"Wal, 'tis kinder pity, now, not to buy her with her son—her heart seems so sot on him, s'pose they fling her in cheap."

"Them that's got money to spend that ar way, it's all well enough. I shall bid off on that ar boy for a plantation-hand, wouldn't be bothered with her, no way—not if they'd give her to me," said Haley.

"She'll take on desp't," said the man

"Nat'lly, she will," said the trader, coolly.

The conversation was here interrupted by a busy hum in the audience, and the auctioneer, a short, bustling, important fellow, elbowed his way into the crowd. The old woman drew in her breath, and caught instinctively at her son.

"Keep close to yer mammy, Albert—close—dey'll put us up togedder," she said.

"O mammy, I'm fear'd they won't," said the boy

"Dey must, child; I can't live, no ways, if they don't," said the old creature, vehemently.

The stentorian tones of the auctioneer, calling out to clear the way, now announced that the sale was about to commence A place was cleared, and the bidding began. The different men on the list were soon knocked off at prices which showed a pretty brisk demand in the market. two of them fell to Haley.

"Come, now, young un," said the auctioneer, giving the boy a touch with his hammer, "be up and show your springs, now."

"Put us two up togedder, togedder—do, please, mas'r," said the old woman, holding fast to her boy.

"Be off!" said the man, gruffly, pushing her hands away, "you come last. Now, darkey, spring," and, with the word, he pushed the boy towards the block, while a deep, heavy groan rose behind him. The boy passed, and looked back; but there was no time to stay, and, dashing the tears from his large, bright eyes, he was up in a moment.

His fine figure, alert limbs, and bright face raised an instant competition, and half-a-dozen bids simultaneously met the ear of the auctioneer. Anxious, half-frightened, he looked from side to side, as he heard the clatter of contending bids—now here, now there—till the hammer fell. Haley had got him. He was pushed from the block toward his new master, but stopped one moment, and looked back, when his poor old mother, trembling in every limb, held out her shaking hands toward him.

"Buy me, too, mas'r, for de dear Lord's sake!—buy me—I shall die if you don't!"

"You'll die if I do, that's the kink of it," said Haley. "No!" And he turned on his heel.

The bidding for the poor old creature was summary. The man who had addressed Haley, and who seemed not destitute of compassion, bought her for a trifle, and the spectators began to disperse

The poor victims of the sale, who had been brought up in one place together for years, gathered round the despairing old mother, whose agony was pitiful to see

"Couldn't dey leave me one? Mas'r allers said I should have one—he did," she repeated over and over, in heart-broken tones.

"Trust in the Lord, Aunt Hagar," said the oldest of the men, sorrowfully.

"What good will it do?" said she, sobbing passionately.

"Mother! mother! don't! don't!" said the boy. "They say you's got a good master"

"I don't care—I don't care. O Albert! O my boy! You's my last baby! Lord, how ken I?"

"Come, take her off, can't some of ye?" said Haley, drily "Don't do no good for her to go on that ar way"

The old men of the company, partly by persuasion and partly by force, loosed the poor creature's last despairing hold, and, as they led her off to her new master's wagon, strove to comfort her

"Now!" said Haley, pushing his three purchases together, and producing a bundle of handcuffs, which he proceeded to put on their wrists, and fastening each handcuff to a long chain, he drove them before him to the jail

A few days saw Haley, with his possession, safely deposited on one of the Ohio boats It was the commencement of his gang, to be augmented, as the boat moved on, by various other merchandise of the same kind, which he or his agent had stored for him in various points along shore.

The *La Belle Riviere*, as brave and beautiful a boat as ever walked the waters of her namesake river, was floating gaily down the stream, under a brilliant sky, the stripes and stars of free America waving and fluttering overhead; the guards crowded with well-dressed ladies and gentlemen walking and enjoying the delightful day All was full of life, buoyant and rejoicing, all but Haley's gang, who were stored, with other freight, on the lower deck, and who, somehow, did not seem to appreciate their various privileges, as they sat in a knot, talking to each other in low tones.

"Boys," said Haley, coming up briskly, "I hope you keep up good heart and are cheerful Now, no sulks, ye see; keep stiff upper lip, boys, do well by me, and I'll do well by you."

The boys addressed responded the invariable "Yes, mas'r," for ages the watchword of poor Africa, but it is to be owned they did not look particularly cheerful. They had their various little prejudices in favour of wives, mothers, sisters, and children, seen for the last time, and though "they that wasted them required of them mirth," it was not instantly forthcoming

"I've got a wife," spoke out the article enumerated as "John, aged thirty," and he laid his chained hand on Tom's knee, "and she don't know a word about this, poor girl!"

"Where does she live?" said Tom.

"In a tavern a piece down here," said John; "I wish, now, I *could* see her once more in this world," he added.

Poor John! It *was* rather natural; and the tears that fell, as he spoke, came as naturally as if he had been a white man. Tom drew a long breath from a sore heart, and tried, in his poor way, to comfort him

And overhead, in the cabin, sat fathers and mothers, husbands and wives; and merry, dancing children moving round among them, like so many little butterflies, and everything was going on quite easy and comfortable.

"O mamma," said a boy, who had just come up from below, "there's a negro trader on board, and he's brought four or five slaves down there."

"Poor creatures!" said the mother, in a tone between grief and indignation.

"What's that?" said another lady.

"Some poor slaves below," said the mother.

"And they've got chains on," said the boy.

"What a shame to our country that such sights are to be seen!" said another lady.

"Oh, there's a great deal to be said on both sides of the subject," said a genteel woman, who sat at her state-room door, sewing, while her little girl and boy were playing round her "I've been south, and I must say I think the negroes are better off than they would be to be free."

"In some respects, some of them are well off, I grant," said the lady to whose remark she had answered "The most dreadful part of slavery, to my mind, is its outrages on the feelings and affections—the separating of families, for example"

"That *is* a bad thing, certainly," said the other lady, holding up a baby's dress she had just completed, and looking intently on its trimmings, "but then, I fancy, it don't occur often."

"Oh, it does," said the first lady, eagerly, "I've lived many years in Kentucky and Virginia both, and I've seen enough to make one's heart sick. Suppose, ma'am, you two children there should be taken from you, and sold?"

"We can't reason from our feelings to those of this class of persons," said the other lady, sorting out some worsteds on her lap

"Indeed, ma'am, you can know nothing of them if you say so," answered the first lady, warmly "I was born and brought up among them I know they *do* feel, just as keenly—even more so, perhaps—as we do."

The lady said, "Indeed!" yawned, and looked out of the cabin-window, and finally repeated, for a finale, the remark with which she had begun—"After all, I think they are better off than they would be to be free"

"It's undoubtedly the intention of Providence that the African race should be servants—kept in a low condition," said a grave looking gentleman in black, a clergyman, seated by the cabin-door "'Cursed be Canaan, a servant of servants shall he be,' the Scripture says"

"I say, stranger, is that ar what that text means?" said a tall man, standing by.

"Undoubtedly It pleased Providence, for some inscrutable reason, to doom the race to bondage, ages ago, and we must not set up our opinion against that"

"Well, then, we'll all go ahead, and buy up niggers," said the man, "if that's the way of Providence—won't we, squire?" said he, turning to Haley, who had been standing there with his hands in his pockets, by the stove, and recently listening to the conversation

"Yes," continued the tall man, "we must all be resigned to the decrees of Providence Niggers must be sold, and trucked round, and kept under, it's what they's made for. 'Pears like this yer view's quite refreshing, an't it, stranger?" said he to Haley

"I never thought on't," said Haley "I couldn't have said as much, myself; I ha'nt no learning I took up the trade just to make a living, if 't an't right, I calculated to 'pent on't time, *ye* know."

"And now you'll save yerself the trouble, won't ye?" said the tall man. "See what 'tis, now, to know Scripture. If ye'd only studied yer Bible, like this yer good man, ye might have know'd it before, and saved ye a heap o' trouble Ye could just have said, 'Cussed be'—what's his name?—and 'twould all have come right" And the stranger, who was no other than the honest drover whom we introduced to our readers in the Kentucky tavern, sat down, and began smoking, with a curious smile on his long, dry face.

A tall, slender young man, with a face expressive of great feeling and intelligence, here broke in, and repeated the words, "All things whatsoever that men should do unto you, do ye even so unto them.' I suppose," he added, "*that* is Scripture as much as 'Cursed be Canaan."

"Wal, it seems quite *as* plain a text, stranger," said John the drover, "to poor fellows like us, now," and John smoked on like a volcano.

The young man paused, looked as if he was going to say more, when suddenly the boat stopped, and the company made the usual steamboat rush, to see where they were landing.

"Both them ar chaps parsons?" said John to one of the men, as they were going out.

The man nodded.

As the boat stopped, a black woman came running wildly up the plank, darted into the crowd, flew up to where the slave-gang sat, and threw her arms round that unfortunate piece of merchandise before enumerated, "John, aged thirty," and with sobs and tears bemoaned him as her husband.

But what needs tell the story, told too oft—every day told—of heart-strings rent and broken—the weak broken and torn for the profit and convenience of the strong! It needs not to be told; every day is telling it—telling it, too, in the ear of One who is not deaf, though he be long silent.

The young man who had spoken for the cause of humanity and God before stood with folded arms, looking on this scene He turned, and Haley was standing at his side. "My friend," he said, speaking with thick utterance, "how can you, how dare you, carry on a trade like this? Look at those poor creatures! Here I am, rejoicing in my heart that I am going home to my wife and child, and the same bell which is a signal to carry me onward towards them will part this poor man and his wife for ever. Depend upon it, God will bring you into judgment for this."

The trader turned away in silence

"I say, now," said the drover, touching his elbow, "there's differences in parsons, an't there? 'Cussed be Canaan' don't seem to go down with this 'un, does it?"

Haley gave an uneasy growl

"And that ar an't the worst on't," said John, "maybe it won't go down with the Lord neither, when ye come to settle with Him, one o' these days, as all on us must, I reckon."

Haley walked reflectively to the other end of the boat.

"If I make pretty handsomely on one or two next gangs," he thought, "I reckon I'll stop off this yer, it's really getting dangerous" And he took out his pocket book, and began adding over his accounts, a process which many gentlemen besides Mr. Haley have found a specific for an uneasy conscience.

The boat swept proudly away from the shore, and all went on merrily, as before Men talked, and loafed, and read, and smoked. Women sewed, and children played, and the boat passed on her way

One day, when she lay to for a while at a small town in Kentucky, Haley went up into the place on a little matter of business.

Tom, whose fetters did not prevent his taking a moderate circuit, had drawn near the side of the boat, and stood listlessly gazing over the railings After a time, he saw the trader returning, with an alert step, in company with a colored woman, bearing in her arms a child She was dressed quite respectably, and a colored man followed, bearing a small trunk. The woman came cheerfully onward, talking, as she came, with the man who bore her trunk, and so passed up the plank into the boat. The bell rang, the steamer whizzed, the engine groaned and coughed, and away swept the boat down the river.

The woman walked forward among the boxes and bales of the lower deck, and, sitting down, busied herself with chirruping to her baby

Haley made a turn or two about the boat, and then, coming up, seated himself near her, and began saying something to her in an undertone.

Tom saw a sudden cloud passing over the woman's brow, and that she answered rapidly, and with great vehemence.

"I don't believe it, I won't believe it!" he heard her say.

"You're just a fooling with me"

"If you won't believe it, look here!" said the man, drawing out a paper, "this yer's the bill of sale, and there's your master's name to it, and I paid down good solid cash for it, too, I can tell you—so now!"

"I don't believe mas'r would cheat me so; it can't be true!" said the woman, with increasing agitation.

"You can ask any of these men here that can read writing. Here!" he said, to a man that was passing by, "just read this yer, won't you! This yer gal won't believe me, when I tell her what 'tis"

"Why, it's a bill of sale, signed by John Fosdick," said the man, "making over to you the gal Lucy and her child. It's all straight enough, for aught I see"

The woman's passionate exclamations collected a crowd around her, and the trader briefly explained to them the cause of the agitation

"He told me that I was going down to Louisville, to hire out as a cook to the same tavern where my husband works, that's what mas'r told me, his own self, and I can't believe he'd lie to me," said the woman.

"But he has sold you, my poor woman, there's no doubt about it," said a good-natured looking man, who had been examining the papers; "he has done it, and no mistake."

"Then it's no account talking," said the woman, suddenly growing quite calm, and, clasping her child tighter in her arms, she sat down on her box, turned her back round, and gazed listlessly into the river

"Going to take it easy, after all," said the trader. "Gal's got grit, I see"

The woman looked calm as the boat went on; and a beautiful soft summer breeze passed, like a compassionate spirit, over her head—the gentle breeze that never inquires whether the brow is dusky or fair that it fans And she saw sunshine sparkling on the water, in golden ripples, and heard gay voices, full of ease and pleasure, talking around her everywhere, but her heart lay as if a great stone had fallen on it. Her baby raised himself up against

her, and stroked her cheeks with his little hands; and, springing up and down, crowing and chatting, seemed determined to arouse her. She strained him suddenly and tightly in her arms, and slowly one tear after another fell on his wondering, unconscious face; and gradually she seemed, and little by little, to grow calmer, and busied herself with tending and nursing him.

The child, a boy of ten months, was uncommonly large and strong of his age, and very vigorous in his limbs. Never for a moment still, he kept his mother constantly busy in holding him, and guarding his springing activity.

"That's a fine chap!" said a man, suddenly stopping opposite to him, with his hands in his pockets. "How old?"

"Ten months and a half," said the mother.

The man whistled to the boy, and offered him part of a stick of candy, which he eagerly grabbed at, and very soon had it in a baby's general depository—to wit, his mouth.

"Rum fellow!" said the man. "Knows what's what!" and he whistled and walked on. When he had got to the other side of the boat, he came across Haley, who was smoking on top of a pile of boxes.

The stranger produced a match, and lighted a cigar, saying, as he did so,—

"Decentish kind o' weather to-part-and-parcel there, stranger."

"Why, I reckon, 'tain't much 'count," said Haley, blowing the smoke out of his mouth.

"Taking her down south?" said the man.

Haley nodded, and smoked on.

"Plantation hand?" said the man.

"Wal," said Haley, "I'm filling out an order for a plantation, and I think I shall put her in. They tell'd me she was a good cook, and they can use her for that, or set her at the cotton-picking. She's got the right fingers for that, I looked at 'em. Sell well either way," and Haley resumed his cigar.

"They won't want the young 'un on a plantation," said the man.

"I shall sell him, first chance I find," said Haley lighting another cigar.

"S'pose you'd be selling him tol'able cheap," said the stranger, mounting the pile of boxes, and sitting down comfortably.

"Don't know 'bout that," said Haley, "he's a pretty smart young 'un—straight, fat, strong, flesh as hard as a brick."

"Very true, but then there's all the bother and expense of raisin'."

"Nonsense!" said Haley, "they is raised as easy as any kind of critter there is going, they an't a bit more trouble than pups. This yer chap will be running all round in a month."

"I've got a good place for raisin', and I thought of takin' in a little more stock," said the man. "Our cook lost a young 'un last week—got drownded in the washtub, while she was a hangin' out clothes, and I reckon it would be well enough to set her to rai-in' this yer."

Haley and the stranger smoked a while in silence, neither seemed willing to broach the test question of the interview. At last the man resumed —

"You wouldn't think of wantin' more than ten dollars for that ar chap, seeing you *must* get him off yer hand, anyhow?"

Haley shook his head, and spat impressively.

"That won't do, noways," he said, and began his smoking again.

"Well, stranger, what will you take?"

"Well, now," said Haley, "I *could* raise that ar chap myself, or get him raised; he's uncommon likely and healthy, and he'd fetch a hundred dollars six months hence, and, in a year or two, he'd bring two hundred, if I had him in the right spot, so I shan't take a cent less nor fifty for him now."

"O stranger! that's ridiculous," said the man.

"Fact!" said Haley, with a decided shake of his head.

"I'll give thirty for him," said the stranger, "but not a cent more."

"Now, I'll tell ye what I'll do," said Haley, spitting again, with renewed decision. "I'll split the difference, and say forty-five; and that's the most I will do."

"Well, agreed!" said the man after an interval.

"Done!" said Haley. "Where, do you land?"

"At Louisville," said the man.

"Louisville," said Haley. "Very fair, we get there about dusk. Chap will be asleep—all fair—get him off quietly, and no screaming—happens beautiful—I like to do everything quietly—I hates all kind of agitation and fluster." And so, after a transfer of certain bills had passed from the man's pocket-book to the trader's he resumed his cigar.

It was a bright, tranquil evening when the boat stopped at the wharf at Louisville. The woman had been sitting with her baby in her arms, now wrapped in a heavy sleep. When she heard the name of the place called out, she hastily laid the child down in a little cradle formed by the hollow among the boxes, first carefully spreading under it her cloak; and then she sprung to the side of the boat, in hopes that, among the various hotel-waiters that thronged the wharf, she might see her husband. In this hope she pressed forward to the front rails, and stretching far over them, strained her eyes intently on the moving heads on the shore, and the crowd pressed in between her and the child.

"Now's your time," said Haley, taking the sleeping child up, and handing him to the stranger. "Don't wake him up, and set him to crying, now, it would make a devil of a fuss with the gal." The man took the bundle carefully, and wassoon lost in the crowd that went up the wharf.

When the boat, creaking, and groaning, and puffing, had loosed from the wharf, and was beginning slowly to strain herself along, the woman returned to her old seat. The trader was sitting there—the child was gone!

"Why, why—where?" she began, in bewildered surprise.

"Lucy," said the trader, "your child's gone, you may as well know it first as last. You see, I know'd you couldn't take him down south, and I got a chance to sell him to a first-rate family, that'll raise him better than you can."

The trader had arrived at that stage of Christian and political perfection which has been recommended by some preachers and politicians of the north, lately, in which he had completely overcome every humane weakness and prejudice. His heart was exactly where yours, sir, and mine could be brought with proper effort and cultivation. The wild look of anguish and utter despair that the woman cast on him might have disturbed one less practised, but he was used to it. He had seen that same look hundreds of times. You can get used to such things, too, my friend; and it is the great object of recent efforts to make our whole northern community used to them, for the glory of the Union. So the trader only regarded the mortal anguish which he saw working in those dark features, those clenched hands, and suffocating breathings, as necessary incidents of the trade, and merely calculated whether she was going to scream, and get up a commotion in the boat; for, like other supporters of our peculiar institutions, he decidedly disliked agitation.

But the woman did not scream. The shot had passed too straight and direct through her heart for cry or tear.

Dizzily she sat down. Her slack hands fell lifeless by her side. Her eyes were straight forward, but she saw nothing. All the noise and hum of the boat, the groaning of the machinery, mingled dreamily to her as waves of sound, and the poor, crush-stricken heart had neither cry nor tear to show for its utter misery. She was quite calm.

* * * * *

At midnight Tom waked with a sudden start. Something black passed quickly by him to the side of the boat, and he heard a splash in the water. No one else saw or heard anything. He raised his head—the woman's place was vacant! He got up, and looked hurriedly around him. The poor bleeding heart was still at last, and its throbbings and anguish just as brightly as if it had not closed above it.

* * * * *

Patience! patience! ye whose hearts swell indignant at wrongs like these. Not one throb of anguish, not one tear of the oppressed, is forgotten by the Man of Sorrows, the Lord of Glory. In his patient, generous bosom he bears the anguish of a world. Bear thou, like him, in patience, and labour in love; for, sure as he is God, "the year of his redeemed *shall* come."

* * *

The trader was not shocked nor amazed; because, as we said before, he was used to a great many things that you are not used to. Even the awful presence of death struck no solemn chill upon him. He had seen death many times—met him in the way of trade, and got acquainted with him, and he only thought of him as a hard customer, that embarrassed his property operations very unfairly; and so he only swore that the gal was a baggage, and that he was devilish unlucky, and that if things went on in this way he should not make a cent on the trip. In short, he seemed to consider himself an ill-used man, decidedly; but there was no help for it, as the woman had escaped into a state which *never will* give up a fugitive, not even at the demand of the whole glorious Union.

[The above terrible picture of one of the "peculiar institutions" of the United States is extracted from a popular tale called "Uncle Tom's Cabin," which, after having gone through ten editions in America, has just been issued in England. It is to be hoped that the book will be found in every family in all the broad and smiling land.]

Variety of Uses.—Flax is employed in the manufacture of the most delicate French and Irish cambrics, and of the coarsest sail-cloth and tarpaulings; of the most beautiful laces from Lisle and Valenciennes, and of the heaviest sacking and towelling. The folds of snowy lawn that deck a bishop's arms, and the stout storm-sail that rides out the fiercest gale, are both the production of the same plant.

EQUIVOCAL GENTLEMEN.

EQUIVOCAL GENTLEMEN! Pray, who are they? Why, they are rather a curious class of persons. But if you are in the habit of noting character, we rather think you must know them. They are to be seen in every city, and almost in every town.

The equivocal gentleman, has in general manner and bearing, and, as far as a very limited exchequer will allow, in dress also, a curious smack of the real gentleman about him, of whom he is, altogether, a sort of amusing caricature. His pretensions are high, very high, and, conscious of the doubtfulness of his claims, always noisy and obtrusive. He endeavours to bully the world into respect for him. But it won't do. When he turns his back, the world winks one of its eyes, and says, with a knowing smile, "that's a queer sort of a chap." It doesn't in fact, know what to make of him—how to class him. It has, however, a pretty good notion that, with all the equivocal gentleman's pretension, he has by no means an unlimited command of the circulating medium.

And this is not an incorrect notion. Scarcity of funds is, in truth, at the bottom of all the equivocal gentleman's difficulties, as, indeed, it is of almost all those of every body else. He, however, may be emphatically said to be born of a warfare between his poverty and "gentility."

It is, of course, in the matter of dress that the equivocal gentleman is most anxious to establish his claim to be considered a genuine article; and it is in this matter, too, that his peculiar position in the world is made most manifest; dress being in his particular case, as it is less or more in all others, a strongly marked and faithful expression of character.

The struggle here, then, to keep matters right, is dreadful None but himself knows how dreadful—none but himself knows the thousand shifts and expedients he is compelled to have recourse to, to maintain appearances in this most important and most troublesome department.

First, of the hat. It is a merciless and unfeeling hat; for it is obstinately hastening to decay, though it well knows that its sorely perplexed owner does *not* know where on earth to get another See what a watching and tending it requires to keep it from becoming absolutely unfit for the public eye as the headpiece of a gentleman! Why, the watching and tending of a new-born infant is nothing to it.

Consider how carefully it must be examined round and round every morning, that no new outward symptom of decay has made itself manifest. Consider the brushing, the smoothing down, the inking of corners and rims, the coaxing and wheedling, by softly squeezing it this way, and gently pulling it that, to induce it to keep as near as possible to its original shape. Nay, desperate attempts may sometimes be detected to make it assume yet a smarter form, in defiance of decay and dilapidation

Then, there is the stock. Stitching and inking and inking again, with careful daily supervision. Then there is,—but we need enlarge no further on this part of our subject.

But, mark, reader! everything about the equivocal gentleman is not in this state of seediness. He would not be the equivocal gentleman at all, if this were the case. Some of the particulars of the outward man are good—in fact, stylish—and it is this incongruity that makes him out, that makes him what he is, and which so much puzzles you to class him when you see him.

The equivocal gentleman *always* manages to have one or two of the component parts of his dress of unimpeachable quality, but *never* can manage to have the whole in this palmy state. There is always something wrong—something below par; and, we may add, generally something *outré*, absurd, or extravagant. Perfect consistency and propriety in dress he never can attain, and perhaps would not, if he could; for one of the most marked features of his character is a craving after singularity, in the art and fashion of his habiliments.

Overlooking himself what partial deficiencies there may be in this department of his entire man, and thinking that the world will overlook them too, the equivocal gentleman affects the "bang up." He is not content with desiring to impress beholders with the idea of his being merely a respectable sort of person: he desires much more than this. They must take him, if not certainly for a lord, at least for some great personage—for a—a—he does not himself, in fact, well know what—for a mysterious, indeterminate somebody, of mysterious and indeterminate consequence.

There are two or three points in which the equivocal gentleman displays a very remarkable degree of ingenuity. One of these consists in the dexterity with which he not only conceals defects of dress, but converts them into positive elegances. Thus, if he have to button up for want of a clean shirt, he contrives, by the very smart way in which he does it, to make it appear not only to be matter of mere choice or fancy, but, in fact, by much the genteeler thing.

But it is in the enacting of character that the equivocal gentleman particularly shines.

Not having either the cash or the credit necessary to enable him to adapt his dress to his identity, he is compelled to adapt his identity to his dress. In other words, placing, for the reason alluded to, little or no influence over the shape, fashion, or quality of his clothes, but being obliged to conform to circumstances in this matter to a most unpleasant extent—to wear, in short, whatever he can most conveniently get—he is driven to the expedient of adapting his character to the particular description of dress he may be wearing at the time. Thus, if it is a short coat, he probably enacts the country gentleman, or sporting character; if a braided surtout, then he is a military man; if he is driven to hide the deficiencies of his other garments by a cloak, he adds a cloth cap with tassels, frizzles up his whiskers, and comes forth a Polish count, and so on of other varieties of dress.

In person the equivocal gentleman is stout and robust, his age somewhere about forty. He is bushy-whiskered and affects a swaggering, bold, offhand manner, talks large to waiters, and with edifying ferocity on every body.

This rabidness of disposition on the part of the equivocal gentleman proceeds partly from his habit of attempting to bully the world into a high opinion of his consequence, and partly from the irritation produced by a constant dread that the world suspects the true state of his case It is thus partly affected, partly real.

Being always miserably short of funds, the equivocal gentleman is necessarily much circumscribed in his enjoyments; and this is particularly unfortunate, for he has a very keen relish for the good things of this life. He likes good living, good drinking, good everything; but cruel fate has denied them to him, except in very limited quantities, and on very rare occasions. If he even gets them at all, it is by mere chance, mere casual incident. Occasionally it is by an effort of ingenuity, through which he has contrived, by some mysterious means or other, to get possession of a little of the circulating medium.

And pray, then, what *is* the equivocal gentleman? What is he in reality, and what does he do? How does he support himself? Why, friend, these questions are a vast deal easier put than answered.

Just now, the equivocal gentleman is doing nothing—literally and absolutely nothing. He was something or other at one time, but at this moment, and for many years past, he has pursued no calling whatever. The equivocal gentleman, in short, is a gentleman of shifts and expedients. He has a little world of his own, in which he manœuvres for a living. Being rather respectably connected, his friends occasionally remit him small sums, and these godsends, few and far between, and his own ingenuity, are all he has to depend upon. The equivocal gentleman, notwithstanding the dashy appearance he aims at, and the large style in which he speaks, is, we are sorry to say it, a bit of a rogue in grain, and a good deal of one in practice: he is, in short, somewhat of a scamp, partly from circumstances, and partly from the natural bent of his genius, which is ever urging him to take the shortest cuts towards the objects he desires to possess. He is, in truth, a sort of human bird of prey; tailors, bootmakers, and lodging-house keepers being his favourite quarries, and the class who, therefore, suffer most from his non-paying propensities. On one or other of these he is ever and anon pouncing, and woe be to them if he once gets them within his clutches: he will leave his mark, be sure, if he does.

The tailor, the bootmaker, and the lodging-house keepers, again knowing that he is their natural enemy—and as well do they know him for this, as the small bird does the hawk—stand in great awe of him; they have an instinctive dread of him, and put themselves in a posture of defence the moment they see him.

Our equivocal gentleman, in truth, lives in a constant state of warfare similar to this with the whole world—not open hostility, perhaps, but lurking, secret aversion. The world looks shyly and doubtfully on him, and he looks fiercely and angrily on the world in return.

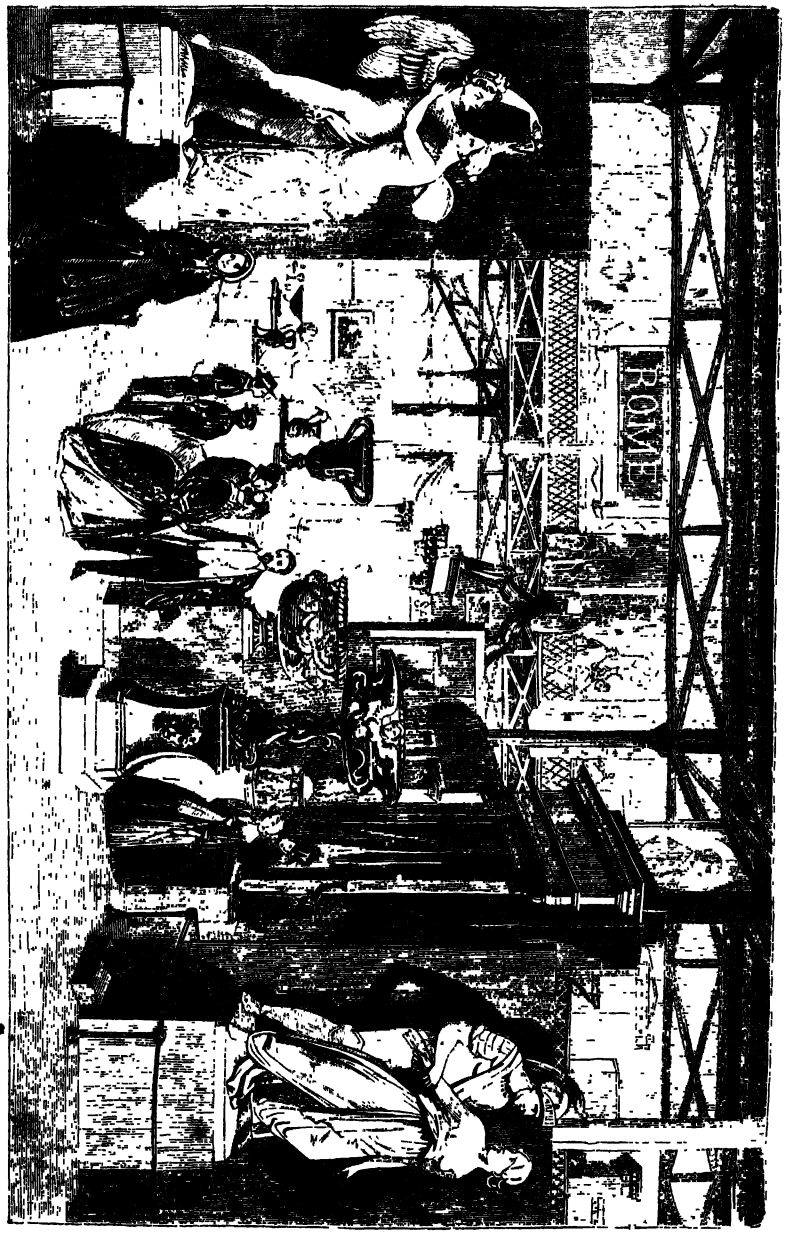
Amongst the two or three little foibles by which the equivocal gentleman is distinguished, is a rather urgent propensity to strong drink. He is, in fact, pretty considerably dissipated, as the florid or brick-red face, on which his luxuriant whiskers vegetate, but too plainly indicates. He is not, indeed, always drunk; for his very limited command of means keeps him, on the whole, pretty sober; but he gets drunk when he can, and no gentleman can do more, nor can more be reasonably expected of him.

The equivocal gentleman is a man of refined tastes, and hence it is that he patronises the drama. He is a great play-goer. On such occasions he figures in the sixpenny gallery; and here he has a difficult part to play, as difficult as any on the stage. He has to make it appear to the gods, who wonder to see so fine a gentleman amongst them, why he has come to such a place, and at the same time to parry the natural conclusion, that it proceeds from a limited exchequer, which he must on no account permit to be presumed for a moment.

The way in which he manages this very ticklish point is this:—he assumes a look at once dignified and supercilious, which look is meant to impress you with the belief that his being in the shilling gallery, which he generally enters at the half-price, is a mere whim of one who could have gone to the boxes had he chosen—that he has come where he is, just to see what sort of a place it is, what effect the actors and the scenery have when seen from such a distance.

To confirm this impression, the equivocal gentleman never sits down in the gallery; this would look like premeditated economy. He stands, therefore, during the whole time of the performance, and stands aloof, too, from the ragamuffin audience, with his arms folded on his breast, and an expression of awful majesty on his brow.

Reader, do you know the equivocal gentleman now? We are sure you do.



A REMINISCENCE OF THE CRYSTAL PALACE.

It was said by a Grecian moralist that "men are less affected by facts than by opinions about facts." Had he lived, however, in the nineteenth century, and passed a few days in the Glass Palace, in Hyde-park, he would have changed his opinion. That was a "fact" of such magnitude and splendour, that the mind was lost in its contemplation. With its vast variety of magnificent homely, artistic, and useful stores, it read a lesson to mankind such as has never before been placed before it. The building and its contents stood alone, superbly unique, and wonderfully in contrast with all that ever before, or elsewhere, had been attempted. In the building we had the realisation, as it were, of a splendid dream, a glimpse of fairy-land; and in its contents a huge comprehensive collection of objects, embracing all that the skill and industry of the world has rendered possible.

In spite of all that has been written and said of the effects of the Great Exhibition on the national taste, the question of its ultimate operation cannot be too often asked—the teachings which it contrasts, its lights and shadows, its largeness and variety of uses, cannot be too often enforced. It has been stated, with much seeming philosophy, that a highly-advanced state of civilisation is calculated to depress the standards of literature and art, and that in whatever degree you extend the patronage of art, in the same degree you lower the standards of it, the many being the customers catered for instead of the few. This kind of reasoning is specious enough at first sight, for it would certainly appear that the applause of the most numerous is that of the most ignorant; but could not a people be educated up to a high standard by the continual contemplation of fine compositions, even in the most homely objects, so that they would demand beauty and elegance of form in whatever met the eye; so that grace might be superadded to utility? What is to prevent the milk-jug of coarse terra cotta on the table of the peasant from having as exquisite a shape as the china one on the table of the noble? And the pitcher which the humble maiden carries to the well might display as much symmetry of design as the Parisian vase in the boudoir of the high-born dame, without putting the manufacturer thereof to any additional expense in its production. Italy, during the fifteenth and sixteenth centuries, was foremost in civilisation, and during this period the arts flourished. With their decay declined the Italians' social superiority and political independence. Galileo, Raphael, Bramante, Titian, and Michael Angelo were ascendant at the same time that the manufacturers of Florence and Genoa monopolised the market from Madrid to Constantinople, and the glass of Venice adorned the table of the warrior whose breast was defended by the armour of Milan. Those were Italy's golden days—arts, manufactures, and independence went hand in hand; with the neglect of the first, the others withered away, and she now lies morally and physically prostrate. We know that the greatest achievements in painting and sculpture were executed for the few; but we also know that the periods in the history of a country distinguished by progress in the arts is that of its most rapid social and intellectual development. It is no more necessary to possess a gallery of pictures in order to cultivate a taste for painting, than it is to inherit an estate in order to admire the beauties of natural landscape. The mind is exalted through the eye to an appreciation of the beautiful; and the artisan who has the privilege of walking through galleries, comparing the excellence of one master with another, is as much refined by their influence as the owner of the rarest collection.

But it is by no means necessary, while we thus endeavour to improve the standard of excellence, to sacrifice material comfort and commercial success to a speculative love of unproductive art. True art can be made subservient to the commonest purposes of daily life—adding refinement to the manners and dignity to the performance of the meanest men and the most commonplace actions. We do not really see why the furniture and decorations of the poor man's single room should not have elegance of form, even though they were of the roughest and cheapest kind. The wealthy should not monopolise the luxury of refined feeling. Certain things might easily be brought within the means of the poor which could not fail to add to their social comfort and moral refinement. A few prints upon a cottage wall, a few handsome forms in glass and earthenware, a few flowers on the table, can surely be not very difficult of attainment; and who shall say where their influence ends? We must not be misunderstood. We would not put the shadow in the place of the substance. We would not be thought to inculcate a system which would be subversive of higher claims. On the contrary, we believe that, in educating the taste of the people, we are making them more sober, more obedient to the laws, more moderate in their desires, more attentive to their social duties, and more fervent in their religion.

We have been led into these observations from the contemplation of the Great Exhibition of 1851, as an historical fact never to be renewed. Who will ever forget his sensations as he stood for the first time beneath that marvellous arch of crystal? "Stand for a minute with me," said the Earl of Carlisle, addressing the working men of Leeds, "where the broad transept intersects the far-stretching nave, while the summer sun glistens, first on the fresh young green of our forest elms, then on the tapering foliage of the tropics, then on the pale marble of the statuary, then on the thousand changing hues of the world's merchandise! I most truly believe that, as a mere spectacle, it surpasses any which the labour, and art, and power of man ever yet displayed in any one spot. Look at that long alley of plate, the stalls of goldsmiths and silversmiths! Such a bright profusion was not spread out by Belshazzar when, amid the spoils of the Old Asia, he feasted his thousand lords. Examine the jewels and tissues of India, of Tunis, of Turkey! So dazzling an array was never piled behind the chariot of the Roman conqueror when he led the long triumph up the hill of the Capitaline Jove. Observe the lustrous variety of porcelain, and tapestry, and silk, and bronze, and carving, which enters into the composition of furniture! Why, Louis XIV. himself, could he be summoned from his grave, would confess that, although the French people had dethroned his dynasty, and exiled his race, and obliterated that monarchy of which he was the special impersonation, they had carried all the arts of embellishment farther even than when he held his gorgeous court at Versailles. But I should not have spoken this had I nothing to remark but upon the jewelled coronet or the wreathing brass, or the glistening marble, or the spangled brocade; these might only be fit adornments for the palaces of the great, or for the toilets of

ITALIAN DEPARTMENT IN THE GREAT EXHIBITION OF 1851.

and reactions of morbid depression, but charactorised by that regular poetical *régime* which he now imposed on himself as his purpose in life.

> "God suffered once the thunder-cloud
> Towards his love to blind him,
> But gently led the blind along
> Where breath and bird could find him;
> And wrought within his shattered brain
> Such quick poetic senses,
> As hills have language for, and stars
> Harmonious influences
> The pulse of dew upon the grass
> His own did calmly number,
> And knew the voice of every bee
> And felt the sun and rain."*

Painful often is the contrast between the placidity, wit, and sportive humour of his verse on the one hand, and on the other the deep gloom which was consuming him piecemeal, preying on his vitals, like the eagle of Prometheus. How often are his letters "the proofs of rare heroism! whose were those flowers of fancy watered by a bleeding It is the knowledge of this that imparts so peculiar a charm to his epistolary and other pleasantries,—the contrast, as Mr. Gilfillan observes, between their airy buoyancy and his fixed, morbid misery, and the view this gives us of the irrepressible spring of enjoyment originally possessed by a mind, which not even the sorrows of madness could entirely choke up, and of that powerful sense of the ludicrous which could wreathe the grim features of despair into contagious smiles. It is beautifully true of this man, stricken of God and afflicted, that when one by one sweet sounds

> "And wandering lights departed,
> He wore no less a loving face, because so broken-hearted"

His habit of surrendering his pen to the most obvious pleasantry at hand, and dallying with the most casual thoughts of the moment, has been compared to Hamlet's talk about old Truepenny in the cellarage, when the thought of his father's spirit is weighing with awful mystery on his heart, or amusing himself with badgering Polonius, when the thought of filial revenge is swaying the very depths of his soul. He made no parade of the trappings of woe, he wore no inky cloak, he obtruded no "dejected 'haviour of the visage" upon the public, he traded not in the forms and modes and shows of importunate grief, but he had that within which passeth show, and with something of Spartan endurance he folded his mantle decorously over the struggle within, though his lifeblood was ebbing drop by drop away. Poor Cowper!

His poetry is, perhaps, dull reading to people whose pulse is ever at fever heat, and who call nothing poetry that does not deal with Corsairs, and Giaours, and Manfreds, and Cains. But it is popular still with a large number of steady old folks, who are addicted, rightly or wrongly, to English impressions of nature, English views of manners, and English sentiments of patriotism. It is manly, straightforward, unaffected, spirited, easy, hearty, domestic, John Bullish. It is truly earnest and sincere—another quality characteristic of John Bull His Mark. The very general esteem for Cowper's poetry, at the close of last century, Mr. de Quincey calls "inevitable,"—because the poet's picture of an English fireside, with its long winter evening, the sofa wheeled round to the fire, the massy draperies depending from the windows, the tea-table with its bubbling and loud-hissing urn, the newspaper and the long debate,—Pitt and Fox ruling the senate, and Erskine the bar,—all held up a mirror to that particular period, and their own particular houses; whilst the character of his rural scenery was exactly the same in Cowper's experience of England as in their own; so that in all these features they recognised their countryman and their contemporary, who saw things from the same station as themselves;—whilst his moral denunciations upon all great questions then afloat were cast in the very same mould of conscientious principle as their own.‡ Professor Wilson ascribes to him the earliest place among that modern generation of poets who, going back to nature, have sought the elements of poetry immediately in the world of nature and of human life:—"The charm of his poetry is a pure, innocent, lovely mind, delighting itself in pure, innocent, and lovely nature,—the freshness of the fields, the fragrance of the flowers, breathes in his verse. His own delight in simple, happy, rural life, is there, and we are delighted, as though, with happy faces, and with endeared family love, we walked by his side and shared with him in his pleasures."* Mr. Campbell, again, while admitting that Cowper's rural prospects have far less variety and compass than those of Thomson, contends that his graphic touches are more close and minute; not that Thomson was either deficient or undelightful in circumstantial traits of the beauty of nature, but he looked to her as a whole, more than Cowper, who contemplated the face of plain rural English life in moments of leisure and sensibility, till its minutest features were impressed upon his fancy, and whose landscapes, if they have less of the ideally beautiful than Thomson's, are distinguished by an unrivalled [illegible] truth and reality.†

Though many persons may refuse to call Cowper one of their favourite poets, hardly one of them but will be found to class something of Cowper's among their favourite poems. The intense puritan, whom [illegible] cannot touch, and who scouts poetry in the abstract and concrete alike as vanity and vexation of spirit, and in whose rather lengthy ears the notes of the most harmonious as the crackling of thorns under the pot, has a liking for, and has even purchased a copy of, the Olney Hymns, though he is careful to tell you he thinks John Newton much the better bard of the twain. The mirthful frivolist, to whom the "Task" is no pseudonym, will allow that Cowper was a good fellow at bottom, for the sake of Johnny Gilpin. The moralist enjoys the didactic pieces, the scholar consults the translations, the schoolboy relishes "Alexander Selkirk," and every man of woman born exults in the "Lines on Receiving his Mother's Picture." "Able Editors" differ widely in their estimate of his various works. Southey predicts that the "Task" and the fragment on "Yardley Oak" will be coeval with our language, but dismisses all the rest with the sweeping assertion, that, if Cowper's other works live, it will be because written by the author of these two compositions.‡ We can hardly assent to this, while we remember the *naïve* beauty of "Oh that those lips had language!"—and many a noble passage in the "Table Talk," "Progress of Error," "Hope," &c. He holds a distinguished place, too, among our satirists. Campbell remarks that his satire is not abstracted and declamatory, but places human manners before us in the liveliest attitudes and clearest colours. "There is much of the full distinctness of Theophrastus, and of the nervous and concise spirit of La Bruyere, in his piece entitled "Conversation," with a cast of humour superadded which is peculiarly English, and not to be found out of England."§ Christopher North calls his satire "sublime," and contends that we have no other such satires:—"the same man who was well satisfied to sit day after day beside an elderly lady sewing caps and tippets, except when he was obliged to go and water the flowers or feed the rabbits, rose up, when Poetry came upon him, sinewy and muscular as a mailed man dallying for a while with a two-edged sword, as if to try its weight and temper, when about to shear down the Philistines."‖ Those who consider him, as many profess to do, tame and unimpassioned, must yet be conscious of the glow of his moral indignation, the flame of which burns purely and strongly amid much that is sectarian and John Newtonish. Southey, as we have seen, summarily dismisses these rhymed poems, declaring that nothing which Cowper has written in rhyme, except by sudden gleams, is above mediocrity, and that he not only wanted ear to form its harmony, but rejected that harmony on system; and that, when he wrote in rhymes, provided he could cram his thoughts

‡ *Letter to G. C. Bedford*, 1809.—Southey adds, "His [Cowper's] popularity is owing to his piety, not his poetry, and that piety was craziness. I like his letters, but think their so great popularity one of the very many proofs of the imbecility of the age." Rather cavalier treatment of Cowper and his admirers.
§ Campbell's "Specimens," vol. vii. p. 368. ‖ Blackwood, vol. xxiii.

into the couplets, he chose rather that they should be rough than harmonious, that they should stumble than glide.* On the other hand, it has been maintained that Cowper's poetry, not being organ-toned, nor informed with any very rich or original music, any more than soaringly imaginative or gorgeously decorative, is of a style that requires the sustaining aid of rhyme, and is apt, in blank verse, to overflow in pools and shallows.† There is more truth, we submit, in this view of the case, than in Southey's sweeping clause.

Never may the time come when Cowper's memory and works shall be treated otherwise than with affectionate respect by England and the English! The blessings of English homes and universal liberty owe him no mean portion of their being.

"Nor ever shall he be in praise by wise or good forsaken;
Named softly as the household name of one whom God hath taken"

A NOVEL SUSPENSION BRIDGE.

THE following from Captain Reid's "Adventures in Southern Mexico," will throw a new light upon the ingenuity of the monkey tribe, and afford a novel anecdote for the collectors of facts in natural history.—"'They are coming towards the bridge; they will most likely cross by the rocks yonder,' observed Raoul. 'How, swim it?' answered the Frenchman; 'monkeys would rather go into fire than water. If they cannot leap the stream they will bridge it.' 'Bridge it!—and how?' 'Stop a moment, captain—you shall see.' The half-human voices sounded nearer, and we could perceive that the animals were approaching the spot where we lay. Presently they appeared on the opposite bank, headed by an old grey chieftain, and officered like so many soldiers. They were, as Raoul had stated, of the 'comadrejai,' or ringtailed tribe. One, an aide-de-camp, or chief pioneer, perhaps, ran out on a projecting rock, and, after looking across the stream, as if calculating the distance, scampered back, and appeared to communicate with the leader. This produced a movement in the troop. Commands were issued, and fatigue parties were detailed, and marched to the front. Meanwhile, several of the comadrejai—engineers, no doubt—ran along the bank, examining the trees on both sides of the 'arrogo.' At length they all collected round a tall cotton wood that grew over the narrowest part of the stream, and twenty or thirty of them scampered up its trunk. On reaching a high point, the foremost, a strong fellow, ran out upon a limb, and, taking several turns of his tail around it, slipped off, and hung head downwards. The next on the limb, also a stout one, climbed down the body of the first, and whipped his tail tightly round the neck and fore-arm of the latter, dropped off in his turn, and hung head down. The third repeated this manœuvre upon the second, and the fourth upon the third, and so on, until the last upon the string rested his fore-paws upon the ground. The living chain now commenced swinging backwards and forwards, like the pendulum of a clock. The motion was slight at first, but gradually increased—the lowermost monkey striking his hands violently on the earth as he passed the tangent of the oscillating curve. Several others upon the limbs above aided the movement. This continued until the monkey at the end of the chain was thrown among the branches of a tree on the opposite bank. Here, after two or three vibrations, he clutched a limb, and held fast. This movement was executed adroitly, just at the culminating point of the oscillation, in order to save the intermediate links from the violence of a too sudden jerk! The chain was now fast at both ends, forming a complete suspension bridge, over which the whole troop, to the number of four or five hundred, passed with the rapidity of thought. It was one of the most comical sights I ever beheld, to witness the quizzical expression of countenances along that living chain. The troop was now on the other side; but how were the animals forming the bridge to get themselves over? This was the question that suggested itself. Manifestly, by number one letting go his tail. But then the *point d'appui* on the other side was much lower down, and number one, with half-a-dozen of his neighbours, would be dashed against the opposite bank, or soused into the water. Here, then, was a problem, and we waited with some curiosity for its solution. It was soon solved. A monkey was now seen attaching his tail to the lowest on the bridge, another girdled him in a similar manner, and another, and so on, until a dozen more were added to the string. These last were all powerful fellows; and running up to a high limb, they lifted the bridge into a position almost horizontal. Then a scream from the last monkey of the new formation warned the tail-end that all was ready; and the next moment the whole chain was swung over, and landed safely on the opposite bank. The lowermost links now dropped off like a melting candle, whilst the higher ones leaped to the branches, and came down by the trunk. The whole troop then scampered off into the chapparal, and disappeared."

KEEP IN STEP.

"*Those who would walk together must keep in step*"—OLD PROVERB.

Away, the world keeps moving forward,
Like an army marching by;
Hear you not its heavy foot-fall,
That resoundeth to the sky?
Some bold spirits bear the banner—
Souls of sweetness chant the song—
Lips of energy and fervour
Make the timid-hearted strong!
Like brave soldiers we march forward;
If you linger or turn back,
You must look to get a jostling
While you stand upon our track.
Keep in step!

My good neighbour, Master Standstill,
Gazes on it as it goes,
Not quite sure but he is dreaming,
In his afternoon's repose!
"Nothing good," he says, "can issue
From this endless 'moving on,'
Ancient laws and institutions
Are decaying or are gone.
We are rushing on to ruin,
With our mad, new-fangled ways."
While he speaks, a thousand voices,
As the heart of *one* man, says—
"Keep in step!"

Gentle neighbour, will you join us,
Or return to "*good old ways?*"
Take again this fig-leaf apron
Of old Adam's ancient days,
Or become a hardy Briton—
Beard the lion in his lair,
And lie down in dainty slumber,
Wrapp'd in skin of shaggy bear—
Rear the hut amid the forest,
Skim the wave in light canoe?
Ah, I see! you do not like it.
Then, if these old ways won't do,
Keep in step!

Be assured, good Master Standstill,
All-wise Providence designed
Aspiration and progression
For the yearning human mind.
Generations left their blessings
In the relics of their skill;
Generations yet are longing
For a greater glory still;
And the shades of our forefathers
Are not jealous of our deed—
We but follow where they beckon,
We but go where they do lead!
Keep in step!

One detachment of our army
May encamp upon the hill,
While another, in the valley,
May enjoy "its own sweet will;"
This may answer to one watchword,
That may echo to another,
But in unity and concord,
They discern that each is brother.
Breast to breast, they're marching onward,
In a good, now peaceful way;
You'll be jostled if you hinder,
So don't offer let or stay.
Keep in step!

CHARITY.

An essay on charity seems at first sight unnecessary,—as all, the highest as well as the lowest, admit the efficacy of the noble virtue. But as poverty is of ancient, nay, divine origin, so is true charity the one great means of its alleviation. All men are brethren. Some are placed high in the world's estimation, have riches abundantly, and are honoured of all men; others are subject to distress and direst poverty, and sink beneath a load of misery and self-abasement; but the conduct on of the first in no wise renders them independent of the last, but rather forms a bond of union between them—"Inasmuch as ye do it unto one of the least of these my brethren, ye do it unto me."

In the engraving we have charity personified under the figure of a virgin. With one hand she is leading forward a sick woman, and with the other she is relieving an aged mendicant. On her countenance is seen an expression of mild and soft compassion, and in her whole person there is that "sweet divinity of goodness" which bespeaks a virtuous mind. Truly the grace of beauty adds something to the kind offices in which she is engaged. But it is not always in the bestowal of money that practical charity is seen. It consists also in the kind look, the sympathising word, the gentle pressure of the hand, the ingenuous emotion, the delicate recognition of even the prejudices and faults of the recipients of our bounty. Charity, says the poet, is twice blessed; it blesses those who give and those who receive. But we must be careful, in bestowing our alms, that we degrade not its receivers. Their self-respect must not be lessened by the manner of our giving; nor must we, on the other hand, dishonour ourselves by any unworthy suspicions, any reluctant withholding of sympathy, any commonplace remarks which might be thought likely to wound, in ever so slight a degree, the feelings, or even the prejudices, of the objects of our benevolence. True charity vaunteth not itself. It seeketh out and relieveth distress without unnecessary parade or many words. It goeth not into the dwellings of poverty or the haunts of crime in a court garment. It putteth not its name in subscription lists, or publisheth its virtues in the columns of a newspaper. It writeth not itself good or gracious on other tablets than the hearts of the poor and lowly. It crieth not out in the highway, or maketh much of its doings in the family. It putteth not gold into the plate when the bishop preacheth, and stayeth not away from God's house because of the poverty of the congregation. But this it doth—it offereth the other cheek to the smiter, rather than

CHARITY. A BAS-RELIEF BY VICTOR VILAIN.

smite again; it giveth to every man that asketh; it prayeth for them that despitefully use it; it loveth its enemies, and doeth good to them that hate it; it giveth them who have taken away the coat, the cloak also; it speaketh well of all men, and it suffereth long and is kind; it weepeth with them that weep, and rejoiceth with them that rejoice; it rendereth not evil for evil; it blesseth where it expecteth not blessing in return; it is merciful and slow to anger; it judgeth not, condemneth not, and doeth unto all men as it would be done unto—"for the same measure that ye mete withal, it shall be measured to you again. . . . Love ye your enemies, and do good, and lend, hoping for nothing again, and your reward shall be great. . . . Give, and it shall be given unto you; good measure pressed down, shaken together, and running over."

P.

HONESTY AND INDUSTRY;

A NARRATIVE FOR THE YOUNG.

Some years ago, a poor boy about ten years old, entered the warehouse of a rich merchant in Dantzic, named Samuel Richter, and asked the bookkeeper for alms. The man did not raise his head from his hand, but grumbled out, "You will get nothing here, be off!" Weeping bitterly, the boy glided towards the door, at the moment that Richter entered. "What is the matter here?" he asked, turning to the bookkeeper. The man scarcely looked up from his work, but answered "A worthless beggar-boy!"

In the meantime, Richter looked towards the boy, and observed, that when close to the door, he picked up something from the ground. "Ah, my little lad," said he, what is that you picked up?" The weeping boy turned and showed him a needle. "And what will you do with that?" asked the merchant. "My jacket has holes in it," was the answer, "I will sew up the big ones."

Richter was pleased with this reply, and still more with the boy's innocent, handsome face. He said, therefore, in a kind, though serious tone, "But are you not ashamed, you so young and so hearty, to beg? Cannot you work?"

"Ah, my dear sir," replied the boy, "I do not know how I am too little yet to thrash, or to fell wood My father died three weeks ago, and my poor mother and my little brothers have eaten nothing these two days. Then I ran out in anguish, and begged for alms. But, alas! a single peasant only gave me a piece of bread yesterday; since then, I have not eaten a morsel."

It is quite customary for those who make a trade of begging to contrive tales like this, and this hardens many hearts against the claims of general want. But the merchant trusted the boy's honest-looking face. He thrust his hand into his pocket, drew forth a piece of money, and said, "There is a shilling, go to the bakers, and with half the money buy bread for yourself, your mother, and your brothers, but bring back the other half to me." The boy took the money and ran joyfully away.

"Well," said the surley bookkeeper, "he will laugh in his sleeve, and never come back again."—"Who knows?" replied Richter. As he spoke, he saw the boy returning, running quickly, with a large loaf of brown bread in one hand, and some money in the other. "There, good sir," he cried, almost breathless, "there is the rest of the money" Then, feeling very hungry, he begged for a knife, to cut off a piece of the bread The bookkeeper reached him in silence, his pocket-knife. The lad cut off a piece in great haste, and was about to eat it But suddenly, he bethought himself, laid the bread aside, and folding his hands, uttered a silent prayer, and then fell to his meal with a hearty appetite

The merchant was moved by the boy's unaffected conduct He inquired after his family and home, and learned from his simple narrative that his father had lived in a village, about four miles distant from Dantzic, where he owned a small house and farm. But his house had been burned to the ground, and much sickness in his family had compelled him to sell his farm He had then hired himself out to a rich neighbour, but before three weeks were at an end, he died, broken down by cold and excessive toil. And now his mother, whom sorrow had thrown upon a bed of sickness, was, with her four young children, suffering the bitterest poverty. He, the eldest, had resolved to seek for assistance, and had gone, at first, from village to village, then had struck into the highroad, and, at last, having begged everywhere in vain, had come to Dantzic.

Richter's heart was touched. He had but one child, and this boy appeared to him as a draft at first sight, which Providence had drawn upon him as a test of [illegible] "Listen, my boy," he began; "have you ever [illegible]—"Oh, yes! I have, indeed," cried the boy "I have read the catechism already; and I should know a good deal more, but at home I had always my little brother to carry, for my mother was sick in bed."

The merchant at once formed his resolution "Well, then, said he, "if you are good, honest, and industrious, I will take care of you. You shall learn, have meat, drink, and clothing, and in time, earn something besides. Then you can support your mother and your brothers." The boy's eyes flashed with joy. But in a moment he cast them again to the ground, and said sadly, "My mother all this while has nothing to eat." At this moment, as if sent by Providence, an inhabitant of the boy's native village entered Richter's house. The man confirmed the lad's story, and willingly consented to carry the mother tidings of her son William, and some food, and a small sum of money from the merchant. At the same time, Richter directed his bookkeeper to write a letter to the pastor of the village, commending the widow to his care, with an additional sum enclosed for the poor family, and promising further assistance.

As soon as this was done, Richter at once furnished the boy with decent clothes, and at noon led him to his wife, informing her of little William's story, and of the plan which he had formed for him. The good woman readily promised her best assistance in the matter, and she faithfully kept her word.

During the next four years young William attended the schools of the great commercial city. His faithful foster-father then took him into his counting-house, in order to educate him for business. Here, at the desk as well as on the school-form, the ripening youth distinguished himself, not only by his natural capacity, but by the faithful industry with which he exercised it. With all this, he retained his native innocence and simplicity He regularly sent half his weekly allowance to his mother, until she died, after having survived two of his brothers. She had passed the last years of her life not in want, it is true, but, by the aid of the kind Richter and her faithful son, in a condition above want.

After the death of his beloved mother, there was no dear friend left to William in the world, except his benefactor. Out of love for him, he became an active, zealous merchant. He began by applying the superfluity of his allowance, which he could now dispose of at his pleasure, to a trade in Hamburg guilds. When by care and prudence he had gained between twenty and thirty pounds, he found that in his native village there was a considerable quantity of good hemp and flax, which was to be had at a reasonable price He asked his foster-father to advance him forty pounds, which Richter did, with great readiness. The business prospered so well, that, in the third year of his clerkship William had acquired the sum of one hundred pounds. Without giving up his trade in flax, he trafficked also in linen goods, and the two combined made him, in a couple of years, about two hundred pounds richer. This happened during the appointed five years of clerkship. At the end of this period William continued to serve his benefactor five years more with industry, skill, and fidelity. Then he took the place of the bookkeeper, who died about that time, and three years after he was taken by Richter as a partner into his business, with a third part of the profits.

But it was not the will of Providence that this pleasant [illegible] be of long duration. An insidious disease [illegible] a bed of sickness, and kept him for two years confined to his couch. All that love and gratitude could suggest William did to repay his benefactor's kindness. Redoubling his exertions, he became the soul of the whole business, and still he watched long nights at the old man's bedside, with his grieving wife, until, in the sixty-fifth year of his life, Richter closed his eyes in death. Before his decease, he placed the hands of his only daughter, a sweet girl of two-and-twenty years, in those of his beloved foster-son. He had long looked upon them both as his children. They understood him; they loved each other, and in silence, yet affectionately and earnestly, they solemnised their betrothal at the bedside of their dying father.

About ten years after Richter's death, the house of William Rime, "late Samuel Richter," was one of the most respectable in all Dantzic It owned three large ships, employed in navigating the Baltic and North Seas, and the care of Providence seemed to watch especially over the interests of their worthy owner. He honoured his mother-in-law like a son, and cherished her declining age with the tenderest affection, until, in her seventy-second year, she died in his arms.

As his own marriage proved childless, he took the eldest son of each of his two remaining brothers, now substantial farmers, into his house, and destined them to be his heirs. But, in order to confirm them in their humility, he often showed them the needle which had proved such a source of blessing to him, and bequeathed it, as a perpetual legacy, to the eldest son in the family.

It is but a few years since this child of poverty, honest industry, and sincere gratitude, passed in peace from this world

COAL AND CIVILISATION.

The following particulars respecting the history of coal may not be uninteresting It is a pleasant, cheerful thing, to sit by the fireside in the cold winter time, and watch the glowing coal, and huge black rocky lumps, and tongues of flame that waver and dance, as the smoke in many fanciful forms rolls up the wide chimney, and it is well to know that men in the olden time have experienced the worth of coal, and had the same enjoyment that we now have Coal was undoubtedly known to Theophrastus and Pliny, and from a very early period amongst the Britons. Nevertheless, for long after it was but little valued or appreciated, turf and wood being the common articles of consumption throughout the country. About the middle of the ninth century, a grant of land was made by the Abbey of Peterborough, under the restriction of certain payments in kind to the monastery, among which are specified sixty carts of wood, and as showing their comparative worth, only twelve carts of pit coal. Towards the end of the thirteenth century, Newcastle is said to have traded in the article, and by a charter of Henry III, of date 1234, a licence is granted to the burgesses to dig for the mineral About this period, coals, for the first time, began to be imported into London, but were made use of only by smiths, brewers, dyers, and other artisans, when, in consequence of the smoke being regarded as very injurious to the public health, parliament petitioned the king, Edward I, to prohibit the burning of coal on the ground of being an intolerable nuisance A proclamation was granted, conformable to the prayer of the petition and the most severe imperatorial measures were adopted to restrict or altogether abolish the use of the combustible, by fine, imprisonment, and destruction of the furnaces and workshops! They were again brought into common use in the time of Charles I, and have continued to increase steadily with the extension of the arts and manufactures, and the advancing tide of population, till now, in the metropolis and suburbs, coals are annually consumed to the amount of about three millions of tons.

The use of coal in Scotland seems to be connected with the rise of the monasteries, institutions which were admirably suited to the times, the conservators of learning, and pioneers of art and industry all over Europe, and in whose most rigorous exactions [illegible] be traced of a judicious and enlightened concern for the general improvement of the country. Under the regime of monastic rule at Dunfermline, coals were worked in the year 1291—at Dysart, and other places along the coast, about half a century later—and, generally, in the fourteenth and fifteenth centuries the inhabitants were assessed in coals to churches and chapels, which, after the Reformation, have still continued to be paid in many parishes Boethius records that in his time, the inhabitants of Fife and the Lothians dug "a black stone" which, when kindled, gave out a heat sufficient to melt iron How long will the coal-metals of the British Isles last at the present, or even an increased expenditure of fuel? So great has been the discrepancy, and so little understood the data on which to form a calculation, that the authorities variously estimate from two hundred to two thousand years For home consumption the present rate is about thirty-two millions of tons annually. The export is about six millions; and yet such is the enormous mass of this combustible enclosed in one field alone, that no boundary can be fixed, even the most remote, for its exhaustion. The coal trade of Great Britain is not only in proportion of three to two of that of all the other nations of the world, while in superficial area her coal measures are to those of the United States only as 11,859 square miles to 133,132 square miles

What a vision of the future is [illegible] If rightly employed, if the arts and progressive development of society at all keep pace with the means now [illegible] the human race in the New world have a destiny to run and a work of civilisation to accomplish, to which the Old in its brightest achievements can furnish but a faint analogy Scarcely two centuries have elapsed since coal was employed as an article of domestic use, or introduced upon the most limited scale into the manufactures, its now ascertained extent and boundless latent powers were not dreamt of or imagined even but half a century ago, and very recently the lamentation was general, that no coal measures existed in the mighty continent of America. Who now can fancy a limit to the social movement with which that vast hemisphere is heaving all over—the advancing tide of its population spreading in every region—the forest cleared and covered with a network of railways, the rivers bridged from end to end with a navy of steam-ships—and all vivified and in motion through the agency of this long undiscovered product of the earth? Geological time rolled on, and the surface of our planet was replenished with the hidden treasure, and the man of science has no numbers to reckon the years that are past.

Sawdust Sugar.—In an article in the "Illustrated Exhibitor," entitled a "Visit to a Sugar Refinery," it is said that sugar may be extracted from various substances, and among them sawdust! A correspondent seems to doubt that fact; and for his benefit we append the following —Bracconot, some years since, pointed out the very remarkable fact that sawdust and linen could be converted into grape sugar, and that from a pound of these substances more than a pound of sugar could be produced. The process is as follows: wood, or linen, or paper, are left to imbibe their own weight of oil of vitriol, eventually the whole is converted into a viscid mass, care must be taken that it does not become too hot. This mass being diluted with water is boiled for some hours, the liquor is filtered, the acid removed by chalk, and the sugar crystallised out after evaporation One hundred pounds of sawdust will yield, by this treatment, one hundred and fifteen pounds of sugar, the same quantity of starch may be converted, by a similar operation, into one hundred and six pounds of saccharine matter These substances only differ chemically from each other by an addition of a small quantity of hydrogen and oxygen, the elements of water, to the latter The quantity of carbon remains through all the same, but the proportions of the two gaseous elements are increased by the process described.

LITERARY NOTICES.

Education in the German Language, through the Medium of the Popular Educator.—"The Popular Educator," No 11, bearing date June 15th, will contain the first of a series of familiar Lessons in German This course will impart a thorough acquaintance with the Language, and—together with the Lessons already commenced on the Literature and Grammar of the English Language, Lessons in French and Latin—render the "Popular Educator" the most complete Educational Work which has ever appeared Besides instruction in the above [illegible] Natural History, Biography, Geography, Arithmetic, Music, History, &c To meet the urgent wishes of numerous Families and Individuals, an *Extra Edition* is now issued, upon superior paper, the price of which is 1½d per Number, or Monthly Parts, containing four Numbers in a neat wrapper, 7d, or when five Numbers, 8½d The Extra Edition is published without the weekly headings Two Parts are now ready; Part I, price 7d, Part II, price 8½d

Lives and Works of the Painters of all Nations.—On July the 1st, John Cassell will publish the first part of a magnificent work, in imperial quarto, under the above title, containing a portrait of Murillo, and seven specimens of his choicest works including the "Conception of the Virgin," lately in the collection of Marshal Soult, and recently purchased by the French Government for the Gallery of the Louvre, for the sum of £23,440 The parts will appear on the first of every month at 9d each, and will be supplied through every booksellers in town or country

Cassell's Shilling Edition of Euclid.—In consequence of the interest excited among all classes of the readers of the Popular Educator, since the publication of our Lessons in Geometry in that work, John Cassell has determined to issue a Popular Edition of The Elements of Geometry to contain the First Six, and the Eleventh and Twelfth Books of Euclid, from the text of Robert Simson, M.D., Emeritus Professor of Mathematics in the University of Glasgow, with corrections, Annotations and Exercises, by Robert Wallace, A.M, of the same university, and Collegiate Tutor of the University of London This work will be ready the first week in July, price 1s in stiff covers, or 1s 6d neat cloth

Scripture Library for the Young, in Shilling Volumes.—The first two volumes of this attractive series of works, "The Life of Joseph," illustrated with sixteen choice engravings and maps, and "The Tabernacle, its Furniture and Services," with twelve engravings, are now ready The "Life of Moses" is in the press

The Illustrated Exhibitor and Magazine of Art.—The First Volume of this splendidly embellished work, handsomely bound, price 7s 6d, or extra cloth gilt edges, 7s 6d, will be ready July 1, and will contain upwards of Two Hundred Principal Engravings, and an equal number of Minor Engravings, Diagrams, &c

Completion of John Cassell's Library.—This invaluable Work is now complete, in 26 Volumes, 7d. each in paper covers, double Volumes, cloth, 1s 6d, or when 3 Vols in 1, 2s 3d The entire Series may be had, bound in cloth, 19s 6d, or arranged in a Library Box, 25s

The Emigrant's Handbook, a Guide to the Various Fields of Emigration in all Parts of the Globe is now ready, price 6d

The Pathway, a Monthly Religious Magazine, is published on the 1st of every month, price twopence—32 pages enclosed in a neat wrapper. Vols I. and II, neatly bound in cloth and lettered, price 2s. 3d. each, are now ready.

WORK AND WAIT.

THIS the watchword heaven hath, o'er thee,
Writ in living lines of glory * *
On its golden gate—
Burthen of each hero story—
Work and wait.

Work in spirit-gloom or gladness,
Youthful sunshine, age's sadness,
Wait the wish'd reward,
Though it mock thy soul to madness,
Long deferr'd.

Ye who Cain's hard curse inherit—
Fruitless toil—Faith bids ye bear it,
As to blessing turn'd—
Blessing boundless for the spirit,
Labour-earn'd

Thou to whom much good is given,
Thou that ne'er with want hast striven
In sad sorrow's mart,
Still must in the work of heaven
Bear a part

Go, with love and gentle speaking,
Bind the hearts of brethren breaking,
Lost thou blighted be
By the reaper vainly seeking
Fruit from thee! FRITZ.

A FORTIGNER'S OPINION OF ENGLAND —The father of Madlle Wagner, in writing to a friend on the subject of his daughter's engagement, coolly says—"England is only to be valued for the sake of her money."

MADAME MALIBRAN'S MODPL.—In her teens, this well-known lady had a cracked, inflexible voice Out of such unpromising materials was made the great singer She took as her model the tone of musical glasses, and became so expert an imitator, that she often deceived her friends by pretending to rub the glass, and giving the music with her voice.

CLEARINGTHS FOREST —Fourteen thousand oak timber trees, standing in Hainault Forest, have recently been sold by order of the government.

A NEW OLD FRESCO —A package has been forwarded to this country from Leghorn, containing a fresco painting by Julio Romano, and sent to England by Lord Overstone, for deposit in the National Gallery. It is understood to be a very splendid work of art

THE WINGS OF THE WIND.—It is calculated that within the last six months upwards of 1,000 miles of telegraphic wire have been strung up by the Electric Telegraph Company in carrying to completion the telegraphic communication of the country.

BROUGHAM v. BROUGHAM. — A newspaper tradition says that Barnes (editor of the *Times*) went one day to Brougham, then Chancellor, and, waiting for him in his private room at the Court, took up the *Morning Chronicle*, in which there was that morning a denunciation of an article Brougham had the day before written in the *Times*. Barnes suspected the authorship from the style, and when the legal dignitary left the judgment-seat to speak to the editor, the latter saluted the Chancellor with, "Well, this is almost too bad to demolish yourself in this way!" Brougham was taken aback Barnes saw at once that the random guess was a hit, pursued his advantage, followed up the attack, and Brougham *admitted that he was the writer of the reply to his own onslaught.*

ANSWERS TO CORRESPONDENTS.

R B. FORD and others have written to us for advice as to how they may profitably employ their leisure, so as to provide themselves with a little money for books, &c. Now this is a question that hundreds in London would like satisfactorily answered. Many young men are thirsting for knowledge, but are without the means wherewith to purchase books. One writes to say that the mechanics' institution of his town does not possess the kind of works he requires; another that he finds a difficulty in procuring books of a sufficiently elementary character; and, again another, that the books of the only library in the village are all either too trifling or too antiquated. How can we reconcile all these opposites—how advise where we know nothing of the particular circumstances of our correspondents?

A CORRESPONDENT from Broomsgrove wishes to know how false teeth are fixed in the jaw. Various plans have been adopted, but we believe the two most usual are by means of a piece of gold wire attached to the adjoining teeth, or by what is called capillary attraction. In the latter plan the set of false teeth is so nicely adjusted to the gums, that, when placed in the mouth, a slight suck exhausts the air between the teeth and the gums, and so keeps the teeth in their places

A. B —Apply to the authorities of the Colonial Office, enclosing your address on a stamped envelope for an answer This plan would also ensure AN INQUIRER a reply to his question.

A CONSTANT READER should apply to the Orthopœdic Institution Lord John Russell's private residence is at Chesham-place, Belgrave-square.

SEVERAL CORRESPONDENTS have written to us on the subject of emigration For information with regard to the rates of passage, modes of transport in the colonies, &c &c, we commend them to "The Emigrant's Handbook," issued from this office, in which will be found all needful advice.

C A B.—We advise you to learn German, mathematics, or one of the abstruse sciences. If you commence a course of strict self-discipline *at once*, and determine to follow it out, there is little fear of a happy result. Send us your address.

CHILLPS —The lines about which you inquire, beginning with "Delightful task! to rear the tender thought," are in *Thomson's Seasons*, near the end of his "Spring."

IGNOTUS —"The boiling-point" varies considerably, according to the nature of the fluid. The boiling-point of water is about 212 degrees by Fahrenheit's thermometer, but it may be raised considerably above that by the addition of saline matter. The boiling-point of nitre is 238°, that of the acetate of soda, about 256°. In perfectly pure and smooth glass-vessels, water may be heated to 221° without boiling.

CARLO.—You should write to Her Majesty's Colonial Land and Emigration Commissioners, Park-street, Westminster. The qualifications for a free passage out are—being under 30 years of age, being married, and having a good knowledge of agricultural and other farming operations.

R S. T.—The distance from Sydney to Bathurst is about 130 miles; from Sidney to Port Philip, about 500 by land. You had better get *Cassell's Emigrant's Handbook*, just published.

M. Y. (Halifax).—You have not stated whether the *warts* you wish to cure are hard or soft. *Hard* warts may be removed by the daily use of a little nitrate of silver, or nitric or acetic acid. Dip a thin slip of wood in the fluid, and apply it to the wart. The nitrate will produce a black stain, and the nitric and a yellow one; but this will wear off in a few days. What are called "*soft* warts," may be removed by the daily use of Gowland's lotion. The milky juice of the spurge plant was recommended in a recent Number, but that being a highly poisonous fluid, it had better not be used, besides, it cannot easily be obtained.

A TRAVELLER.—You complain, in common, we believe, with hundreds, that you cannot read with any comfort when travelling in a railway or other swift conveyance Try the following plan —Place a card or a slip of paper over the line below the one you are about to read. Your eye will then be free from the disturbance caused by the motion of the carriage, and if you then read with comfort, thank us for the hint, and publish it for the benefit of others.

MARY W.—Yes; you are entitled to a month's notice, or a month's wages instead thereof, unless you have done any thing which may render your *immediate* dismissal an act of necessity and justice.

A NERDY MAN.—You had better write to Mr. Walcott, the secretary to the Colonial Land Emigration Commissioners, Park-street, Westminster. In the mean time, we may state that the most eligible classes of emigrants are agricultural labourers, shepherds, herdsmen, or women of the labouring class. These are taken, to the age of 45, at £1 per head; between 45 and 50 at £5 per head; and between 50 and 60 at £11 per head. The next best class are married mechanics and artisans, and these, with their wives, are taken, up to 45, at £2; between 50 and 60, £14 Children of both these classes, under 14, at 10s. per head. Families with more than four children under twelve years of age are ineligible. Single men are taken out at £5 per head.

C. PERKINS.—The word "*iconoclast*" is formed from two Greek words, *eikon*, an image, and *klao*, to break. It is a name given to the Greek emperors, or dignitaries of the Greek Church, who broke the images in order to put a stop to the idolatrous practice of worshipping them. The old golden coin, value 21s, was called a *guinea*, because the first that were struck were of gold from Guinea, in Africa, but the term, "guinea gold," now means gold equal in value to that of which guineas are made, or, in other words, *sterling* gold.

PADDINGTON —Your friend has misinformed you According to the most recent return, the number of hackney carriages, including cabriolets, working by licence in the metropolitan districts, was rather more than 3,800.

R. M'INTOSH.—We hope to give you, and many more, full particulars respecting the cheap issue of boxes of colours, and cases of mathematical instruments in the course of a few days.

W. R. R. may be assured upon competent authority that the liquors he enumerates are by no means necessary for "women giving suck." A host of medical practitioners have declared that the use of such liquors is highly injurious both to the mother and the babe They recommend, in lieu thereof, broths, gruel, milk, and tea. The same remarks will apply to the other class of persons of whom you speak,—namely, "those who are weak and low, or who are slowly recovering from illness"

"WHY AND WHEREFORE" will find that we have attended to his remarks, in the answer given above to M. Y., of Halifax.

A DRAUGHTSMAN.—We decline stating "the features of Mr. Herdman's new theory of vision in relation to perspective," because after he had delivered his lecture upon it, the accuracy of his views was much questioned by many scientific gentlemen present.

J. F. N.—You had bettur write to Mrs. Wedlake of Fenchurch-street, London, who has generally a number of thrashing machines and other agricultural implements on sale.

A MECHANIC.—The present market price of silver is 4s. 11½.

MARY.—Never mind a few "freckles;" the use of cosmetics are, in most cases, dangerous.

R. MANSFIELD.—Covers in which to bind the New Series of the *Working Man's Friend*, may be had at 1s. each at our Office, or through any Bookseller.

X.—The "Arches Court" is the chief and most ancient consistory court, belonging to the Archbishop of Canterbury, for the debating of what are termed spiritual causes. It derives its name from the Church of St. Mary-le-Bow (*de arcubus*), where it was formerly held. "*Qui tam actions*" are actions brought by common informers. They are so called, because in the form in which they are conceived, the prosecutor declares that he prosecutes "as well for our sovereign lord the king as for himself" ("*tam pro domino rege quam pro seipso*"). Where information is given of offences committed against penal acts of parliament, the informer is usually entitled to one moiety of the penalty, while the other goes to the crown, and this gives the informer a right to sue the party offending for his share of the penalty.

All Communications to be addressed to the Editor, at the, Office, 335, Strand, London.

Printed and Published by JOHN CASSELL, 335, Strand, London —June 12, 1852.

THE LAKE OF COMO.

EVERYTHING connected with Italy is interesting. Books have been written, almost without number, songs have been improvised to all kinds of melodies, and enthusiasm has been "got up" in the minds of travellers to an unprecedented extent, when the "classic land" has been the theme, and yet the interest with which every new book, or picture, or song, or story is hailed, has by no means diminished. True that some is pleasant to read of Rome "the Eternal City," Naples, Florence, Milan, Venice,—even though the glory has departed from them all. The very names of the cities, lakes, mountains, have a sweet music in them; and scarcely a spot in the peninsula but has its legends and true histories.

How often has the route from France to Italy been described! When the great Hannibal made the passage of the Alps in

VIEW OF THE LAKE OF COMO.

f the books and some of the pictures might as well not have een written or painted,—the books telling little more than here good dinners are to be obtained, and where bad ones re to be avoided; and the pictures, some of them, giving nerely the conventional and ideal features of the land of vines nd olives. Nevertheless, and in spite of these drawbacks, it nineteen days, he thought, and justly too, that he had performed a mighty feat; in one day, thanks to Napoleon's ambition, the hundred miles from Nice to Genoa are travelled with little difficulty; sometimes through Alpine passes and over roads cut in the sides of mountains, and across bridges, and through valleys, and again over mountains and rocks, and

projecting headlands, at an elevation of a thousand feet above the sea.—but more often by the coast road opened about twenty years ago. Both paths, however, are crowded with beautiful scenery and romantic associations.

On leaving Nice, the traveller takes a road which winds round the base of several hills for three or four miles inland. Thence, at an elevation of some fifteen hundred feet, the sea comes into view, and beneath him lies the harbour of Villa Franca. On through villages, thickly set with olives and vineyards, like nests, to Genoa. Here by way of Spezzia and Sarzana, the last town in the Genoese territories, to Lucca, and thence through the little river Luna, which crosses it, into the Apennines, and through the duchy of Parma to Lombardy. Pisa and Leghorn, and Piombino, and Orbitello, beautiful marine villas—and on the sea shore, and we are on the road to Rome. Rome the dream of artists and scholars, Rome decayed, fallen, Rome the once mistress of the world—fallen, prostrate, but crowned, but still glorious Rome! Still our eyes are on Naples, Vesuvius, Sicily, Calabria, Capua, Rome, Venice, for these few lines, we may not reach our journey's end, but have yet to reach our destination, and take Genoa, Milan, by way of Padua and Mantua, and Brescia, Verona, and Milan,—every step of our journey crowded with objects on the path, and stand at length upon the wooded summit of Isola Bella, down upon the still waters of the noble lake

> Like a sea,
> Flung about cradled by the hills,
> Catching the evening sun, both ends
> In many a wandering bay and cape and horn

The lake of Como, or Lario, as the ancient name is situated in the Milanese district of Austrian Italy. It is about twenty seven miles in length from north to south, by about three miles wide, and is divided into two branches, at the end of one stands the city of Como, and on the other the town of Lecco. Indeed the lower end of the lake near Bellagio, is often called the lake of Lecco, —

> "Sweet is it to behold on every side
> The crystal flood divide,
> Making an isle of every cape and bay,
> And watch the soft clear light with which the green
> Now seen, now lost
> Like fire-flies glancing, through the boughs is gleam,
> As the winds the covert move."

The city of Como, though rather out of the track of the ordinary tourist, is well worth visiting for its own account of the cool purity of its atmosphere and its associations which every travelled scholar will comprise as having been the birthplace of the younger Pliny, a statue of whom may yet be seen in the wall of one of the churches, bearing a Latin inscription, and the Duomo is one of the most ancient cities of Italy, having been founded by the Gauls under Brennus. It is surrounded by walls which fully stand out on the shore of the lake. These are guarded, every here and there, by picturesque towers, which, since the Austrian keep such strict watch and ward over the Lombard-Venetian kingdom, may, though mostly ruinous, be still brought into use. Of course Como, like every other French, German, or Italian town, has its old castle and its ruined cathedral, but it has besides a flourishing trade in silk and cotton, a good quarry of the true white marble, and many new which are, clean, and handsome houses. The scenery on the borders of the lake is at once grand and beautiful. It is enclosed between hills of noble appearance, clothed with vines and olives nearly to their summits. Our engraving shows one of the numerous villages, which are to be found on the shores of the lake. Protected by the mountains behind, numerous pretty villas are built almost to the water's edge; and such is the salubrity of the climate, that vines, almond, and chestnut trees appear as though they were in an almost constant state of blossom. The Lake of Como, like most of the lakes of Italy, is famous for the purity of its waters, the beauty of its surrounding scenery, the gaiety of its boatmen, and the indescribable charm of the soft clear blue skies which mirror themselves in its translucent depths. On summer evenings it is no uncommon thing to see the greater part of the inhabitants of the villas on its banks, afloat in all kinds of strange picturesque little vessels. At such times it is pleasant to hear the songs of the various parties trolled forth through the cool air. Bulwer, in one of his most popular novels, gives us a specimen of these boat-songs of the Lago di Como:—

> "The beautiful clime!—the clime of love!
> Thou beautiful Italy!
> Like a mother's eyes the earnest skies,
> Ever have smiles for thee!
>
> The beautiful lake, the Lunan lake!
> Soft like like a silver sea,
> The huntress queen, with her nymphs of sheen,
> Never had bath like thee!
>
> See, the Lady of Night, and her maids of light
> Ever now are mid-deep in thee
>
> Beautiful child of the lovely hills,
> Ever bliss may thy slumbers be!
> No murmur should tread by thy dreamy bed,
> No life bring a care to thee,
> Nor sorrow the bed let the mourner tread,
> [illegible] thee!"

In songs like these, the wanderers and dwellers by the still calm waters may dream away their lives undisturbed by the bustle of the outer world of cities, and, with heart awakened to the "mystery of sweet sounds," and with souls attuned to the melodies of nature, exclaim with Shakspeare —

> "Here will we sit, and let the sounds of music
> Creep in our ears,—soft stillness of the night,
> Become the touches of sweet harmony."

SILESIAN NATIONAL EXHIBITION

The success which last year attended the Great Exhibition of all Nations has induced the people of other countries to get up exhibitions of their own, and thus the "world idea," as the Germans call it, is making the circuit of the globe. In Paris, New York, Cork, and other places, the notes of preparation are already sounding, but it remained for the Germans in Breslau, a remote city in Prussia, almost on the confines of the German language, to be the first to follow the example of Great Britain. On the 27th of May, the National Silesian Exhibition was opened with all necessary pomp and ceremony. Of course our readers will have acquainted themselves, through the medium of the newspapers, with the particulars of the building, which is of wood, with a glazed roof, the character of the objects exhibited, embracing specimens of all the fabrics peculiar to the country, from iron ore to ladies' dresses, woollens, and toys, —the difficulties experienced by the [illegible] in getting the exhibitors to patronise it before the last moment, and the present success and unanimous approval it has finally met with at the hands of the German people. On these subjects we cannot enlarge, from the simple fact of our Friend being date so long after the occurrence has taken place; but on the influence of such peaceful demonstrations we may write just one sentence, and it is this:—A better knowledge of a people, a more comprehensive idea of their resources in art and manufacture, a more vivid picture of their national and domestic peculiarities, and a more perfect acquaintance and intelligent appreciation of what they are capable of producing, may be obtained by a single day's careful inspection of their National Bazaar than could be arrived at by a whole life of reading, without the advantage of a personal visit to the country.

THE NATIONAL EXHIBITION AT CORK.

Before this number reaches the hand of the reader, the National Exhibition at Cork, in Ireland, will have been opened. Arising out of the Great Exhibition of last year, our friends on the other side of the Irish Sea will have the benefit of a long and valuable experience in the arrangement of the articles to be exhibited, and in the conduct of the minutiæ necessary to be observed. To enable as large a number of persons as possible to be present on this interesting occasion, the Chester and Holyhead Railroad have adopted a scale of charges which will enable tourists to visit the sister isle at a most economical rate. Tickets for one month have been issued, which will frank visitors from London, Birming-

ham, Liverpool, Edinburgh, and the northern towns, to Ireland and back, allowing them to stop as long as they please at any point of their progress. Thus thousands, besides gratifying their taste at the National Exhibition at Cork, will have an opportunity of examining the Giant's Causeway, the Lakes of Killarney, the cities of Dublin, Belfast, and other interesting spots in the beautiful island.

We understand that the greatest enthusiasm exists in Ireland with regard to this National Industrial Exhibition, and we doubt not but that, while we are recording its commencement, we are also hailing the advent of a better day for that unfortunate and misgoverned country. With the submarine telegraph in action at Galway, and the Peace Bazaar crowded at Cork, we think we may congratulate our Irish brethren on a *settled peace* among the nations.

LOOK UP!

BY JOHN CRICHLEY PRINCE.

"Look up!" cried the seaman, with nerves like steel,
As skyward his glance he cast,
And beheld his own son grow giddy, and reel
On the point of the topmast,
"Look up!" and the bold boy little knew,
And hard he'd his brief glances -
Slid down at once from his perilous place,
And leapt in his father's arms.

"Look up!" we cry to the cowed—oppressed,
Who see no hope all contest suit,
They had best look up to the mountain crest
Than down to the precipice foot,
The one offers heights they may hope to gain—
Pure ether and freedom, and room,
The other bewilders the aching brain
With roughness, and danger, and gloom.

"Look up!" to sick souls, by affliction bent,
Not daily with dull despair,
Look up, and be faith to the firmament,
For heav'n and mercy are there
The frail flower droops in the storms shower,
And the shadows of needful night,
But it looks to the sun in the after-hour,
And takes full measure of light.

"Look up!" sad man, by adverses brought
From high unto low estate,
Play not with the bane of corrosive thought
Nor murmur at chance and fate,
Renew thy hopes, look the world in the face,
For it helps not those who repine,
Press on, and its voice will amend thy pace,—
Succeed, and its homage is thine.

"Look up!" great crowd, who are foremost set
In the chargeful "Battle of Life,"
Some days of calm may reward ye yet
For ye are of allotted strife
Look up, and *beyond* there's a guerdon there
For the humble and pure of heart,
Fruition of joys, unalloyed by care,
Of peace that can never depart.

"Look up!" large spirit, by Heaven inspired,—
Thou rare and expansive soul!
Look up, with endeavour and zeal untired,
And strive for the loftiest goal
Look up, and encourage the kindred throng
Who toil up the slopes behind,
To follow, and hail, with triumphant song,
The holier regions of mind!

POETRY AND PROSE.—One day in spring Sir Walter Scott and Lady Scott strolled forth to enjoy a walk around Abbotsford. In their wanderings they crossed a field where a number of ewes were enduring the frolic of their lambs.—"Ah," exclaimed Sir Walter, "'tis no wonder that poets, from the earliest ages, have made the lamb the emblem of peace and innocence!" "They are, indeed, delightful little animals," returned her ladyship, "especially with mint sauce!"

THE HEADS OF THE WORLD IN 1862.

THE following is the most complete list of the governing powers of the world which has hitherto appeared —

State.	Name.	Title.
Anhalt-Benburgh	.. Alexander ..	.. Duke
Anhalt-Cothan ..	.. Augusta	.. Duchy
Anhalt-Dessau ..	.. Leopold	.. Duke
Austria	.. Francis Joseph I	.. Emperor
Baden	.. Chas. Leopold Frederick	Grand Duke
Bavaria	.. Maximilian II ..	.. King
Belgium	.. Leopold	.. King
Bolivia	.. General Belzu ..	.. President
Brunswick	.. William	.. Duke
Brazil	.. Pedro II	.. Emperor
Buenos Ayres ..	.. Juan M de Rosas*	.. President
Cabool	.. Dost Mahomed ..	.. Ameer
Chil	.. Manuel Mont ..	.. President
China	.. Hien Fung ..	.. Emperor
Corrientes	.. Benjamin Constant	.. Governor.
Costa Rica	.. Juan Rafael Mora	.. President
Denmark	.. Frederick VII ..	.. King
Dominica	.. B Baez	.. President
Equador	.. General Alvarado	.. President
Egypt	Abbas Pacha ..	.. Viceroy
Entre Rios ..	Justo Jose Urquiza	.. Governor
France	.. Charles L N Bonaparte	President
Great Britain ..	.. Victoria ..	.. Queen
Greece	.. Otho	.. King
Guatimala	.. General Carrera	.. President
Hanover	.. George Frederick	.. King
Hayti	.. Faustin I ..	.. Emperor
Hesse-Cassel ..	.. Frederic William	.. Elector
Hesse-Darmstadt ..	Louis III ..	.. Grand Duke
Hesse-Homburgh ..	Ferdinand ..	.. Landgrave
Holland or Netherlands ..	William III ..	.. King
Honduras	.. Juan Lindo ..	President
Hohenzollern Hechingen	Frederick William	.. Prince
Hohenzollern Sigmaringen	Charles Antony ..	.. Prince
Liberia	Joseph J Roberts	.. President
Lichtenstein ..	Aloys Joseph ..	.. Prince
Lippe Detmold ..	Leopold	.. Prince
Lippe Schaumburg ..	Georg Wilhelm ..	.. Prince
Mecklenburg Strelitz	Frederick Francis	.. Grand Duke
Mecklenburg Schwerin	.. George V ..	.. Grand Duke
Mexico	.. Mariano Arista ..	.. President
Modena and Mercera	Francis V ..	.. Duke
Mosquito	.. Jamico	.. King
Nassau	.. Adolphus ..	.. Duke
New Grenada ..	.. Jose H Lopez ..	.. President
Nicaragua	.. Laureano Pineda	.. Director
Oldenburg	.. Augustus	.. Grand Duke
Paraguay	.. Carl Lopez ..	.. President
Parma	.. Charles Louis ..	.. Duke
Peru	.. Ramon Castilla ..	.. President
Portugal	.. Maria II	.. Queen
Prussia	.. Frederick William IV	.. King
Reuss, Elder Line	.. Henry XX ..	.. Prince
Reuss, Younger Line	.. Henry LXII ..	.. Prince
Russia	.. Nicholas I ..	.. Emperor
San Salvador ..	.. Francis Duenas ..	.. President
Sandwich Islands ..	.. Kamchamcha III	.. King
Sardinia	.. Victor Emanuel ..	.. King
Saxe Altenburg ..	.. Joseph	.. Duke
Saxe Coburg Gotha ..	.. Ernest II ..	.. Duke
Saxe Meiningen ..	.. Bernard	.. Duke
Saxe Weimar	.. Charles Frederick	.. Grand Duke
Saxony	.. Frederick Augustus	.. King
Schwartzburg Rudolstadt	Lewis Gunther	.. Prince
Schwartzburg Sondershausen	Gunther II ..	.. Prince
Society Islands ..	.. Pomare	.. Queen
Spain	.. Isabella II ..	.. Queen
States of the Church	.. Pius IX	.. Pope
Sweden and Norway	.. Oscar I	.. King
Turkey	.. Abdul Medjid ..	.. Sultan
Tuscany	.. Leopold II ..	.. Grand Duke
Two Sicilies ..	.. Ferdinand ..	.. King
United States ..	.. Millard Fillmore	.. President
Uruguay	.. Jo quin Suarez ..	.. President
Venezuela	.. Jose G Monagas ..	.. President
Waldeck	.. George Victor ..	.. Prince
Wurtemburg ..	.. William	.. King

* Since deposed, his successor not known.

RELATION OF MARRIAGE TO GREATNESS.

BY B. B. HINE.

I AM convinced that the rapidity of human progress will greatly depend upon the observance of the laws of marriage. These laws have reference to such an adaptation of husband and wife as will secure their own highest happiness, and the best possible development of their offspring. That much of the physical and mental inequality observed among mankind is due to the mismatching of parents, there cannot be a shadow of doubt. That much of the natural proneness of many to vice and crime is due to the same cause, is equally evident. And that the conditions of the great mental and physical vigour of children are chiefly dependent upon the true adaptation to which we refer, is apparent to all who have given this subject a little attention.

In this I would not rob education and social circumstances of their great importance in occasioning good or bad character; for we believe these can do much to pervert the best natural endowment, or to correct the most unfortunate by birth. But I would have it distinctly understood that a large amount of the woes of life, much of the physical and moral deformity we observe among our fellow-men, as well as of the great inferiority of so large a portion of mankind, can be effectually overcome by a strict regard to the marital relations.

I should not attempt to discuss the whole subject of marriage in this paper, even if I were capable of doing so. My object is merely to give some facts from the history of greatness, which bear upon the question of early marriages. I have frequently seen it asserted, by physiological and phrenological authors, that to marry before the maturity of the parties in physical and mental vigour is a gross indiscretion, if not an unpardonable sin. For, though the parties may be happy through life, yet the consequences upon their children, in giving them feeble constitutions, ill health, and premature graves, are unimaginably deplorable, and should startle all young lovers from their reveries who begin to dream of connubial felicity This may be true, but the inconsiderate reader is little apt to heed a mere assertion, and, with multitudes, *inclination* is sufficient to countermand an undemonstrated proposition.

I have also seen, since beginning this inquiry, the statement that certain of the world's distinguished sons have been the youngest-born of the family. It need not be said that the authority of half-a-dozen such cases, selected from the shining host of renown, have little or no authority, inasmuch as it may be that double the number can be found who were the eldest-born. To make, therefore, an appeal to greatness effectual on this subject, we must begin with the biographical catalogue, and notice all the examples, whether born first, second, third, or last in the progress of the family. Though we have not space to give all the bright examples that can be found, yet I will give all the cases that I have examined, so that the list can be taken as the average of the whole.

We must apologise for the omission of many whose names will readily occur to the reader, but that are not mentioned here, because their biographers have failed to give facts which are of any service in this connexion. It may be here remarked that the lesson of history in this case is, as far as it goes, perfectly reliable, because the historians had no theory to support, nor no prejudice on this subject to pamper, by the concealment of opposing facts, or the undue colouring of those that are favourable. Let us, then, listen to the voice of Nature; for when her dicta are given they are effectual, and should command universal and unqualified obedience. When we find the eldest son distinguished, we shall give such facts as can be found concerning the condition of their parents, tending to explain the vigour of their first child.

LORD BACON was the youngest son by a second marriage. His father was fifty and his mother thirty-two years of age at his birth, which was in 1560.

BENJAMIN FRANKLIN was the youngest son by the second marriage of his father, who was also the youngest son of the youngest son for four generations. He was born in 1706.

SAMUEL JOHNSON was the eldest son, born in 1709. His father was past fifty and his mother past forty years of age at his birth. His father had but one other child, a son, that died at the age of twenty-five. It is proper to remark here that this case seems to be an exception to the law, that children born while their parents are in the decline of life are of inferior mind and body. But the fact is given, that both his parents possessed large and robust bodily powers, and transmitted their physical vigour to the son.

ADAM SMITH, the founder of political science, was an only son, and born in 1723. His father had been originally bred to the law, and afterwards held the office of private secretary to Lord Louden, Secretary of State and Keeper of the Great Seal. He was comptroller of customs, and died a few months before Adam's birth. It is therefore evident, from the stations he had filled, that he was of full middle age at the time of the advent of his illustrious son.

VOLTAIRE, of whom it is said, that "he broke our spiritual chains," and of whom it may be said, that he came near sundering our religious ties, was the younger of two sons, and born in 1694. He was so feeble as an infant, that he was not expected to survive many months, but finally lived to puzzle the world for eighty-five years.

JEAN JAQUES ROUSSEAU, who was the author of that theory of government upon which our fathers based the republic, to wit, the "social compact," and who boasted, when past fifty years of age, that there was no woman of fashion of whom he could not make a conquest, was born in 1712. Mention is made of a brother, seven years older than he, so that he must have been the third or fourth, if not the youngest, son. He was one of the most original philosophers the world ever had, and probably the influence of none was ever greater during his life. And yet his celebrated "Confessions" contain a revelation of folly so extreme, vanity so excessive, and baseness so disgraceful, that it would pass for incredible, if not proved by the book itself.

D'ALEMBERT was an illegitimate and a foundling. He was taken to the hospital, but his father, M. Destouches, who was commissary of artillery, provided for his support as soon as he found what had happened. His mother was sister of Cardinal Toucin, Archbishop of Lyons, and was afterwards known in the circles of Paris as a woman of talents and accomplishments. Soon as she discovered the literary and scientific inclination of her son, she remarked, "Woe to him who depends for subsistence on his pen! The shoemaker is sure of his wages, but the bookmaker is sure of nothing." She was the author of a novel, of which the reviewer said, that it could make the most hardened weep. He was born in 1717, and two years after entering the academy he attained the highest rank of geometricians. He was a disciple of Voltaire. I have been thus particular in this case, not only to show that D'Alembert was not born of young parents, but also that he is an exception to the law that individuals conceived at a time of unhallowed gratification have a predominance of the lower organs, and are rarely more intellectually distinguished. We find his mother was a talented woman, and his father, from the position he held, was a man of no mean mind. Besides, the examples of illegitimates in France are not of so much account as in other countries, where the illicit commerce of the sexes is more disgraceful, and more effectually prevented.

LAVOISIER was born in Paris in 1743; and the fact that his father had become wealthy in the occupation of farmer-general shows that he must have been in middle-life when his notable son was born, and in all probability a younger son.

SIR MATTHEW HALE was the only son of Robert Hale. His father had been educated for the bar, but he abandoned the profession from conscientious scruples, thinking it impossible to practise law consistently with a strict adherence to truth and justice. The conscientious delicacy of his father must have done much for the son, even though he was an early son. The probability is, however, that Sir Matthew Hale was born of middle-aged parents.

GUILFORD, lord keeper of the seal, was the second son.

LORD JEFFRIES was the sixth son.

LORD MANSFIELD was the fourth son, and born in 1704.

SIR WILLIAM BLACKSTONE was the fourth son, and born, after the death of his father, in 1723.

THOMAS ERSKINE was the third an youngest son, and was born in Scotland in 1750.

SIR SAMUEL ROMILLY was the third son that attained the age of maturity, and born in 1757.

WILLIAM PITT was the youngest child, born in 1759, when his father, Lord Chatham, was fifty-one years old.

ALEXANDER HAMILTON was born in 1757, and was the youngest son of his father's second wife.

GEORGE WASHINGTON was the third son, born in 1732, of the second wife of his father, who had had two sons by his first wife.

PATRICK HENRY was the second son, one of nine children, and was born in 1736. His father was the second husband of his mother.

BENJAMIN RUSH, the father of medicine in America, was the eldest son, and born in 1745. His father died when his son was six years of age, the father of but one other child, which renders it probable that he was on the verge of middle life, at least, when Benjamin was born. His mother was an extraordinary woman, and, not being able to educate her children from the proceeds of a small farm, she removed to Philadelphia, and engaged in trade. She taught the elements of English herself.

AARON BURR was born in 1756, four years after his father's marriage, in the thirty-eight year of his age. His grandfather and father were successive presidents of Princeton College, New Jersey. His mother was twenty-five years of age at the birth of Aaron, and was the daughter of the celebrated President Edwards. His parents died before he was three years old.

DANIEL WEBSTER is the youngest child by a second marriage.

DR DODDRIDGE was the twentieth child by one father and mother.

THE HUTCHINSONS are the four youngest of twelve children now living, out of sixteen of the Hutchinson family.

MOZART was the youngest of seven children, he and a sister, four years older than himself, being the only survivors of childhood He was born in 1756. When but six years of age, he, with his sister, who was ten years old, gave highly-successful public concerts. His parents were also distinguished musicians

SHAKSPEARE was the eldest son, and was born in 1564. The ages of his parents are not given. He ran away to London to escape the penalty of deer-stealing, attached himself to a theatre, and became a dramatist that the world has failed to find breath enough to praise.

KEAN, the great tragedian, was an illegitimate, born in 1789. His mother was a Miss Carey, a low actress, and his father was Edmund Kean, a workman about the theatre. What the ages of his parents were, we know not.

ALEXANDER POPE was born in 1688, the only son of his father, but the second son of his mother.

TOM MOORE was an only son, though he had two sisters, older than himself. He was born in 1780.

THOMAS CAMPBELL was born in 1777, the youngest of a large family, and when his father was sixty-seven years old

LORD BYRON was born of his father's second wife, three years after her marriage in 1788. His father had a daughter by his first wife.

JAMES BEATTIE was the youngest son of six children, born in 1735.

JOHN DRYDEN was born in 1631. He was the eleventh child of a family of fifteen.

JOHN MILTON, who is said to have been a 'man in his childhood," appears to have been the eldest of three children He was born in 1608. His father was disinherited on account of his reformed faith, and adopted the profession of a scrivener It is highly probable that he married late, as he had been educated at Oxford, espoused the radical religion, was disinherited, and went to work for a living before his marriage. He was a distinguished musician.

EDMUND WALLER was born in 1605. His father died while he was an infant, and his care devolved on his mother, who was a remarkable woman, intimate with Cromwell, whose downfall she predicted to him. Edmund was a younger child. He represented his borough in parliament at the age of sixteen. He was cousin of Hampden, and made a speech in his defence, of which 20,000 copies were sold in one day. He died in 1687, leaving a numerous family. His eldest son was too weak to inherit his estate, and the second son took it. He married a rich wife at twenty-two years of age, by whom he had a son that died young, and a daughter. She lived but a short time, and he married a second wife, whose first child was as stated above. His second son became quite distinguished These facts bear heavily on the law of marriage that is the first of this paper.

ABRAM COWLEY was born in 1618, and was probably the only son; if not, he was the youngest, as his father died before his birth. His mother was a woman of lofty sentiments, and to her counsels is ascribed, to a great extent, the moral purity that characterised her son. Abram wrote many poems at ten years of age.

SIR WALTER SCOTT was the fourth son, and was born in 1771.

GOTTFRIED AUGUST BURGER was the only son of his father, who died when he was a boy. He became dissolute, and was abandoned by his grandfather, who assumed the care of him. He managed, however, to raise a living, reformed, and bore the title of "poet for the German people"

From the poets turn we to some of the artists.

WILLIAM HOGARTH was the eldest of three children, whose father's father was the youngest of nine He was born in 1697. His father was a school-teacher and an author. He wrote a work of 400 pages, as an addition to Littleton's Latin Dictionary, which was much praised by the best scholars William was apprenticed to a silver-plate engraver. The fact that his parents had but three children is something to show they were in middle-life when the distinguished artist was born

RICHARD WILSON was the third son, and was born in 1713.

SIR JOSHUA REYNOLDS was the tenth of eleven children, and was born in 1723.

THOMAS GAINSBOROUGH was the youngest son, and born in 1727.

WILLIAM BLAKE was the second son, and born in 1757.

GEORGE MORLAND, who was said to have been "original and alone," was the eldest of five children, and born in 1763. What the ages of his parents were, we are not informed.

HENRY FUSELI was the second of eighteen children. His father was a painter and a scholar.

THOMAS BANKS, a noted sculptor, was the eldest of three sons and born in 1735. Little is said of his parents.

JOSEPH NOLLEKENS, a sculptor, was the second of five children, born in 1737 He came from a race of painters

JOHN FLAXMAN was the second son of a sculptor, born in 1755.

GEORGE ROMNEY was the fourth and youngest son. His grandfather did not marry until after he was sixty years of age, and yet lived to see his grandchildren. George was born in 1734, and became a renowned painter.

ALLAN RAMSAY was also a poet, the son of a poet, and born in 1713. He was the eldest of seven children Poets are generally of early development, and this fact in the case of his father may reconcile this example with the law under description.

SIR GEORGE HOWARD BEAUMONT was an only son, born in 1753 His father died while he was an infant, and his mother is said to have been a woman of taste and talent.

SIR THOMAS LAWRENCE was the youngest of sixteen children, born in 1769 He was chief painter to the king.

BENJAMIN WEST was the tenth child, born in 1738, and the youngest son

We will close these citations with a few examples of a different stamp

SIR THOMAS MORE was an only son, born in 1480. His father was about forty years of age at his birth. His mother, on the night of her marriage, saw engraven on her wedding-ring the number and character of the children, *the face of one shining with any more brightness*

SWEDENBORG was the second child and eldest son of Jasper Swedenborg, Bishop of Skasa.

JOHN WESLEY was the fourth son, and born in 1703.

JOHN HAMPDEN was born in 1594, the eldest of two sons. His father was a member of parliament in 1593, and died in 1597. He must have been in middle life when his noble son was born, for at that time youth were not as apt to be members of parliament as they are now legislators in this country. His mother was aunt to the Protector Cromwell

WILLIAM PENN was an only son, born in 1644. His father was but twenty three years of age at the birth of his son, but the fact that he was Rear-Admiral of Ireland at the time proves that he must have matured at an early age. His father was a most conscientious man, and his mother was daughter of a merchant of Holland.

Among the historians we find the following concerning whom the required facts are given:—

HUME was the youngest of three children, and was born 1711

GIBBON was the youngest of seven children, and was born in 1737.

SMOLLETT was the second and younger son of the youngest, and was born in 1721.

WILLIAM ROBERTSON was the seventh child, and was born in 1721. His father was an able divine, and his mother a strong-minded woman.

Among the great commanders we find the following:—

ALFRED THE GREAT was the third son.

PETER THE GREAT was the seventh child of his father, and the eldest of his second wife. His father's oldest child was weak and diseased. Peter was born 1673.

FREDERICK THE GREAT was the eldest son, born in 1711. His father is said to have been old at his death, and Frederick being but twenty-nine years of age at that time, the inference is that he was mature when his illustrious son was born.

NAPOLEON BONAPARTE was the second son, born in 1769. His father was but twenty-one years of age at the birth of Napoleon. He was attached to Paoli, the champion of his country's independence. His young and spirited wife, while *encein*te with the future hero, followed Paoli's head-quarters and the wreck of Corsican patriots across the mountains, and resided with him at the summit of Monte Rotondo. As the time of Napoleon's birth approached, his mother was escorted back to Ajaccio. On the important day, she went to church, but, finding herself ill, hastened back, and arrived at her room just in time to leave the infant upon the carpet. The advocates of early marriages may make as much out of this example as they can get credit for.

HORATIO NELSON, the hero of Trafalgar, was the fourth son, born in 1758.

CHARLES XII. was the eldest child, born in 1682, when his father was twenty-seven years old. His mother was rewarded for her virtues, but his father was a tyrant. The Queen employed all her means in relieving the oppressed, and, when these failed, she threw herself at the king's feet, and, bathing them with tears, besought him to pity his subjects, but the reply she received was: "Madam, we took you to bring us children, not to give us advice."

But, not to close with human vice on our minds, let us cite a few examples from the rank of polite writers —

HENRY FIELDING was the third son of the third son and was born in 1707.

STERNE was the second child.

JOSEPH ADDISON was born in 1772, when his father was forty years of age. He was the eldest son. His father left four other children, all of whom were as far above the ordinary world as Joseph was above them.

In collecting the above examples and authorities, we have taken all, as they came before us, in whose cases the necessary facts have been furnished. No selection has been made with a view to the great law under consideration, but all contradictory facts have been cited. We have gone over but a small portion of the field of human greatness, but enough has been given to speak for the whole. A profitable class of subjects under this head would be the kings and emperors of the world who have been cotton to the hereditary right. If we should compare the eldest born with the younger throughout all kingdoms, we should be struck with the weakness of the one and the comparative strength of the other. Peter the Great was the second son while a mere boy, in consequence of the weakness of his elder brother, who was the reigning sovereign. So would we find striking contrasts between the feelings born of very youthful parents and those who derived their vigorous minds and bodies from full-grown sires. In the few investigations we have made, the reader has discovered the fact, in several instances, of the weakness of the first-born. In no case has an example of inefficiency in the younger children, that has fallen under notice, been omitted.

What, then, is the argument? The reader need not be told that those who are born of immature parents are the monuments of parental folly and wickedness. The statement we have made, furnishing scarcely a single instance in favor of early marriages, should be considered conclusive on this subject, and lead the young to reflect before they add to the deformity and weakness of mankind. Every marriage should be consummated under such circumstances as to secure in each child an improvement in the stock. Progression is the order of nature, and it is to be lamented that the indiscretion of love is one of its greatest obstacles. It is sometimes said, in justification of early marriages, that it tends to conserve the virtue of the parties, and thus promote public morality. But let it be said, in reply, that those who require early marriage to protect their virtue, better rot in the filth of their own minds than give birth to such as will transmit for ever their weakness and their baseness. None but those who can produce good developments for their children, and who are free from all transmissible disease, should permit themselves to be the occasion of a single birth.

It is as wicked to bring into the world a constitutional thief, or murderer, or a libertine, as it is to be guilty of these crimes themselves. Let all, then, reflect upon the subject, and be cautious how they sin.

WEATHER WISDOM.

NEARLY everybody professes to be weather-wise. Everybody tells everybody what sort of weather may be expected, and in nine cases out of ten everybody is wrong. What is commonly called the power of foretelling the weather is only the result of repeated observations on the comparative frequency with which certain effects accompany one another. Hence it is that agriculturists, shepherds, gardeners, coachmen—but above all, fishermen and sailors—are so much more weather-wise than the mechanic or citizen, and from the constant necessity they are under of studying the minutest indications, or secondary effects of meteorological changes, they arrive at the power of foretelling future changes, with a certainty far exceeding the landsman's comprehension.

In the absence of that *tact*, that quick prescience of atmospheric changes, possessed by the class of persons we have before mentioned, and which can only be acquired by a similar course of discipline, the common observer must have a barometer to aid him in forming a guess, whether he should take an umbrella or great-coat out with him, or whether he may safely go forth unprepared for anything but wet and sunshine. But indications of the weather are not only to be found in barometrical changes, the clouds furnish data, and animals evidence every change, and he who sets to work to study these things [illegible] more than weather-wisdom, he acquires the [illegible]

BAROMETRICAL CHANGES IN THE WEATHER.

After a continuance of dry weather, if the barometer begin to fall slowly and steadily, rain will certainly ensue, if after a great deal of wet weather, the mercury begins to rise steadily [illegible] weather will come, though two or three days [illegible] On either of the two foregoing suppositions, if the change immediately ensues on the motion of the mercury, the change will not be permanent.

The mercury will often rise or fall as has just been mentioned, for some time before the fair or wet weather, which it presages comes on, but it will then fall or rise during the continuance of this change, the mercury will often appear at variance with the existing state of the atmosphere. Under such circumstances the principle before alluded to must be borne in mind—that the barometer only indicates some change in the air which has taken place, but [illegible] may not yet be seen.

A sudden fall of the barometer in the spring or autumn, indicates *wind*, in the summer during very hot weather, a thunderstorm may be expected, in winter a sudden fall after a frost of some continuance indicates a change of wind, with snow and rain. But in a continued frost, a rise of the mercury indicates approaching snow.

When a violent gale has followed a sudden fall of the mercury, it begins to rise again very rapidly, especially about the time of the equinoxes; in this case the gale will not last long. The rapid fluctuations of the barometer are to be interpreted as indicating either dry or wet weather, it is only the *slow, steady*, and continued rise or fall that is to be attended to in this respect. A rise of mercury, late in the autumn, after a long continuance of wet and windy weather, generally indicates a change of wind to the northern quarters, and the approach of frost.

INDICATIONS FURNISHED BY CLOUDS, &c.

Clouds are an old-fashioned index to the weather. In many an old country saying, in many an old doggrel verse its weather-wisdom lessons are conveyed.—

> "An evening red and morning gray,
> Will set the traveller on his way,
> But an evening gray and a morning red,
> Will pour down rain on the traveller's head."

If the sky be clear, after the continuance of fair weather, light streaks of cloud (*cirrus*) appearing are the first indica-

tions of change. If these clouds accumulate, and descend into lower regions of the atmosphere, rain commences. When the sun appears to be setting in a fog, with dark and crimson streaks, in sharp, well-defined lines, wind, and rain, and stormy weather may be expected. In hot summer weather, the sky, during the finest days, is often loaded with masses of cloud, clear, sharp, rounded, and brilliantly edged with light. With such a sky, no immediate change need be apprehended. It, however, towards evening, these clouds congregate in the horizon, and rise upwards with sharp outlines, and an unusual sullenness and closeness is felt in the air, it is a sure sign of an approaching thunderstorm. A greenish tinge in the gray evening is a sure precursor of wet, but, whatever may be their form, colour, and character, an increase of the clouds, particularly towards evening, may be generally taken as indicating approaching rain, because accumulated moisture in the air must return to the earth in rain. The dappled or mottled sky is at all seasons a sign of fine weather. If dose around the moon are considered a tolerably certain sign of rain, even when there is no apparent cloud intervening to form them

GENERAL AND COMMON PROGNOSTICS OF THE WEATHER.

Among these we may reckon such as are derived from birds, beasts, insects, reptiles, and plants, to which may also be added the woodwork of houses, as doors, windows, window-shutters, &c.

Before rain an unusual bustle is observed among ants, bees, and wasps at their nests; spiders quit their recesses, and are seen crawling about at night, flies of all kinds are more active, and sting or bite. When gnats fly in compact bodies in the beams of the setting sun, it indicates fine weather, but if they retire under the shade of trees at evening, rain may be expected. Snails and slugs appear [illegible] in damp weather, and therefore both [illegible] and are more noisy in the ponds and marshes at the same time. Swallows fly low before rain, because the insects which form their prey approach nearer to the earth at that time. It has been observed that fish are eager in bolting at flies, and are more active before rain, for a similar reason.

The incessant cry of pigs before a storm has been a theme of amusement in rural life, quite long enough to test the truth of the observation. Sailors expect a storm when porpoises and dolphins gambol on the surface of the sea.

Peacocks and guinea-fowls, and many other birds, are particularly clamorous before rain, and the domestic cock remarkably uneasiness by frequent crowing. Before wet or rain in the quill part of their feathers [illegible] wood, which, when the weather is extraordinary degree of moisture in the atmosphere, they express by means of their bill, and distribute it over their feathers to secure them better against the effects of an approaching shower.

Domestic animals, as cows and sheep, but particularly the latter, on the approach of rain, feed with great avidity in the open field, and retire near the trees and hedges as soon as they are satisfied. In fine weather they go out and lounge about, eating and resting alternately, with apparent indifference.

The closing of the flowers of the *anagallis arvensis* on dull days and in moist weather has conferred upon it the title of the "poor man's weather-glass," but the following lines convey most of the popular precepts on the subject, and we therefore venture to present them:—

"The hollow winds begin to blow,
The clouds look black, the glass is low,
The soot falls down, the spaniels sleep,
And spiders from their cobwebs peep
Last night the sun went pale to bed,
The moon in haloes hid her head,
The boding shepherd heav'd a sigh,
For sear and yellow leaves lay by,
The sailor took reef in each sail,
Closed is the light red pimpernel
Hark! how the chairs and tables crack!
Old Betty's joints are on the rack,
Her corns with shooting pains torment her,
And to her bed untimely send her
Loud quack the ducks, the sea-fowls cry,
The [illegible] sing high,
How restless are the [illegible] wing!
The bu[illegible] flies sing [illegible],
Low o'er the grass the swallow wings,
The cricket, too, how sharp he sings!
Puss on the hearth, with velvet paws,
Sits wiping o'er her whiskered jaws;
The smoke from chimneys right ascends,
Then spreading back to earth it bends,
The wind, unsteady, veers around,
Or settling in the south is found,
[illegible] on the fishes rise,
[illegible] flies,
[illegible],
[illegible],
[illegible],

CERVANTES.

Four works of fiction are known above all others, and are read in nearly all the languages of the civilised world—"The Arabian Nights' Entertainments," "Gil Blas," "Robinson Crusoe," and "Don Quixote:" the first by an unknown writer, or writers, the second by Rene de Sage, the third by our countryman De Foe, and the last by Cervantes. And thus, in one sense, are England, France, and Spain, for ever identified. But of all the Spanish prose fictions, the immortal Don Quixote has attained the most universal popularity. For two centuries previous to its appearance, the "Amadis de Gaul," and the "Poema de Cid," had engrossed the attention of the world of Spanish readers; but no sooner had the "Knight of the Sorrowful Countenance" appeared, than the romantic legend of the "Cid" gave way before him, and the histories which arose out of the struggles of the Crescent and the Cross were put aside for Cervantes' trenchant sword of ridicule and sarcasm. It has ever been asserted that the work of Cervantes, so abounding in satire and extravagant adventure, had great influence in lowering the high and manly spirit for which the natives of the peninsula had been for ages celebrated. It may be so, for, from the moment that Don Quixote entered the lists, the spirit of high romantic Spanish chivalry fled away affrighted, never to return.

An author or an artist is generally known by the works which survive him: in the case of Cervantes this is true; but had he never distinguished himself as a writer, the story of his life would have been well worth reading. It is a romance of itself. Unknown to the great mass of his countrymen, Cervantes had no contemporary biographers; and it was not till after his death that the world discovered what a great man it had lost. Seven cities claimed the honour of having given him birth,—even as of old, seven cities claimed Homer as their own. Though the place of his burial is still unknown, Madrid, Seville, Lucena, Toledo, Consuegra, Esquiviss, Alcazar de San Juan, and Alcala de Henares, asserted their right, after his death, to have his name enrolled among their citizens. It is believed, however, that he was born in the latter city; for in the parish of St. Mary the Greater, he was baptised on the 9th of October, 1547. Though not of the class of nobles, his family had for ages distinguished itself for valour and honour; and among the conquerors of the New World under Columbus, we find the name of Cervantes. The immediate progenitor of the author of "Don Quixote," was Rodrigo de Cervantes, who in 1540 married Donna Leonora de Cortinas, a lady of noble family, from the village of Barajos. Two daughters and two sons blessed this union, the youngest-born of whom was Miguel, the subject of our notice.

Of the early life of Cervantes little is known, except that he was so extremely fond of reading that he would pick up and peruse any scraps of paper which he chanced to find in the streets, and that he was enthusiastically fond of poetry and romance. It is probable, however, that he received his education at Salamanca, from the fact of the manners of its students being so well depicted in two of his novels, "Le Licencie Vidriera" (The Graduate Vidriera), and "La Tia Fingida" (The Feigned Aunt), as well as in the second part of "Don Quixote." That he was a successful student is evident from the varied and extensive learning which he displays in his works.

While yet a very young man he accompanied cardinal Acquaviva, the pope's nuncio, from Spain to Italy in the capacity of an humble friend; and it was during this journey, probably, that he obtained his knowledge of Valentia, Barcelona, and the southern provinces of France. In 1569, being then about twenty-two years of age, we find Cervantes serving as a volunteer (*asentar plaza de soldado*) in the Spanish army, at that time engaged in a quarrel with the Turks. Of his exploits in the various engagements honourable mention is made; and it is likely that an ardent youth like him would scarcely be content to pass through the routine of a soldier's duties without in some way distinguishing himself. In the battle of Lepanto, Cervantes received three arquebus wounds, two in the breast and one in the left hand, which was maimed for ever. Sick and wounded he was compelled to remain in the hospital of Messina, for upwards of six months; and when at last he was sent home, it was in the capacity of an invalid, with a pension of three crowns a month. But Cervantes gloried in his valour and his wounds, received, as he himself tells us, "on the most glorious occasion which had occurred in that century, or those which had preceded it, or which, it could reasonably be hoped, would be witnessed for ages to come,—a triumph which was among the stars destined to guide future warriors to the haven of honour."

But his wounds do not appear to have incapacitated him for further service, for in 1573, we find him taking honourable part in the disastrous campaign on the coast of the Morea; he was also subsequently engaged in the expedition to Goletta, and his company was among those chosen to take possession of Tunis. Thence he returned to Palermo with the fleet; and when he arrived in Italy, he obtained permission from Don Juan, the commander, to return to Spain, from which he had been absent seven years. The military experiences of Cervantes—during all of which he had been especially distinguished for courage, wit, and exemplary conduct—enabled him to visit the cities of Rome, Florence, Venice, Palermo, and Naples, as well as the island of Sicily and the coast of Africa; and the knowledge of the world thus obtained he made good use of in his subsequent career as an author.

Hitherto, we have seen Cervantes under the aspect of a successful soldier; and we can but allude to the events which further distinguished his military career. On the 26th of September, 1575, the galley *El Sol*, in which he served was captured by an Algerine squadron, and he, with the rest of the crew, his countrymen, was conducted in triumph to the port of Algiers, was loaded with chains and thrown into prison. Some letters found on his person, induced his captors to think him a man of high station; and a proportionately large ransom was consequently demanded for his liberation. His father heard of his sad fate, and in vain sold all that he had to purchase his son's liberty. But though the ransom was insufficient for Miguel, it served to liberate his brother John, who returned to Spain with the intention of raising an armed force to attack the Algerines. Thus was there no hope left for Cervantes but in the exercise of his wits and the resources of his courageous mind. Many and various were his attempts at escape; but they were all frustrated by the vigilance of his captors or the accidents of fortune. At one time he headed the little band of brave fellow-sufferers, and boldly sallied forth, but they were stopped at the gate of their prison. At another, he sent a faithful moor to Hassan Agra, the Dey of Algiers, with offers of submission, but the messenger was impaled alive, and his master sentenced to receive two thousand lashes—a doom only reversed through the interest of the highest nobles. At another time, he trusted to some Valentian merchants, established at Algiers, to come with an armed frigate to his aid; but the man who had the conduct of the scheme, like another Judas, betrayed his trust; and for five years Cervantes remained a prisoner in an African dungeon. At last, however, his liberation was effected by ransom. On the 19th of September, 1580, Cervantes walked out of his prison doors; he once more breathed the air of heaven, a free, unfettered man, and, turning his face homewards, experienced, as he tells us, "one of the greatest joys a human being can taste in this world,—that of returning after a long period of slavery, safe and sound to his native land."

Behold Cervantes now a private citizen of Esquivias. He has seen much trouble, encountered much danger, experienced the successes and the ill-fortunes of war, travelled through various countries, observed the manners and customs of mankind, made himself acquainted with strange languages, worn off the first excitements of life, become inured to dangers, prisons, and privations; and has fought and bled and suffered for his country. "Let me take my ease," he exclaims; "I shall soon be what the world calls a middle-aged man."

But the ease which his active spirit takes is the labour of other men. He cannot sit idly down and dream away his life; he must find vent for the restless activity of his fine impulsive spirit; and so, from having been a soldier, he becomes an author, and love and literature fill up the vacuum in his heart. Towards the close of 1584, being then thirty-seven years old, he published his first work, "Galatea, an Eclogue;" and on the 14th of December of the same year, he married

MIGUEL DE CERVANTES SAAVEDRA.

Donna Catalina de Palacios Salasar y Vosmediano, a lady of noble birth, the heroine of his poem.

Henceforth he was an author. But the profits of the pen, in that age, as in this, were by no means regular, sufficient, or certain; and we find Cervantes about this time alternately writing a comedy or a farce, acting as clerk in the Navy Victualling Office, or petitioning the king for employment in America, "the refuge of destitute Spaniards." Fortunately for the *old* world, he was not allowed to go to the *new*, or perhaps his great work, "Don Quixote," would never have been written. Although our author was not a poor man, he must not be considered by any means a rich one. Besides an increasing family, he had taken charge of his two sisters. Years were creeping on apace, for he was now forty, and it therefore behoved him to look about amongst his friends, but they did not assist him with advice or employment. It was under these circumstances that Cervantes wrote most of his novels, the first that had ever been written in the vernacular of Spain, previous writers having confined themselves to translations of Decameron and Boccacio.

About this time, however, a great misfortune overtook our hero. He was accused of malversation of office, was arrested, and thrown into prison; and though there is no reason to believe that the slightest stain of dishonour attaches to Cervantes, it is certain that the occurrence was a source of great anxiety and distress to him. How long he remained in prison, or what became of him for the next five years (1598-1603), is not certainly known; but it was during this period that he commenced the immortal "Don Quixote." It has been said that the work was partly written in a dungeon of the Inquisition; and though, as Voltaire says, it would be difficult to say anything too bad of the Holy Office, there is no valid reason for believing that Cervantes ever came in contact with the Brotherhood. It appears rather probable, indeed, from the minute account which he gives of [illegible], that he resided in that city during these years. However this may be, in 1605 the first part of that famous work appeared. At first, as has been the case with other celebrated books, it was not to be found; but, a few months serving to make it known, it was sought everywhere, and among all classes of the people, with the most unbounded enthusiasm and delight. In a short time its success was so perfectly ensured as to raise up around its author the very best, though, perhaps, not the most flattering, evidences of its truth and fearlessness—a host of enemies. All those readers and writers of the monstrous tales of chivalry which Don Quixote attacked and ridiculed, considered themselves personally insulted. The friends of Lope de Vega and the dramatists were deeply incensed, and all against whom the Don had couched a lance were ready to exclaim against the truth of his satires. But the "struggles of a book," were not in this case destined to be of long duration, and before ten years had passed the second part of "Don Quixote" had appeared, and been welcomed everywhere. Perhaps the second part was hastened, from the fact that a spurious continuation, by a monk of Aragon, who called himself the licentiate, Alonzo de Avellaneda, had already made some noise. This so incensed Cervantes that he hastened to bring forward the "true history." In the dedication of the second part to the Count de Lemos, Cervantes says, "Don Quixote has put on his spurs, that he may hasten to kiss the feet of your excellency. I believe that he will appear a little peevish, because at Tarragona he was bewildered and ill-treated; nevertheless, it has been established by diligent inquiry, that it was not really he who figures in that history, but an impostor who wished to pass for him, yet cannot accomplish his object." In the preface to the second part, and in the work itself, the author is at some pains to punish his unblushing plagiarist; and in order to prevent any second Avellaneda from continuing the knight's adventures, he concludes thus:—"Here Cid Hamet Benengeli lays down his pen; but he has placed it so high that no one henceforth will think it prudent to make a new attempt at seizing it."

In his preface Cervantes again refers to his poverty and infirmities; but he was not really in want,—as, besides his wife's property, he was in the receipt of a pension from the Count de Lemos, whose liberality he acknowledges in the same page in which he laments his wants.

Of course, every one knows the true anecdote of Philip III. of Spain, who being one day on a balcony, observed a man laughing so immoderately that he exclaimed, "The fellow must be mad, or reading 'Don Quixote,'" but every one does not know how the Marquis Torres, the censor of that day, "confirms and approves" the celebrity of its author. "I affirm," says he, "that on the 25th day of February in the present year, 1615, while my lord cardinal, the illustrious Don Bernando de Sandoval y Roxas, Archbishop of Toledo, was on a visit to the ambassador of France, who had come to Spain to negotiate the treaties of marriage between the princes of both nations, many French gentlemen in his suite, lovers of the belles-lettres, accosted me and other chaplains of my lord cardinal, making inquiries concerning works of literature, upon which I took occasion to mention this second part of Don Quixote, then under my examination. They no sooner heard the name of Cervantes than they began to expatiate on his merits, and on the estimation in which his works were held in France, and in the neighbouring kingdoms. The first part of 'Don Quixote,' the novels, and the 'Galatea,' they said were universally known. So great were their encomiums, that I [illegible] to introduce them to the author himself, and they, accented with expressions of most unbounded acknowledgments to me for the proposal, first inquiring the most minute details concerning him. I was obliged to confess to them that, though a veteran soldier and a man of birth, he was in state of poverty. 'Why is not such a man enriched from the public treasury?' cried one of them; when another gentleman shrewdly observed, 'If poverty obliges him to write, Heaven forbid that he should be in affluence, since by his works he enriches the whole world.'"

Little remains to be told. With the completion of "Don Quixote" the real life of Miguel de Cervantes may be said to have ended. He lived, indeed, for some years afterwards, but it was a life of sickness and suffering. But neither pain nor poverty could silence his tongue or sadden his spirit. He died with his pen in his hand, and a smile upon his lips, on the 23rd of April, 1627, being then in his seventy-fourth year. After what has been said, we need say but one more. His works are, as we have already mentioned, translated into all European languages, and are everywhere received with welcome and approbation. Our portrait of him is taken from one which was affixed to a volume printed many years since. The reader may judge for himself if it be like the original, for here are the very words in which the author describes himself:—"He whom you see here, with an aquiline countenance and chestnut hair; the forehead smooth and uncovered, the nose awry, though well proportioned; the beard silver (it is not twenty years since it was gold); large moustachios, a small mouth, teeth not very numerous, for he has but six in front, and yet more, they are in bad condition and worse arranged, since they do not correspond one with another; the figure between the two extremes, neither large nor small, the complexion clear, rather pale than brown; a little stooping in the shoulders, and not very light about the feet, this is the author of 'Galatea,' and of 'Don Quixote de la Mancha,' and other works, thrown on the town, which may have lost their road, the name of their master being unknown. He is commonly called Miguel de Cervantes Saavedra."

P.

SHALL MOORE HAVE A STATUE?—A correspondent of the *Times* begs for a nook in Westminster Abbey for Tom Moore, and expresses his feelings in the following strain:—

"Oh! let one touch of his harp awaken
Our fond regard for the child of song!"
May it thrill till the high resolve be taken
To crown him our deathless bards among!

In our holiest fanes there is but one corner,
Fit shrine to deposit his honour'd remains;
Not saved for the sinless, but due, tell the owner,
To genius whose brightness extinguish'd its stains.

If his lyrical numbers' melodious spell
Still hold beauty and love in their magical chain,
Wit and lore were made vocal in poesy's shell,
And Lansdowne and Russell applauded the strain.

[The question has since been answered in the most unmistakable terms; and a committee of gentlemen has been formed for the purpose of collecting subscriptions.]

LOVE AND LOYALTY.

THE town of G——, on the Ohio river, was originally settled by French emigrants, principally royalists, many of whom preserve, to this day, their national character, customs, and prejudices. Among these was one family of rank, distinguished for refinement and intelligence, who having emigrated on the first lowering of the storm which convulsed all Europe, were enabled to bring with them a considerable amount of their once princely fortune. This family consisted of old Jean Dulaire, formerly an officer at the court of the unfortunate Louis, and still a faithful and fiery-hearted royalist, his daughter, an only child, gay, charming, pretty, and petit, with Julie for her name; his nephew, Jacques Le Brun, a scholar and a gentleman, tall enough for a grenadier but with an amount of modesty which would overstock a school girl. It happened very naturally, in the course of human events, that Jacques loved his bewitching little cousin, but "faint heart never won" a lively and coquettish French girl, and so, one fine summer morning, with a cold smile on his lip, and misery at his heart, poor Jacques saw his soul's dearest treasure bestowed—by her father, fate, and the priest—on a gay, handsome, and young Frenchman, once attached, in an honourable capacity, to the house of Orleans, but who had been about two years in America, was poor, but enterprising, and had already entered upon an extensive trading business on the Ohio and Mississippi rivers. After his marriage, he remained with his wife at the house of her father until the autumn, when his business called him to Louisville. He parted from his friends with a cheerful smile on his fine, manly face, tenderly unwinding the small white arms of poor Julie, who clung weeping about his neck to the last, agonised with those dark presentiments which ever haunt the heart of a loving woman.

Months had passed by, bringing most affectionate, though, from the want of direct communication, very unfrequent, letters from the absent Loraine. It was now the dead of winter, and his return was looked for daily and anxiously. One bright frosty morning Julie was standing at the window of the common parlour, looking towards the river, with fixed and dreamy eyes, the heart within her becoming hourly heavier, and "sick with hope deferred." Against the wall seat at her side leaned the pale and devoted Jacques, cherishing still for his fair cousin a holy and unalterable affection—a love as pure and as unseen as a crystal hid in the bosom of a rock. Suddenly the eyes of both were attracted to a party of men coming up from the bank of the river, led by old Jean Dulaire. As they drew near the house, Julie was struck by the manner of her father, and the expression of his face. He walked deliberately, yet proudly, he seemed both happy and sorrowful, and in his eye shone the light of a sentiment, with him, a gentleman of the old *régime*, true as religion, and ardent as love—loyalty.

The strangers were dressed—as travellers at that inclement season of the year should be dressed—with comfortable plainness, even roughness. Two of them were evidently but common boatmen, but the three in advance, who were young and handsome, though strong and hardy-looking, had about them that nameless grace, that air of superiority, of refinement, of *je ne sais quoi*, which always, and in all situations, distinguish gentlemen, the truly noble, wherever they are found. Julie and Jacques were hardly surprised when they were presented to three of the princely members of the royal family of France, the Duc d'Orleans, Duc de Montpensier, and the Count de Beaujolais. After breakfasting with their friends, these brave and unfortunate young princes related enough of their recent history to account for their present situation and undertaking. After many months' travelling through various parts of the United States, they had heard, while resting for a time in New York, of the new law, expelling all the members of the Bourbon family from France, and that their noble mother had been deported to Spain. Their object was to join her; but, owing to the then existing war between England and Spain, this object was not easily attained. To avoid French cruisers on the coast, they determined to repair to New Orleans, and from thence to Havanna, where they thought to take ship for Europe. They crossed the Alleghany mountains to Pittsburg in December. At that place they purchased a keel-boat, hired two persons to aid them in their navigation, and thus descended the Ohio. They found that the immense quantities of ice almost obstructed their passage, they had been in some danger from it, and had once or twice been obliged to land, and lay up for some days, awaiting a thaw. As the day of their arrival was extremely cold, the travellers remained with the emigrant family; but the following day, being milder, they took leave at an early hour. The eldest brother, the Duc d'Orleans, as he bent to kiss the fair hand of the beautiful Julie, kindly expressed his regrets at not having met her husband, who had formerly been his secretary.

The excitement of this interesting visit having passed, the wifely anxiety of Julie returned. Alas! how long was it destined to weigh upon her breast with mortal heaviness—to slowly draw strength, and joy, and hope, like blood-drops from her heart! Weeks, months, went by, and brought neither husband nor letter; no tidings of any kind reached the half-frantic woman, or her anxious friends. Diligent inquiries were finally made at every town on the river where the business must have called him in the habit of trading, but in vain, and Pierre Loraine was at last mourned as dead! Then, how desolate grew the once happy home—its joy changed to sadness, and the bright eye to tearful, she was most of the day found, the victim of her hapless fate untouched, the voice of her singing was hushed, and her once-loved flowers withered and died in the shade of her neglect. It was a beautiful evidence of Julie's own loyalty of nature, that she never for one hour believed herself deserted by her husband—never received that he had died by the hand of some foe, or perished from disease or fallen a victim to his own reckless spirit—in any of any condition, when, as was his wont, he had gone out alone.

The gentle mourner was finally aroused from the deep stupor of her grief by the severe and protracted illness of her father. It was, again winter, when the old man, who had long been failing, but who's habits were those of cheerful and constant activity, resigned himself, like a sick child, to the stern dominion of disease. Julie, who, in her tenderly awakened youth, had been longing, with an intense ardour for years, to [illegible] rebuked her selfish sorrow, passed [illegible] and, [illegible] tended for [illegible] and [illegible] with [illegible] woman's mission—ministering to the wants and cravings of age. Thus, in affectionate attendance on her aged father, she passed the dreary autumn and winter months, till the warm pulses of spring began to play through the chilled bosom of earth, and the blue skies once again smiled down on the coming birth of flowers. Oh, that our worn hearts might ever leap with the renovated heart of nature—that our griefs might depart with her storms, and our smiles return with her sunshine—lest our complaining voices might never make discord in the song of her rejoicing, and that the tears of our mortality might never blind us to the infinite glory with which God has crowned her!

Julie Loraine was daily becoming more reconciled to her sad, peculiar lot. She was religious and industrious, a good daughter and friend, and though widowed in heart and life, could not long remain a wretched woman. Her father seemed to revive as the spring advanced, but it was still evident that his race was nearly run. One day, as he was walking his room, leaning on the arm of his nephew, Jacques Le Brun, he dwelt freely on the event of his death, which, at the best, he believed, could not be far distant. Seeing that Jacques appeared much affected, he said, tenderly,—

"You should not grieve for me, my son. I am old and bowed towards the grave with many sorrows. I have been faithful to my king and country, true to the holy mother church, and I do not fear death—except as it would be grateful to me, and I should even be impatient for it, were it not that I must leave the richest treasure of my heart, the angel of my life, my dear and devoted child, my Julie, wedded and unprotected."

"Stay!" cried Jacques, "have you forgotten me? Will I not remain her protector and friend—her own true-hearted brother?"

"Ah, my [illegible] you have not that relation by nature, and the world [illegible] you to assume it. Were you Julie's husband, now ——"

"I were the happiest man living!" exclaimed Jacques, in a quick, excited tone.

Dulaire turned, and, looking with earnestness into the face of his young companion, said,—

"And so, Jacques, you love my Julie?"

"Oh, yes, uncle, I adore her! Yet she has never known my love, wild and hopeless as it has ever been!"

"Poor Jacques! how much you have suffered, and I never dreamed it! Ah! there is much before our eyes that we never see. But June may yet be yours. Without a doubt, Loraine is long since dead, for he was not a man to forsake a wife—and such a wife! To you, my good Jacques, I could resign my child, and afterwards sink tranquilly to the last sleep. Go and call her; I will talk with her alone on this subject."

Jacques summoned his cousin, and for the next half-hour walked the hall without, in a state of fearful uncertainty. At length, hearing his name softly called, he hesitatingly entered the room. His first glance at his uncle's face reassured him, but he saw that his cousin had been weeping, and her voice was tremulous, though her words were calm, as she said,—

"My father has related to me his conversation with me. I did not know before that you loved me, Jacques. I must have pained you many times by my lightness in the days gone by. I know that, should Heaven take my father from me, I should be quite unprotected. We should then be alone in the world, cousin. I have never thought of you as a husband, but I have loved you well as a brother, and I think we could be happy together."

Here Jacques caught her hand, and, pressed it passionately to his lips. Julie withdrew it, hurriedly, saying,—

"Hear me out, I entreat you, cousin. I cannot be your wife while there is one remaining doubt of my being in truth a widow. Should we marry, and should Pierre some day return—oh, God! what misery for us all! No, no; ask me not to be yours, till you bring me proof that the cold earth, or the colder wave, covers him."

Then, flinging herself into her father's arms, she wept with all the grief of a first bereavement. Le Brun could not but see that the love of Julie for her lost husband had never died; and as her resolution continued unshaken, by the advice of her father and the entreaties of her lover, in the course of a week, Jacques set forth on the strange expedition to discover indubitable proofs of the widowhood of his love. Hopes and fears chased each other through his heart as he kissed the brow of his cousin in parting, and looking into her blue eye, saw there a faint smile struggling with a tear—that beautiful strife which we sometimes mark in the cup of a violet, when the dew would quench the sunshine, and the sunshine would drink up the dew.

Our enamoured pilgrim travelled but slowly in those anti-steam navigation times, and it was many weary days before he reached Louisville, the place in which Loraine had last been known to be. It was a sunny May morning when he landed, and strolled through the principal street of that then inconsiderable town. Suddenly Le Brun remarked a stranger coming towards him, whose light, springing step and long black curls were surely familiar to his eye But no; this young man wore a foreign dress and a long moustache. Nearer he came, and, wonderful miracle! it was no other than the lost Loraine! Jacques became deathly pale, and staggered as though struck by a heavy blow! Hope and joy died within him, and a wild and fearful feeling grappled at his heart Had quick, stern thoughts been good sharp steel, Loraine had then fallen, pierced by more dagger-points than freed the soul of Cæsar. But Jacques's nature was too essentially generous and good to cherish such deadly feelings as these, the reaction was sudden and perfect—a moral revolution His affection for his old friend came back, and with it the bitterest remorse, and when Loraine, on recognising him, sprang towards him with all the frank cordiality of a brother, he, on the breast of his friend, renounced for ever the sweet, vain dream of his love He was roused by the wild, hurried inquiries of Pierre, "What of my Julie?—what of her father? Tell me, Jacques, for her sake, tell me!"

"They live and love you still; come, let us lose no time in going to them."

* * * * *

It was the eve of the first of June, and a fit birth-night was it for that rose-crowned queen of the changing months The stars were unusually brilliant in honour of the great occasion, and freshness, fragrance, and moonlight were abroad Let us look for a few moments into the quiet home of our heroine. In the pleasant little parlour we find her, with her venerable father, who is looking in far better health than a few months since he had hoped ever to enjoy. He is seated in his luxurious arm-chair, with his feet resting upon a stool, embroidered by the fair hands of his daughter He wears a dark dressing-gown of brocade, and his thin white locks are crowned by a small cap of black velvet. On a stand at his side lies a gold snuff-box, with a miniature of "Louis the Martyr" set in the lid. From this he often regales himself, giving always a glance at the pictured semblance of decapitated royalty But, to drop this inconvenient present tense, Julie, clad in deep mourning, with a widow's sombre cap almost concealing her sunny hair, sat on a low ottoman at his side. There was a hurried step without, the door opened, and Jacques stood before them Julie sprang forward with a cry of welcome, but her eye fell upon another form. She paused, clasped her hands, and one word broke from her lips—

"Pierre!"

But the heart spoke volumes in that single word, and the next instant she lay in a swoon of joy on the breast of her first and only love, her lost and her found. And it was touching to see old Jean Delaire; how he rose and tottering toward the returned wanderer, "fell upon his neck, and wept." And Jacques—with his life-long love, tried, tempted, and sanctified—was he not happy, with a happiness greater than theirs?—a holy pleasure, which nothing could take from him—the calm, sweet joy of self-sacrifice, of renunciation.

When the first half-delirious raptures of meeting were over, all gathered round Pierre to hear the story of his long absence, wanderings, and adventures. But first he removed from Julie's head, with his own hand, the widow's cap, and twined in her beautiful hair some half-opened roses, wet with night-dew Then, with that dear hand leaning upon his shoulder—one arm around the slenderest waist in the world, and one hand grasping his father's, he related the strange, eventful history, which we give, as near as may be, in his own words.

"It was rather late in the winter when I left Louisville for home, and I was obliged to stop a while at some small settlements on the way to transact business. Just as I was about leaving one of these places, with a company of traders, all strangers to me, I observed a keel-boat near the shore, containing a number of men, which had become encompassed and blocked in with the ice. I could persuade no one to go with me in a boat to the assistance of the strangers, so I took a long pole in my hand, and walked to them on the floating ice, leaping from block to block. I reached the boat in safety, and found three of those men to be our young exiled princes, the Duc d'Orleans, Duc de Montpensier, and the Count de Beaujolais. They had come in this manner—the brave young men!—all the way from Pittsburg. But I forget—you must know of their undertaking, for they told me that they stayed one night with you A day or two before I encountered them, their helmsman had been taken ill, and given up, and thus they had got into trouble. But I soon got them free of the ice, and brought them safely to the landing Then it was that his highness and his noble brothers earnestly entreated me to turn my face from home, and to accompany them to New Orleans What could I do? There was my royal master, who, in his prosperity, had befriended me, and could I forsake him in the hour of his misfortune? Ah, Julie, pardon me once obeying loyalty rather than love! I promised my prince, proudly but sadly, to go with him But I wrote to you telling the story of my strange fortune, and gave the letter to the sick boatman, who was returning to Pittsburg."

"I never received that letter!" exclaimed Julie. "Ah, then, the poor fellow may have died before reaching this place."

"I will not weary you with a detailed account of our hardships, adventures, and hairbreadth escapes—for we had enough of all these to preserve us from *ennui*. We reached New Orleans at length in fine health and spirits, and the princes took passage that very day for Havanna, in an American ship which was to sail the next morning. At night I went on board, to spend the few last hours with my illustrious friends, who had the cabin entirely to themselves. With a few bottles of old Burgundy, with songs and legends of *la belle* France, what wonder if time went by unchallenged? It was past midnight when we embraced and parted I went up on deck, and, to my astonishment, the ship was off to Havanna, with all sail spread, and far behind us gleamed the lights of New Orleans! I beat my breast—swore at the stupid captain; but all in vain—they took me the voyage to Havanna. After seeing my friends sail for Europe I concluded to return to New Orleans in the same vessel which had brought me out. But again the fates were against me. We had been but about two days at sea when we were boarded by a French cruiser, and, owing to my having about me some books, autographs, and a miniature, parting-gifts from the Duc d'Orleans, I had the honour of being taken possession of as an important prize. The rascals believed, or pretended to believe me a Bourbon, one of the princes; and, *malgre* my remonstrances, threats, and entreaties, they took me all the way to France, and placed me in close confinement. It was then some months before I could obtain a trial, and though I was at last honourably acquitted of the grave charge of royal birth, my money was retained, with what I valued more, the last gifts of my prince I was thus detained until I could earn sufficient to replenish my wardrobe, and pay my homeward passage. I wrote several letters to Julie and to you, my father, but did not send them, from utter hopelessness of their ever reaching you. At length I was able to take ship for Martinique, and from thence to New Orleans. From thence I worked my way up the Mississippi and Ohio—up to home Ah, my dear Le Brun, my poor fellow, I am sorry for you—you have lost so charming a wife."

A RELIQUE OF THE PRETENDER.—The unfortunate Prince Charles Edward, "the young Pretender" of this country, but "the rightful heir" of Scotland's Jacobites, in the course of his melancholy wanderings, carried a portable knife, fork, and spoon, in a leathern case, about his person; on his departure from Scotland, they were given as a *souvenir* to the Primrose family, with whom Flora Macdonald was connected, and, having been guarded with jealous care, were ultimately presented to Sir Walter Scott, as the most benefiting recipient. When George IV. visited Edinburgh, Sir Walter presented this curious historic monument to that sovereign as the greatest gift a national writer could make to his king. From the king it passed to the Marchioness of Conyngham, and from her to her son, the Lord Londesborough, who has possession of it. The intrinsic value of the article is not great, but the historic value is priceless, no doubt, to many Scotchmen.

THE INDUSTRY AND COMMERCE OF HUNGARY.

THE soil of Hungary is, by its fecundity, and by the variety of its vegetable productions, well adapted for the mixed character of its population. Throughout the whole of the country the greatest of abundance and diversity are observable. To the north the mountains of Carpathia, with their threatening defiles, where the gold and silver mines are worked—the richest mines in Europe—upon the mountain-side where the luxuriant vineyards of Tokai extend; beyond, the lakes of Balaton and Ferto, lakes that well deserve the name of inland seas; the Danube, that monarch of European rivers, rolls onward to the ocean, traversing the vast pasturages which extend on every side, and which almost appear to be without limit; fields of yellow corn, fields of grass, fields of grain of every kind, stretching far away in their varied hues, presenting a magnificent spectacle, which reminds the traveller of the grandeur of the desert without its aridity! To the south reigns the temperature and the vegetation of Italy, with all its richness of soil and southerly splendour; there lies an immense laboratory of agricultural produce capable of competing with the exportations from Odessa, and of supplying the wants of half Europe, if a foreign government did not, by its selfish enactments, hinder the efforts of the agriculturist in all commercial enterprise. In short, the whole geography of the country is remarkably prolific, and in its diverse latitudes produces without exception that which is best adapted to sustain the life of man. We can then easily understand why the Magyar loves his country, and here lies the secret of the jealousy and covetousness of other nations in their endeavours to reign alone in that highly-favoured land.

In order rightly to estimate the reciprocal advantages which Hungary offers to its inhabitants, and to foreign nations who have entered into an alliance with the Magyars, we must glance at the industrial and commercial condition of that country during the last half-century.

In spite of the obstacles which had to be surmounted, the state of Hungary had arrived at that point which had overcome the limits of a purely agricultural condition, and had in some degree created a commercial interest, which is the only true and proper foundation of the industrial manufactures of a nation. But the imposts which had been established had rendered it impossible to engage in a liberal and unrestricted interchange of commodities with other lands. The government of Vienna having acted only for the extension of their national power, everything having been sacrificed to this, everything else having given way before it. After the issue of the imperial tariff, the importation into Austria of the agricultural produce of Hungary was only permitted so long as it did not interfere with similar Austrian productions. The frontiers of the Austrian empire were guarded by a line of custom-houses—a stern prohibitive on trade—so that the Magyars were very often encumbered by the productions which they had not the power of removing from Austria, and selling to a foreign land, as every means was resorted to for the interdiction of such trade. The admission into Hungary of works of art and articles of manufacture was almost open, whilst the admission of Hungarian productions into Austria was virtually prohibited. Whilst the excise duties upon Austrian articles admitted into Hungary was five florins, sixty florins had to be paid if Hungarian productions crossed the Austrian frontier. Thus, too, the Hungarians had to purchase of the Austrian at 200 florins what they might easily have obtained from France at 75 florins.

A VIEW OF THE FREE PORT OF FIUME, IN THE GULF OF QUARNARI, IN THE ADRIATIC SEA OR GULF OF VENICE.

It was this iniquitous system which provoked, in 1844, the general abandonment of the nation, and that industrial movement which was destined to regain lost time. Long since the complaints of the diet had reached the cabinet of Vienna, but had been entirely disregarded. It was time that men should awake from their apathy and act for themselves; the stern voice of necessity demanded a change. The value of commercial relations with foreign lands was apparent. The Hungarians looked to the Adriatic for a fitting spot to select as a port; none appeared so fitting as a seaport on the coast of Fiume, to serve as a connexion—industrial and commercial—with the west.

The village of Fiume—St. Veit am Flaum, in the Illyrian language—formerly occupied by the Romans, was taken by the Magyars in the reign of Ladislas (1089). Lost in the warfare with the Turks, it was retaken by Marie Thérèse, and was from that moment declared the French port of Hungary. Its topographical position is excellent. Placed in an amphitheatre of hills, its basin presents a safe and convenient harbour to the largest vessels. The three openings by which it is entered are well guarded by [illegible] and fortified by art. The sailors of Fiume are well known for their prudence; and from their number Austria, Venice, and Dalmatia have in years long past drawn their best seamen. The timber-yard of Port Royal is one of the most magnificent establishments of its kind, and from the wood stored within it have been built some of the finest ships that ever rode upon the waters.

The register of the port of Fiume given in 1844 contains an entry of 562 vessels coming in, and 570 going out. The exportation in the same year contains,—salt, 95,000 cwt; tobacco, 49,000; hemp, 8,600; rags, 6,900; and, lastly, 285,000 cask staves. These were principally for use in Marseilles and Bordeaux. The exportations of Hungary from the other ports during the same period amounted to 71,735,913 florins, against an importation of 68,514,437 florins, in which the foreign exportation comprised only the value of [illegible]. All the rest went to Austria. The Magyars were cast down at a state of things so disastrous, and hoped to repair it by pursuing their commercial enterprise by the way of Fiume. Their hope seemed to be but an illusion; but in it lay the foundation of their prosperity. Jacques Cœur, the son of a poor artisan, created the French navy in 1440. The Magyars will have no power till they find another Jacques Cœur to do for them in modern commerce what he of old accomplished for France. Austria is without doubt suspicious, and has endeavoured to destroy the hopes of Hungary by rendering Fiume a tributary to the city of Trieste.

JAMES FERGUSON.

Perhaps no kind of writing conveys greater encouragement to the young and inquiring mind than the biographies of those daring spirits who have risen from the mass by their own persevering efforts. It is pleasant to read how such an one, whose name, it may be, is now placed on the roll of the world's great men, rose from the meanest beginnings; and it is instructive to trace how, step by step, he won for himself a consideration which his original position by no means warranted,—how he bore himself when the honours which the world can bestow were showered thickly upon his head,—and how at last, in his old age, looking lovingly back to his youth of struggle and his manhood of emprise, he records, for the benefit of the young of after-days, the means by which he accomplished his great triumphs. The places of note among men—the senate, the bar, the pulpit, the press, and the professor's chair—are ever recruited from the ranks of the people; and is it not an encouraging thought, that almost all stations are accessible to those who have courage to stand forward among the competitors, and that, in the race of life, the great prizes are not reserved for the wealthy and the well-born, but that all, the sons of labour and the inheritors of poverty, may hope for an honourable reward, ere the great struggle is over?

These remarks have been called forth from the perusal of the life of James Ferguson, a man to whom it was given to raise himself from the very lowest depths of poverty to a known which is now as wide and lasting as the English language. He was born in the year 1710, of humble parents, in a mean cottage, not far from the little village of Keith, in Banffshire. His father, though but a day-labourer, was honest and religious; and the very first incident recorded in the life of the future astronomer seems like a promise of after-fame. It was the practice of the father to teach his children all he himself knew, which was to read and write. James, however, could not wait till his own turn came, but secretly learned the lessons given to his elder brothers; and when at last he went to receive his first lesson, his father discovered, to his surprise, that he had little to teach. At the early age of seven or eight years an incident occurred which seems to have made so great an impression on his mind, as almost to determine his future career. The roof of the cottage having fallen in, his father raised it with a prop in the manner of a lever. This operation excited the attention of the child, and he immediately set about various experiments in a small way—making models and drawing diagrams, and so forth—which in the end made him thoroughly acquainted with not only the lever, but also the power of the wheel and axle. He had thus, without assistance, actually made the discovery of two of the most important truths in practical mechanics. After he had made his discoveries, he proceeded, like older philosophers, to write an account of them, believing that no other treatise on the subject had appeared. We may fancy the little fellow's surprise when, on showing his discovery to a gentleman who came to his father's house, to find that the whole was already in a printed book, and his gratification when the true nature of the mechanical powers were explained to him. The taste for practical mechanics, thus early discovered, continued to distinguish him through the whole of a long and useful life.

The poverty of his father necessitated our young philosopher to work for a living. He was, therefore, employed by a neighbouring farmer in tending sheep; and while so employed his taste for astronomical pursuits appears to have had its rise. During the day, he occupied himself, while his flock was feeding around him, in making little models; and as soon as night came on he would lie down on the grass, like the Chaldean shepherds of old, and study the stars. His removal to the service of another farmer—a worthy man called James Glashan—enabled him still further to indulge in these observations. "I used to stretch a thread, with small beads on it," he tells us, "at arm's length, between my eye and the stars. Sliding the beads on it, till they hid such and such stars from my eye, in order to take their apparent distances from one another, and then, laying the thread down on a paper, I marked the stars thereon by the beads."

It appears, moreover, that his master, so far from discouraging his shepherd-boy in his astronomical fancies, actually took part of his work in the daytime upon himself, so that the lad might have further leisure. Mr. Gilchrist, the minister of Keith, having seen some of Ferguson's performances, was so pleased with the evident talent they displayed, that he gave him a map of the world to copy, and furnished him with compasses, ruler, pens, ink, pencils, and paper—the first regular drawing instruments he had ever possessed. A pleasant picture is given by the astronomer of this period of his life. For the purpose of enabling the lad to pursue his studies, the master gave him more time than he could reasonably expect; "and often," he says, "took the flail out of my hands and worked himself, while I sat by him in the barn, busy with my compasses, ruler, and pen."

The map finished, young Ferguson took it to his patron, and while at his house was introduced to Mr. Grant, of Achoynamey, who offered to take him into his house, so that he might receive instruction from Mr. Cantley, his butler. From this butler, who appears to have been a very clever person, James Ferguson received his first instruction in decimal fractions and the elements of algebra; but, just as he was about to commence geometry, Mr. Cantley left that part of the country to take office under the Earl of Fife. The youth, therefore, returned to his father's house, carrying with him, as a gift from the good butler, a copy of "Gordon's Geographical Grammar," from which he obtained his first real knowledge of the globe.

His next occupation was in the house of a miller, in whose employment he remained, notwithstanding ill-usage and insufficiency of food, for more than a year, when he was engaged by Dr. Young, who promised to instruct him in medicine. But this gentleman, who was a farmer as well as a physician, not only

broke his promise, but used him so badly in other respects, that, after staying for three months, he was obliged to return to his father's. A severe hurt which he had received while in the doctor's employ, and which the doctor was too busy to attend to, kept him at home for some months. But he could not be idle; and during this compelled leisure he constructed wooden clock, and a wooden watch with a whalebone spring; and his knowledge of the mechanism of clocks and watches becoming known in the neighbourhood, he obtained some little employment in cleaning and repairing the horologes of the villagers.

About this time, being then twelve years old, he was invited to reside at the house of Sir James Dunbar, of Durn, where his talent for drawing excited so much attention from the ladies that they employed him in designing patterns for dresses, lace collars, and various other articles of female attire, besides making him useful to Sir James in several ways. But our hero did not neglect his astronomical studies because he was noticed by the rich; on the contrary, when he was sent to the house of Lady Dipple, Sir James's sister, he continued to make nightly observations of the stars with his threaded beads, and so excited would he sometimes become while thus occupied, that, to use his own words, he thought he saw the ecliptic "lying like a broad highway across the firmament, and the planets making their way in paths like the narrow pathways made by cart-wheels, sometimes on one side of a place to mend, and sometimes on the other, crossing the road at small angles, but never going far from either side of it."

He now began to employ himself as a painter in a small way; and having gone to reside with Mr. Band, of Auchmeddan, Lady Dipple's son-in-law, where he first enjoyed the luxury of access to a good library, he commenced taking miniature portraits. His talents in this way struck his friends as extraordinary, and by their advice, he proceeded to Edinburgh and set up as a regular portrait-painter. He was now about eighteen; and for twenty-six years he followed the profession of a painter with greater or less assiduity, although he never appears to have been either highly successful or much in love with it. Meanwhile, he tried his hand at medicine, in which he made some progress; but, however, for his astronomical studies. Having discovered the causes of eclipses, he drew up a scheme for showing the motions and places of the sun and moon in the ecliptic for every day in the year. This discovery he made known to the celebrated Maclaurin, who was so much pleased with it that he had it engraved. It sold so well that Ferguson began to consider his fortune made. One day he asked the professor to show him his orrery; when he saw it, he was so struck with the harmony of the motions of the heavenly bodies, that, without seeing the interior of the instrument, he set about constructing one for himself, which answered its purposes so well, that he was soon engaged in delivering lectures on it before the professor's mathematical class. He afterwards made six instruments of a like description, each new one an improvement on the last.

In this way his mind became more and more habituated to philosophical pursuits; and, quite tired, he says, of drawing pictures which would never become famous, he determined to try his fortune in London as a teacher of astronomy and mechanics. In London, then, that glorious city, the next year (1743), we find him—still occupied in painting portraits, but devoting every spare minute, and often half the night, to the study and prosecution of his favourite pursuit. He was now in his thirty-third year, and he longed to accomplish something which should distinguish him from the crowd. Having discovered a new astronomical truth, that the moon must always move in a path concave to the sun, he submitted his proposition to Mr. Folks, the president of the Royal Society. This brought him into immediate notice; and the same day that the president received the paper, he took its author to a meeting of the learned body with which he was connected, and introduced him as a highly promising young man. In 1747 his discovery, entitled "A Dissertation on the Phenomena of the Harvest Moon" was published; and such was the favour with which it was received by the learned, that in the next year we find him engaged in delivering public lectures to fashionable audiences on the eclipse of the sun, &c., under the patronage of the Prince of Wales, afterwards King George III.

From this time he was continually occupied in astronomical pursuits, delivering lectures, and writing several works on astronomy and mechanics, besides contributing occasional papers to the philosophical transactions.

Soon after George III. came to the throne, he bestowed a small pension on Ferguson from the privy purse. In 1756 he published his "Astronomy explained upon Sir Isaac Newton's Principles"—many editions of which have since appeared. In 1763 he was elected a fellow of the Royal Society, the usual fees being remitted, as in the cases of Newton and Thomas Simpson. In 1764 he published his lectures on subjects in Mechanics, Hydrostatics, Pneumatics, and Optics, with the use of the globes, the art of Dialing, and the Calculation of the mean times of New and Full Moons and Eclipses. In 1769-70 appeared several works from his pen intended as introductions to astronomical studies; in the latter year he was elected a member of the American Philosophical Society, and in 1775 he published his last work, "The Art of Drawing in Perspective made easy to those who have no previous knowledge of Geometry." The next year (1776) he died; having [illegible] great things, and being in the enjoyment of reputation second to few scientific men of his day.

And thus had the shepherd's boy risen, by the strength of his intellect, [illegible] learned, which entitles him [illegible] to be placed among the benefactors of science, and the great places in the world's system open to all competition. Ferguson, says a public writer, has contributed more than perhaps any other man in this country to the extension of physical science among all classes of society, but especially among that class whose circumstances preclude them from a regular course of scientific instruction. His ingenuity in the selection and arrangement of his facts, and in the display of the truths deduced from them, was his characteristic both as a writer and a lecturer. Of his [illegible] Madame de Genlis, the teacher of the young [illegible] and his brothers, says—"This book is written with so much clearness, that a child of ten years may understand it from one end to the other." When we consider, that during the whole course of his life, Ferguson was ignorant of mathematics and the higher parts of Algebra,—now probably to the scarcity of good and cheap elementary works, a scarcity which is every day becoming less and less—his success in whatever he undertook appears astonishing. In his day, books on science were comparatively dear and few; in ours, a youth who can merely read his own language may teach himself whatever he pleases, how much greater, then, becomes the merit of a man, who, like Ferguson, raised himself from poverty to distinction by the efforts of his own perseverance [illegible] Devotion to knowledge, unlike any other [illegible], brings with it a reward which reconciles the student to poverty, and renders him capable of rising superior to the petty ills of life.

P.

LITERARY NOTICES.

EDUCATION IN THE GERMAN LANGUAGE, THROUGH THE MEDIUM OF THE POPULAR EDUCATOR.—"The Popular Educator," No 11, bearing date June 12th, contained the first of a series of familiar LESSONS IN GERMAN. This course will impart a thorough acquaintance with the Language, and—together with the Lessons already commenced on the Literature and Grammar of the English Language, Lessons in French and Latin—render the "Popular Educator" the most complete Educational Work which has ever appeared. Besides instruction in the above [illegible] English Grammar, Arithmetic, Mental Science, Music, History, Penmanship, Book-keeping, Shorthand, Geography, &c. To meet the urgent wishes of numerous families and individuals, an *Extra Edition* is now issued, upon superior paper, the price of which is 1½d per Number, or Monthly Parts, containing four Numbers in a neat wrapper, 6d, or when five Numbers, 8½d. The EXTRA Edition is published without the weekly headings. Two Parts are now ready; Part I, price 7d, Part II, price 8d.

CASSELL'S SHILLING EDITION OF EUCLID.—In consequence of the interest excited among all classes of the readers of the POPULAR EDUCATOR, since the publication of the Lessons in Geometry in that work, John Cassell has determined to issue a Popular Edition of THE ELEMENTS OF GEOMETRY, to contain the First Six, and the Eleventh and Twelfth Books of Euclid, from the text of Robert Simson, M.D., Emeritus Professor of Mathematics in the University of Glasgow, with corrections, Annotations, and Exercises, by Robert Wallace, A.M., of the same university, and Colleague and Tutor of the University of London. This work will be ready early in July, price 1s. in stiff covers, or 1s. 6d. neat cloth.

MISCELLANEA.

THE "TON" OF ST. KITTS.—The magnificos of Basseterre are the shopkeepers and their shopmen. The latter wear mustaches, imperials, and dandy dresses, ride their nags, and (as a creole informed me) "lead here," They are by no means of so high a caste, or so well-informed as shopmen in England, but talk and act as if their superiors did not exist. Indeed, throughout the West Indies, it is high treason to hint that there is any class of gentlemen, *par excellence*, in the world. Noble birth, education, elegant manners, and fortunes that command all the splendours of life, with the taste to appreciate them, must be carefully kept out of sight, lest it grate offensively on the ear of the counter-skipping *elegant* and his trading-master. The educated clergyman, the lawyer, and the physician are looked down upon by the shopocracy of the West Indies.

PRE-RAPHAELITISM.—If the theory of the Pre-Raphaelites is just as regards painting, it must be just as regards the other departments of taste. What would be the effect of the new system, if applied to romantic fiction? But the question is unnecessary; for the new system ignores romance, which is the truth of nature, not of fact. A pre-Raphaelite story, taken from real life, may be romantic in its incidents and striking in its catastrophe, but it would want coherence in the design, and therefore produce no sustained emotion, and its characters being drawn, without selection from vulgar prototopes, would excite more disgust than interest. The drama?—but there the new theory of art becomes more ridiculous: a tragedy on such a plan would be received with alternate yawns of ennui and shouts of laughter All these are pertinent questions; for fine art, in literature, music, sculpture, painting, architecture, forms a homogeneous circle under one law of taste. It may be supposed that we are ascribing too much importance to this department of the mediæval mania; but, for our part, we scorn nothing that presents a bar, however slight to the progress of civilisation and refinement. Pre-Raphaelitism is only one form of a degradation of taste which appears to keep pace with the utilities of the time, and we shall never be slow in lending our aid to cleanse the temple of its desecrators

INTEMPERANCE.

WATCH yonder wretch—mark well his haggard face,
H is tattered garments, and his tottering pace,
I n every feature, vice and dark despair
S ecurely reign, and penury and care,
K een are his wants, and justice round them throws
E ndless confusion and a cloud of woes.
Y ou ask what dire calamity is this

W hich blights so cruelly his health and bliss?
H e is a drunkard. Alcohol hath found
I n him a victim, and his soul is bound!
S oon as the demon his fell torch illumes,
K indled within, the fatal fire consumes;
E ach comfort flies at his approach; and fade
Y outh, strength, and beauty, 'neath his Upas shade.

THE DUTY OF ALL IS TO LABOUR.—"The rich man," says Dr. Channing, "has no more right to repose than the poor. He is as much bound to labour as the poor; not to labour in the same way, but to labour as really, as efficiently, as intensely. I am tempted to say more intensely, because he has a sphere so much wider and nobler opened to him. No man has a right to seek property in order that he may enjoy, may lead a life of self-indulgence, may throw all toil on another class of society. This world was not made for ease. Its great law is action, and action for the good of others still more than for our own. This is its law, and we violate it only to our own misery and guilt."

FLEXIBLE VARNISH may be made of India-rubber shavings, dissolved with naphtha, at a gentle heat, in a close vessel.

HARD VARNISH FOR JAPANNING.—Take of the best pale African copal seven pounds, fuse, add two quarts of clarified linseed-oil. Boil for a quarter of an hour, remove it into the open air, and add three gallons of boiling oil of turpentine. Mix well, then strain into the cistern, and cover up immediately

LINSEED-OIL VARNISH.—Take eight pounds of linseed-oil, and boil for one hour, then add one pound of the best resin, previously powdered, and stir the mixture until the resin is dissolved Now add half a pound of turpentine. Let the whole cool, and it is ready for use

SHELLAC AS A WATER VARNISH.—Dissolve one part of borax in twelve of boiling-water, and add the whole to an equal quantity of white lac varnish, with which it will mix freely. This varnish is useful in painting, where a firmer body is desirable than can be procured altogether in oils It may be also used instead of shellac varnish alone, as a vehicle in painting

A GOOD JAPAN VARNISH FOR TIN-WARE.—Take oil of turpentine eight ounces, oil of lavender six ounces, copal two ounces, camphor one drachm Mix at a moderate heat

BLACK JAPAN VARNISH FOR LEATHER.—Take boiled linseed-oil one pint, burnt umber eight ounces, asphaltum half an ounce Boil and add oil of turpentine till the required consistency is obtained.

TO JAPAN VARIOUS KINDS OF WOOD.—Provide yourself with a small muller and stone to grind any colour you may require; also with white hard varnish, brown varnish, turpentine varnish, japan gold size, and spirit of turpentine, which you may keep in separate bottles until required; with flake white, red lead, vermillion, lake, Prussian blue, king's and patent yellow, orpiment, spruce and brown ochre, mineral green, verditer, burnt umber, and lamp-black Prepare the wood to be japanned with size, in order to fill up and harden the grain, then rub the surface smooth with glass-paper when dry. With the foregoing colours you may match the tint of any kind of wood, always observing to grind your colours smooth in spirit of turpentine, add a small quantity of turpentine and spirit-varnish, and lay it carefully on with a camel-hair brush, then varnish with brown or white spirit-varnish, according to colour. For a black, mix up a little size and lamp-black, and it will bear a good gloss without varnishing. To imitate black rosewood, a black ground must be given to the wood, after which take some finely-powdered red lead, mixed up as before directed, and lay on with a flat, stiff brush, in imitation of the streaks in the wood; after which take a small quantity of lake, ground fine, and mix it with brown spirit varnish, carefully observing not to have more colour in it than will just tinge the varnish; but, should it happen on trial to be still too red, you may easily assist it with a little umber ground very fine, with which pass over the whole of the work intended to imitate black rosewood, and it will have the desired effect. If the work be done carefully, according to the foregoing rules, it will, when varnished and polished, scarcely be distinguished from the real wood.

ANSWERS TO CORRESPONDENTS

"A WOULD-BE-ARTIST."—You may fix your pencil drawings by passing them through rice water. Boil a table-spoonful of the best rice in a quart of clean soft water, till the grains have swelled out to their full size. Remove it from the fire before the grains, by bursting, begin to thicken the water. Strain the liquor through fine muslin into a dish, and then, taking your drawing by two of the corners pass it quickly *under* the rice-water, so that every part is covered Place the drawing upon a clean deal board, in a slanting direction, and fasten the upper corners with two pins There let it remain till thoroughly dry, when you will find your pencil-work so fixed that Indian rubber will not erase it. Drawings thus fixed may be cleaned at any time with the crumb of stale wheaten bread, without any fear of spoiling the work, however bold. *Chalk* drawings may be fixed by the same method, but the crumb must be passed carefully through the rice-water over the work, especially in the shaded parts, may be disturbed.

H. WELSH.—You may find all the information you ask respecting "paper-making, writing, and printing," in a sixpenny book published at our office, entitled, "Book for the Young" "Baron Trenck" is not an imaginary being; he really existed, and we believe the history of his persecutions to which you refer may be regarded, on the whole, as authentic. A "History of Shipwrecks" would occupy more space than we are able to devote to such a subject.

J. CLIFFORD.—who, by-the-by, has not told us his "whereabouts,"—offers to reward us with *three pounds* for our trouble,' if we will tell him "the best thing for curing groundless fears" Our "fears" that we shall not be able to win this glittering prize are not quite "groundless."

MARY ANN.—Alpaca is the soft silk-like wool of the Alpaca, an animal of the Llama tribe, peculiar to South America, having some resemblance both to the camel and the sheep, though it cannot properly be classed with either. The question is now being seriously discussed, whether this animal admits of naturalisation in the British Isles.

HENRY.—The census already published does not contain the particulars you require, as to the number of persons engaged in each trade, and the number of persons belonging to each religious denomination. The former will, no doubt, be published; concerning the latter there is much doubt.

SAXON.—Deafness is an "infirmity" which you should not trifle with. We fear that you would derive little or no benefit from the pamphlets or remedies that are advertised from time to time You might obtain suitable aid, perhaps, at some of the ear infirmaries in London, but for this your *personal attendance* would be necessary.

V. E., J. BARRY, and others.—We cannot encourage you to hope for success in Australia either as grocers, or clerks, or storekeepers. As to "suitable fields for emigration" and other particulars about emigrating, we refer you, C. LANANGE, and several other correspondents, to the *Emigrant's Handbook* just published at our Office

X. M.—The sentiments expressed in your lines are excellent, but your versification is not sufficiently correct for our pages. "Try again."

J. TENNYSON.—We know but of one ship that sails to Australia upon the temperance principle but that one does not take passengers. You can of course, act upon the temperance principle in any vessel you choose. We cannot undertake to say "in which of the gold fields" you would "be most successful." As to "the lowest possible cost of emigration," you would be best able to calculate that after obtaining the rate of passage &c., from the agents of some vessel advertised to sail.

W. PERRY.—There is nothing in the circumstances to which you refer, to prevent you investing any portion of money in a saving bank.

E. A.—*Spectacles* are said to have been invented by one SPINA, about the year 1200.—The word *miasma* is from the Greek word *miaino*, to pollute; it means infecting substances arising from distempered poisonous bodies, by which persons are affected at a distance.

SPAIN AND ITS PEOPLE.

THE inhabitants of the Spanish peninsula occupy a prominent position in the history of the world. Belonging to one of the oldest branches of European civilisation, the influence of the Spaniards is felt and acknowledged in all European countries; no less in Great Britain—whose oldest allies and bitterest enemies they have alternately been—than on the continent, himself, in larger and more learned books. Meanwhile, w will endeavour to make him familiar with

THE GENERAL CHARACTERISTICS OF THE COUNTRY.

Spain occupies that portion of the western European penir sula between the 35th and 44th degree of north latitud

THE ROYAL PALACE OF MADRID.

where, in all dynasties and monarchies the name of Spain has been more or less intimately connected from the earliest period. As it would be manifestly beyond our scope to attempt anything more than a brief and general description of this interesting country, it will be our aim to convey to the reader such information as will induce him to search out for having its extremities about 9 degrees west by 3 degrees east of London. It is bounded on the north by the Bay of Biscay and the Pyrenean mountains, which separate it from France; on the south by the Straits of Gibraltar, which divide it from Africa; on the east by the Mediterranean sea; and on the west by the kingdom of Portugal—which is a narrow slip

forming nearly the whole western sea boundary of Spain—and the Atlantic Ocean. Thus we perceive that the Pyrenees range forms a grand natural boundary between it and France; and that including the kingdom of Portugal, a kingdom nearly allied to it in language and traditions, it is surrounded on three sides by the sea. A glance at the map of Europe, however, will convey a better idea of its situation than could any written words. The greatest breadth of Spain, from the river Bidasoa in the west to Cape St. Sebastian in the east, is about 500 miles, while its length from the Bay of Biscay in the north, to the rock of Gibraltar in the south is nearly 600 miles, forming, with Portugal, nearly a square. Its superficial contents may be estimated at about 148,000 square miles; and its grand physical traits are the extent, number, and height of its mountains; and its rivers, which take their rise between the chains from which they flow. The strong contrast between this formation and the level, monotonous region of France, has induced modern geographers to find some cause for the fact other than a mere caprice of nature. Inquiry on the subject led naturally to discovery, and it is now believed that the Spanish mountains are the terminations of that great range which, taking its rise in Tartary, traverses Asia and Europe, leaves a stronghold in Switzerland, and a few scattered posts in France by the way, to keep up its communication with Spain, where it forms a vast natural bulwark of hills, which lend each other support in withstanding the immense volume of waters with which the ocean endeavours to overwhelm the continent of Europe. Without inquiring into the correctness of this supposition, it is sufficiently evident that there are many chains of mountains which take their rise in the Pyrenees, and run southward by westward, intersecting the whole peninsula. Another look at the map will render this apparent, and the reader will discover the Asturian and Gallician range; the range of Guadarrama, that which is called the Iberican; the Sierra Morena; and the mountains of Granada and Ronda, which skirt the Mediterranean, are the most elevated of them all. "These last," says Father Marina, in his excellent account of Spain, "press onward with so much boldness, that they seem to have pretended in various places to cross over the sea, dry up the strait, and unite themselves with Africa."

Another singular characteristic of Spain, is its distinctly marked division into two separate regions, one of which has been called the central, and the other the region of the coast. The whole interior of Spain may in truth be spoken of as one vast mountain; for though it consists mainly of level lands, traversed by lofty ridges, yet even the plains rise almost everywhere to an elevation of nearly two thousand feet above the level of the sea. In these preliminary remarks we must again request the reader to refer from time to time to the map of the country, so that he may verify the truth of them as he goes on. And, indeed, we here take occasion to say, that in all geographical and historical reading—in voyages and travels, no less than in the more exact accounts of the geologist—the student will find the possession of a map of the country under consideration a most important aid. To resume: in consequence of the extreme dryness of the atmosphere, the rivers of Spain are neither so many nor so great as to comport with the height and number of her mountains. The principal are—the Tagus, the Guadalquiver, the Ebro, the Duero, and the Guadiana. The Tagus, the prince of Spanish rivers, and the fruitful theme of so much poetry, takes its rise in the mountains of Guadarrama, waters the groves and gardens of Aranjuez, half encircles old Toledo; and having received many tributary streams, at length opens into a wide estuary, reflecting the images of Lisbon and Cintra. The Guadalquiver, another poetical river, rises between the Modena and the Nevada, and having been fed by numerous mountain rivulets flows slowly and gracefully towards the ocean—laving in its way the walls of Cordova and Seville, and scattering fertility over the fair plains of Andalusia. The Ebro has its source in the mountains of Navarre, and takes its course between two of the branches of the Pyrenees, until it empties itself into the Mediterranean—the "Great Sea" of the ancients: it is the only one of the larger rivers that takes an eastern course. The Duero is a mere rivulet at its rise in old Castile; but it gradually swells as it passes the spot where Numantia once stood; and passing through Portugal, reaches the ocean at Oporto. The "proud Guadiana" springs mysteriously from among the classic marshes of Ruidosa, flows onward between delightful meadows, the pasture of countless flocks and herds, and reaches the ocean in the gulf of Huelva. Besides these are numerous smaller streams, such as the Minho, which flows from Gallicia to the Atlantic; the Lima, supposed to be the "Letho" of the ancients; the Tambre, which finds its outlet at Cape Finisterre; and the Gave de Pau, which passes seaward at the historical Cape St. Vincent.

The lakes of Spain are of no great importance. The most remarkable of them, however, is the Lake of Abulfera in the province of Valencia. This beautiful lake extends nearly twelve miles, from the village of Catarraja to the town of Callera, and is about five miles and a half wide; but it is so shallow that only small boats can float in it. At certain seasons of the year, however, the whole surface of the lake is alive with company, who go in boats to shoot the aquatic birds which make it their home; and at other times it affords excellent sport to the angler, as it abounds in fish of large and excellent quality.

The soil of Spain varies as much as its surface, in one part, it is covered with woods and forests—especially in Catalonia, Gallicia, the Asturias, and the Sierra Morena; in another, it is intersected by dry mountainous plains. The region of the coast, though less elevated, and sloping gradually towards the sea, is broken into a constant succession of mountains and valleys, which produce the most agreeable variety, and furnish a happy contrast to the quiet monotony of the interior. The country, however, is everywhere fertile—or might easily be made so by proper irrigation—even in the snowy regions of the Sierra Nevada.

The climate of Spain varies according to the position of its cities. It is described by the writers who have only visited the north and the interior, as being a prey to perpetual snow on the mountains, and unsheltered and unshaded heat in the valleys,—swept by cold blasts in winter, and burnt up by a powerful sun in summer; but all round the coast, and for many miles inland, the climate is delightful; and no engagements need be put aside on account of the weather. "No country in Europe," says Humboldt, "presents a configuration so singular as Spain. It is this extraordinary form which accounts for the dryness of the soil in the interior of the Castiles, for the power of evaporation, the want of rivers, and that difference of temperature which is observable between Madrid and Naples, two towns situated in the same degree of latitude." There is a tradition, mentioned by Marina, of a drought so long and so severe that the springs and rivers dried up, and men and animals died miserably for want of water; and there is a legend which tells how, in the thirteenth century, about the time of the famous battle of Navas de Tolosa, in which two hundred thousand Saracens were slain, that for nine months no drop of rain fell in the kingdom of Toledo; but, perhaps, there is a slight tinge of exaggeration in both accounts. We now come to speak of

THE PRODUCTIONS OF SPAIN.

Nature appears to have been particularly indulgent to the peninsula; but the ingratitude of man has rendered him unworthy so noble a possession. The productions of Spain are rich, various, and almost universal. That the mines of gold and silver from which the ancients drew their stores of wealth, are—with the exception of the silver mine of Almaden—nearly exhausted, is certainly true; but Spain possesses mines of iron, and copper, and lead, and quicksilver, which might be made more valuable, if properly worked, than could any quantity of the precious metals. It will be seen, as we proceed, how the possession of riches has proved a curse to this beautiful country; how, after having been the discoverers, and almost the possessors, of the great American continent—in the southern half of which the Spaniards have left indelible traces of themselves in the character of its people, and in the very names of its cities, towns, rivers, and mountains,—they have failed to render themselves a great nation; how, after having played a most conspicuous part in the history of Europe from the time of Cæsar to that of Isabella, they have sunk in the estimation of the world, and are reckoned but a secondary state; and how, after having had it given them to possess riches in countless abundance, and a country

the fairest on the earth, the Spaniards have thrown away the opportunity of making their influence in modern politics anything but a bad influence, and their position in the world a position which thoughtful men grieve to behold.

But we must not anticipate ourselves. Besides the metals, Spain possesses coal and salt mines in Asturias, Arragon, and La Mancha; precious stones are dug up in various parts of the kingdom, the most beautiful marbles in the world are found in nearly all her mountains. Wheat of the finest quality is produced—or could easily be produced—in most of her provinces; and the grape is grown all over the peninsula. In fact, modern Spain is celebrated only for her fine wines and her ancient memories!

But other goods belong to this favoured country. In her mountains are produced abundance of timber and charcoal, and in her valleys the pasture for sheep and cattle needs little cultivation. Horses of the true Arabian stock range far over her hills, and cattle and swine breed abundantly in her forests; wild animals congregate fiercely in her wastes and fastnesses, and sheep outnumber the inhabitants of her valleys. As the hunter wends homeward, he is greeted by the songs of nightingales, and flowers of sweetest odour throw their gifts upon the evening air. Everywhere is abundance, but everywhere man lies supine in the sunshine, and neglects the gifts which God has given him!

In the fruits of Spain there is a quantity and richness almost unequalled by any other country. Besides the different varieties common to the temperate climes, the fig, pomegranate, orange, lemon, citron, date, plantain, and banana of other lands find there a kindly home. There seems, indeed, to be no extravagance in the theory of the Frenchman who attempted to find, in the different sections of Spain, a similitude, in point of climate and productions to the various countries lying around it. Thus he compares Biscay, Asturias, and Gallicia, to the neighbouring countries of Europe; Portugal to the corresponding part of America; Andalusia to the opposite coasts of Africa; and Valencia, in point of soil, climate, and the genius of its inhabitants to the regions of the East.

Nor are the riches of Spain confined to the resources of her fertile soil; the Atlantic and the Mediterranean, washing an almost equal extent of coast, supply her inhabitants with fish of fine and various quality, and at the same time place them in a position to communicate with every nation of the world. Verily, Spain is a favoured country: and, properly governed, would, under Providence, give the palm to no other nation upon earth.

THE POLITICAL DIVISIONS OF SPAIN

formerly consisting of fifteen provinces which are thus tabulated in the Encyclopædia Britannica. The population given is that acknowledged at the beginning of the present century, and it has not probably increased more than 5 or 6 per cent.

The monarchy of Spain, as seen from the table below, consisted of many distinct provinces, each of which, in earlier times formed a separate and independent kingdom; but although they are now united by marriage, conquest, inheritance, and other circumstances under one crown, the original distinctions geographical as well as social, remain almost unaltered. By recent decrees, however, the old political divisions are no longer recognised; and Spain is now divided into forty-nine provinces—namely, Alava, Altacete, Alicante, Almeria, Avila, Badajoz, Las Baleares, Barcelona, Burgos, Caceres, Cadiz, Las Canarias, Castellon de la Plana, Ciudad Real, Cordoba, La Coruna, Cuenca,

The language, costumes, and local habits of the natives of Spain vary no less than the climate and productions of the soil—as every reader of the immortal Don Quixote is quite aware. Man following, as it were the example of the nature by which he is surrounded, has little in common with the inhabitants of the remoter districts; and these differences are increased and perpetuated by the ancient jealousies and inveterate dislikes which petty and contiguous states are so fond of keeping up with tenacious memory. "Thus," says a quaint writer, "Estramadura is quite unlike Catalonia; Catalonia differs from Andalusia; Andalusia from Gallicia, and all and equally from one another. The general comprehensive term Spain, which is used by geographers, is apt to mislead the traveller; for nothing can be more vague or inaccurate than to predicate any single thing of Spain or Spaniards, which will be equally applicable to all its heterogeneous parts. The north-west parts

of Spain are more rainy than Devonshire, while the centre provinces are as dry and parched as Barbary. The rude agricultural Gallician, the industrious manufacturing artisan of Barcelona, the gay and voluptuous Andalusian, and the business-like Castilian are all Spaniards; but they no more resemble each other than do the characters at a masquerade."

In our next article we shall endeavour to give a short *résumé* of the history of this remarkable people.

THE DREAM OF THE NIGHT.

In one of the western counties of Ireland, about twenty years ago, there stood a stately mansion in the midst of a mountainous and rather wild district. It had all the incongruities of architecture which characterise those buildings which had been erected in the age of lawless violence and petty warfare; the close windows, and castellated walls of the days of the Kernes and gallow-glasses, "tories and rapparees," from time to time surrounded and half-hidden by gay terraces and airy apartments, marking the gradual triumph of peace and law. It was imbosomed by woods of native oak and mountain ash; and the bleak hills above, if they were not picturesque, were at least useful. In summer they afforded pasturage to sheep and cattle, and in winter their furze was the retreat of large numbers of grouse, partridges, and hares. The furniture of the interior of the mansion in a great measure corresponded with its outward appearance. One or two fauteuils and light slender chairs seemed intruding amongst their highbacked and massive companions; the plate, the pictures, and even the books, belonged to the last century. The owner of these premises was a Mr. Everard Cotherell, the descendant of a military adventurer in the wars under Elizabeth, who by his marriage with the daughter of the chieftain of the district had succeeded to the inheritance, and by his winning manners and kind-heartedness had secured the allegiance and affections of the clan. The estate was for the most part marsh or mountain, and was at the period of our tale let at exorbitant rents, which were seldom paid up, and then chiefly in farm labour. But Mr. Cotherell was a man who never went to extremes with his tenantry. It was the boast of the district that for centuries back no Cotherell had ever sent a poor man's cow to the pound, or taken the roof from over the head of the widow or the orphan. The present owner was a man of retired habits, who resided constantly upon his estate, occupying himself with his farming pursuits or his books. He seldom went to Dublin, and then only on business, as neither his purse nor his tastes enabled him to enjoy the gaieties or dissipations of the metropolis. He had at home society which he valued more than he could have done that of the gayest or the wittiest, or most learned—a wife, whom he had married for love, and loved now, if possible, more ardently than ever, and a daughter in the full bloom of youth and beauty. Upon the latter he and Mrs. Cotherell actually doted. Her education had from her birth occupied all their leisure hours; and as she was their only child, they were looking forward with calm pleasure to the day, when, as the wife of a man of high birth, a model of manly beauty, the possessor of a refined and dignified mind, she would become the mistress of the "old house at Rathnagru." Pleased would they then lay down their wearied heads and say, "Lord, now lettest thou thy servants depart in peace, for our eyes have seen thy salvation."

Mary Cotherell was, when our story commences, about eighteen, and her appearance told at once of the mixed race from which she sprang. Her fair hair and mild blue eye were decidedly Saxon, but the comic expression about the mouth, the expressive, but by no means disagreeable, prominence of the features, the rapid succession of light and shade by which her emotions showed themselves upon her lively, speaking face, told of a mingling of Celtic blood as plainly as the family papers or genealogy. The Celtic character showed itself still more as one watched the current of her quiet existence. Extravagant joy at the prospect of any of the little pleasures of a country life (for she knew no others), was succeeded by extravagant grief at the commonest disappointment, the death or mishap of the meanest of her favourite animals. Her language was generally figurative and impassioned, and her sympathy for the poor unbounded. She had lived amongst them, been brought up amongst them; in short, they were almost her only friends. She wailed at the wakes, and ministered closely and soothingly by the bedside of the sick amongst the tenantry, carried food, wine, and medicine from the "big house" in her own hands; but, nevertheless, it never entered her head that it was kind of her to do so, or that she was giving a proof of what modern young ladies call "Christian benevolence," and make its objects feel that it is pure charity. It came to her as a daily duty, as much as eating her breakfast, and, it must be confessed, rather more agreeably than saying her prayers. She was, it may be readily believed, the idol of the peasantry, the more so, as she and all her family were still stanch adherents of the "ould religion." When, to all we have mentioned, you add a little occasional pettishness and wilfulness, a decided manifestation in some instances of a determination to have her own way, you have before you as good a picture as I can give of what Mary Cotherell was when first I knew her. It must not be supposed that Mr. Cotherell's retired life caused him to be forgotten by his city friends. Like all the Irish gentry of the period, his hospitality was too lavish to render that by any means probable. His dinners were certainly by no means so *recherché* as were to be met with in Merrion-square, nor the attendance so exact and satisfactory, nor the rooms so comfortable; in short, there was not one department of his *ménage* with which a fastidious exquisite might not find a thousand faults. But there was an indescribable charm about the plentiful dinners of game fresh from the moors, and fish from the stream, beef and mutton "killed on the premises," and piled on the table in masses fit for Cyclops, vegetables fresh from the garden, and, above all, the flowing bumpers of whiskey-punch at the close, quaffed by all with a most pleasing disregard to the proprieties of city life. And there was the fine stud of hunters, upon which Mr. Cotherell so prided himself, and which were at all times at the disposal of his guests, not one of which ever "stopped at a wall, or looked for a gap," and which possessed that familiarity with [illegible] and morasses so necessary in Irish animals of their class; and there was the unlimited supply of game scattered over miles of a romantic country, to exercise the muscular powers, and sharpen the appetite for the joys of evening. Then after tea there was the music and the dancing—not the piece of tame formality known under the name of dancing in England, but a dashing, rollocking, jovial, lively sort of amusement, carried on amidst merry jokes and hearty laughter, and with a degree of vigorous exertion of the lower extremities, unknown at evening parties at the present day.

It need cause no surprise, then, when we inform our readers that no sooner had the shooting-season set in than a host of young barristers, students, and "young men about town," connexions and acquaintances, more or less intimate, of the Cotherell family, might be seen packing themselves on the top of the Galway mail, or into the long boxes, dignified by the name of "passage-boats," which used to start, and, for aught we know to the contrary, start still, from Portobello-bridge *en route* to Rathnagru House. Down they came in swarms each one hurrying to secure as good a bedroom as possible pulling the old butler by the ear, or half flinging him down stairs, by way of announcing his arrival. That functionary having, of course, the utmost respect for all his master's friends, and holding all "gintlemin" in the utmost reverence seldom made any comment upon these modes of salutation beyond observing "that the gintlemin was always might hilaryus when they was afthur comin' from the city."

By degrees the ladies would begin to arrive too, for one se never establishes itself long anywhere alone. Then the gentlemen would have to relinquish the bedrooms, one by one and take up their night abode on the sofas, and often on the floor of the sitting-rooms, carrying on at all times tremendous fun and frolic, and making a great uproar, to the manifest gratification of the whole household.

Among the number was a young man named Robert Croughton, a student of Trinity College, who was just finishing his course. He was the son of an old and intimate friend of Mr. Cotherell's; and as he came each summer, with unfailing regularity, he was received with a larger share of welcome than fell to the lot of most of the visitors of Rathnagru. No of them were ever invited. They came or stayed away, pleased their fancy, and were always cheerfully received; b

the absence of any one individual from these yearly reunions seldom excited any attention, beyond a passing remark. Croughton, however, was always calculated upon, and always arrived. The ladies considered him an indispensable portion of the company, and the gentlemen thought him a "decent, harmless fellow." He was always the first to reach the drawing-room after dinner, and was the only one known to stay in from shooting or "tracing" hares, on a bracing snowy morning, to copy music or read poetry. His tastes and disposition may be easily guessed; he was gentle and refined in his manners, averse to coarse pleasures, fond of ladies' society, given to literary pursuits, full of an ardent and impassioned sentimentality, which found vent in very middling pieces of poetry, and possessed an intimate acquaintance with the language, habits, manners, and legends of the Irish peasantry He was intended by his father for one of the "learned professions," but he possessed one feeling which would have proved a bar to his success in any one of them—a strong repugnance to work of any kind, and a total want of energy. He would have been content to lead for ever a flowery, joyous life at Rathnagru, amongst the ladies, the fields, and the horses, and cursed his hard fate when the close of the vacation called him back to college Of middle height, with fair, curling hair, regular but pleasing features, and delicate complexion, he was the beau-ideal of what young misses term "interesting."

To make a long story short, he had, during his repeated visits, fallen in love with Mary Cotherell, and had pressed his suit with all the ardour of which his susceptible and highly-wrought nature was capable. By her he was at once accepted, and the parents, on both sides, after mature deliberation, came to the conclusion that it was, perhaps, the best thing that could happen. Repeated failures in college had inspired Croughton's father with grave doubts as to his son's success when thrown upon his own resources in the great world, and he thought the life of a country squire would just suit him Mr. Cotherell judged rightly that he would make a good husband for Mary, and a kind landlord for the tenantry. What more was wanted? Finally, it was arranged that they should be married as soon after he had obtained his degree as possible. It seems to me as if but yesterday that, on the evening of the day on which the preliminaries were all arranged, they were in my *vis-à-vis* in a quadrille we were dancing in the old drawing-room at Rathnagru I remember with what admiration I gazed on them, as they leaned against the cabinet, while the end couples were going through the figure, their whole soul and attention wrapped in their own conversation, and the love-light beaming from their eyes, and with what fervour I responded to the emphatic exclamation of my partner, "*Aren't* they a nice couple!"

One morning, two or three weeks before the scene I have just been describing, and just previous to the expected arrival of Croughton and the other guests from Dublin, Mr. Cotherell came down to breakfast, unusually sad and silent. This sombre melancholy, which deepened during the day, excited the attention of Mary and her mother, and led them to inquire the cause. He at first replied that it was nothing of consequence, and towards evening made an effort to appear cheerful. That it was only an effort, however, was quite apparent, and at tea Mrs. Cotherell gently remonstrated with him upon keeping the source of annoyance or anxiety concealed from her.

"Well, my dear," he replied, "since you press me, I'll tell you; but I know you'll think me silly; and so I am, perhaps, but I can't help it. I dreamt last night that I was standing with Mary upon the bank of a rushing, roaring river, swollen, turbid, and muddy, and that she suddenly—I couldn't tell how—fell in. Bevis" (a favourite greyhound) "was standing at my side, and plunged in after her, and, seizing her dress in his mouth, made an effort to swim towards the bank. But all in vain. The torrent carried them away. Mary I saw, rising and falling with the heaving of the water; and, my God!" said he, with a sudden start, shuddering as he spoke, "can I ever forget the frightful expression of her eyes, as they were fixed upon me, as I thought for the last time! I awoke with the fright, and could not sleep again during the whole night. I have tried in vain to shake it off, but it has left an extraordinary impression upon me, for which I cannot account. I could not help starting, as if in terror, when I saw Mary entering the room this morning"

When he had finished, Mary looked a little graver than usual, and said, after a moment's thought, "Peggy Fegan says it's bad to dream of muddy water—I wonder is it."

"Tush, child! it's all old women's folly. You must have been ill, my dear," said Mrs. Cotherell, turning to her husband; "indigestion, or something of that kind."

So the matter dropped for the present. By Mary and her mother it was soon forgotten, in the excitement of preparation for the visitors, but it was evident Mr. Cotherell still brooded over it. Even when Croughton had come down, and Mary was his affianced bride, her father stayed constantly near, riding and walking close beside her, and exercising so close a supervision, as it were, over the two lovers, that Croughton felt rather annoyed at it, as he considered, and rightly too, that there was now less occasion for it than ever.

One snowy morning the gentlemen had all gone out to course, if coursing it could be called, when the poor hare had to escape from powerful dogs through deep, soft snow. After a long chase on the hills, puss, hard pressed, ran towards the house, near to which the trampling of men, horses, and cattle, had either melted the snow, or rendered the footing firmer. Loth to leave this favourable position for certain death in the wastes beyond, the poor animal took refuge in the farm-yard. Rushing into the dairy with frightened haste, she ran behind some pails, under a bench near which Miss Cotherell was standing, talking to some poor women, who were collected to receive their daily allowance of buttermilk. She stooped directly, with girlish eagerness, to secure the hare, and just as she did so, Bevis, the hound, came bounding in and made towards her, and, darting, open-mouthed, at his prey, slightly wounded her mistress's hand with her fang.

"Well, I declare!" she exclaimed, "papa's dream is now fulfilled, so it is nothing but a scratch after all. I must run and tell him." She did so, but he looked graver than ever, and kissed her with an earnest sadness that for the moment surprised and alarmed her. But it was soon forgotten when Robert Croughton kissed her too, and condoled with her upon her wound.

The winter months soon passed round, and summer, so welcome to lawyers, students, prime ministers, and beggars, came again, and a merry party was once more collected in Rathnagru, but this time to witness the wedding. It was to come off in three weeks, and all were in high spirits, save Mr Cotherell, who, still gloomy, sombre, and foreboding, seemed more occupied in seeing to the safe-keeping of the dog Bevis, which he had kept tied up in a stable ever since the accident we have mentioned, than in preparation for the approaching festivities. A fortnight was still to come—to the lovers it seemed a year—before their union, when the whole household were aroused, early one morning, by wild and piercing shrieks, issuing from Mary Cotherell's bedroom. Father, mother, guests, servants, all rushed, in wild affright, to the spot. When there, a scene met their view which might well cause the stoutest heart to throb convulsively, and the sternest brow to blanch its colour. Crouching in a corner of the room was the unhappy Mary, in her night-dress, her eyes glaring with maniacal light, and around those lips from which Croughton had so often kissed the soft dew of love, he was now horrified to see the foam hanging in thick wreaths.

"Keep away from me! I'm mad!" she exclaimed. "And take away the dog—the dog, I tell you!" pointing, with frantic gestures towards the water-basin—"the dog is in that water! Take him away directly, or—or he'll devour me;" and the word "*devour*" was prolonged into a fierce, wild shriek Her father alone had the courage and presence of mind to approach her. Walking towards her with the calmness and devotion of despair, he took her in his arms, although she resisted with frightful energy, and, laying her in the bed, held her down, while they sent for a doctor. He came; but why prolong the sad story. What pleasure or profit should I derive from relating, or the reader from perusing, the details of the awful scene which followed,—the ravings of the maniac, for ever lost in this life, the prolonged swooning of the mother, the calm but unfathomable grief of the father, and the wild despair of the unhappy lover! In a few days, she was borne to the grave by the same means that her fathers had been for generations before, upon the shoulders of the faithful and sorrowing tenantry, and the peasant girls, in white

dresses, and bearing in their hands white rods, as a token that a maiden had gone to her rest, formed the van of the sad procession. Mother and father, broken-hearted, soon followed to that better land where the weary are at rest; and when last I heard of Croughton he was a missionary in South Africa.

Of the old house nothing remains but the mouldering walls, and the estate itself was brought to the hammer, a few days ago, in the Encumbered Estates Court for the benefit of the heirs-at-law.

THE IRISH INDUSTRIAL EXHIBITION.

THURSDAY, June the 10th, was a great day in Cork, says our able contemporary, the *Athenæum* The city—rich at all times in natural beauties, wood and water, fine streets, picturesque bridges and commanding heights,—and now full of strangers from every part of the British isles, the representatives of royalty, literature, science, industry, and the Fine Arts—presented to the eye a spectacle as imposing in its outward forms as it was suggestive in its moral meanings. Cork is a city of great architectural possibilities. Its harbour is almost unrivalled. Its wharves are broad, clean, and well located. Its main thoroughfares are wide, straight, and capacious. Its houses are lofty. Altogether it reminds the traveller of New York more than any other city in Europe. But when the tourist turns from the pictorial to the social aspects of the place, the parallel ceases. The new world has no scenes to show like those of transpontine Cork. Here, poverty sits in the highway nursing its rags; not with that hopeful fierceness and impatience which a starving Saxon exhibits in his distress,—but with a rosy merriment and good humour, as if the Celt, "being native here and to the manner born," were in love with misery. Here, at least there are ready wits and strong arms waiting on Providence for a task to perform. Cork is also a city of great social possibilities

The Irish Industrial Exhibition is for Cork and for the south of Ireland an event of much importance Exaggerated notions are no doubt entertained by some; the over-sanguine expect from it the most varied and irreconcilable benefits, and even sober people look to it for the industrial regeneration of this country. It is in the order of nature that this eagerness of expectation should suffer some rebuke from the literal facts, but from what has already transpired in reference to the collection of industrial products now housed in Cork, it is certain that an impetus will be given to native manufactures,—and it is probable that of the thousands of strangers who will be drawn to Ireland by the attractions of the prose Crystal Palace, some few may be induced by the combined attractions of natural beauty, good living, and cheap estates to settle in the neighbourhood. Such ideas, however, though they may seem sanguine enough in the meridian of London, would be denounced as cold and sceptical in the atmosphere of Cork. Under the glowing light of a fierce sunshine —amid the noise and dazzle of a military display—in the fervour of a new set of sensations—men's minds are in a state of moral intoxication. To them it appears that Ireland has obtained a new lease of national life. The phrase of our native prelate –

"Westward the tide of empire seems to flow"—

is now on every tongue; and the almost simultaneous opening of the submarine telegraph between Howth and Holyhead—which brings Dublin within a few seconds of London—and of the Irish Industrial Exhibition at Cork, is regarded less in the national aspect of an evidence of steady Imperial progress than as a cabalistic sign of accomplished emancipation.

This exuberant unreality of fancy is not, however, difficult to understand and appreciate. The material and practical are as yet novelties in Ireland. The generation of living men was nursed in fanciful and legendary superstitions. The national schools have done much to banish the banshee—hosts of Saxon tourists have wellnigh driven the phantom steed from the waters of Killarney—the railway has scared will-o'-the-wisp from the moors and mosses of the great central plains of the island. But the early homes of those who now have to deal with the practical Saxon on the exchange and in the corn market were tenanted by the fairies. The elfin tribes are going; but they will, of course, leave some inheritance of fancy and superstition—some elements of the unreal and the grotesque behind them. In time these, too, will follow;—and probably few events could have accelerated their flight more effectively than the Exhibition now open in Cork.

The structure in which the Exhibition is held is partly new. The site is the Corn Market, on Albert Quay, fronting the picturesque heights along which winds the Glanmoire-road. Nothing could be better as to situation;—for the ships ride along the edge of the quay within a dozen yards of the entrance gates, and a handsome and capacious bridge crosses the sea at this point. The Corn Exchange proper forms one end or nave of the structure. The other nave, the principal showroom in the building—and called the Hall of the Fine Arts—is a half-barrel of wood, very much like the hull of a huge ship turned upside down. Wings are added—also of a temporary character—for the more useful articles. Light is admitted by a strip of glass along the roof—as in some railway stations in England. An eye familiar with the graceful outlines and material brilliancy of the Crystal Palace in Hyde-park wanders with some impatience about an interior so devoid of beauty and originality. From no point is the edifice imposing; though there is one view—that from the floor of the Corn Exchange proper down the half-barrel towards the point ending with the great organ—which is decidedly pretty. The walls are covered with crimson cloth—and this in its turn is almost covered with paintings, worsted work, and engravings. Works have been sedulously collected from Irish artists of eminence, whether settled in London or elsewhere. Thus, we have once more Macdowall's "Eve and Psyche," and Foley's two large figures—the "Youth at a Fountain," and the "Wanderer"—in the hall. Maclise's "Spirit of Justice"—a fresco of which he has executed for the House of Lords—is conspicuously placed, as it ought to be in such a collection. Of the merits or demerits of these productions nothing more is to be said—and for the remainder of the fine arts it is almost a charity to say nothing.

The real interest of the Exhibition centres in the industrial products. This is the case not only as to the social consequences of the gathering, but even as to the skill displayed. Foley and Maclise are a credit to Ireland, no doubt; but their triumphs are individual and exceptional—producing no results for the country or for the race. The excellence displayed by the weaver and the lace-maker is of social and political importance; and in this department of the Exhibition we cannot award our praises too warmly. The poplins of Irish manufacture, the laces of Limerick and Belfast, are already famous wherever fineness of tissue and delicacy of finish are appreciated, and their reputation must be increased by the many exquisite specimens here shown to the fair and fashionable visitors. In this direction the Irish Exhibition will probably do a great service to native industry. The Crystal Palace was not particularly rich in specimens of Irish work—one reason, among others, for the effort now being made in Cork; and thousands of persons retired from that vast collection without being struck with the minute beauty of the island products. This omission, so far as the tourists to Cork are concerned, may now be rectified.

That these tourists will be many during the summer which has now set in with what Walpole calls "its usual severity," there are reasons to expect. By the perfection of the Irish railway system the distance is reduced to that of journeys which the most timid tourist will undertake without alarm. Cork is now as near to London as Boulogne—Killarney is not so far as St. Goar. The sea voyage is not more formidable than that between Dover and Ostend, and the scenery of the road is far finer. The Bay of Dublin, though in no respect like the Bay of Naples, is very superior to the roadstead of Ostend. The marine and mountain views in North Wales are grander than the Valley of Liége. Cork itself, the Cove, Blarney, Glengariff and the three lakes of Killarney present a combination of natural attractions not easily surpassed in continental Europe. And where on the way to the Rhine is there a scene like Bangor—between Snowdon and the sea—or a work of human enterprise and power like the Britannia-bridge?

But the hope for Ireland lies, not more in the tide of Saxon tourists which may now be expected to pour along its plains and mountain paths, than in those great material links which are binding it into closer fellowship with England and Europe. Last week the magnetic wires were laid from Anglesea to

Dublin; while the representative of English royalty was inaugurating the Irish festival of Industry in Cork on Thursday, workmen were employed in laying down fresh wires between Port Patrick and Donaghadee. Thus will England touch the sister island north and south. Belfast and Glasgow will be united at one end of the chain, London and Dublin at the other. By these means Ireland is connected materially—we were about to say spiritually—with the whole of continental Europe.

The visitor to the Cork Exhibition will scarcely fail to stumble on the morals of the scene and of the country. In the streets, by the quays and bridges, at the doorways of the temporary structure in which the works of Irish genius are collected, he will see thousands of men, women, and children in the most abject state of poverty, basking in the sun or crouching in the rain like the lazzaroni of Naples—a race to which steady labour is entirely unknown. In the suburbs he will find a soil unsurpassed in fertility, an atmosphere humid, but not unhealthy to man, and particularly favourable to vegetation. Within the walls he will notice evidence of a remarkable capacity for handwork. Capital and guiding intellect are wanted to complete the series of productive agents. But with these added—these outer, and, so to speak, foreign elements—the industrial resources of Ireland might be developed to an indefinite extent. The Saxon may easily bring these into the island.

As the Vice-Regal court rode through the town on Wednesday, in all the pomp and circumstance of majesty, with waving banners, prancing horses, peals of artillery, and multitudinous shouts, we noticed, under the shadow of the Cork Industrial Palace, and moored to the pier of the bridge over which the gorgeous procession passed, an emigrant ship bound for New York. It was crowded with hale and adult labourers and their families. These poor people were compelled to leave their native land. They had been cottiers—evicted to clear ground,—workhouse children—and the lazzaroni of Irish towns. They were leaving a country in which there were thousands of acres of uncultivated ground. They were advertised to sail next day,—and while the Lord Lieutenant was listening in the Exhibition to addresses which assured him that a new prosperity is about to dawn on Ireland, the emigrant ship unmoored, and began to drop down the river in search of new homes for its occupants. What a contrast between the crowds on the bridge and the crowds on deck! Rightly scanned, the whole moral of the Irish Industrial Exhibition may be found in the tale of that departing ship.

EPISODE IN THE LIFE OF A LEARNED ANTIQUARY.

Professor Stark is a most estimable man, and very learned in antiquities. You have no doubt read, or at least heard, of his erudite works on the ancients; but, possibly, you may not be acquainted with him personally. Besides the many artistic and historical acquisitions, Etruscan washhand-basins, or Ethiopian pocket handkerchiefs, which Professor Stark possesses—among the many venerable curiosities which ornament his house, the learned gentleman includes an old housekeeper, who is a perfect Megaera, in an anti-classical sense, and, in accordance with her destiny, makes his life miserable, and boils his coffee for him early every morning. We must not forget to mention that the worthy Professor is now engaged in giving a series of lectures on the "line of beauty in the Greek ideal." This housekeeper and an owl, which the professor calls "Minerva," and regards as the symbol of classic wisdom and æsthetic science—probably because it is unable to bear the daylight of common sense—are the only living beings who, during the absence of the Professor, are permitted to intrude upon his *sanctum*—that is to say his study; the former however, not, as might be supposed, to clean the room, but for the purpose of feeding the "symbol of wisdom." For, although the Professor is of such a gentle disposition, that, as the saying runs, he could not "offend an infant," yet, in spite of this lamb-like nature, he would turn into a roaring lion if he only suspected that Brigitta had moved his paper or brushed the dust from his "vases." A short time ago, however, this is said to have happened. As I have heard the rumour, it runs thus:—

One day—so I have been told—the unfortunate Brigitta, who, like all women, has a natural inclination for dusting and scouring,—one day, therefore, as Brigitta, giving way to temptation, was occupied in removing half an inch of dust from a piece of pottery-ware, which the learned Professor has christened "fragment of an Etrurian urn," he entered his study, and caught her in the very act. Terrified at the consequences of her deed, she let the "fragment" fall from her trembling hands, and the next moment the "Etrurian urn" lay broken into a dozen pieces on the floor.

Rage and despair paralysed the Professor's tongue. His lips moved, but no sound was heard to issue from them. Silently he pointed towards the door, and Brigitta, understanding the pantomime, did not require a second admonition.

For four whole weeks Brigitta did not dare to show herself to the Professor. The owl was only fed when he was giving his lectures, and its master's coffee was always on the table before he came down in the morning. This state of affairs was in no wise agreeable, and Brigitta at length determined to alter it. No sooner was the idea adopted than she set to work to carry it out.

One morning the neighbours saw the Professor's housekeeper leave the house in a mysterious manner, and provided with a covered basket. It was several hours before she returned, without even stopping a moment to gossip at a house close by with a "dear friend." No one could say where she had been, or what business she could have had in the town, as it was not market-day. Brigitta herself preserved a mysterious, and, for her, most unusual silence. The next morning, when the Professor descended from his bedroom to his study, he was extremely surprised to see two unmistakably-ancient, though tolerably-preserved vases, which did not belong to his collection, standing on the table by his coffee. He could scarcely believe his eyes,—looked again, examined, admired, and at length, after an hour of silent ecstasy, only broken by a few exclamations of astonishment, arrived at the conclusion that the said vases were "Celtic drinking-cups," which he had long but hitherto unsuccessfully desired to possess. When he arrived at this result, he remembered the mysterious manner in which he had found these "precious relics of a lost civilisation" on his table. Could they be a present from a learned friend at a distance? In that case there must be some letters, or a commentary. Some one—and here his brow overclouded at the thought that thus "some one" could be no other than Brigitta—must have opened the package, and have drawn the "drinking-cup" from their wrappers. He trembled at the possible idea that the unhallowed hand of a "woman" should have placed these treasures in the danger of destruction.

In the mean time the coffee had become cold,—a circumstance which, in connection with his irrepressible desire to solve the riddle, gave the Professor courage to call "Brigitta" in a somewhat loud voice.

Fortunately, she happened to be in a side room, where a window in the door gave her an opportunity of watching the silent monotony which the Professor held over the "Celtic drinking-cups."

She therefore opened the door, and inquired in a careless voice, what were the Professor's orders?

"My coffee is quite cold, Brigitta," he replied, without removing his eyes from the Celtic treasures.

"I'm sure it's not my fault," replied the old housekeeper, in a sour tone, wishing, at the same time, to regain the ground she had lost.

"Yes, yes, I know that,—it's of no consequence; but—a-hem!—can you tell me how these *Celtic drinking-cups* came to be placed upon my table? Eh!"

"They are drinking-cups, are they? Well, I thought they were something else."

"And what did you believe them to be, Brigitta?" inquired the Professor, whose critical ideas were all attention.

As, however, Brigitta maintained a determined silence, the Professor asked where she had found them?

"In the garden,—down there by the potato beds," was the reply.

"So, so! hem! How deep were they under the surface?"

"Six or seven feet, or thereabout."

"I thought so," murmured the Professor, regarding the

"drinking-cups" with affection. "Tell me, my good Brigitta, what you intend doing with them? Would you—hem!—might I—"

"Well, I found them in your garden. If they please you, of course you can have them; but if you imagine that you owe me any thanks—"

"Ask anything you like," interrupted the Professor eagerly.

"Well, then," continued Brigitta, raising her voice, and throwing everything in this last card,—"I wish you would let me dust and put in order your study every Saturday evening."

The Professor started up as if a tarantula had bitten him, and then hurried up and down his room with hasty steps. At last he stood still and said,—

"Listen, Brigitta; I promised you, and, of course, will not break my word. Dust as much as you like, in the name of all that's horrid, but I promise you that, if you manage to break anything, you shall not stop an hour longer in the house. Now you may bring me my coffee."

Evil tongues will maintain that Brigitta found the "Celtic drinking-cups" among the rubbish of a potter's workshop, after having inspected hundreds of broken pots with critical eyes. At last the two "drinking-cups" were found, which appeared to include the necessary properties of antiquity. The Professor, however, gave to the world, a few months after, a very admirable and profoundly learned work, in two volumes, on "*The various Artistic Shapes observable in Celtic and Scandinavian Vases, and especially in ancient Drinking-cups of those Nations*," a work which was received with all the more satisfaction by connoisseurs, from the fact that the title pages presented engravings of two very rare and remarkable "Celtic drinking-cups."

CHATEAUBRIAND.

Francis Augustus, Viscount Chateaubriand, was born at Combourg, in Brittany, in 1769. At the age of seventeen he joined the regiment of Navarre, in which he remained for a considerable time. The French revolution drove him from Europe. He sailed to America, wandered to the wilds of Kentucky, and, after a residence there of two years, he crossed the wilds of Texas and New Mexico, as far as Cape Mendocino, on the Pacific coast. This long journey furnished the materials for his "Natches," a sort of poetic prose composition, in which he describes the habits of our western Indians. Returning to Europe in 1792, he resumed his military career, was wounded at the siege of Thionville, and soon after repaired to England. Here he wrote his "Historical, Political, and Moral Essay on Ancient and Modern Revolutions, considered in Relation to the French Republic. When Napoleon appeared, he discarded this work, abjured his liberal opinions, and became a warm supporter of that singular man. In 1802 he published his "Genius of Christianity," which rendered him so popular in France that he was induced to return, and, with Fontanes and La Harpe, became joint editor of the *Mercury*. In the following year he became Secretary to the Roman Legation, under Cardinal Fesch, at which time he conceived the idea of writing his "Martyrs," a religious poem not versified. He was afterwards appointed French Minister in the Valais, but soon after resigned. In 1806 he visited the East—Greece, Asia Minor, Palestine, Egypt, and Carthage, and returned through France in 1807. According to his own words, he brought back, as mementoes of his pilgrimage, a dozen pebbles from Argos, Sparta, and Corinth, a phial of water from the Jordan, another from the Dead Sea, and a handful of sedge from the banks of the Nile. On his return to France, he was deprived of his share in the *Mercury*, on account of some remarks which appear to have irritated Napoleon; and from this time his opinion of the emperor underwent a gradual though total change. Aware that he was the object of suspicion to the government, he took occasion, in his "Journey from Paris to Jerusalem," to praise the emperor's conduct and policy, especially that part of it which referred to military affairs. After the disasters consequent upon the Russian war, Chateaubriand openly announced his hostility to Napoleon, and his adherence to the house of Bourbon. These sentiments are fully embodied in his pamphlet entitled, "Of Bonaparte and the Bourbons," in which he strongly denounced the emperor, and avowed himself an ultra-royalist.

By other pamphlets in a similar style, he ingratiated himself with the old dynasty, was received at court after Napoleon's first banishment, fled with Louis XVIII. to Ghent, and again returned with him to Paris. Honours such as royalty can confer now crowded fast upon him. In August, 1815, he was made peer and minister of state; in March of the following year he became a member of the Academy. His feelings, his influence, were now decidedly royal; yet in his "Monarchy According to the Charter," he indulged himself in some reflections so offensive to the crown, that he was dismissed from the office of Secretary of State. From this time until 1820 he continued to publish various works, chiefly as a political character. It is related of him that when the Duke of Bordeaux was baptised, he presented the Duchess of Berri with a phial of water brought from the Jordan. In 1820 Chateaubriand was appointed Minister Plenipotentiary and Envoy Extraordinary to Berlin; in the following year Minister of State and Member of the Privy Council. In 1822 he was appointed Extraordinary Ambassador to London, and on his return to France in the same year he succeeded the Duke of Montmorenci in the department of Foreign Affairs. On the 4th of June, 1824, he was dismissed, under symptoms of disapprobation; but on the death of Louis he again obtained the favour of the court by his "The King is Dead—Long Live the King." But, as he failed in obtaining a place in the ministry, he threw his whole influence with the opposition, and, by means of the public press, attacked the ministers with great bitterness and much success. His famous pamphlet "On the Abolition of the Censorship," in which he declared that a representative government without the liberty of the press is worthless, gained him great applause. In 1826 he advocated the cause of Greek freedom, both by his pen and in the Chamber of Peers.

Chateaubriand's health now began to fail; and though he continued to be engaged in politics and literature until very recently, yet it was with less success than formerly. His principal labour was his superintending the publication of a complete edition of his works, for which he received five hundred and fifty thousand francs. On returning from a voyage to Dieppe, in 1847, such alarming symptoms of disease manifested themselves, as left no room to doubt that his death was very near. Medical assistance was vain; and on the 4th of July, 1848, he died at his house in the Rue de Bac, at nine o'clock in the morning. The funeral service was attended by an immense concourse of the great and fashionable of Paris, and M. Patin, a member of the Academy, pronounced the oration over his body. His remains were afterwards transported to St. Malo, his native place, where they were deposited in a tomb on a high rock overlooking the sea, a fitting resting-place for the poet-politician.

FREEDOM.

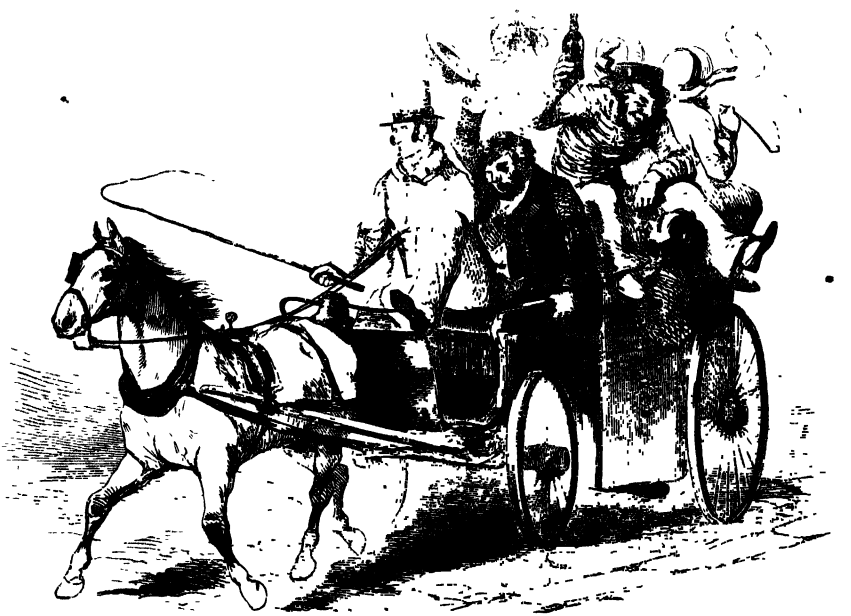
Mankind have bent beneath Oppression long;
The rack and scourge have crush'd their native fire;—
Yet shall grey Error and case-hardened wrong
Light the whole earth with their funereal pyre.

For falsehood shall not ever reign The night
That o'er the Arctic icebergs spreads its pall,
Long as it lasts, yields to the morning light
That throws its golden radiance over all

So shall emerge from out the fatal gloom
That hath o'ershadowed every noble thought
Freedom's inspiring form, while round her bloom
The glories which man's sufferings well have bought.
Undreained of blessings then will have their birth
And love and joy illume the new-created earth

Bradford, Yorkshire Joseph Arthur Binns

A Railway in Difficulties.—A circumstance, perhaps unprecedented in railway annals, has within the last few days, occurred to the Preston and Longridge Railway, the result of which has been that the line has been unavoidably closed, the locomotive power, carriages, and all the rolling stock having been taken possession of and sold under a warrant of execution!



"WHEN THE WINE'S IN," &c.

THE context is familiar enough to everybody, no doubt. The engraving represents a scene by no means unusual. The passengers are evidently sailors, and all of them the worse for their cups. It is difficult to know how they keep their places, seeing they are so perfectly restless and reckless. The one sitting 'longside the driver will probably soon capsize himself, and have a broken limb or a fractured skull. Another has lost his hat, and is threatened to be deluged with the contents of the bottle which his mad brother holds over him, and will most likely be sadly wounded with its broken fragments. What a wonder it will be if they reach their destination without some serious accident! To speak to the eye and the heart is one of the great ends of painting. Garrick has well expressed it in his epitaph on Hogarth —

> "Farewell great painter of mankind,
> Who reach'd the noblest point of art,
> Whose pictured morals charm the mind,
> And through the eye correct the heart."

How happy should we be if the above description so arrested the mad fellows described in our picture? Who would like to be in their position, or share their destiny? Here, then, is one of the warnings of that wisdom which continually utters her voice in the streets; and if our representation and remarks should induce our readers to resolve never to touch poisons which can so thoroughly unman men, and peril their every prospect for this world and that to come, we should rejoice at the thought that one great object which THE WORKING MAN'S FRIEND has kept in view,—namely the emancipation of the people from whatever can debase or injure them, has been accomplished.

The scene chosen by the artist reminds us of an event which occurred a little distance from the house where we were staying a few years ago. The owner of a pothouse had proposed to spend the Sunday with some of his brother innkeepers about four miles from home, and to give his wife and some other friends a holiday also. These gentlemen often choose the Sunday for their recreations. Our neighbour, on the fatal occasion we are about to mention, had, like the gentry in our picture, hired a light vehicle, and at the appointed hour drove away with his party. The horse travelled rapidly along, and nothing particular happened during the journey All were sober, and arrived with safety at the appointed

"WHEN THE WINE'S IN THE WIT'S OUT."

eye and engaged the attention of our readers as to make them see and feel the great evils connected with the use of strong drink When a man or woman becomes fond of these, everything is placed in jeopardy. The recklessness of the party depicted above, is but a faint representation of the lives and conduct of the votaries of the bottle. As soon as this new appetite is created, the health, the intellect, the morals, in fact all things connected with the wellbeing of man, are endangered. To the lovers of the tankard or the bottle, nothing is safe or secure Much has been said of the ruin occasioned by these poisons, but the thousand thousandth part has not been told Every parish has its histories of desolation and death from drink; and almost every family its tale of woe The world could not contain the books that might be written on this melancholy subject. Who will venture to predict the end of the rendezvous. After alighting, and the usual salutations of innkeepers with innkeepers, they sat down to the carousal, and the day was spent as jovially as the landlords, the landladies, and their associates could wish. As far as eating, drinking, jests, and polite obscenity rendered peculiarly savoury by a due proportion of oaths and profanity, could minister pleasure, they were all happy. Doubtless, as they all knew better, conscience every now and then uttered an unpleasant whisper, but then they all believed in the potency of the bowl to silence such an officious intruder, and an extra glass soon turned seriousness into laughter, and even religion, death, and eternity into a jest.

Pothouse theological and religious disputation not unfrequently arises from the struggle within. Conscience will go everywhere; even Lucifer has not yet been able to invent a lock which it can-

not pick, nor to forge a bolt which can exclude it even from the regions of darkness. It is as ubiquitous as ourselves, and therefore it enters the tavern; and as its voice is uppermost, and as men and women in liquor generally, like children, think aloud, religion is often upon the tapis of the beer-house kitchen or the parlour of the more polished and expensive tipplers; and nowhere is it more roughly handled. In the company referred to religion was not neglected, but then it was introduced to be condemned and scouted; for what could an assembly of swearers and drunkards say in praise of an austere judge who so severely reproved and condemned their vices.

Well, after having eaten all they could eat, and drunk all they could drink; and after exhausting every jest by uttering it several times over, and rendering every tale insipid by repetitions, the party broke up, and our neighbour, the pothouse keeper, with his wife and companions, ascended their car. It is true there were some fears when Boniface took the reins, because the horse was restive and the driver was the worse for liquor; but away they went. The wife, who was not much the worse for liquor, was alarmed, and in going down a hill persuaded her husband to alight and walk, and even suggested that a more sober man from the other car which accompanied them should take charge of the vehicle and the precious lives which it contained,—doubly precious, alas! because none of the passengers were fit for an exchange of worlds. Drunken men, however, fear nothing; and the landlord resolved to drive home without assistance. Whether from fright, from the drunkard's whip, or from some other cause, we know not, but the animal ran away, and in a few moments ran into another conveyance, precipitated the wife on the ground a lifeless corpse, and the innkeeper was prostrated by their side, perfectly stunned, in which condition he continued until the next day, when he awoke; and on inquiring for his partner, learned the sad news that she slept the sleep of death.

Comment is unnecessary. Our readers, knowing our principles, will not be surprised that we have devoted a portion of their FRIEND to a picture and article illustrative of the working man's bane—Intemperance.

THE THREE BEAUTIFUL PRINCESSES:

A MOORISH LEGEND.

These legendary celebrities were daughters of El Hayzari, the left-handed king. Early in his reign, Mohammed had found amongst the captives taken in one of his forays into the territories of the Christians, a damsel of transcendent beauty. The fair captive, and the old duenna who had been taken with her, were consigned to the royal harem, and in due time the former made the Moorish sovereign the proud and happy father of three lovely daughters, all born at a birth. Mohammed could have wished they had been sons, but consoled himself with the idea that three daughters at a birth were pretty well for a man somewhat stricken in years, and left-handed. As usual with all Moslem monarchs, he summoned his astrologers on this happy event. They cast the nativities of the three princesses, and shook their heads.

"Daughters, O king!" said the sages, "are always precarious property; but these will most need your watchfulness when they arrive at a manageable age; at that time gather them under your wings, and trust them to no other guardianship."

The threefold birth was the last matrimonial trophy of the monarch; his queen died soon after, bequeathing her infant daughters to his love, and to the fidelity of the discreet Kadiga,—for such was the name of the duenna.

Acting upon the advice of his astrologers, the cautious monarch sent his daughters, under the care of Kadiga, to be reared in the Castle of Salobrena. This was a sumptuous palace, surrounded by strong fortifications, and situated on the summit of a hill which overlooks the blue waters of the Mediterranean sea. Here the princesses remained, surrounded by all kinds of luxuries and amusements. They had delightful gardens for their recreation, filled with the rarest fruits and flowers, with aromatic groves and perfumed baths. On three sides the castle looked down on a rich valley, enamelled with all kinds of culture, and bounded by the lofty Alpuxarra mountains; on the other side it overlooked the broad sunny sea. In this delicious abode, in a propitious climate, and under a cloudless sky, the three princesses grew up into wondrous beauty. Years rolled on smoothly and serenely, the discreet Kadiga watching her precious charge with unremitting care. At a corner of the gardens which clothed the side of the hill on which the royal castle of Salobrena was built, was a small watch-tower fitted up as a pavilion, with latticed windows to admit the sea breeze. Here the princesses—whose names were Zayda, Zorayda, Zorahayda—used to pass the sultry hours of midday, taking their siesta, or noontide slumber. Here as the sisters were one day inhaling the healthful breezes wafted over the azure bosom of the Mediterranean, their attention was attracted by a galley which came coasting along with measured strokes of the oar. As it drew near, they observed that it was filled with armed men. The galley anchored at the foot of the tower, in which they sat, and a number of Moorish soldiers landed on the narrow beach, conducting several Christian prisoners. The fair occupants of the tower peeped cautiously through the close jalousies of the lattice, which screened them from sight, and perceived amongst the prisoners three Spanish cavaliers richly dressed. They were in the flower of youth and of noble presence; and the lofty manner in which they carried themselves, though loaded with chains, and surrounded with enemies, bespoke the grandeur of their souls. The princesses breathed with intense and breathless interest. Cooped up as they had been in this castle among female attendants, seeing nothing of the male sex but black slaves, or the rude fishermen of the sea-coast, it is not to be wondered at that the appearance of three gallant cavaliers, in the pride of youth and manly beauty, should produce in their unsophisticated bosoms sensations closely bordering upon the agreeable.

"Did ever nobler being tread the earth than that cavalier in crimson?" cried Zayda, the eldest of the sisters. "See how proudly he bears himself, as though all around him were his slaves!"

"But notice that one in green!" exclaimed Zorayda. "What grace! what elegance! what spirit!"

The gentle Zorahayda said nothing, but she secretly gave preference to the cavalier in green.

The princesses remained gazing until the prisoners were out of sight, then heaving long-drawn sighs, they turned round, looked at each other for a moment, and sat down, musing and pensive, on their ottomans. Weeks and months glided on, the fair sisters thinking only of the captive cavaliers, and becoming daily more and more under the influence of the fatal passion which the memory of them strengthened and confirmed. The progress of this dangerous and subtle disease was not unperceived by the sharp-sighted Kadiga. The discreet old woman became alarmed at the mischief which she had not the power to counteract or remove, and resolved to rid herself of her responsible charge, by intimating to Mohammed that his daughters had arrived at the marriageable age—the critical period at which the astrologers had warningly painted. As he sat one day on a divan in one of the cool halls of the Alhambra, a slave arrived from the fortress of Salobrena, with a message from the wise Kadiga, congratulating him on the anniversary of his daughters' birthday. The slave at the same time presented a delicate little basket decorated with flowers, within which on a conch of vine and fig leaves, lay a peach, an apricot, and a nectarine, with their bloom, and down, and dewy sweetness upon them, and all in the early stage of tempting ripeness. The monarch was versed in the oriental language of fruit and flowers, and readily divined the meaning of the emblematical offering.

"The critical period has arrived," said he, "I must gather them under my wing, and trust to no other guardianship."

So saying, he ordered that a tower of the Alhambra should be prepared for their reception, and departed at the head of his guards for the fortress of Salobrena, to conduct them home in person. About three years had elapsed since Mohammed had beheld his daughters, and he could scarcely credit his eyes at the wonderful change which that small space of time had made in their appearance. During the interval, they had passed that wondrous boundary-line in female life which separates the crude, unformed, and thoughtless girl, from the blooming, blushing, meditative woman. It is like passing from the flat, bleak, uninteresting plains of La Mancha, to the voluptuous valleys and swelling hills of Andalusia.

Mohammed the left-handed, surveyed his blooming daughters with mingled pride and perplexity; for while he exulted in their charms, he bethought himself of the prediction of the astrologers. "Three daughters! three daughters!" muttered repeatedly to himself, "and all of a marriageable age! Here's tempting Hesperian fruit, that requires a dragon watch!"

He prepared for his return to Granada by sending heralds before him, commanding every one to keep out of the road by which he was to pass, and that all doors and windows should be closed at the approach of the princesses. He then set out, accompanied by his precious charge on three beautiful white palfreys, and escorted by a strong guard.

The cavalcade was drawing near to Granada, when it overtook, on the banks of the Xenil, a small body of Moorish soldiers, with a convoy of prisoners. It was too late for the soldiers to get out of the way, so they threw themselves on their faces on the earth, ordering their captives to do the same. Among the prisoners were the three identical cavaliers whom the princesses had seen from the pavilion. They either did not understand, or were too haughty to obey the order, and remained standing and gazing upon the cavalcade as it approached.

The ire of the monarch was kindled at this flagrant defiance of his orders. Drawing his scimitar and pressing forward, he was about to deal a left-handed blow that would have been fatal to at least one of the gazers, when the princesses crowded round him, and implored mercy for the offenders. Mohammed paused, with uplifted scimitar, when the captain of the guard threw himself at his feet, and exclaimed, "Let not your majesty do a deed that may cause great scandal throughout the kingdom. These are three brave and noble Spanish knights, who have been taken in battle, fighting like lions." "Enough!" said the king, "I will spare their lives, but punish their audacity: let them be taken to the Vermilion Towers, and put to hard labour." Whilst Mohammed had been making this harangue, the veils of the three princesses had been thrown back, and the radiance of their beauty revealed. Its effect upon the three cavaliers was instantaneous and complete. Quick as was this *cordial* victory, not less singular was the fact, that each of the love-vanquished cavaliers was enraptured with a several beauty. The cavalcade resumed its march, and reached the Alhambra: the Spanish captives were conducted to their allotted prison in the Vermilion Towers in the same fortress. The residence provided for the princess was one of the most dainty that fancy could devise. It was a tower somewhat apart from the main palace of the Alhambra, though connected with it by the wall which encircled the whole summit of the hill. On one side of it looked into the interior of the fortress, and had, at its foot, a small garden filled with the rarest flowers. On the other side it overlooked a deep ravine that separated the grounds of the Alhambra from those of the Generalife—the summer residence of the Moorish kings. The internal decorations of the tower were of the most gorgeous description.

But the memory of the noble cavaliers filled the fair charges of Kadiga with pensive and melancholy thoughts. In spite of all the luxury with which they were surrounded, they pined and faded; nothing could "minister to their minds diseased." The flowers yielded them no fragrance, and the song of the nightingale itself was harsh and jarring to their ears. In vain did the anxious Mohammed ransack the Zacatin of Granada for the richest silks and most precious jewels. He gave it up as a hopeless affair, and gave *carte blanche* to the discreet Kadiga, in whom his confidence was unbounded. The wise duenna was skilful in diseases of the heart, and knew the best medicine for her pining charge. The day before, she had discovered the *locale* of the Christian captives, and going privately to Hussein Baba, the big-whiskered, broad-shouldered renegado, in whose charge they were, and slipping a broad piece of gold into his itching palm, thus signified her wishes:—"My mistresses have heard of the musical talents of the three Spanish cavaliers, and are desirous of hearing a specimen of their skill. I am sure you are too kind-hearted to refuse them so innocent a gratification." The cautious Hussein was about to suggest obstacles and dangers, but they were all removed by the golden logic of Kadiga, and it was arranged that the cavaliers should be placed to work in the ravine at the bottom of the princesses' tower. The various scenes in the interesting drama which followed, need not be detailed. By the generous connivance of Hussein Baba, the lovers held converse by song and flower. Days and weeks flew by like so many hours, the mutual passion of the captives and their royal mistresses becoming strengthened by the very difficulties by which it was attended. At length there was an interruption in their telegraphic correspondence; for several days the cavaliers ceased to make their appearance in the glen. The three beautiful princesses looked out from the tower in vain. In vain they stretched out their swan-like necks from the balcony; in vain they sang like captive nightingales in their cage; nothing was to be seen of their Christian lovers; not a note responded from the groves. The discreet Kadiga was sent forth for intelligence, and soon returned with a face full of trouble. "Ah, my children!" cried the sorrowing duenna, "You may now hang up your lutes on the willows. The Spanish cavaliers are now ransomed by their families; they are down in Granada, and are preparing to return to their native country." The three beautiful princesses were in despair at the tidings. As soon as the first burst of sorrow had subsided, the faithful governess ventured to finish her communication. "Yes, my children, well may you grieve at the loss of such worthy cavaliers. Granada, alas! has not their equals. Would that they had embraced the faith of Islam, and taken service under your royal father! There might then have been hope. As it is they are in despair, and could think of only one plan that would remedy your common misfortune." "What was it, good Kadiga?" exclaimed the anxious princesses in a breath—"What was it? that we may lose none of their parting words."

In the excess of their affection, they endeavoured to persuade me to urge you to fly with them to Cordova, and become their wives!"

The three princesses turned alternately pale and red, and trembled, and looked down, and cast shy looks at each other, but said nothing.

The scene that followed need not be described, nor need the reader be told that doubts and fears were all silenced and removed by the potent arguments of love. The following night was the one appointed for their escape. Towards midnight, when the Alhambra was buried in sleep, the discreet Kadiga listened from the balcony of a window that looked into the garden. Hussein Baba, who was to accompany the cavaliers in their flight, was already below, and gave the appointed signal. The duenna fastened the end of a ladder of ropes to the balcony, lowered it into the garden, and descended. The two eldest princesses followed her with beating hearts, but when it came to the turn of the youngest princess, Zoraidayda, she hesitated, and trembled. Every moment increased the danger of discovery. A distant tramp was heard.

"The patrols are walking the rounds," cried the renegado, "if we linger, we perish. Princess, descend instantly, or we leave you."

Zoraidayda was for a moment in fearful agitation; then loosening the ladder of ropes, with desperate resolution, she flung it from the balcony.

"It is decided!" she cried, "flight is now out of my power. Allah guide and bless you, my sisters! Farewell!"

The two eldest princesses would fain have lingered, but the furious renegado hurried them away. A dark subterraneous passage soon brought them to the outside of the fortress, where the cavaliers awaited them with fleet steeds. The lovers were disguised as Moorish soldiers of the guard, commanded by the renegado. The lover of Zoraidayda was frantic when he heard that she had refused to leave the tower, but there was no time to waste in lamentations. The two princesses were placed behind their lovers, the Kadiga mounted behind the renegado, and all set off at a discreet round pace in the direction of the pass of Lope, which leads through the mountains to Cordova.

They had not proceeded far when they heard the noise of drums and trumpets from the battlements of the Alhambra.

"Our flight is discovered!" said the renegado.

"We have fleet steeds, the night is dark, and we may distance all pursuit," replied the cavaliers.

They put spurs to their horses, and scoured across the Vega. They had attained the mountain of Elvira, and were entering a pass, when a bale-fire sprang up into a blaze on the top of the watch-tower of the Alhambra.

"Confusion!" shouted the renegado; "that fire will put all the guards of the passes on the alert. Away! away! Spur for your lives, or they are lost!"

Away they dashed, the clattering of their horses' hoofs echoing from rock to rock, as they swept along the road that skirts the rocky mountain of Elvira.

"Forward! forward!" cried the renegado, as the watch-towers of the mountains answered the light from the Alhambra. "To the bridge—to the bridge, before the alarm has reached there!"

They doubled the promontory of the mountains, and arrived in

sight of the famous Puente del Pinos, that crosses a rushing stream, often dyed with Moorish and Christian blood. To their confusion, the tower on the bridge blazed with lights, and glittered with armed men. Followed by the cavaliers, the renegado struck off from the road, skirted the river for some distance, and dashed into its waters They were borne for some distance down the rapid current; the surges roared round them, but the beautiful princesses clung to their Christian knights, and never uttered a complaint. The party soon gained the opposite bank in safety, and were led by the renegado, by rude and unfrequented paths and wild barrancos, through the heart of the mountains, so as to avoid all the regular passes They succeeded in reaching the ancient city of Cordova, where the restoration of the cavaliers to their country and friends was celebrated with great rejoicings, The princesses were forthwith received into the bosom of the church, and, after being in all due form made regular Christians, were rendered happy wives.

In our hurry to make good the escape of the princesses, we forgot to mention the fate of the discreet Kadiga When Hussein Baba plunged into the stream, she clung to him like a cat, and her terror knew no bounds.

"Grasp me not so tightly," cried Hussein Baba, "hold on by my belt, and fear nothing"

She held firmly, with both hands, by the leathern belt that girded the broad-backed renegado, but when he halted with the cavaliers, to take breath on the mountain summit, the duenna was no longer to be seen.

"What has become of Kadiga?" cried the princesses, in alarm.

Allah alone knows!" replied the renegado "My belt became loose in the midst of the river, and Kadiga was swept with it down the stream. The will of Allah be done! but it was an embroidered belt, and of great price."

There was no time to waste in idle laments, but bitterly did the princesses bewail the loss of their discreet counsellor After the flight of her sisters, the unhappy Zorayhada was confined still more closely, though she had no known inclination to elope It was thought, indeed, that she secretly repented having remained behind; for now and then she would be seen leaning on the battlements of the tower, and looking mournfully towards the blue mountains of Cordova, and sometimes the notes of her lute were heard accompanying mournful ditties, in which she lamented the loss of her sisters and her lover, and bewailed her own solitary life. She died young, and, according to popular rumour, was buried in a vault beneath the tower, and her untimely fate has given rise to more than one traditionary fable

Such is the legend of "The Three Beautiful Princesses"

THE DIVERSION OF HAWKING.

THE diversion of hawking belonged to the good old time. In those days "it was thought sufficient for noblemen to wind their horn and carry their hawk fair, and to leave study and learning to the children of mean people." So that Spenser makes his gallant Sir Tristram boast,

> "Ne is there hawk which mantleth her on pearch,
> Whether high towering, or accoasting low,
> But I the measure of her flight do search,
> And all her prey, and all her diet know."

It is well sometimes to think of these things. To leave the present and live with the past—to forget our railroads and steam navigation—our straight brick houses—our well-lighted, well-paved, well-guarded thoroughfares—our manufactories, museums, libraries, cheap books and newspapers, mechanics' institutions, and the rest of it—and to glance at the things that have been, to know how men in England fared centuries agone, what they did, and how they did it, in the good old times.

Famous old times! when this good city of London was a picturesque old place, with curious gables and projecting stories, and dark, narrow streets where the plague lurked; when prentice lads woke up the echoes on a summer's eve with buckler-play in the cheap, and the stocks and the pillory were set up in every parish: when swaggerers paraded in Paul's walk with well-brushed finery, and cudgelled their lofty [illegible] to devise a new pourpoint; when gallant swashbroad sum, emptied their pottle-pots in the pleasant ville of and under a cl[illegible]d cheered and shouted when old brum broke drous beauty. Years rolled [illegible] among the curs of the bear-garden —and traitors' heads were on the bridge gate blackening and rotting in the sun; when the outlaws of merry Sherwood indulged in plundering predictions undismayed by the smell of hemp; when gallant knights tilted at the tournaments, and very often lost their lives; when artisans were impressed by royal command to build Windsor castle, and all the hedges and fences near the king's forest were ordered to be removed, in order that his deer might have more ready access to the fields of pasture. Learned old times! when a man escaped hanging if he knew how to read; and Wickliffe says, "there were many unable curates, who could not read the ten commandments."

In was in those old times that hawking was a favourite diversion and principal amusement of the English. Then a person of rank scarcely stirred out without his hawk on his hand; and in old paintings this is the criterion of nobility. Harold, afterwards king of England, when he went on a most important embassy into Normandy, is painted embarking with a bird on his hand and a dog under his arm, and in an ancient picture of the nuptials of Henry VI., a nobleman is represented in a similar manner Every degree had its peculiar hawk, from an emperor down to a holy-water clerk. It was the pride of the rich, and the privilege of the poor.

The falcons and hawks which were in use, are found to breed in Wales, in Scotland and its islands. The peregrine falcon inhabits the rocks of Caernarvonshire. The same species, with the gerfalcon, the gentil, and the goshawk, are found in Scotland, and the lanner, in Ireland. The Norwegian breed were, in old times, in high esteem in England, and were thought bribes worthy of a king. Thus, we learn, that one Geoffrey Fitzpierre gave two good Norway hawks to King John, to obtain the liberty of exporting a hundredweight of cheese.

The training of hawks consisted principally in the manning, luring, flying, and hooding them. An old writer tells us how to man them, "which is by watching and keeping them from sleep, by a continual carrying them upon your fist, and by a most familiar stroking and playing with them with the wing of a dead fowl, or such like, and by often gazing and looking them in the face with a loving and gentle countenance, and so making them acquainted with the man." By a peculiar whistle they were taught, when flying, to return to their owner's hand. From the very first the animal was accoutred with certain paraphernalia—its head was covered by a leathern *hood*, fitting close all round so as to shut up its eyes, but easily removed when necessary. On the top of the hood there was a tuft of feathers. Leathern straps, called *jesses*, a few inches in length, were fitted to the legs of the bird by a button slipping through a slit or loop. Close beside the loop was a small spherical *bell*, composed of silver for clearness of sound. The other end of the *jesses* were furnished each with a ring, which could be readily fitted upon the swivel, designed to connect them both with the *leash* or long, slender strap, sometimes prolonged by a *creance* or common cord, and designed as a tether by which to restrain the bird, at the same time that it should be allowed considerable room for free motion.

The training of falcons was a wearying and laborious business. The sport, we need hardly say, was founded on the natural instinct of this rapacious order of birds. But to train them was no easy matter. The falconer's was a responsible office—you notice him in his quaintly-fashioned garb in old pictures—you read of him in old romances, how he was deep in the mysteries of his art, how the falcon proper and the gerfalcon, the short-winged hawk, the sparrowhawk, the goshawk, the tiercel, the tierce-gentle, and the musket, were to him familiar things; but, perhaps, it were impossible to find a better description of the falconer than that which is furnished by John Stephens, who wrote in the days of King James I. "A falconer," he says, "is the egg of a tame pullet hatched up among hawks and spaniels. He hath in his minority conversed with kestrels and young hobbies; but growing up he begins to handle the lure and look a falcon in the face. All his learning makes him but a new linguist; for to have studied and practised the terms of Hawk's dictionary is enough to excuse his wit, manners, and humanity. He hath too many trades to thrive; and yet if he had fewer he would thrive less. Hawks be his admiration, his knowledge, his labour, his object, his all."

Vast was the expense which attended the sport. In the early part of the seventeenth century Sir Thomas Monson gave a thousand pounds for a cast of hawks. This accounts, in some degree, for the severity of the laws which were enacted for their preservation.

By an old law it was declared felony to steal a hawk, and to take its eggs even in a person's own ground was punishable with imprisonment for a year and a day, and a fine according to royal pleasure.

Falconry is a sport of the past, and yet it must ever remain a living thing amongst us. Our literature abounds with references to the pastime, and many of its terms are incorporated into our common language. Milton speaks of *imping* his wing to a bolder flight, and Shakspeare makes Macduff frantically inquire, when he hears that his children are slain—

> "What! all my pretty ones—all
> *At one fell swoop?*"

To "hoodwink" and to "fly at higher game" are common terms. These, and a thousand others, scattered through old books, and uttered in our daily talk, will ever keep alive the memory of falconry.

The Grand Falconer of France had the superintendence of all the king's falconers, and was a sworn officer with wages and allowances amounting to £22,200, a year. All hawk merchants, both French and foreigners, were bound under pain of confiscation of their birds, to come and present them to the Grand Falconer, for him to choose birds for the king before they were allowed to sell to any one else. In the reign of Louis XIV., if his majesty, when hawking inclined to the pleasure of letting fly a hawk, the grand falconer placed it on the king's fist; and when the prey was taken, the pricker gave the head of it to his chief, and he to the grand falconer, who presented it to the king. The Duke of St. Alban's is hereditary grand falconer of the British court.

The old books upon hawking are written with great vivacity and spirit, and abound more in gentle description and pleasant anecdote than any other treatises upon field sports. "Uncle," says Master Stephen, in *Every Man in his Humour*, "afore I go in, can you tell me if Edward have ere a book of the sciences of hawking and hunting? I have bought me a hawk, and a hood and bells and all, and lack nothing but a book to keep them by." And when Old Knowall angrily replies, "Oh, most ridiculous!" he rejoins, "Nay, look you now, you are angry, uncle; why, you know, an' a man have not skill in the hawking and hunting languages, I'll not give a rush for him. They are more studied than the Greek or the Latin." And so they were studied with wonderful care by all those who strove to be thought gentlemen.

It was a gallant sight to witness a hawking party ride forth to the sport, and to follow them and witness the bravery of hawk and heron—if old writers are to be believed. The noble horses gaily decorated, the picturesque costume of the time, the birds hooded and plumed, the falconers and the dogs were all worth looking at as they passed under the gnarled branches of the wide-spreading trees to the broad "hawking downs." And the sport itself was exciting. When down by the river the heron had been roused and flew upward to the sky, and the falcon unleashed, and unhooded, was whistled off, and flew as if she never would have turned head again. Higher and higher the birds rise till they seem no bigger than sparrows, each ascending in spiral gyrations, each trying to make the wind his friend, the falcon striving to gain the ascendant that with one fell swoop he may come down upon his prey. It was not uncommon to release two hawks. These circlings, then, had the curious effect of presenting the three birds as apparently flying in different directions; whereas, the real intention of the two hawks was steadily directed to one point—that of contact with the heron, whose entire efforts were to

A HAWKING PARTY IN THE SEVENTEENTH CENTURY.

rise higher than the hawks, or to receive their swoop upon its sharp bill. Presently, the final swoop is made, heron and hawks descend together, but not with a dangerous rapidity, the action of their wings breaking their fall, and now the whole party of falconers are in quick pursuit, to the assistance of the hawks against the final struggle of the heron.

In a play first acted in 1604, the following passage occurs, highly descriptive of the sport:—

> "*Sir Charles.* So; well cast off, aloft, aloft, well flown.
> O now she rakes her at the sowse, and strikes her down
> To the earth like a swift thunder clap—
> Now she hath seized the fowl, and 'gins to plume her,
> Rebeck her not, rather stand still and check her.
> So she's seized her! her jesses and her bells. away!
> *Sir Francis.* My hawk killed two!
> *Sir Charles.* Ay, but 'twas at the querre,*
> Not at the mount like mine."

Such then was the "good old sport of falconry." During the whole of the day the gentry were given to the fowls of the air and the beasts of the field; and in the evening cele-

* When a hawk went covertly under the hedges and seized a bird by the river, it was said the bird was taken unfairly, or killed at the *querre*.

brated their exploits with the most abandoned sottishness; and the labouring population of the kingdom were liable to capital punishment, to fines and imprisonments for destroying the most destructive of the feathered tribes. Those days are gone, and glad are we they are gone. If such a condition as that which we have just mentioned was the state of "Merry England" in the good old times, and all history says it was so, we rejoice that the good old times are past; for, admitting that those old times were good, we have still three degrees in comparison, in history as well as in grammar—the positive good old times, the comparative better old times, the superlative best old times—for, by the bright light resting on the future, *the best old times are coming yet!*

SUBMARINE TELEGRAPH BETWEEN ENGLAND AND IRELAND.

A submarine telegraph between the coasts of England and the sister isle is now an accomplished fact, and an event pregnant with interest as regards the future welfare of both countries. On the morning of the 1st of June, at four o'clock, the Britannia steamer started from Holyhead with the telegraph cable on board, preceded by Her Majesty's steamer Prospero, a vessel furnished by the Admiralty, as a pilot to the expedition. The steamers proceeded at a low rate of speed, varying from four to six miles an hour, paying out the wire with the greatest care and precision as they receded from the English coast, and at length, after a passage of little more than sixteen hours, and without the occurrence of any accident, arrived at Howth Harbour amid the cheers of those who had assembled to witness their approach. The moment the Britannia had arrived at her destination, and communicated the fact to Holyhead that the Irish shore was reached, the final grand test was applied to the telegraphic cable by connecting the wire with one of the ship's loaded guns, and passing the word, "Fire!" to Holyhead. The answer was the immediate discharge of the gun on board the Britannia. The hour was then just half past eight o'clock. The work had been performed in little more than eighteen hours. Messages were now rapidly interchanged, and a salute of the Britannia's guns fired from Holyhead. A letter had arrived in Dublin, directed to a gentleman who had left for Holyhead by the midday steamer, and whose presence was immediately required in London. A message was sent to seek him out. Within half an hour he was discovered, and he responded, "I am here." "You are wanted in London" "I shall start by the next train." Another hour and the cable was ashore, the connexion completed with the land wires, and the indicators at the Dublin terminus of the Drogheda Railway, were conversing with those at the terminus of the Chester and Holyhead Railway, in Holyhead. The Britannia remained outside the harbour during the night, and before these words reach the reader, the connexion of the submarine wire with that already laid down upon the Howth line will have been completed. At this moment an unbroken line of electric communication is established between London and Dublin, and from this fact arrangements will result, in a brief space of time, which will virtually—as respects the transmission of news—bring the metropolis of Ireland from four to six hours, the distance from Holyhead to Kingstown, nearer to London than it has heretofore been.

THE SHIP OF DEATH.

(From the German.)

By the shore of Time now lying,
On the inky flood beneath,
Patiently, thou soul undying,
Waits for thee the Ship of Death.

He who on that vessel starteth,
Sailing from the sons of men,
To the friends from whom he parteth
Never more returns again.

From her mast no flag is flying,
To denote from whence she came;
She is known unto the dying—
Azael is her captain's name.

Not a word was ever spoken
On that dark, unfathomed sea,
Silence there is so unbroken
She herself seems not to be.

Silence thus, in darkness lonely,
Doth the Soul put forth alone,
While the wings of angels only
Waft her to a land unknown.

EXERCISES FOR INGENUITY.

Solutions to Questions in No. 35, May 29.

1. The first woman had 50 eggs. She sold as many as she could at 7 a penny, and the remainder at 3d. each; the second had 30, and the third 10; and they all sold their eggs "after the same rate, and obtained the same amount of money." Thus,

The first woman had 50 eggs. The 49 at 7 a penny = 7d. and 1 at 3d. = 3 = 10d. The second woman had 30 eggs. She sold 28 at 7 a penny = 4d., and 2 at 3d. each = 6d. = 10d. The second woman had 10 eggs. She sold 7 for a penny = 1d., and 3 at 3d. each = 9d. = 10d.

2. If a wheel be 4½ feet high, there will be required for the tire 14·1372 feet of iron—14½ feet nearly.—M. W. M. Supposing the tire to be three inches thick, the length of it would be 14·9226 feet.—John Mather, J. R. W. L. Smith, Robert Middleton, Edward Edwards, George Smithers, F. Roberts, Bennet Lowe.

3. By the laws of geometrical proportion we have the whole sum.

Thus, $£2000 \times 2 - 5s. = £3999\ 15s.$ the whole debt.
$2 - 1$

—John Sowden, W. M. W., Edward Edwards, L. R.

4. Let the price of the hat be 1 shilling, then 1s. + 6d. + 1d. 3d. = 2s. 1d., and 1s. 7d. × 1s. ÷ 2s. 1d. = 7 shillings, the price of the hat.—7s. + 3s. 6d. + 1s. 9d. + 2s. 4d. = 14s. 7d. proof.—Robert Middleton, D. R. G., Edward Edwards, Charles Peirdon, L. Francke, Mutatis, John Mather, Bennet Lowe.

5. As $\frac{2}{3}$: 6 . $\frac{3}{4}$: 7 $\frac{1}{2}$, the answer required.—J. Sowden, that is, as the true third of 20 is to the supposed third of 20, so is the true fourth to the supposed fourth of 33.—W. M. W.

6. This question has been answered by J. Sowden, but the figures are written so badly that we cannot make them out. J. M. W.'s solution is also open to the same objection. John Ridgway's solution is sufficiently correct; but it is wrongly stated. Joseph Timms forwards the following ingenious solution —

Let x = one of the required numbers and y the other, then by the question we have

$$x^2 - y^2 = xy \qquad (1)$$

and

$$x^3 - y^3 = x^2 + y^2 \qquad (2)$$

Assuming $vx = y$, and substituting it in equation (1) we have

$$x^2 - v^2x^2 = vx^2$$

dividing by x^2 we have $1 - v^2 = v$

$$v^2 + v = 1$$

$$v^2 + v + \tfrac{1}{4} = \tfrac{5}{4}$$

$$v + \tfrac{1}{2} = \sqrt{\tfrac{5}{4}} \qquad \text{whence taking the upper sign}$$

$$v = \frac{\sqrt{5}-1}{2}$$

By substituting this value of v in equation (2) it becomes

$$x^3 - \left(\frac{\sqrt{5}-1}{2}\right)^3 x^3 = x^2 + \left(\frac{\sqrt{5}-1}{2}\right)^2 x^2$$

$$x^1 - (\sqrt{5}-2)\,x^3 = x^2 + \frac{(3-\sqrt{5})}{2}\,x^2$$

Dividing by x^2 we get $(3-\sqrt{5})\,x = \frac{5-\sqrt{5}}{2}$

$$\therefore x = \frac{5-\sqrt{5}}{2(3-\sqrt{5})} = \frac{(5-\sqrt{5})\,(3+\sqrt{5})}{2(3-\sqrt{5})\,(3+\sqrt{5})} = \frac{10+2\sqrt{5}}{8} = \frac{5+\sqrt{5}}{4}$$

By putting the value thus found for x in equation (1) it becomes

$$\frac{(5+\sqrt{5})^2}{4} - y^2 = \frac{(5+\sqrt{5})}{4}\,y$$

$$y^2 + \frac{(5+\sqrt{5})}{4}\,y = \frac{15+5\sqrt{5}}{8}$$

$$y^2 + \frac{5+\sqrt{5}}{4}\,y + \frac{(5+\sqrt{5})^2}{8} = \frac{15+5\sqrt{5}}{8} + \frac{30+10\sqrt{5}}{64}$$

$$= \frac{120+40\sqrt{5}+30+10\sqrt{5}}{64} = \frac{150+50\sqrt{5}}{64} = \left(\frac{25\,(6+2\sqrt{5})}{64}\right)$$

$$\therefore y + \frac{5+\sqrt{5}}{8} = \pm\tfrac{5}{8}\sqrt{(6+2\sqrt{5})} = \pm\tfrac{5}{8}\,(\sqrt{5}+1)$$

whence taking the upper sign, we have

$$y = \frac{5\sqrt{5}+5}{8} - \frac{5+\sqrt{5}}{8} = \frac{5\sqrt{5}+5-5-\sqrt{5}}{8} = \frac{4\sqrt{5}}{8} = \frac{\sqrt{5}}{2}$$

Therefore the true answer is $\frac{5+\sqrt{5}}{4}$ and $\frac{\sqrt{5}}{2}$. Joseph Timms.

Mr. Bennet Lowe, of Manchester, also sends a solution to this question, which arrived too late for insertion.

7. It seems probable (says Hallam in his "Middle Ages," vol. 2., p. 205), that the creation of parishes was not a simultaneous act, but was the gradual result of circumstances, and was not accomplishing till near the time of the conquest.—JOHN MATHER.

8. "Because it receives none of the rays of light and reflects them all."—LUPUS. "Because it reflects or throws back the rays of light and absorbs none."—JOHN MATHER.

9. Crowns were originally wreaths or chaplets of leaves or flowers. The first golden crown of which I find any mention is that worn by Mordecai, who "went out with a golden crown on his head." Esther, chap. 8, verse 15.—JOHN MATHER.

10 One sovereign, four twopenny pieces and sixteen farthings. Twenty-one pieces in all. Answered by twenty-three correspondents.

11 Fill the three quart tin and empty it into the five ditto. Fill the three quart a second time and *fill* the five quart, which will leave one quart in the three quart tin. Then empty the five quarts into the eight quart pot, and put the one quart into the five quart tin. Once more fill the three quart tin from the eight quart pot, which will leave *four quarts in the eight quart pot*.—ROBERT MIDDLETON, Aberdeen. Also by James Price. J. R W. L. M.

12 — *Wheat* is the article much used in this nation,
On which some queer folks wish to put a taxation;
Take a letter from *wheat*, and then you have *heat*,
Take two letters from it, and then will appear,
What we all *wish to do* every day of the year
CHARLES PEIRSON

QUESTIONS REQUIRING ANSWERS.

1. When and by whom were the Canadas acquired by England?

2. By whom was Jamaica discovered, and in what period of English history was it acquired by the English?

3. What small island in the German ocean belongs to the English?

4. In travelling from Washington, in the United States, to the north of the island of Borneo, and thence to New Zealand, thence to California, and lastly to India, how many times would a vessel cross the equinoctial line?—LUPUS.

5 — CHARADE.

Gemmed with the dews of night,
When all the stars of heaven had shed
Their sweetest influence on its head,
Waiting its incense to the early light,
I pluck'd my FIRST from its ambrosial bed.

It graced her bridal brow,
Whom eighteen happy years before
A sweet and smiling child I bore,
To plight at holy font a Christian's vow,
And gain my SECOND, the meek name she wore

Alas! for youth's vicissitude!
Ere she had pass'd her bridal year,
She died—and on her youthful bier,
Amidst funereal herbs my WHOLE was strewed,
Mingled with flowers and wet with many a tear

6. A man went into a house, borrowed as much money as he had with him, spent sixpence; went into a second, borrowed as much as he had with him, and spent sixpence; went into a third, borrowed as much as he had with him, and spent sixpence, and came out with nothing. How much had he at first?—A. BELK.

7. A snail up a steeple one hour had climb'd
When the clock of the village struck nine,
And when the same clock just eleven had chimed
He had finish'd one-third of the line.
Now the hands of the clock were as two is to three,
And their points when the bell counted nine,
Were in inches apart, it is told unto me,
Just three short of twenty and nine.
So now if you'd finish this wonderful tale,
Determine the height of the tower,
The long minute finger, and pace of the snail,
If they went the same distance per hour.
JOHN RIDGWAY, Broken Cross, Macclesfield.

8. What is the meaning of the letters S.P.Q.R., used on the ancient Romans' ensigns?—G. T.

9. A sphere of brass, whose circumference is 58 1196 inches, is drawn into a wire $\frac{1}{10}$ of an inch diameter. Required the length in miles, and the cost at 2d. per yard.

10. In a round tower, 18 feet diameter, 60 feet high, and divided into six stories, there is a leaden pipe for the conveyance of water to the building, wound round in form of a screw, so that it surrounds the tower exactly six times. The pipe is 1½ inch diameter, and ⅛ of an inch thick. Required the cost at 3½d. per pound, allowing a cubic inch to weigh seven ounces avoirdupois.

11 — A landed man two daughters had,
And both were very fair;
He gave to each a piece of land,
One round the other square.

At twenty pounds an acre just,
Each price its value had,
The shillings that encompass each
The price exactly paid

If cross the shilling be an inch,
And it is very near,
How much above the circle is
The excess of the square?

12. While a leaden bullet was descending from the top of a tower, a small ball suspended by a slender thread, ten inches long from the point of suspension to the centre of the ball, made eight vibrations. What was the height of the tower?—WILLIAM MILLER

13. Four boys met a maid with a basket of pears. The first robbed her of one-fifth of what she had, but gave her four again, the second took from her one-fourth, but returned her three, the third took one-third but returned her two, and the fourth took away one half, and returned her one. She had twelve pears left. How many pears had she at setting out?

14. Who levied the first land-tax, and what was it called?—J. M.

15. What are the two mean proportions between 4 and 108?—N. T. N.

16. What four weights are they which may be weighed from 1 to 40 lb.?—GEO. HIGGINS, jun.

17. If a body weigh 28 lb. on the surface of the earth, what will be its weight at 100 miles above it, the earth's diameter being 7,925 miles?

We congratulate our friends on their success in the Exercises for Ingenuity; but, at the same time, we must impress on them the importance of *a clear and distinct style of handwriting*. In the 5th question of No. 30 an error has occurred, to which our attention has been called, which arose from this want of distinctness; and in the present number we have been obliged to lay aside several ingenious questions from the same easily-remedied cause.

LITERARY NOTICES.

FINE EDITION OF THE POPULAR EDUCATOR.—An EXTRA EDITION of this work, on fine paper, at 1½d. per Number, or in Monthly Parts, in a neat wrapper, at 7d, or when Five Numbers, 8¾d, is now published, which is issued without the weekly headings Persons wishing for this edition must be careful to order the "*Extra* Edition" The whole of the Numbers may now be obtained, or the first Three Parts.—Part I., 7d, Part II., 8¾d, Part III., 7d.

THE ILLUSTRATED EXHIBITOR AND MAGAZINE OF ART.—The First Volume of this splendidly embellished work, handsomely bound, price 6s. 6d, or extra cloth gilt edges, 7s 6d, is now ready, and contains upwards of Two Hundred Principal Engravings, and an equal number of Minor Engravings, Diagrams, &c.

COMPLETION OF JOHN CASSELL'S LIBRARY.—This invaluable Work is now complete, in 26 Volumes, 7d. each in paper covers, double Volumes, cloth, 1s. 6d., or when 3 Vols in 1, 2s 3d. The entire Series may be had, bound in cloth, 19s 6d., or arranged in a Library Box, 25s.

The EMIGRANT'S HANDBOOK, a Guide to the Various Fields of Emigration in all parts of the Globe, Second Edition, with additions, to which has been appended a "Guide to the Gold Fields of Australia," with copious Instructions, Government Regulations, &c., accompanied by a Map of Australia, in which the Gold Regions are clearly indicated, is now ready, price 9d.

THE PATHWAY, a Monthly Religious Magazine, is published on the 1st of every month, price twopence—32 pages enclosed in a neat wrapper. Vols I. and II, neatly bound in cloth and lettered, price 2s. 3d each, are now ready

CASSELL'S SHILLING EDITION OF EUCLID.—In consequence of the interest excited among all classes of the readers of the POPULAR EDUCATOR, since the publication of the Lessons in Geometry in that work, John Cassell has determined to issue a Popular Edition of THE ELEMENTS OF GEOMETRY, to contain the First Six, and the Eleventh and Twelfth Books of Euclid, from the text of Robert Simson, M.D. Emeritus Professor of Mathematics in the University of Glasgow, with corrections, Annotations, and Exercises, by Robert Wallace, A M., of the same university, and Collegiate Tutor of the University of London. This work will be ready early in July, price 1s. in stiff covers, or 1s. 6d. neat cloth.

MISCELLANEA.

"PULLING ONE WAY."—A story is told of a bridegroom who rejoiced in certain eccentricities. A day or two after his wedding, he requested his bride to accompany him into the garden. He then threw a line over the roof of their cottage. Giving his wife one end of it, he retreated to the other side, and called out, "Pull the line!" She pulled at his request as far as she could. He cried, "Pull it over!" "I can't," she replied. "Pull with all your might!" shouted the whimsical husband. But in vain were all the efforts of the bride to pull over the line, so long as the husband held on to the opposite end. But when he came round, and they both pulled at one end, it came over with great ease. "There," said he, as the line felt from the roof, "you see how hard and ineffectual was our labour when we pulled in opposition to each other; but how easy and pleasant it is when we both pull together. It will be so, my dear, through life. If we oppose each other it will be hard work, if we act together it will be pleasant to live. Let us, therefore, always pull together." In this illustration, homely as it may appear, there is sound philosophy. Husband and wife must mutually bear and concede, if they wish to make home a retreat of joy and bliss One alone cannot make home happy. There must be a unity of action, sweetness of spirit, a great forbearance and love in both husband and wife, to secure the great end of happiness in the domestic circle

ABSURDITY OF THE MALE COSTUME.—A philosopher has said that every man designs his clothing with the view of typifying externally what he feels to be his nature and that seems to be a sound rationale of the true principle and the actual intent; but how near is it to the fact? The living statue, man, cannot be recognised in the living tailor's block. His vaulted head is roofed by a black chimney-pot,—though, by the way, he never uses that chimney when he lights a tobacco fire in his mouth. His limbs he thrusts into shapeless cases, too loose to display the natural form, too tight to assume any symmetrical form as drapery His feet are put into black cases, which reduce the rounded and finely-fingered foot to a shape as nearly as possible to the model of a pianoforte pedal. His trunk is encumbered by the meeting of the several bits that make his garment—flaps lengthened here, curtailed there. The column of his neck he hides with a complicated system of swathing, bows, and flaps, called a stock, surmounted by the stiffened flaps of a white garment beneath; on grand occasions, men of refinement inclining to religious views, put a white table napkin round their throats, "and boast themselves more lovely than before!" There is a notion that our dress is regulated by climate and convenience. They have their influence; bustling habits make us cultivate succinct forms: cold climate favours cloth; but the real regulators of costume are, first, the tailor, who knows nothing about it; and then that tasteless person, Mrs. Grundy. As to climate, a narrow-brimmed hat is not good for either sun or rain; a collar with an opening betwixt stock and coat neither for wind nor water; trousers are purveyors of mud, and an open waistcoat only another encourager of lung disease.

TRIFLES.—A gentleman having written a letter, concluded it as follows.—Give everybody's love to everybody, so that nobody may be aggrieved by anybody being forgotten by somebody.

DEMOSTHENES.—The transcendent glory which Demosthenes acquired as an orator, and which, after the admiration of more than two thousand years, is still increasing, and ever will increase, has caused his merits as a statesman and a patriot, to remain by many apparently unheeded. But nothing could be more erroneous or unjust than to suppose that Demosthenes either cultivated or valued his eloquence for its own sake, and for the fame which it might bring him as a mere rhetorician. He was emphatically a practical man; and his whole career was one of laborious and unremitting action. He bestowed the industry, which has made his name proverbial, on acquiring and perfecting the power of public speaking, because, without possessing that power it was impossible for him to acquire political influence, and exert himself effectively in his country's cause.

THE EIGHTH (AND GREATEST) WONDER OF THE WORLD.—"Amongst the many wonders of this world, there is none greater than the blindness of the writers of this and other countries to the transcendent influence of the blood and spirit of ancient Scandinavia on the English character."—The opening paragraph, of the *Literature and Romance of northern Europe*, by William and Mary Howitt

CICERO'S WARNING AGAINST THE TRICKS OF BRITISH CABMEN.—"Tu, qui cæteris cavere didicisti, in Britannia ne abessedaris decipiaris, caveto.—" You, who are up to a dodge or two, beware lest the British cabmen are too quick for you

WHAT A WIFE SHOULD BE.—Burns, the poet, in one of his letters, sets forth the following as the true qualifications of a good wife.—"The scale of good wifeship I divide into ten parts, good nature, *two*, good sense, *two*, wit, *one*, personal charms, namely, a sweet face, eloquent eyes, fine limbs, graceful carriage, all these, *one*, as for the other qualities belonging to, or attending on a wife, such as fortune, connexions, education, (I mean education extraordinary), family blood, &c, divide the *two* remaining degrees among them as you please, only remember, that all these minor proportions must be expressed by *fractions*, for there is not any one of them in the aforesaid scale entitled to the dignity of an integer."

RAILWAY LANGUAGE.—The shriek of the railway engine, is Saxon for *keep off the track*.

FIRE ALARM TELEGRAPH.—The *Scientific American* says.—The people of Boston are constructing a fire-alarm telegraph. Forty-nine miles of wire have been stretched over the city, diving under the arm of the sea which separates the main portion from South and East Boston. The first of the forty cast-iron signal-boxes has been placed on the Reservoir in Hancock-street. These will be so distributed that every house in the city will be within fifty rods of one. Whenever a fire occurs, resort will be had to the nearest box, where, by turning a crank, instantaneous communication will be made to the central office, and from that—which stands related to the whole fire department of the city like the brain to the nervous system—instant knowledge will be communicated to the seven districts into which the city is divided, by so striking the alarm-bell simultaneously that the locality of the fire will be known exactly to all This system, the perfect success of which is now certain, will stand forth as one of the finest achievements of scientific skill, and a source of just pride to Boston.

NOTICES TO CORRESPONDENTS.

SIR,—Many thanks on my own behalf for your *Friend*, it has, I think, done me good. I wish you every success. May the working men appreciate you! When a boy (now 44) I would have given the whole of my pocket-money for such a work—the only book (part of one) in our house, excepting the bible and prayer-book, when I was a boy, was a tattered copy of the "Guardian," over this I pored during the unoccupied hours of Sunday, and thought myself fortunate in possessing such a treasure. How ought the youth of the present day to value the opportunities they possess! Without wishing to flatter—your works, which an errand-boy might make himself possessor of, if read, marked, and inwardly digested, would be the means of communicating a vast fund of useful and ornamental knowledge. I have been a *working boy and man* all my years, since comparative infancy—I can truly say, I have by the labour of my hands earned my bread since five years of age. With the exception of two years at a good school, between 13 and 15 years of age, the whole of my learning has been acquired behind the counter, after 9 o'clock at night. I only mention this to show that where there is a will there is a way. I have been amply repaid for my efforts, and am only sorry I did not apply myself to study more diligently. My father came to London as a porter to a retail cheesemonger, about the year 1790 or 92—the only learning he had when a boy was a fortnight at Midsummer, and also at Christmas, when the schoolmaster paid a visit to the village where my father was born, during the vacation of his, the schoolmaster's, school. When a young man in London, the only reading he could get, was the waste paper out of the cheesemonger's shop, the time for reading was the Sunday afternoon—the place, Kensington Gardens, under a tree. Still he contrived to acquire no mean fund of useful knowledge—was frequently consulted by his neighbours and friends in matters of moment—lived to purchase the land he had laboured upon in Yorkshire when a boy, was highly esteemed by the gentry of the neighbourhood of his estate, was an esteemed officer of the parish in London in which he resided many years, and I may add, left his neighbourhood better than he found it Now let me add, the secret of all this was—temperance, *early* habits, industry, hard work, no false notions of appearances, prudence, and strict integrity in all his dealings, with the reputation of "his word being as good as his bond." I mention this as an encouragement for boys and young men to "go and do likewise" Excuse my style, and believe me, yours respectfully,

W. BURTON

[We insert the above because, without knowing the writer, we believe there is sincerity and energy enough in it to render it useful to our youthful readers.—ED]

S N. (York). We hardly know what directions to give you for "stengthening your memory" Memory depends materially on the constitution of the body, and also on its particular physical conditions at certain times and seasons, for that which is forgotten at one time, or under one condition, will be present, in its most minute particulars, at other times and under other conditions You ask, if "memory and recollection are not the same thing?" Not exactly; Locke calls *memory* "the storehouse of the mind, the storehouse of our ideas," its business is to furnish to the mind, when occasion requires, the ideas that had been dormant *Recollection* is the power of recalling, or bringing out from the storehouse of the brain, impressions which it had received before, but which had been laid by and forgotten for a time. Generally speaking, our recollection of ideas or events will be strong in proportion to the impression they first made upon our minds.

A WASHERWOMAN.—Your question was answered in one of the early Nos. of the WORKING MAN'S FRIEND; but as you may not be able to obtain that, we repeat the answer. To "desiccate" is to dry up; and a "desiccating laundress" is one who dries clothes by a new process—namely, the introduction of a strong current of hot air into the room where the wet clothes are hung. This plan is adopted in most of the public "washing-houses."

SPAIN AND ITS PEOPLE.—II.

A BRIEF HISTORY OF SPAIN.

ROYAL PROCESSION IN MADRID.

HAVING in our last article given a short account of the general physical character of Spain, we shall now attempt a brief resumé of its history. And here we must repeat that our "Glimpses of the Peoples of all Nations" must be considered simply *as* glimpses, and not as histories or even substantive accounts. The office of the FRIEND is to introduce his readers

to good company, and not to monopolise their entire attention; thus, it is his hope that none will be satisfied with his notices of China, Hungary, Egypt, or any other country, but that all will endeavour to profit by the little glimpse afforded, by reading for themselves in more enduring and important volumes.

Spain was probably known to the Phœnicians about 1,000 years before the Christian era, though it seems to have been disregarded by the Greeks, at that time the most renowned people of Europe—till after the time of Herodotus, in whose history we find the first reliable account of it. It is thought by many authors that Spain was the Tarshish of the Scriptures, from which the Phœnicians—the great traders of that period—imported gold, silver, and precious stones into Judea, it is certain, however, that the precious metals have been found here in considerable quantities in the early ages, and from that fact we may, not unfairly, infer the great love of gold and riches which has ever distinguished the people of the peninsula. The original population of Spain appears to have been Celtic—the first inhabitants having probably been a tribe who passed from over the mountains from Gaul and settled in the fair country beyond. From a very early period, however, the Spaniards mixed with the Moors, and it would appear, that from the moment when the first African escaped on the Spanish shore at Gibraltar, the fate of the Spaniard would be bound up with that of the Moor.

About 800 years before Christ, the Greeks established a colony at Marseilles—now a flourishing French port on the Mediterranean—and thus became acquainted with Spain. They probably left a few of their countrymen in the northern part of the peninsula, to which they gave the name of Iberia and Celtiberia; but whether the Iberians be colonists from the old population from the place, or the place from the inhabitants, it is impossible to decide. They also called a part of the country, now known as S[illegible], H[illegible], from its entrance at the western extremity of [illegible] world. Its present name Hispania is probably [illegible], the Romans, though at what precise period is unknown. The etymology of the word is also uncertain.

Early Spanish history, like that of all other countries, is full of vague tradition and poetical fable, but before the first Punic war between the Carthaginians and the Romans, little is known as to its authentic history. It was probably inhabited by a wandering warlike people, for we find, in the middle of the third century before Christ, that the Romans, under Hamilcar Barcas, with difficulty possessed themselves of Catalonia, where they founded the city of Barcelona, the modern Barcelona.

Previous, however, to the Roman conquest, Spain had been famous for its gold and silver, its fisheries, its dye-stuffs—their taste for finery they had probably learnt from the Phœnicians—and its timber. Aristotle assures us, that when the Phœnicians first arrived in Spain, they exchanged their naval commodities for gold and silver, which they obtained in such immense quantities that they actually used it as ballast, and made it into anchors! A country so rich in gold was not likely to remain long unknown to the world, and thus we find it successively fought for, [illegible], visited and coveted by the Phœnicians, [illegible], and Romans. To the already full hand of the latter it fell, but instead of finding the natives a peaceable and easily-conquered people, ready to fight on the side of their conquerors, and willing to adopt their laws and customs, the Romans were necessitated to dispute their passage into the peninsula step by step with a hardy nation, whose love of liberty was equal to their valour, and whose strength and activity the whole power of the empire was scarcely sufficient to subdue. To this day the Spaniard is proud to name as his ancestors the brave Asturians, and Numantines, and Cantabrians, who battled with the Romans in the forests and plains of their fatherland.

But notwithstanding the desperate efforts made by the half savage natives, the Romans overcame them at last, and took possession of their country. In assisting the Romans to drive out the Carthaginians, the poor Spaniards were but forging fetters for themselves, and so, in the course of a few years, the Peninsula came to be a Roman province. But for more than two centuries afterwards, the inhabitants of Gallicia, Asturias and Biscay, owned no allegiance to the conqueror. Protected by the natural barriers which existed in their mountains and forests, they defied the invaders of their country; and it was not till Augustus Cæsar opposed them in person, with the whole strength of the Roman arms, that they gave signs of yielding.

It would occupy too much space to detail the means by which Rome acquired authority in Spain; but, once conquered, the Spanish people were found to be easy of rule, and willing to be taught; and thus, in process of time, civilisation completed what war had begun, and the Spaniards, as a people, assumed the dress, and manners, and language of their conquerors. Years passed away, and so completely identified at last were the Spaniards with the Romans, that they not only accepted, under Vespasian, all the privileges of the Italian people, but had the honour of furnishing the empire with several royal masters. Under the emperors, Spain was rich [illegible] She was the granary of the Empire, and the [illegible].

If the Romans were an aggressive people, they were also most noble conquerors, for wherever they carried their arms, there also they carried the arts of civilisation and refinement. In Spain the Romans built numerous cities, the names of some of which exist to this day; they erected bridges and aqueducts, and opened roads and causeways from one end of the country to the other, they adorned their cities with temples and statues, and introduced the Grecian style of architecture into a country which they had found a comparative wilderness, they gave prizes for public games, and caused amphitheatres to appear where waste places only had been, they taught the people the use of various implements, and set on foot many manufactories, they patronised the arts of painting and household decoration, and thus industry gave rise to wealth, and wealth to luxury.

Another epoch in the history of nations another turn of the pleasant page of old time. Rome is about to fall by her own greatness, and the provinces are left to the care of [illegible] abandoned, and advised to take care of themselves [illegible] from the commotions which shook all Italy, Spain is yet in the enjoyment of perfect liberty. Not, however, but that it has suffered something in the civil wars of Marius and Sylla, when Sertorius availed himself of the troubled state of the republic to erect Spain into an independent state. And still later, when Pompey and Cæsar contended for universal dominion, the momentous struggle was once more maintained in the battle-field of the peninsula. Yet, for the most part, Spain continued during all the vicissitudes of the metropolis to enjoy peace.

In the fifth century, however, when the Roman empire, after twelve hundred years of greatness, ceased to exist, Spain became like were a prey to the savage hordes which swarmed from the north and east of Europe. These, having overrun Italy and France, crossed the Pyrenees, and swooped down on this favoured land. Centuries of peace and prosperity had deprived the Spaniards of their warlike character, and thus rendered them an easy prey to the savage valour of the barbarian. Everything gave way before them. They rushed over this devoted country with the fury of a deluge, and their traces were marked with equal desolation. The Goths seemed to take pleasure in destruction rather than victory or even enjoyment. Towns were demolished, plantations laid waste, vineyards rooted up, and the face of nature destroyed and brutalised. A famine followed, and then a plague, and Spain became a howling wilderness.

But the barbarians warred not only with the Romans and the Spaniards; they quarrelled amongst themselves, and the horrors of unnatural war were added to those of famine and death. The Suevi, who had settled in Gallicia, were able to maintain possession of that inaccessible province; but the Vandals, who had passed the Sierra Morena, and converted the blooming garden of Bœtica into a desert, were either annihilated, forced to yield, or driven from Spain to struggle with the Romans for a foothold in Africa. The kingdom of the Visigoths, with the exception of Gallicia, included all Spain and Narbonne Gaul.

The feudal system now came to increase the horrors of this devoted land. The new kingdom was split into counties, to reward those captains who, by virtue of superior ferocity, had been raised in rank, while the meaner soldiers assumed the estate of the Romans and Spaniards, and degraded their pro-

prietors into the condition of slaves. "What contrast," exclaims an eloquent writer, "can be more pitiable than is offered by the late flourishing but now blighted and famished condition of unhappy Spain. Where peace, and plenty, and refinement, and luxury once dwelt, devastated cities, and smoking ruins, and desolated fields, alone remain!"

But a day of retribution was at hand. A new power had risen in the East, the birthplace of so many religions; and urged by the impulse of a novel and popular faith, had overrun a part of Asia and Africa, and stripped the Romans, Vandals, and Goths of their possessions in that part of Africa now known as Algeria. Nor did a warlike people like the Saracens pause and rest satisfied at the northern extremity of the African continent, when so narrow a strip of water alone divided them from beautiful Spain.

Excuses for landing in Europe soon presented themselves to a people wishful of power and enterprise. The disputed succession between King Roderick and the sons of Witiga, his successor; the destruction of the strong places in the kingdom, which till the last they had occupied to prevent a rebellion, the degeneracy of the Goths, whose sensual habits had reduced them to a state of shameful effeminacy, the earnest invitation of the oppressed Jews, whose ancestors had come to Spain when Jerusalem was taken by Nebuchadnezzar, and in still greater numbers when the holy city was destroyed by Titus, and who now possessed all the wealth and learning of the land, but, above all, the abject condition of the Spaniards themselves, who, weary of slavery were willing to submit to any change which should promise them relief,—all these were reasons, if any were needed, why the Saracens should make good their footing in Spain. And so in the year of our Lord 711, Musa, the lieutenant of the caliph in Africa, sent over Taric and his soldiers to try their fortunes in the fair land of Spain.

The success of this venture was more than complete. Taric crossed into Spain and was victorious, and recrossed to Africa for more troops and further supplies. The battle of Xeres was fought and won; the power and spirit of the Goths was broken, none remained to be overcome but the poor degraded Spaniards, who still preserved the dress and language of the Roman without any of the Roman valour and perseverance.

The Spaniards, indeed, were no less astonished at the conduct of their new conquerors, instead of destroying everything as the Goths had done, they sought rather to preserve the country inviolate; and instead of murdering the people, they allowed them to move away whithersoever they would, or to remain in the possession of their houses and lands upon the condition of paying a slight tax.

The Goths and some of the Spanish clergy took refuge in the mountains of the north; hence it is, that even in the present day more than two-thirds of the Spanish nobility are found in the provinces of Leon, Gallicia, and Asturias; and that priests abound in those parts. The abandonment of the conquered country was, however, by no means general among the clergy. They remained undisturbed for centuries, until the inroads of the barbarous and fanatic Moors towards the close of the Mohammedan dynasty. The Christian bishops continued to exercise their functions and even to hold councils, and the people practised the faith of their ancestors;—but many, won by the apparent ease and indifference of the Saracens, embraced a faith at once so soft and enticing as that of Mahomet.

A new language was now introduced into Spain; and her rivers, mountains, cities, and provinces—nay even the peninsula itself—received new names, conformable to the policy or caprice of the conquerors. Thus the general name of Hispania, which had been given the country by the Romans, was changed for that of Andaluz, from the province of Andalusia, the first the Saracens overcame; and many of these Saracenic names remain to this day.

The dominion of the Saracens, established over the largest and fairest portion of the peninsula, continued to own allegiance for more than half a century to the caliph of Damascus, in whose name the conquest of Spain had been made. But the remoteness of the province from the capital of the conqueror's country, and the ambition of rival chiefs, gave rise to numerous dissensions, until some of the most enlightened and patriotic Arabians determined, as the only means of securing their conquest, to erect Spain into an independent kingdom, fortunately, there still remained a single prince of the unhappy race of Omar, escaped from the cruel massacre of his family, and now wandering, a houseless exile, in the wilds of Africa. This exile was Abdoulrahman. He was discovered and invited to Spain, to place himself at the head of the empire of the west. Obeying the summons, he landed at once in Andalusia, attended by a trusty band of those brave Zenotes who had lent him shelter and hospitality in his adversity. Though young, this prince was brave and experienced; and he had not long been in the land of his birth before he was joined by the generous and enlightened, and by their aid he succeeded in driving out the lieutenant and those who owned allegiance to the caliph, and was thus the means of erecting Spain once more into a kingdom.

The genius of the people, and the rare qualities of a brilliant succession of kings, combined to carry the new empire to the height of development

The Saracens had now established a kingdom in Spain; but from this period its history is so confused, that we must necessarily erect a few landmarks, as it were. In the following table the chronology of the contemporary kings of Spain is carried from Abdoulrahman the First to Philip the Third, when the various separate kingdoms were united under one head —

From this period the crown of Spain is no longer divided, but one monarch rules the whole peninsula. In 1516 the House of Austria sat upon the throne, and till 1665 numbered five kings,—viz., Charles I., Philip II., Philip III., Philip IV., and Charles II. In 1700 the House of Bourbon began to reign.

We have thus traced the history of Spain from the earliest times to its subjugation by the Saracens in the eighth century. Under the rule of the Arabian strangers, the Spaniards rose, as a people, to a height they had never before attained. The arts of life were carried to a point of refinement hitherto unknown in the peninsula, and for more than seven hundred years the rule of the Arabian was easy, and the yoke on the neck of the Spaniard was too light to be felt. In fact, as has been stated, and as may be seen by the somewhat dry tabular matter above, there were in Spain during this period five separate kingdoms. Our space would not allow us to trace or even to hint at the doings in these states during the long series of years we have indicated. Suffice it that under the Saracen the arts and sciences flourished; music, architecture, poetry, and literature were the pastimes of the learned, while among the people sports and games of all kinds were practised and encouraged. Spain during these years was comparatively at peace, her people were happy, her soil was well cultivated, and her cities well built. But a change was at hand—a change which has been commemorated in verse, and prose, and classic association, and which we shall speak of in our next number.

SAMUEL JOHNSON.

BY PARSON FRANK.

From this series of papers on the British poets of the eighteenth century, it would be hardly fair to exclude Samuel Johnson. We must direct our glasses a while to this starry sign in the literary heavens, this Ursa Major, this Great Bear of Lichfield. True, he is little consulted as a poetical oracle by the present generation; few are they who tread the antiquated streets of *his* "London; a satire," or sigh with him over the "Vanity of Human Wishes," or listen to the tragic tones and are riveted by the five acts of "Irene." Nor, in fact, are his prose writings in any particular request; the world beginning to incline to the opinion that nowhere is the doctor so great, so original, so interesting, and so instructive as in Boswell's incomparable biography. But he is too much of the poet, after all, to be overlooked with impunity in these our sketches; and where he but half the poet he really is, so sincere is our liking for the man, if not our admiration for the writer, that we should be tempted to drag in the Herculean LL.D., by hook or by crook.

If there was ever an Englishman in the last century, Johnson was one: a huge, burley, stout-hearted, clear-headed, often wrong-headed, independent, upright, straightforward, positive, dogmatical, litigious, prejudiced, high-principled, sound sensed, rough and ready John Bull. Englishmen at large—not merely English tories, look you, but English whigs and radicals to boot—are proud of the fine old fellow, and, while they laugh at his weak points delight to do him honour for his genius and manly character. As Macaulay says, "Johnson grown old, Johnson in the fulness of his fame and in the enjoyment of a competent fortune is better known to us than any other man in history. Everything about him, his coat, his wig, his figure, his face, his scrofula, his St. Vitus's dance, his rolling walk, his blinking eye, the outward signs which too clearly marked his approbation of his dinner, his insatiable appetite for fish-sauce and veal pie with plums, his inextinguishable thirst for tea, his trick of touching the posts as he walked, his mysterious practice of treasuring up scraps of orange-peel, his morning slumbers, his midnight disputations, his contortions, his mutterings, his gruntings, his puffings, his vigorous, acute, and ready eloquence, his sarcastic wit, his vehemence, his insolence, his fits of tempestuous rage, his queer inmates, old Mr. Levett and blind Mrs. Williams, the cat Hodge and the negro Frank, all are as familiar to us as the objects by which we have been surrounded from childhood."* Every one traces with curiosity the up-hill course of this brave "Working Man," his pride and poverty at Oxford, which he had to leave without a degree,—his experience as an usher at Market Bosworth,—his marriage with the widow Porter, twice as old as himself,—his speculation as a private schoolmaster at Edial, ending with his migration to London in company with one of his three pupils, David Garrick,—his laborious daily work as a literary hack, when the sweat of his brain only procured him a hard crust, but during which trying and protracted period he manfully strove on, bore up against the blast, cringed to no patron, pandered to no unrighteousness, and at length came out more than conqueror, having—we say it with reverence—"fought a good fight, and kept the faith" which so many of his brethren were tempted, by distress or by flattery, to deny. In the autumn of his days he could well decide how far true is the doctrine Goethe has put into the mouth of Antonio, in reference to the moody, solitary Tasso:—

"The toil of life
Alone can tutor us life's gifts to prize.
The smiles of fortune have too soon been his,
For him to relish aught in quietness.

* Critical Essays, vol. i. p. 380, fourth edition.

Oh that he [Tasso] were compelled to *earn* the blessings
Which now with liberal hand are thrust upon him!
Then would he brace his nerves with manly courage,
And at each onward step feel new content."*

"Seven years, my lord," wrote Johnson to Chesterfield, when about to publish his Dictionary, "seven years have now passed since I waited in your outward rooms, or was repulsed from your door; during which time I have been pushing on my work through difficulties of which it is useless to complain, and have brought it at last to the verge of publication, without one act of assistance, one word of encouragement, or one smile of favour. Such treatment I did not expect, for I never had a patron before."† Justly may Carlyle ask whether there is not more pathos in "brave old Samuel's" manful eking out of his income, his paying visits on "clean shirt days," and so on, than in a whole circulating library of Giaours and Harolds. His diseased frame and constitutional melancholy enhance the effect of the portrait. His body was "inert, unsightly"—his vision defective. But all his "singularities, eccentricities, addresses, strangenesses, uncouthnesses, brutalities, weaknesses, prejudices, bigotries, and superstitions," as Professor Wilson sums them up,‡ could not prevent him from loving, or from being loved, "for he had a most tender, and a most generous, and a most noble heart." His melancholy we have called constitutional; and certainly there does seem to have been what John Sterling calls a sad unrest and entire absence of peace in Johnson's whole life.§ Mr. De Quincey holds that it is good to be of a melancholic temperament, as all the ancient physiologists also held; *but only if* the melancholy is balanced by fiery aspiring qualities, not when it gravitates essentially to the earth. Hence, he argues, the drooping, desponding character of Johnson's estimate of life, who viewed mankind as "miserable, scrofulous wretches," taking himself as exemplar of the current species:—"and but for his piety," De Quincey characteristically remarks,‖ "which was the best indication of some greatness latent within him, he would have suggested to all mankind a nobler use for garters than any which regarded knees. In fact, I believe, that but for his piety, he would not only have counselled hanging in general, but hanged himself in particular." Nothing, however, could be farther from truth than to call Johnson a misanthrope. His breast was full of the milk of human kindness. Companions wondered and laughed at his matronly helpmate and her unprepossessing aspect, but Johnson's "deathless affection for his Tetty," was, as Carlyle observes, always "venerable and noble." Visitors wondered and laughed at his home circle,—blind, peevish, old Mrs. Williams, Betsey, the maid servant, to whom he desires in his correspondence to be "remembered kindly,"¶ Francis, the blackamoor, whom he would not order to go out and buy oysters for the cat Hodge, lest the trouble should make puss unpopular in the kitchen,** and that obscure practitioner, Robert Levet, strange and grotesque in appearance, stiff and formal in manner, and speechless before company;†† but Johnson was impervious to ridicule wherever he felt that mercy and righteousness were met together. "Generous old man!‡‡ Worldly possession he has little," says Carlyle, treating of his middle life, "yet of this little he gives freely, from his own hard-earned shilling, the halfpence for the poor, that 'waited his coming out.'"§§ Not mere halfpence either; for Dr. Maxwell, the temple preacher, tells us that he frequently gave all the *silver* in his pocket to the poor, who watched him, between his house and the tavern where he dined. If he was hot and hasty, he was also placable and conciliatory on reflection. His very prejudices, strong and irrational as they sometimes were, do not offend us as they would in another man; even Hazlitt says, "I do not hate but love him for them." These prejudices were of an anomalous kind, under the influence of which his mind seemed to dwindle away, in Macaulay's words, "from gigantic elevation to dwarfish littleness." But we feel with Hazlitt that his were not time-serving, heartless, hypocritical prejudices, but deep and inwoven,—not to be rooted out but with life and hope,—prejudices which he found from old habit to be necessary to his own peace of mind, and which he thence inferred were necessary to the peace of mankind at large. His hatred of the Scotch, his belief in witches, and similar convictions, were, as Carlyle has said, only the beliefs of ordinary well-meaning Englishmen of that day—hallowed, some of them at least, by fondest sacred recollections, and to part with which was parting with his heart's blood.

As a writer, his day of glory is in its twilight decline. His reputation both in verse and prose is past its prime, and fallen somewhat into the sere, the yellow leaf. That ponderous, stately, elephantine style of his which once had every young Englishman for pupil and imitator—just as Chalmers was ambitiously copied some years ago by all the licentiates in theology throughout broad Scotland, or as Carlyle and Tennyson have their mocking-birds at the present time—is now considered fit theme for a jest in every mouth, a sarcasm in every magazine. His bloated diction was of ill service to the progress of the English language. It is true that he denounced those who inflated it with irregular and foreign words—but he was partaker in their sins, and himself did that which he approved not, thus becoming worthy of stripes. Not as an able contributor to the "North British Review" observes, that Johnson introduced many Greek and Latin words, but that he mainly employed those we already had, and starved what should have been kept up, and pampered what should have been kept down, till our language became like himself, little sinew and much fat.* There is too much of solidity and ballast in Johnson's thought to allow us to consider his expressions hollow and merely artificial, as we necessarily do in the instance of his copyists, who plagiarised his weakness and omitted that which made it tolerable; but how desirable were a less affected diction in so genuine a man! Mr. Landor says, that magnificent words, and the pomp and procession of stately sentences, may accompany genius, but are not always nor frequently called out by it:—"the voice ought not to be perpetually nor much elevated in the ethic and didactic, nor to roll sonorously, as if it issued from a mask in the theatre.'† A German author of the seventeenth century amusingly illustrates the very characteristics of the Johnsonian composition, in his description of a certain Hessian official, who, when he wanted a knife, would say to his boy, "Page, convey to me the bread-dissecting implement;" or, when he wished to tell his wife that it was nine o'clock, and therefore bedtime, would say, "Help of my soul! desire of mine eyes! my superior self! the metallic hollow has resounded to thrice three inflictions! Rise therefore, on the columns intended to support thy frame, and repair to the couch plethoric with feathers." Archdeacon Hare compares the Johnsonian sentences to the hoops worn by ladies in those days, as being equally successful in disguising and disfiguring the form, as well as keeping you at a distance from it.‡ There is truth as well as wit in Peter Pindar's§ lines:—

"I own I like not Johnson's turgid style,
That gives an inch the importance of a mile,
Casts of manure a waggon-load around,
To raise a simple daisy from the ground;
Uplifts the club of Hercules—for what?
To crush a butterfly, or brain a gnat;
Creates a whirlwind from the earth, to draw
A goose's feather or exalt a straw;
Sets wheels on wheels in motion—such a clatter,
To force up one poor nipperkin of water;

‡ Mr. Hare, who by the way, is generally disposed to depreciate Johnson, further compares his STYLE to the sails of a mill, which roll round, ponderously and monotonously, yet seldom grinding any corn, as though in truth it were constructed for the purpose of going round a thing, and round it, and round it, without ever getting to it.—See *Guesses at Truth*, 2nd Series, 259.
§ Dr. Walcot, who delighted to burlesque Johnson and Boswell; as in his *Bozzy and Piozzi, or the British Biographers*.

Bids ocean labour with tremendous roar,
To heave a cockle-shell upon the shore;
Alike in every theme his pompous art,
Heaven's awful thunder or a rumbling cart!"

Tautology is another sin laid to the charge of his composition; and one, if proven, unworthy of an accurate weigher of words and meanings,—of the "great pedagogue," as Robert Fergusson in caricaturing spirit calls him,—

"Whose literarian lore,
With syllable on syllable conjoin'd,
To transmutate and varify, had learn'd
The whole revolving scientific names
That in the alphabetic columns lie."*

Sentences which might have been expressed as simple ones, are expanded (according to Archbishop Whately) in Johnson's writings, into complex ones by the addition of classes which add little or nothing to the sense; and which have been compared to the false handles and keyholes with which furniture is decorated, that serve no other purpose than to correspond to the real ones.† De Quincey pronounces Johnson the most faulty writer in this kind of insanity that ever had played tricks with language—and illustrates this opinion by citing the opening lines of Johnson's "Vanity of Human Wishes," —

"Let observation, with extensive view,
Survey mankind from China to Peru"

Which couplet has been paraphrased as follows —"*Let observation, with extensive observation, observe mankind extensively*," a neat specimen, unquestionably, of decorate tautology. The distinction between Johnson's natural manner in conversation, and his stilted manner in composition, is palpable. When he talked, as Macaulay says, he clothed his wit and his sense in forcible and natural expressions, but as soon as he took his pen in hand to write for the public, his style became systematically vicious. "All his books are written in a learned language; in a language which nobody hears from his mother or his nurse; in a language in which nobody ever quarrels, or drives bargains, or makes love, in a language which nobody ever thinks."‡ Nothing can be better than Goldsmith's retort about the "Animated Nature," when he said, "Doctor, if *you* were to write a fable about little fishes, you would make the little fishes talk like whales." Oliver could, on occasion, say sharp things, as well as do kind ones.

The poetry of Johnson has merits which are, of course, not a little qualified by the mannerisms to which we have directed attention. But merits it has, of a *calibre* and a vitality which show to singular advantage, if compared with the namby-pamby effusions and sickly sentimentalisms and canting mawkishness so rife among ourselves. His verses are usually vigorous, always clear and manly, often impressive in their sonorous cadence, apt in their illustrations, ring now and then even pathetic. The "Vanity of Human Wishes" has been eulogised by Sir Walter Scott as a satire, the deep and pathetic morality of which has often extracted tears from those whose eyes wander dry over pages professedly sentimental. His other Juvenalian satire, "London," is called by Wilson a noble poem, although his great moral genius was cramped by the requisite imitation of his Roman prototype, with whom he had to move parallel, but then "to have shown so much genius and so much ingenuity at one and the same time, to have been so original even in imitation, places Johnson in the highest order of minds." Complaints there are, that the censure is freely bestowed by the satirist of "London" coarse and exaggerated, and that the satire ranks rather as a party than as a moral poem. But where is the satire to which complaints of that kind have not been attached? and how few are the satires which contain such forcible painting as this? Englishmen at once recognise a worthy countryman and an able teacher in the assailant of those

"—— Whom pensions can incite
To vote a patriot black, a courtier white,"

and of those supple tribes who, for "bribery and corruption," are ready to "repress their patriot throats,"

"And ask no questions but the price of votes,
Whose wish is full to riot and to rail,
With weekly libels and septennial ale"

The historical illustrations in "The Vanity of Human Wishes" come in with great effect—more especially to those who are familiar with Juvenal's tenth satire. Wolsey, seen standing in full-blown dignity, directing by his nod the stream of honour, and then frowned on by Henry, scorned "by those his former bounty fed," oppressed with age, cares, and sickness, and fleeing to the refuge of the cloister; Villiers and Huley, Hyde and Strafford, all the victims of

"—— Their wish indulged in courts to shine,
And power too great to keep or to resign."

How stirring, too, the allusions to Charles the Twelfth, that frame of adamant, that soul of fire, pushing on with his Gothic standards to the walls of Moscow; but, after all his achievements, dying in a petty fortress, and by a dubious hand, and leaving a name

"At which the world grew pale,
To point a moral or adorn a tale."

Frequent quotation has attested the graphic significance of the melancholy couplet,

"[illegible] dreams of dotage flow,
And [illegible] and a show.

And this, again, on the "fatal gift of beauty"

"York, Rome could tell what ills from beauty spring;
And Scilly cursed the form that pleased a king."

In these passages we see qualities of the author's genius which, if not all, revealed in the pages of Boswell, notwithstanding the common assertion that Johnson is in every sense greater in the "Life" than in his own writings. We incline rather to Mr. Gilfillan's opinion,* that although Boswell's book does justice to Johnson's wit, readiness, and brilliancy, we must consult the poems and prose essays if we would see the full force of his fancy, the full energy of his invective, and his full sensibility to, and command over, the moral sublime. And most justly does Christopher North† accord to him noble natural and noble feelings—a hate high as heaven of wickedness, a scorn as high of all that was base and mean, wide knowledge of the world, of London, of life, severe judgement, and [illegible] not very various, perhaps, but very vivid in its own peculiar action. That his ear was defective, according to our standard of harmony, seems evident from his remarks on the metre of Milton,‡ and the "*improvements* made by Dryden" (whose proposal to turn "Paradise Lost" into rhyme met with this rebuff from the *more* glorious John "'Ay, Mr Dryden, you may *tag* my verses if you will") If Wordsworth could have lived and written during the middle of the last century, Johnson, we venture to say, would have been one of the severest, as well as most formidable and intelligent of his adversaries. The doctor's cast of mind and taste was wholly in another direction; when he ventured on things pastoral, he was unhappy, and thought of, and sighed for, Fleet-street. His bucolic muse, it has been said,§ seems to have taken her ideas of the "rural kingdom" from Lincoln's-inn-fields, or perhaps wandered, in her fine enthusiasm for "vocal groves" to the utmost verge of Birdcage-walk. Cowper was willing to "lay sixpence" that had Johnson lived in the days of Milton, and by an accident have met with his "Paradise Lost," he would neither have directed the attention of others to it, nor have much admired it himself. His position, on the whole, in the temple of the Muses

---

* See *Fergusson's Poems*, p 45 (1840) The Scotchman's travestie is rather a heavy affair, and the fun of it not very exuberant. His spite against the doctor is, however, natural enough, on the ground of national jealousy. It was a bad day for Johnson's popularity north of the Tweed which he uttered

"From Thames's banks to Scotsman shores,
Where Lochlomondian liquids unfold"

Wholesale Elements of Rhetoric.

* See his papers on Macaulay, in the second series of *Literary Portraits*.
† In his splendid review of "The Man of Ton," in *Blackwood*, vol. xxiii.
‡ Cowper remarks on this point, in a letter to Unwin, "Was there ever anything so delightful as the music of the "Paradise Lost?" It is like that of a fine organ; has the fullest and the deepest tones of majesty, with all the softness and eloquence of the Dorian flute Yet the doctor [Johnson] has little or nothing to say upon this copious theme, but talks something about the unfitness of the English language for blank verse, &c."—*Hayley's Life of Cowper*
§ See a lively and sagacious essay on "The Regeneration of our National Poetry," in the *Athenæum*, 1849, p. 824, &c.

might be summed up worse than in Cowper's* words: "Good sense, in short, and strength of intellect, seem to me, rather than a fine taste, to have been his distinguished characteristics."

We must add a word or two on Johnson's achievements in criticism, original prose composition, and conversation. In criticising the poets, he is shrewd, pointed, and positive, but so narrow in his sympathies, that many of them get scant justice, just as others get superfluous attention, at his hands. Mr. Hare contends that he only looked into a book to contemplate his own image in it, and that when anything came across that image he turned to another volume.† The judgments he passed on books were "superstitiously venerated" by his contemporaries; but our own age generally assents to the comment of Mr. Macaulay,§ that they are the judgments of a strong but enslaved understanding, which was hedged round by an uninterrupted fence of prejudices and superstitions, though within his narrow limits he displayed a vigour and activity which ought to have enabled him to clear the barrier that confined him. His most celebrated production in prose, "Rasselas, Prince of Abyssinia," which he wrote in the parenthesis of the week to defray the charges of his mother's funeral, was called by the poet Young a "mass of sense," and still counts its admirers, though they are now a feeble folk, compared with their ancestors. All the characters talk like the great lexicographer. Like him they are turned with despondency. Hence "Rasselas" has been called, by Bulwer, the most melancholy and debilitating moral speculation that ever was put forth. As to the characters, Sir Bulwer Lytton‖ describes them as a dim succession of shadowy images, without life or identity—mere machines for the germination of morals, and the mere location of sonorous phraseology. On the other hand—nothing personal to the accomplished lexicographer—Wilson cordially protests, "No pig shall ever persuade me that 'Rasselas' is not a noble performance—a design and in execution." And elsewhere the eloquent professor unhesitatingly pronounces it an "*as yet unsurpassed* work," where, on the wings of fancy and feeling, you are wafted along over the earth, yet never lose sight of its flesh-and-blood inhabitants, working and weeping, yet not unhappy still in their toils and their tears, and dying but to live again in no cold, glittering, poetic heaven. Between these two verdicts it is hard for *us* to decide. The professor has the greater genius, and is the finer critic; but the baronet is cleverer at constructing and sustaining the interest of a story, and certainly has public taste with him in his estimate (grant it, however, a little too smartly contemptuous) of the merits of "Rasselas."

But when Johnson's conversational powers are the theme, there can be but one judgment in kind, differing as it may in degree. Coleridge, who could see nothing like reality and consecutiveness in his writings, who declared his antithesis to be almost always verbal only, and many sentences in the "Rambler" to have no assignable definite meaning whatever,—Coleridge** speculated on the philosophy of his conversational prowess, and, to account for it, supposed it was stimulated by the excitement of company. Surrounded by his intimates, within sight of the "spectacles of Burke and the tall, thin form of Langton, the courtly sneer of Beauclerk, and the beaming smile of Garrick, Gibbon tapping his snuff-box, and Sir Joshua with his trumpet in his ear,"†† the doctor got off his stilts, unbuckled his heavy armour, and "came down upon" them with irresistible sallies of witty good sense, and "homely wisdom." He was then natural, hearty, vivacious. "His colloquial style was as blunt and direct as his style of studied composition was involved and circuitous."* Of course his prejudices came out in full development, magnified by the irritation of opposition and the heat of personal collision—for he was too accustomed to despotic monarchy in society to bear patiently with plain-speaking from those republican spirits who would not or could not "flatter Neptune for his trident, or Jove for his power to thunder."† He often seemed fighting rather for victory than for truth; yet Carlyle apologises, very reasonably for this, as representing the ebullience of a careless hour, and on merely superficial debateable questions—the effect of which was harmless, and possibly beneficial, in taming noisy mediocrity, and choosing at another side of a debateable topic. Compared with the conversation of Coleridge, Johnson's wants philosophy and depth, however superior it may seem in lucid and hearty English sense. Johnson does not, as Hazlitt pointed out, set us thinking for the first time; his reflections present themselves like reminiscences, and do not disturb the ordinary march of our thoughts, we seldom meet with anything to give us pause. And when Johnson *did* tackle a question, the "gyration of his flight upon it" was exceedingly brief. There was no process—as the most distinguished of Coleridge's immediate disciples, M. de Quincey, has observed—no evolution, no movements of self-confict or preparation, a word, a distinction, a pointed antithesis, and, above all, a new abstraction of the logic involved in some pedantic adage or pun, formed the utmost of his efforts. Upon David Hartley, Hume, Voltaire, Rousseau, the true or false philosophy of his own times, he "had nothing to say, and had nothing" [illegible], a perpetual sneer is saying something.

But here, as with the entire space of the magazine is at our disposal, we must (to use a not un-Johnsonian word) cut up. Hazlitt was wrong when he said Johnson "never makes us laugh." The doctor has made us do so, most absurdly, in the present instance, and must be held responsible for whatever discontinuous hurry there may be in our remarks.

THE BEGINNING OF THE END.

The following curious [illegible] is evidently remarkable in the [illegible] is translated from a work entitled, "Nostradamus;" a history of private prophecy, published in Paris, in 1840, by M. Eugene Bareste, at which period the man who now governs France was of small importance in the eyes of political seers, though certainly he appears to be the individual alluded to in the latter part of the extract. In the original, the particulars respecting the discovery of the MS. are detailed very minutely and circumstantially.

"One evening Napoleon was at Malmaison. He was extremely fond of discussing subjects that bordered on the marvellous, especially with Josephine, whom he knew to be very superstitious. This evening, then, he had been speaking of his gigantic projects for some time, when he concluded by placing in the hands of the empress an old parchment-covered manuscript book in duodecimo, dated 1542. "Hold," said the emperor, opening the volume, "read this." Josephine read aloud. "The Predictions of Master Noel Olivarius."—"Well?" asked she. "They say this relates to me," said the emperor. "How, in a book published in 1542?" "Read it." The empress tried, but as it was written in old French, and the characters indifferently formed, she paused for some minutes to glance over the chapter pointed out to her; then, in a confident voice, she began thus —

"If the Gaul shall see born far from her bosom a supernatural being; this being will rise out of the sea while very young, will come to learn the tongue and manners of the Celti-Gauls, will open for himself, still young, through a thousand obstacles, a road among the soldiers, and will become their chief. This winding path will cause him great troubles; (he) will come to make war near his natal soil for a lustre and

* Hazlitt

† Shakspeare. "Coriolanus." Cowper says, in a letter (1782) to Mr. Rose, "I fancy Johnson made coxcombs of all his friends, and they, in return, made him a coxcomb; for, with reverence be it spoken, such he certainly was, and, flattered as he was, ought to be so."—*Hayley's Life*, p. 376.

more. Beyond seas (he) shall be seen warring with great glory and valour, and shall war anew (for) * the Roman world. Shall give laws to the Germans, shall quell the troubles and terrors of the Celti-Gauls, and shall then be named, not king, but afterwards called *imperator*, with great popular enthusiasm. He shall fight everywhere through the empire—shall drive out lords, and princes, and kings, for two lustres and more. He shall raise new princes and lords to life, and, speaking on his path, will cry—*O sidera! O sacra!* He shall be seen with a strong army of forty-nine times 20,000 men, armed foot soldiers, who will bear arms and headpieces of iron. He will have seven times 7,000 horses, ridden by men who will bear more than the first, (a) great sword or lance, with bodies of brass. He will have seven times seven times 2,000 men who will work terrible machines, vomiting sulphur, and fire, and death. The whole amount of his army will be forty-nine times 20,000 men. He will bear in his right hand an eagle, omen of victory to the warrior. He will give many territories to the nations, and to each one peace. He shall come to the great city, planning very great things; buildings, bridges, harbours, water-courses; doing of himself, with vast riches, as much as a Roman, and all within the dominion of the Gauls. He shall have two wives."

Josephine stopped. "Go on," said the Emperor, who did not like interruptions.

"And one only son. He shall go to make war where the lines of longitude and latitude cross, fifty-five months. There his enemies will burn with fire the great city, and he will enter and leave it with his people amidst ashes (and) great ruins: his people not having either bread or water, in great and decimal † cold, will be so unfortunate that the two-thirds of his army will perish, and more, by one half the other, he being no longer within his dominions. Then, the great man abandoned, betrayed by his own friends, pursued, in his turn, with great loss, even to his very city, by (a) great European population. In the place of him shall be put the kings of the old blood of the Capet.‡ He, forced into exile in the sea from which he came so young, and near his native place, will remain there for eleven moons with some of his (people) true friends and soldiers, not more than seven times, seven times, seven times two in number. As soon as the eleven moons are accomplished, he and his take ship and come to set foot on Celti-Galic ground. And he will advance towards the great city where the king of the old blood of the Cape had seated himself, who rises, takes flight, carrying away with him royal ornaments; settles things in his former dominion; gives to the people very admirable laws. Then driven out again by (a) trinity of European peoples, after three moons, and a third of a moon, he is replaced by the king of the old blood of the Cape, and he believed to be dead by his soldier-people, who in that time shall keep to their household gods against their will.

"The Celts and the Gauls, like tigers and wolves, shall devour each other. The blood of the old king of the Capet shall be the subject of black treasons. Some unhappy (persons) shall be misled; and by fire and sword shall be cut off—the lily maintained; but the last branches of the old blood shall be still menaced. Then (they) shall be warring among themselves. Then a young warrior will advance towards the great city. He will bear the lion and the cock upon his armour. Then his lance will be given him by a great prince in the East. He shall be marvellously aided by (the) warrior people of Belgic Gaul, who will join with the men of Paris to put an end to troubles, to assemble soldiers, [illegible] them all with branches of olive. (He shall be) warring against so much glory seven times seven moons that (a) trinity of European populations, with great fear, and cries, and tears, (ill) offer their sons as hostages, (and) submit to laws wholesome, [illegible] and beloved by all. Then peace during twenty-five moons. [illegible] Lutetia,‖ the Seine reddened with blood, by reason of dear struggles, shall extend its bed with ruin and mortality. Seditions of the unhappy Maillotins. Then (they) shall be driven from the palaces of the kings of the valiant man; and thereafter, the wast Gauls (shall be) declared by all the nations (a) great and mother nation. And he, saving the remnant (that) escaped of the old blood of the Capet, rules the destinies of the world, * makes himself Sovereign Consul of every nation and of all people, lays the foundation of benefits without end, and dies."

Josephine, surprised at what she had read, shut the book and questioned Napoleon about this strange prediction. The emperor, not wishing to attach much importance to the sayings of Master Olivarius, contented himself with answering:—"Prophecies always tell whatever one wishes to make them tell; nevertheless, I own that this one has considerably surprised me," and then turned the conversation to another subject.

On his return from Elba, the emperor recollected this prediction, and spoke thus of it to Colonel Abd:—"I have never been one who would believe everything, but here I acknowledge fairly that there are things beyond the capacity of man, and which even his rare intelligence can never fathom—witness that singular prophecy found in the Benedictine Library during the revolution, and which I myself have seen. To whom does it allude? Am I, indeed, the subject of it? In truth, we must refer always, in those matters, to the Ruler of the universe, and profit as we may by the sparks of light vouchsafed to some privileged beings, to enlighten us as to the road we should follow, and to warn us of the shoals that lie in our way."

The author of the above curious prediction then goes on to relate the history of the original MS. It was discovered, he tells us, by Francis de Metz, Secretary to the Municipality of Paris, in June, 1793, when the frantic excesses of the Montagnards were at their height, among the heaps of books and manuscripts plundered from every library in the country. This had come from the library of the Benedictines, with a number of volumes on the occult sciences, and, perceiving it to be authentic, he copied it, though without understanding its application, and finally placed the original in the library of the Hotel de Ville, where it remained until Napoleon ascended the throne, when some persons having mentioned the then fulfilled prophecy the emperor had the volume brought to him, and from that time the original has been lost sight of. However, as the prediction had created some sensation, many persons had been allowed to copy it, and M. Bareste asserts that he himself found the first copy among the papers of Francis de Metz, written, signed, and dated 1793 by his own hand. At this point, therefore, there can be no doubt. It was [illegible] 1815, inserted in the *Memoirs of Josephine* (collective, accor and 1827), and again published by Edward Bricot from his ron his *Recueils de Prophéties*. We give the conclu[illegible] added conjectures of M. Bareste in his own words, as an [illegible] into proof of its authenticity, since we find him evidently seeking to apply it to the favourite of the day, the late Duke of Orleans:—

"Now, if we attentively examine this prophecy, we shall find it very extraordinary. All that it predicted touching the rise and reign of Napoleon, and the restoration of the Bourbons, has been fully and exactly accomplished. The troubles of 1827, the plots of the liberals, and even the very revolution of 1830, is to be found in it. But it goes further still! Who is this young warrior who will bear on his armour a lion and a cock, emblems of strength and foresight? (It is worth remarking, as rather singular, that the architects of the column of July should have chosen the lion and the cock for the symbolic ornaments of that monument.) What mean those words: The lance shall be given him by a great prince of the East, and he shall be wonderfully aided by a warrior people, who will join with the men of Paris to put a stop to disturbances and revolutions? And those unhappy *Maillotins* who are once more to redden the Seine with blood, who are they? And who is this man who will make France universally respected, who will control the destinies of the world, and who will lay the basis of a new state of society? Let time reply!"

* Obscure—"Se fait conseil souverain detoute nation," &c., may also mean, "Makes (to) himself (a) sovereign council from (the) whole nation."

BELLS.

THREE hundred years ago, Paul Neutzner, a German traveller who visited England, informed his countrymen that one of the great peculiarities of Englishmen was their vast fondness for great noises, such as the firing of cannon, beating of drums, ringing of bells, and so forth. "It is common," he says, "for a number of them (who have got a glass in their heads) to get up into some church belfry, and ring the bells for an hour together."

Paul Neutzner was not far wrong. There is something in the volley of sound—in the roaring brazen clang, thundering from quivering bell metal—that we all love, more or less, although we may not believe, with Charles Lamb, that it is the music nighest bordering on heaven. The music of the bells is associated with some of our happiest hours. We have listened to its rattling merriment, and heard the bells tell the world that it was Christmas-eve, or that the old year had gone, and that the new year, full of hope and promise, had come in its stead. When we listen to the flood of harmony, high up in ancient belfries, and hear the sound caught up and echoed back from every tower and steeple near, we are not ashamed to own that we have a fondness for "such great noises."

Bells are old-fashioned music. When the ceremonial law was given to Moses, and the dresses of the priests were appointed, one remarkable characteristic of those habiliments was the golden bells which adorned them. Beneath the hem of the ephod which Aaron wore, pomegranates of blue, and purple, and scarlet were placed, and bells of gold between them round about; so that as the priest entered the holy-place, and a worshipping assembly awaited his outcoming, the melody of the bells upon his garment might be heard, assuring the host that all was well.

And it was not only the Jews who were accustomed to use bells in their religious services. At Athens, the bell from the Temple of Proserpine assembled the people at the hour of sacrifice; and so, also, in Persia the practice was observed,

THE GREAT BELL AT MOSCOW, RUSSIA.

and on his robe of state the shah wore golden bells. Prefixed to a manuscript copy of the Psalms, of the fourteenth century, is a representation of King David, playing upon five bells, which are arranged before him, and which he is supposed to be striking with two small hammers which he holds in his hands.

But bells were used for other than religious purposes. For *commercial pursuits*—as, for instance, in the Greek Islands—a bell was used to announce the opening of the markets; for *military discipline*, as when the warlike Greek went the nightly rounds in camp or garrison, and at every spot where a soldier was placed sounded his bell, in order to see that the man was

awake and watchful; for purposes of *triumph*, as when some mighty hero returned, and in his decorated chariot, hung with bells, was received with the plaudits of his countrymen; for something far different than triumph, when the criminal, with bells suspended round his neck, was led away to death, or when the solemn bell of the "Cedononhorus" sounded as he preceded the corpse to the tomb.

It is doubtful at what time bells began to be used in Christian churches. In the early times, the Christians were glad enough to meet in silence, and when it became safe, perhaps requisite, that the hour for worship should be made known in some public way, a wooden hammer was sounded upon a wooden board, and in some places, say old writers, a trumpet was sounded.

People generally suppose that Paulinus, bishop of Nola, first introduced church bell-ringing, in the year 400, and this is most likely the fact.

Ingulphus mentions that the Abbot of Croyland (870) gave a great bell to the church of [illegible] abbey, which he called Guthlac; he afterwards added to it six others, viz., Bartholomew and Bethelin, Turketul and Tocwin, Pega and Bega. For in those old days it was customary to bestow names upon the bells, and to consecrate them to the purposes for which they were designed

In the little sanctuary at Westminster, King Edward III erected a clocker or bell-tower, and placed therein several bells, one of which bore the following inscription:—

"King Edward made me thirty thousand weight and three,
Take me down and weigh me, and more you shall find me."

Whether for the purpose thus suggested, is not known, but, sure enough, King Henry VIII. took down the bells, and chalked up by some wagg behind upon the wood,

"But Harry [illegible]
Will be [illegible]"

And this was by no means unlike by-gone King Henry VIII., wagered the Jesus bells of Paris, and lost them by a throw of dice to Sir Miles Partridge, by whom they were taken down and sold.

To deprive a town of its bells was considered a great disgrace and public calamity. Henry V took away the bells of Calais, and bestowed them on his native place Monmouth. In eastern lands the Moslems have seized upon the bells, and melted down the sanctified metal for base purposes, so that in the east their sound is hushed, and no harmony of bells

"Bids the sons of mirth beware,
And tell of sorrow to the fair,
Reflection to the wise."

A sad, sad loss, if we are to credit the testimony of Wynkyn de Worde, who, in his "Golden Legend," says, "Evil spirits that are in the regions of the air fear much when they hear the bells ring, and this is the cause why the bells are rung when it thunders, and when great storms, and tempests, and outrages of weather happen; to the end that fiends and wicked spirits should be afeared, and flee away, and cease from working tempests." From this old credulity arose the practice of ringing the passing-bell.

China was once wonderfully celebrated for its bells, its high pagodas, and quaintly-fashioned towers were all adorned with bells. At Nankin, in the middle of the sixteenth century, four great bells were erected, the largest of which was twelve English feet in diameter, and weighed 50,000 lb. These bells brought down the tower in which they were put up

One of our most celebrated bells is the Great Tom of Oxford—it weighs 17,000 lb., and is 7 feet 1 inch in diameter at the brim, and 5 feet 9 inches high; its thickness at the striking part is 6 inches. The great bell of St. Paul's weighs between 11,000 and 12,000 lb., and measures 9 feet in diameter. But we cannot boast any very large bells, the country of great bells is, without dispute, Russia. There the great bell may be heard in full vigour, not

"Swinging slow with sullen roar"—

for the Russian bells are too large to be swung, but incessantly tolling, and booming and deafening all ears but those of Russians, who almost worship their bells. The largest of them has been called by Adam Clark "a mountain of metal," and is termed by the Russians the "Tsai Kolokol," or king of bells, from the metal of which at least thirty-six bells might be cast, each as large as the great bell of St. Paul's. The king of bells weighs 400,000 lb. or nearly 200 tons, is 20 feet high, and 21½ in diameter. The enormous bell is now exhibited close by the Ivan Veleki, or Great Ivan, which is a tower belonging to the Cathedral at Moscow. An inscription on the bell states that it is made of the metal of a former one, which was cast in the year 1654, first rung in 1658, and greatly damaged by a fire on the 19th of June, 1701. The inscription goes on to state that, the empress Ann added 72,000 lb. of metal to the 288,000 lb. which the old bell contained, and that the new bell was cast in the year 1734. People from all parts, during the operation of casting, contributed their gold and silver plate to add to its weight and glory. This bell was never suspended in a bell tower; by a disastrous fire, a piece was broken out of the side; but in the year 1836 a French architect, Monsieur Monferrand, succeeded in placing the bell upon an octagon granite pedestal at the foot of the Tower of Ivan Veleki, and is one of the curiosities of the Kremlin, at Moscow.

The great bell at Montreal, which was cast in 1847, is eight feet seven inches in diameter at the mouth, eight feet one inch high to the top of the crown, and weighs 30,000 lb.

The constituent parts of a bell are the body or barrel, the clapper in the inside, and the ear or cannon on which it hangs to a large beam of wood. The metal of which it is made is a composition of tin and copper, or pewter and copper; the proportion one to the other is about twenty pounds of pewter, or twenty-three pounds of tin to one hundred pounds of copper. The metal thickness is one fifteenth of the diameter, and a tenth of the height.

It is a curious and interesting sight to watch the casting of a bell, and to look at the inner mould built up of brickwork, having an open space left in the centre for the fire. "The face of this mould or core is covered with a composition of clay and other materials, and moulded into the shape of the inside of the bell. It is then baked by means of the fire in the hollow, and when hard, is coated with another composition, which is made to take the exact shape of the outside of the bell, and is also hardened by the fire, after which the inscription, or any desired ornament are placed upon it in relief; over this the outer mould or cope is formed, and the whole having been burnt the cope is taken off, and the inner thickness of composition, representing the bell, is removed; so that when the cope is again put over the core, there is, of course, a space between the two of the shape and thickness of the bell, and into this the metal is allowed to run. One necessary precaution is to leave a hole in the cap of the mould, beside the orifice through which the metal runs, to allow the air to escape; the omission of this would be fatal to the process For large bells the formation of the mould takes place in a pit dug in the ground near the furnace, but the moulds of smaller size are formed in the workshops and placed afterwards in holes dug for the purpose. When in the pit the earth is crammed firmly round it leaving nothing exposed but the holes in the cap, and from these a channel technically called a 'gutter' is cut to the mouth of the furnace." When the metal is admitted and is seen to bubble up through the air-holes the "fiery wives" are stopped Twenty-four hours is sufficient to cool an ordinary bell, the mould is then broken off and it is removed to the workshops to be tuned at the turning machine.

In the furnace the dry branches crackle, the crucible shines as with gold,
As they carry the hot flaming metal, in haste from the fire to the mould,
Loud roar the bellows, and louder the flames as they shrieking escape
And loud is the song of the workmen who watch o'er the fast filling shape;
To and fro in the red glaring chamber, the proud master anxiously moves,
And the quick and the skilful he praiseth, and the dull and the laggard reproves;
And the heart in his bosom expandeth as the thick bubbling metal upswells,
For like to the birth of his children he watcheth the birth of the bells.

There are a number of curious customs connected with bell-ringing. At Barton, Lincolnshire, a bell is rung every night

or the guidance of travellers. The tradition is that a worthy old dame of bygone times, being accidentally benighted in the wolds, was directed on her course by the sound of the evening-bell, and, out of gratitude, gave a piece of land to the parish-clerk, "on condition that he should ring one of the church-bells from seven to eight every evening, except Sundays, commencing on the day of the carrying the first load of barley in every year, till Shrovetide inclusive."

At Great Catworth, Hants, a bell is rung every Saturday at twelve, because (so runs the legend) a farmer once went to plough on Sunday, and urged, in excuse, that he did not know it was Sunday. To prevent the recurrence of the circumstance, some one left a piece of land to maintain the ringing of a noon-bell every Saturday, in order that every person in the parish might know that the next day was Sunday, and so abstain from labour.

At many of our city churches bells are rung at an early hour every Sunday morning, the only remaining trace of the early services which once were held. At St. Mary's, Ely, a bell is tolled at 4 a.m. all the year round; at St. Neot's the parish-bell is sounded at one o'clock, and called the dinner-bell. Endless are the variety of circumstances which have originated these practices, perhaps all more or less attributable to the tolling of the curfew in the days of Norman sway.

At some churches special evenings are devoted to the ringing of the bells, and short touches, and bob-triples, and bob-majors, or grandsire bob-caters, awaken the neighbourhood with their noisy glee, and making many a sulky mum, becoming impatient of their banging and clashing, dancing and whistling, give vent to some such sentiment in reciting their ringers as Mr. Gatty has translated from a French verse —

> "Disturbers of the human race,
> Your bells are always ringing,
> I wish the ropes were round your necks,
> And you upon them swinging!"

But far different is the sentiment which Longfellow puts into the mouth of his Friar at Strasburg, who ceases his discourse when the bells begin to chime:—

> "For the bells themselves are the best of preachers,
> Their brazen lips are learned teachers,
> From their pulpits of stone, in the upper air,
> Sounding aloft, without crack or flaw,
> Shriller than trumpets under the Law,
> Now a sermon and now a prayer!
> The clamorous hammer is the tongue,
> This way, that way, beaten and swung,
> From mouth of brass, as from mouth of gold,
> May be taught the Testaments, New and Old,
> And above it the great cross-beam of wood,
> Representeth the Holy Rood,
> Upon which, like the bell, our hopes are hung
> And the wheel wherewith it is swayed and rung
> Is the mind of man, that round and round
> Sways and maketh the tongue to sound!
> And the rope, with its twisted cordage three,
> Denoteth the Scriptural Trinity
> Of morals, and symbols, and history,
> And the upward and downward motions show
> That we touch upon matters high and low."

Again we plead guilty to the allegation of our German traveller, and own we love "great noises." We cannot listen to the bells without pleasurable emotion. The bells of Bow, we love to think, had a voice for Whittington, and bid the outcast, friendless boy come back to teeming London, there to win glory and renown. And the bells have voices for us; when ropes are jerking, and bells swinging, and a rattling chorus pealing aloft, they shout out joy and gladness. When, solemnly, one bell—one iron-tongued bell—a muffled monotone—tells us that somewhere near at hand there are sad hearts and tearful eyes, and one lies cold and dead, they teach a solemn lesson to the throbbing heart.

Wonderfully well as an American writer rung the changes of the bells—the silver bells that tinkle on the sledges—the golden bells that, in their harmony, foretel a world of happiness—the brazen bells that scream out their terror in a mad expostulation with the deaf and frantic fire—the iron bells that seem to feel a glory in rolling a stone upon the human heart—all this is sounded forth wonderfully well—so well, that with one of his lusty peals—one merry, cheerful peal—we stop the ringing for the present:—

> "Hear the mellow wedding-bells—
> Golden bells!
> What a world of happiness their harmony foretels!
> Through the balmy air of night,
> How they ring out their delight;
> From the molten-golden notes,
> And all in tune,
> What a liquid ditty floats
> To the dove that listens, while she gloats
> On the moon!
> Oh! from out the sounding cells
> What a gush of euphony voluminously wells!
> How it wells!
> How it dwells
> On the future! how it tells
> Of the rapture that impels
> To the swinging and the ringing
> Of the bells, bells, bells,
> Of the bells, bells, bells, bells,
> Bells, bells, bells,—
> To the rhyming and the chiming of the BELLS!"

PEOPLE'S COLLEGES.

Whoever undertakes to write the history of this generation, will note—if he do his work in a philosophic spirit—something more than the marvellous events which have transpired or the mighty men who have acted in its lifetime. Wars and revolutions, the destruction of one dynasty and the restoration of another, the extinction of an ancient kingdom and the epoch-al revival of a far more ancient republic, the extension of old and the birth of new empires, will not be the only, nor even the chief topics of narrative and reflection. They will be, to him, superseded in importance, if not in interest, by the development and operation of silent, perhaps, and almost imperceptible, of influences, slow-working but powerful,—just as, to the geologist, the ferned rock, the submerged mountain, the tilted continent, or upheaved island—the memorials of elemental warfare and subterranean convulsion—are less inviting objects of study than the hollowed channel, the regular strata, or coral reef, monuments of the ceaseless industry of nature in building up this earth, myriads of ages, perhaps, before its present habitants were brought into being.

Among the most obvious and potent elements at work upon society in this country, is that of voluntary literary association. The founder of Mechanics' institutions could scarcely have reckoned—far-seeing as he was—on the extent to which his example would be followed. We can most of us recollect the establishment of the first of those institutions—but few of us are aware of their present number and condition. There is not a city or town but has its Athenæum, its Literary and Mechanics' Institution—scarcely a village but has its Mutual Instruction Society. But their efficiency has not kept pace with their numerical increase. They consist, usually, of a library, lectures, and classes. The library is made up, in many cases, chiefly of cheap novels and cast-off religious books—the lecturers are generally gratuitous, and therefore cannot be expected to be eminent in their vocation—and the classes are, it is to be feared, popular only in proportion as showy "accomplishments" are preferred to solid acquirements. The designation "Mechanics' Institution" is, moreover, with many of the associations that bear it, a complete misnomer,—the rate of subscription being so high as to exclude all mechanics, except a very frugal few; and such are likely to choose more substantial aliment for their money. With a still larger number, "Association for Mutual Amusement" would be a fairly descriptive title. Superficiality is their general characteristic and reproach. They have done much to excite a desire for information, to raise the common estimate of intellect, and to impart an air of refinement. That is something to have done—but unless they can be made to do much more, they must be superseded, as no longer fair exponents of one of the tendencies of our age, nor adequate ministers to the intellectual wants of our youthful and adult population.

The model of a new form of educational effort is not want-

ing. Some ten or twelve years ago, the Rev. R. S. Bayley—an Independent minister of Sheffield, widely known for his graphic, sometimes grotesque, eloquence as a preacher, and his strong democratic sympathies—to whom the education of the masses had long been *the* question of the age, the great duty alike of the Christian and the patriot—opened an institution which he called "The People's College." He offered there to instruct the young men and women of Sheffield in all that he could teach them, as much as they could learn—from the rudiments of English up to the intricacies of Hebrew, from the vulgar rule of arithmetic up to the sublimities of the exact sciences. Unaided by the respectability or wealth of the town, the meanness of his school-house contrasted strikingly with the loftiness of its title, and the poverty of his means with the largeness of his purpose. But Mr. Bayley is an enthusiast; he persevered—he outlived the coldness or the scorn of the higher, and overcame the apathy of the lower orders. The hard-handed workers in iron and steel gathered round him night and morning, and repaid him by their progress in learning, their attachment to his person, and their submission to his authority—for the true teacher is always a despot, though never a tyrant—for the unwearied labour which he bestowed upon them. After one of their public examinations, a gentleman addressed him, saying, "Sir, we must have a People's College in Nottingham," By the munificence of that gentleman—Mr. Gill, if we recollect rightly—a structure more worthy of the name, and materials more adequate to the object, were provided. In the course of last year, Mr. Bayley removed, in his ministerial capacity to London. Shortly before, an article in the *Westminster Review*, on "National Education," detailed these facts. It was read by a gentleman at Florence—Mr. Lombe, the proprietor of large estates in the county of Norfolk. He, mindful of the duties of property whilst enjoying its privileges, wrote to Mr. Bayley, requesting to be informed of the expense of establishing in Norwich an institution similar to that in Nottingham. The reply was—that to erect or fit up suitable buildings, to engage competent masters, to purchase library and apparatus, would require an outlay of fifteen hundred pounds, extending over three years, when the institution would become self-supporting; the student's fees, as at Sheffield and Nottingham, ranging from 2d. to 1s. per week each. With magnificent liberality, Mr. Lombe immediately placed at Mr. Bayley's command the sum named. The opening of a People's College in Norwich, under his superintendence, was the result. So well is the princely gift appreciated by the people of the ancient city, that enlarged accommodation has already had to be provided for the students in attendance or applying for admission.

Mr. Bayley has returned to his pastoral charge, but not to content himself with discharging the ordinary duties, or enjoying the leisure of his position. In premises adjoining the chapel, a People's College, on a small scale, is conducted. He perceives, however,—as does every one who mingles freely with the working classes,—that so far from being won to the Church by the influence of the school, they will not even use the school if they suspect it of subservience to the Church, and he is desirous that everywhere they should be dis-sociated—that education should pioneer the way for Christianity only by fitting the minds of the people to appreciate its evidences and receive it doctrines. It is proposed, we understand, to establish in the east of London one or two of these admirable institutions, on a scale proportioned to the number of those who would, it is certain, eagerly avail themselves of the proffered teaching. Nothing, surely, need be said to commend such a project to the adoption of the friends of education in a district where they are numerous and powerful. To see several hundred young men and women elevated alike above the drudgeries and the frivolities of life—their minds at once both developed and disciplined by the study of mathematics and logic—their faculties greatly multiplied by the acquisition of more than their mother tongue—the nature and relations of the great world around, and the greater world within them, made reverently familiar by the revelations of material and moral science — the scroll of history unrolled to their intelligent perusal—the treasures of literature unlocked for their appropriation—habits of application and order built up by individual resolve under the exercise of wise and vigilant authority—to witness this, in steady operation, would amply repay any expenditure of personal or pecuniary aid. The founder of People's Colleges must not be left to work in obscurity and difficulty. We differ from him in thinking that Government has the right, or on it devolves the duty, to help on, by direct contribution, the great work to which he seems to have devoted his life; but we heartily agree in urging the heavy responsibilities, the impending perils, of suffering the youth of our nation to run to waste, or to fester into mischief. And we believe, that were every Christian minister animated with his spirit—were but few of our men of wealth as conscientious as Mr. Lombe—Government might close its hand, yea, prepare to vacate its throne; for a self-educated would speedily become a self-governing people.

DEATH BY THE WAY-SIDE:

A SKETCH.—BY MARTHA RUSSELL.

"Never before had the forests of America witnessed such a sight! Never again was there such a pilgrimage from the sea-side 'to the delightful banks of the Connecticut!'"—*Bancraft.*

Such is the language of the eloquent historian, with reference to the journey of that band of pilgrims who, in the pleasant spring time of 1636, turned their backs upon such vestiges of comfort and civilisation as the infant settlements of Massachusetts Bay afforded, and headed by their beloved pastor, the Rev. Thomas Hooker, made their way through perils innumerable, across swamps and streams, over rough and rocky highlands, and through tangled woods and deep green valleys, with no guide but a compass, and no shelter but the heavens, until, like the Israelites of old, they crossed the "goodlie river," and upon its western bank raised their altars, and laid the foundation of the pleasant city of Hartford.

And he is right. More than two hundred years have elapsed, and "companies by fifties and by hundreds," of New England's sons, with their wives and their little ones, have gone forth from her rugged hills and sheltered valleys, to seek a richer reward for their labour amid the fertile prairies of the West, or by the golden-bedded streams of California; yet, in character and influence, in that true courage which lifts the soul above fear—a courage, thank God! not dependent on thews and sinews, but growing out of a firm adherence to God and the Right, and which inspires the heart of the feeblest woman as well as the strongest man—in all that goes to make up true moral grandeur, none can compare with this

It is not without significance that the old writers speak of this company, as consisting of "about one hundred *souls*." They were not mere *bodies*, seeking a new field for the gratification of animal appetites and pleasures, but *souls*, with ends and aims that took hold on eternity, and who faced famine and death, not for worldly gain, but that they might obtain liberty to give an external development to those truths which had already made them free in spirit. In proof of this we need only adduce the fact that, in all succeeding emigration of their descendants, the seeds of whatever they have carried with them that is truest, best, most ennobling—that which gives *vitality* to their institutions—may be traced back to our early fathers, and even now they move us with a sway mightier than any living influence.

No The world even counts few pilgrimages like that! That there will yet arise prophets and disciples dowered with a fuller and clearer knowledge of the truth, we earnestly trust and believe; yet these men shall not die, or, rather, like Abel, being dead, they shall yet speak, and their voices vibrate along the chain of existence until time is no more.

It was toward the close of a rare day in June, that the pilgrims from a ridge of wooded highlands caught their first faint glimpse of the beautiful river Many a hill and valley, swamp and morass, lay between, but then it was like a narrow silver thread on a ground of green, and, after a moment of almost breathless silence, there arose an irrepressible shout—a clear old English shout, that woke the sleeping echoes for miles around.

These had scarcely died away, when, in tones deep and clear as a bell, Mr. Hooker gave voice to the sentiment of the whole company, in the eloquent words of King David,—

"Oh give thanks unto the Lord, for he is good. for his mercy endureth for ever."

"Let the redeemed of the Lord say so, whom he hath redeemed from the hand of the enemy;

"They wandered in the wilderness, in a solitary way;" "they found no city to dwell in. Hungry and thirsty, their soul fainted in them."

"Then they cried unto the Lord in their trouble, and he delivered them out of their distresses."

"And He led them forth by the right way, that they might go to a city of habitation."

"Oh that men would praise the Lord for his goodness, and for his wonderful works to the children of men!"

At the foot of that wooded range of hills lay a beautiful valley, and there they halted for the night. It was a striking scene, that halt between the hills, and one well worthy of the artist's pencil.

The wild, luxuriant beauty of the landscape, over which neither scythe nor sickle, plough nor axe, had as yet passed, the flush of life that trembled along the hills, and throbbed and thrilled in everything around them, the hum of the myriad insect tribe, the strange birds sitting still on the boughs, and pouring out their evening songs of rare and wondrous melody, the occasional cries of wild beasts that their coming had aroused from their lairs, mingled with the unwonted lowing of one hundred and sixty head of cattle which the pilgrims had driven before them, and upon whose milk they had chiefly subsisted during the journey, now greedily satisfying their hunger upon the fresh green grass of the valley, while the milkers went among them, filling their pails, preparatory to the evening meal. Here, a party of men, some of whom but a short time before had been the pride of England's oldest university, stood, axe in hand, cutting down branches of the fragrant birch, or thick-leaved maple, while another arranged them into huts and couches for the shelter and comfort of the women and children There, a group were busy unloading the few pack-horses that carried their extra stores, while, like a second Prometheus, the accomplished owner of Capford Hall and Ex-Governor of Massachusetts, John Haynes, might be seen with tinder-box, steel, and flint in hand, kindling the fires so necessary to protect them from wild beasts, as well as cook their hasty-pudding, and parch their quota of Indian corn. Two crotched sticks, supporting a good stout pole, from which swung an iron pot, answered all the purposes of a fireplace; and around these clustered the busy-handed matrons, not a few of them the cherished daughters of wealth and ease, watching the seething, bubbling contents of the vessels, or tended their infants in the shade, while rosy-cheeked maidens brought water in wooden dippers or gourd-shells from a crystal spring that bubbled up beneath the roots of a wide-spreading birch, near which stood the reverend pastor himself, that "light of the western churches," whose eloquence had drawn people from all parts of the county of Essex to hear him, ere he was silenced for nonconformity, folding the broad leaves of the hickory into drinking-cups for the fair-haired, blue-eyed lambs of his flock, that had gathered round him to slake their thirst, while in the background rose the dark-wooded hills, and above them the arched deep, unclouded sky of June.

Not far from the spring, under the shade of a magnificent oak, were two huts, built of branches like the rest, but constructed with far more care, for it seemed as if every one of the company had been anxious to do something towards perfecting their arrangement. One was occupied by Madame Hooker and her family, and near the opening of the other reclined a fragile-looking girl, with hair like a floating cloud at sunset, and eyes, deep, serene, and clear, as the cloudless sky above her. This was Maude, the young wife of Geoffrey Winstanley, whose youth, gentleness, and failing health, made her an object of peculiar interest to every heart

She had scarcely recovered from the effects of her sea-voyage, when they started on their pilgrimage; and it had been too much for her, "poor thing," the matrons said, "but the quiet and comfort of the settlement would soon set her up again;" and her husband listened to them eagerly, and repeated their words to himself, as if by so doing he could silence the terrible misgivings that haunted him.

Now the little children brought bunches of luscious strawberries, to tempt the appetite of their favourite, and win from her one of those sweet smiles which they had learned to prize higher than words; and their elders, as they passed, paused to congratulate her on their nearness to their journey's end—alas! they little knew how true it was in her case!—and to speak words of hope and comfort; but some there were who, as they gazed upon her face, and noted that clear, transparent look, that gave it such a peculiar beauty, turned away with a silent prayer for her and her husband, for they knew, like all the highest beauty of earth, it was but a reflex from that unseen land towards which she was hastening.

"Ripening for eternity!" said Mr. Hooker, when, after evening prayers, he turned from the side of the young invalid, with a fervent blessing, and sought the presence of his wife. "Our gentle Maude is almost done with the things of earth!"

"And Geoffrey—poor Geoffrey!" murmured his wife. "How will he ever bear it? Even but now he hath spoken to me of renewed hope."

Mr. Hooker did not answer; but as he stood watching the noble, manly figure of Geoffrey Winstanley, as he bent over his young wife, now arranging the bear-skins on which she reclined, with a tenderness and anxiety that seemed never satisfied—now pulling back the rich waves of hair that fell too heavily over her cheek, and thought of the dread trial that awaited—all the human stirred within him, and he, too, murmured, "Poor Geoffrey!"

There had been a time when he and many others had heard, with surprise and regret, that Geoffrey Winstanley, with his strong will, clear intellect, and sincerely religious heart, had become the thrall of a young beauty of sixteen, the favourite niece of the haughty rector of Swindon, and that he lingered in England, in the hope of making her his wife. They felt ready to say to him, in the words of Manoah to Samson, "Is there no woman among the daughters of thy brethren, nor among all thy people, that thou goest to take a wife of the uncircumcised Philistines."

But when she stood among them as his wife, and they heard how, for the sake of the proscribed puritan, she had braved the anger and persecution of her relatives—when they saw the tenderness, meekness, and reverence with which she looked up to all her husband's friends, the heart of the most rigid warmed towards her; and with Mr. Hooker's family she soon became "our gentle Maude." As the good man thought of all this, and of her gentle yet earnest faith, and the many times within the past few weeks when he had visited her in his capacity of teacher, and came away a learner, his heart smote him for his injustice.

He was indeed right. Under the combined teaching of love and death, Maude Winstanley was ripening for eternity. Once she had resolutely shut her heart against even the thought of the latter, it seemed so impossible that death could reach her, shielded by Geoffrey's love, and sheltered in his arms. But as the weeks went on, deepening the symptoms of that fatal disease that steals upon its victims silently as autumn steals upon the hills, and robes them with a beauty which is not of this world, her heart awoke to a deeper insight of spiritual truth, the high doctrines so often discussed between her husband and her pastor grew clearer to her understanding, and bore fruit for eternity.

Still the human was strong within her, and there came moments, especially when she felt the deep eyes of her husband looking down upon her with such an expression of unutterable love and sorrow, and his strong frame shook with agony if she did but breathe of what awaited them, when her lips trembled, and her heart shrunk shudderingly from the thought of the grave and the winding-sheet—when earth with him seemed better than heaven without him.

Do not blame her too severely, thou of stronger faith; but remember she was but a gentle, loving girl, and wisdom and faith grow but slowly in this sphere of ours. If you have met a trial like this with more unwavering faith, thank God for it; or, if as yet the bitter cup has not been presented to your lips, still thank God, for it is of his mercy alone; but blame her not.

God did not, but gave to her heart that assurance without which immortality itself would be but a cheat—the blessed assurance that affection dies not with the breath; that in a little while, a few brief days at most, that love, freed from the stains and impurities of earth, should again beam on her from those beloved eyes, and those arms once more fold her in their pure, holy embrace.

And Geoffrey Winstanley, while he gazed into her spiritual eyes, and listened to her low, earnest tones, as she poured forth for his comfort those blessed intuitions, the gnawing pain at his heart grew still, but only to return with tenfold power when they ceased, and he found himself alone.

That was no boyish fancy that had led him to linger behind his friends in England, and meet their looks of grave reproof, for the sake of Maude Edgerton. He had left the first flush of youth some years behind, when she stole in upon the unsunned side of his heart, and gave to life a new, and, to him, undreamed-of beauty and significance.

He had been an orphan from childhood, and the influences under which he had grown to manhood had not failed, while they strengthened and developed to the utmost his mental and moral energies, to deepen the natural reserve of his character, until even those who knew him best had little conception of the earnest enthusiasm, the boundless capacity for affection, that lay concealed beneath his calm, grave, almost stern, exterior. Earnest, truthful, noble, and sincerely religious, he yet lacked that feminine influence so necessary to man's highest development—to temper justice with mercy, energy with softness, inflexibility with grace, and render his whole character symmetrical and in harmony with the Divine Ideal.

This had been Maude's mission; and could he part with her now, when life first seemed blossoming to completeness—when each hour brought some new, delicious joy, of which his solitary youth had been defrauded? Could he lay that head down in the grave, whose every golden tress was dearer to him than life, and, looking calmly up, say, "Thy will be done?"

Not without a struggle, the bitterness of which few even dreamed, for his was not a nature that manifested its emotions in those wild paroxysms which pass with most people for evidences

of profound feeling; it was rather like the ocean, when the fury of the tempest has beaten the waves to an apparent calm, and none can judge of the wild commotion below, save those who have felt its power. It is strange how we misjudge the hearts of men in this world, and call that coldness and indifference which is simply the tranquillity resulting from intense power.

"It is written, 'Thou shalt not make unto thyself idols,'" Mr Hooker had said, half seriously and half playfully, one day, to Geoffrey, as he marked the peculiar expression with which he watched the movements of his young wife, and he had been startled at the intense feeling that trembled in his voice as, pointing to where she sat, soothing the feverish restlessness of the minister's youngest child, he replied, "It hath also been said, beware lest ye 'entertain angels unawares.'"

The sight of the beautiful river, which had spread such joy through the land, had not failed to stir the deep enthusiasm of Geoffrey Winstanley's nature, and as that clear June day deepened into twilight, he sat by the side of Maude in that sylvan tent, and spoke, with the heart of a poet and the eye of a prophet, of their future home, and the mighty destiny that should yet await on their humble efforts.

Maude listened long, and in silence; then, summoning all her God-given strength, she spoke to him of the home that awaited her, not with him on the banks of the beautiful Connecticut, but by the river of life whose stream makes glad the city of God.

She did not need to look up in his face, for the trembling of the arm that encircled her, and the large burning tear-drop that fell on her forehead, spoke plainly of the agony her words had awakened within him. They seemed to have changed natures—that high-hearted, calm, grave man, and the yielding, frail, timid one, and, as she kept on, there was something of sorrow in her faith—of holy, in the calm resignation with which she spoke of death, and of future in her views of the life beyond, that he was lifted above himself, and, leaning his head on those golden locks, he poured out all his selfish struggles, and told how for weeks past he had been ready to struggle with God to retain her still on earth.

"Earth! what is earth, my husband?" he replied. "But a few short years of troubled joy at best, and what is this compared to that rest which remaineth for the children of God? That rest will soon be mine, and there I shall wait for you. You will not fail to meet me there, beloved?"

"God aiding me, I will not. In this hope, and with this aim, I shall live and die," he replied fervently.

For a few moments there was silence between them, while the grateful evening breeze stirred the leafy canopy of their bower, and lit in the soft June moonlight, that fell like a shield of glory over the golden locks of the invalid. A smile fluttered round her mouth, then a strange tremour for a brief second shook her whole frame, and struck an icy chill to her husband's heart, for, with that passing moonbeam, the spirit of Maude Winstanley swept upward from the earth.

Oh death! death! death! thou masked angel, whom our tear-dimmed eyes cannot unveil, thou fearful void, which reason cannot fathom; thou icy silence, which love cannot break, thou dread pause, which no earthly power can fill—blessed, thrice blessed, is he who can hear through the darkness and desolation, the sorrow and the anguish that wait upon thy footsteps, the voice of Him, who, by that fresh grave in Bethany, first sanctified human grief, whispering, "Lo! it is I—be not afraid!"

Not there—oh, not there, with that beloved form stiffening in his arms, and that heavy, benumbing sense of sorrow weighing down upon his heart—not when, with kiss after kiss upon that cold brow, he resigned her to the care of the weeping women who had gathered round, and rushed out into the night—not when the hand of Mr. Hooker grasped his in true and silent sympathy, could Geoffrey Winstanley hear *that* voice. But when, in the deep watches of the night, he knelt alone by the side of his dead, then it fell upon his heart like an echo of *her* voice, only far sweeter and more heavenly, and that icy silence grew tremulous, as with the slow beat of an angel's wings. * * * *

They buried her "by the way," as Jacob buried Rachel, but they set up no pillar upon her grave." Her initials, cut in the smooth bark of a young birch that overhung her grave, were the only memorial that marked the spot were slept all that was mortal of Maude Winstanley.

A TRUTHFUL REPLY.—An Irishman, having been arraigned and convicted upon full and unmistakable evidence of some flagrant misdemeanor, being asked by the judge if he had anything to say for himself, replied, with the characteristic humour of his country, "Never a single word, yer honour; and it's my real opinion there's been a grate daal too much said as is."

THE COUNTRYMAN'S REPLY TO THE EXECUTIVE OF THE MILITIA BILL.

So, ye want to catch me, do ye?
Nae! I doant much think ye wool,
Though your scarlet coat and feathers
Look so bright and butiful,
Though ye tell sich famous stories
Of the fortune to be won,
Fightin' in the distant Ingies,
Underneath the burnin' sun.

'Spose I am a tight young feller,
Sound o' limb and all that 'ere,
I can't see that that's a reason
Why the scarlet I should wear,
Fustian coat and corded trousers
Seem to suit me quite as well,
'Think I doant look badly in 'em,
Ax my Meary, she can tell!

Sartinly I'd rather keep 'em—
These same limbs you talk about,
Cover'd up in cord and fustian,
Than I'd try to do without
There's Bill Muggins left our village
Just as sound a man as I,
Now he goes about on crutches,
With a single arm and eye.

To be sure he's got *a m dal*,
And some *twenty pounds a year*,
For his health, and strength, and service,
Guver'ment can't call that dear,
Not to reckon one leg shatter'd,
Two rib broken, one eye lost,
There I went on such a ventur,
I should step and count the cost.

'Lots o' pleasure!' lots o' gammon,
Ax Bill Muggins about *that*,
I'll tell ye 'tant by no means
Sort o' stuff to make ye fat.
If it was, the private so'ger
Gets of it but precious little,
Why, it's jest like bees a kitchin'
With the sound of a brass kittle.

'Lots o' gold and quick promotion?'
Pr'ythee jest look at William Green,
He's been *fourteen years* a fightin',
As they call it, for the Queen;
Now he comes home invalided,
With a sergeant's rank and pay;
But that he is made a captin,
Or as much I aint heerd say.

"Lots o' fun, and pleasant quarters,
And a so'ger's merry life;
Ah, for tradesmen's, farmers' daughters
Wantin' to become my wife?"
Well, I think I'll take the shillin',
Put the ribbons in my hat!—
Stop! I'm but a country bumpkin.
Yet not quite so green as *that*.

"*Fun?*" a knockin' fellow-creturs
Down like ninepins, and that ere,
Stickin' bag'nets through and through 'em,
Burnin', slayin', everywhere,
"*Pleasant quarters?*"—werry pleasant!
Sleepin' on the field o' battle,
Or in hospital or barricks,
Cramm'd together jest like cattle.

Strut away, then, master sergeant,
Tell your lies as on ye go,
Make your drummers rattle louder,
And your fifers harder blow.
I shan't be a "son o' glory,"
But an honest workin' man,
With the strength that God has guv me
Doin' all the good I can.

UNEXPECTED.—"Wife," said a man, looking for his bootjack, "I have places where I keep my things, and you ought to know it." "Yes," said she, "I ought to know where you keep your late hours."

INSTINCT AND REASON.

Animal instinct is distinguished from human intellect by the uniformity of its action, the unerring methods which it employs to accomplish purposes that do not extend beyond what is necessary for the preservation of the individual or the propagation of its kind. And this is done without the aids of instruction or experience. But reason is a comparing, examining, deliberative, and improvable faculty, and to the advancement of which experience is of infinite service. It is a faculty which resulted from the fall of man, and came into existence after that catastrophe. It was provided in the separation of the will from the understanding, which was miraculously effected by Divine wisdom, to preserve in man the means for his instruction in spiritual things after his perception had been closed. Reason always implies a state of obscurity, and we experiment with it in order to rescue what we are in search of from a condition of mysteriousness. It is liable to err in this pursuit from many causes, and it frequently does so. But this is not the case with instinct. It possesses at once all the light which it is capable of enjoying; it goes to work with a matured power, and all its actions are perfect in their kind, it never mistakes its aim, it never errs in the means taken for its accomplishment.

The reason of this is, because every beast, bird, fish, reptile, and insect has been created with its own peculiar and discrete natural law, which is love, instinct, principal, [illegible] implanted to [illegible] as they [illegible] womb, or are excluded from the egg, they see, hear, walk, know their food, and follow their affections only, and every species of animals is by those affections carried straight forward to the particular use which they are designed to promote to the economy of creation. The habitation of this love is the heart within the head, by means of their distinct [illegible] influx from the world of causes, which [illegible] flows into their corporeal senses, and thereby at once determines their actions and preserves their uniformity. This, also, is the reason why some have bodily senses so much more exquisite than those of men. It is this influx, received by an organism which has no structural forms for the exercise of thought, which constitutes instinct, and all its varieties depend on the differences in the organism which receives the influx.

If the actions of beasts partook in any degree of what is properly understood by reason, we might fairly expect to see some alteration take place in their habits and pursuits. Reason does not allow its possessor to remain [illegible] of knowledge if it is active he improves, [illegible] degenerates. These are no characteristics of the animal kingdom. Beasts make no improvement in the choice of their pursuits. They continue in the order in which they were created. Their habits and instinct are the same to-day as they were six thousand years ago. The same species maintain inviolate what is common to their being no intercourse between them improves their condition, no separation diminishes the powers which belong to their nature. Numbers do not enlighten by their association, and individuals lose nothing by isolation. The beaver erects his hut with the same intelligence, the bee collects her honey with the like industry, and the birds build their nests with the same attention, as did their ancestors when they first began to work.

How different is the case with man! How changeful has been his condition, and how diversified his existence! He improves by association with his fellows, but degenerates by separation. His habits of life are different, not only in every country, but almost in every house. These circumstances are solely referable to that thinking faculty by which he is distinguished, and which the brutes have not.

But here a new phenomenon in our subject presents itself for consideration. Man is born into the world the most helpless and destitute of all animated nature; a more organisation, with but a faint perception of life from the external senses, having no connate ideas, nor any disposition even to seek his sustenance from the bosom of his parent.

The case is entirely different with the beasts: they are born with everything proper to their natural life, and in a very short time their faculties break forth into all the perfection of which they are capable. They know, without instruction, what is nutritious and proper for their food, and avoid with remarkable sagacity what is offensive and unwholesome. With equal acuteness do they distinguish their friends from their foes; and some possess a delicacy of sense which man has never attained. Indeed it is evident that beasts are born at once into their respective states, and that their perfection is developed in a very short period after their existence. Whereas man is born into nothing. He at first is ignorant and helpless. He acquires nothing but by instruction, and his arrival at perfection, or the filling up the measure of his capabilities, remains to be accomplished. We cannot say to the human mind, "Thus far shalt thou go, and no farther." It is a perpetually expansive principle, and no limits can be set to its attainments, because it is designed to live and so to improve for ever. It is only the capacities of brutes which have their limits these can be gauged and measured: we can mark their boundaries and see their end.

Beasts may be compared to a piece of ground that will bear nothing but its own indigenous plant, and which no labour or cultivation will fit for the growth of an exotic. but man may be likened to another plot of land rude and untilled, but possessing all the materials of soil, and capabilities for bringing forth every seed that may be sown therein to maturity and fruitfulness.

A HOME SONG FOR THE POOR.

O! let us not murmur, though clouds should arise,
To darken our way with their fast summer skies,
By and by they will pass from our sight,
And leave the blue heavens more brightly bright
Dear love will our pathway be chequered through life—
Now coldness and sunshine, now sorrow and strife,
Still let us not doubt, 'midst affliction and pain,
That deep springs of hope in our breasts will remain
Should the hearts we have cherished prove faithless and cold,
Be our murmurings hush'd, our vexation untold;
Though the tie of our joy by them falsehood is set,
Let us kindly forgive them, *and strive to forget*
Then away with repining, let our hearts be the shrine,
Around which love and chastity closely intwine;
Let the dove of content from our breasts never roam,
But gladden and cheer both our path and our home.

LITERARY NOTICES.

The Edition of The Popular Educator.—An Extra Edition of this work, on fine paper, at 1½d. per Number, or in Monthly Parts, in a neat wrapper, at 7d., or when Five Numbers, 8½d., is now published, which is issued without the weekly headings. Persons wishing for this edition must be careful to order the "Extra Edition." The whole of the Numbers may now be obtained, or the first Three Parts.—Part I., 7d.; Part II., 8½d.; Part III., 7d. The Common Edition, at One Penny per Number, Monthly Parts, 4d., or [illegible] issued.

The Illustrated Exhibitor and Magazine of Art.—The First Volume of this splendidly embellished work, handsomely bound, price 6s. 6d., or extra cloth gilt edges, 7s. 6d., is now ready, and contains upwards of Two Hundred Principal Engravings, and an equal number of Minor Engravings, Diagrams, &c.

Completion of John Cassell's Library.—This invaluable Work is now complete, in 26 Volumes, 7d. each in paper covers; double Volumes, cloth, 1s. 6d., or when 3 Vols. in 1, 2s. 3d. The entire Series may be had, bound in cloth, 19s. 6d., or arranged in a Library Box, 25s.

The Emigrant's Handbook, a Guide to the Various Fields of Emigration in all parts of the Globe, Second Edition, with additions, to which has been appended a "Guide to the Gold Fields of Australia," with copious Instructions, Government Regulations, &c., accompanied by a Map of Australia, in which the Gold Regions are clearly indicated, is now ready, price 9d.

The Pathway, a Monthly Religious Magazine, is published on the 1st of every month, price twopence—32 pages enclosed in a neat wrapper. Vols. I. and II., neatly bound in cloth and lettered, price 2s. 3d. each, are now ready.

Cassell's Shilling Edition of Euclid.—In consequence of the interest excited among all classes of the readers of the Popular Educator, since the publication of the Lessons in Geometry in that work, John Cassell has determined to issue a Popular Edition of The Elements of Geometry, to contain the First Six, and the Eleventh and Twelfth Books of Euclid, from the text of Robert Simson, M.D. Emeritus Professor of Mathematics in the University of Glasgow; with corrections, Annotations, and Exercises, by R. Wallace, A.M., of the same university, and Collegiate Tutor of the University of London. This work will be ready early in July, price 1s. in stiff covers, or 1s. 6d. [illegible] cloth.

MISCELLANEA.

IRISH AND SCOTCH.—When George IV. went to Ireland, one of the "pisantry," delighted with his affability to the crowd on landing, said to the toll-keeper, as the king passed through, "Och, now! and his majesty, God bless him, never paid the turnpike; an' how's that?" "Oh! kings never does," was the answer; "we let's 'em go free." "Then there's the dirty money for ye," says Pat; "it shall never be said that the king came here, and found nobody to pay the turnpike for him." Moore told this story to Walter Scott. "Ay, Mr Moore," remarked Scott, "there ye have just the advantage of us; there was no want of enthusiasm in Edinburgh; the Scotch folk would have paid anything in the world for his majesty but—pay the turnpike."

FLOWERS AND THE FAIR SEX.—Flowers are prettily said to be "terrestrial stars, that bring down heaven to earth, and carry up our thoughts from earth to heaven" Woman, lovely woman, has been still more prettily defined as "something between a flower and an angel" Having *both* these "gifts" to gladden us, what happy, merry fellows we men ought to be.

NATURAL AFFINITY.—An outside passenger by a coach had his hat blown over a bridge, and carried away by the stream "Is it not very singular," said he to a gentleman who was seated beside him, "that my hat took that direction?" "Not at all," replied the latter; "it is natural that a *beaver* should take to the water"

When the merchants of Breslau once applied to Frederick the Great for protection against the ruinous competition of Jewish dealers, the monarch asked how the Jews managed to draw business into their hands? The answer was that they were up early and late, always travelling about, lived very economically, and were contented with small gains on rapid returns. "Very well," said the enlightened monarch, "go and be Jews, too, in the conduct of your business."

CLIMATE.—The institutions of a country depend, in a great measure, on the nature of its soil and situation. Many of the wants of man are awakened or supplied by these circumstances. To these wants, manners, laws, and religion must shape and accommodate themselves. The division of land, and the rights attached to it, alter with the soil; the laws relating to its produce, with its fertility. The manners of its inhabitants are, in various ways, modified by its position. The religion of a miner is not the same as the faith of a shepherd, nor is the character of the ploughman so warlike as that of the hunter. The observant legislator follows the direction of all these various circumstances. The knowledge of the natural advantages or defects of a country thus forms an essential part of political science and history.

DO IT AND BE DONE WITH IT.—There is a very sensible German custom—concentrating the coughing and nose-blowing during the service-time at church. The clergyman stops at different periods of his discourse, stands back from the pulpit, and stands and blows his nose. The entire congregation imitate his example, and disturb the service at no other time.

A BUTT AND A STAVE.—A young gentleman being pressed very hard in company to sing, even after he had solemnly assured them he could not, observed they intended to make a *butt* of him. "No, my good sir," said Colman, "we only want to get a *stave* out of you."

NOTICES TO CORRESPONDENTS.

AN ENGRAVER.—The bituminous substance called "Asphaltum," is brought from the Dead Sea, from the island of Trinidad, and from some parts of Europe. You will have some difficulty in obtaining genuine asphaltum. What is sold under that name is, in most cases, "pitch bottoms," the sediments of melted pitch. You should apply to a first-rate drysalter, or druggist. We will endeavour, in an early number, to furnish you with a receipt for a hard etching ground which will render the use of asphaltum unnecessary.

L. B.—The best "substitute for potatoes" that we know of is haricot beans, the *white* sort. Put one quart into a gallon of cold *soft* water, with two ounces of butter, and let them simmer slowly for three hours; by that time they will have absorbed a large portion of the water, and will be found mealy and palatable. If you wish for a more savoury dish, proceed as follows:—Boil the beans as above, drain, and put them into a stewpan, with a little salt and pepper, two ounces of butter, some parsley chopped fine, and the juice of a lemon Place them on the fire for about ten minutes, stirring them well, then serve them up Some persons prefer mixing with them a small quantity of onion chopped very fine

A FISHERMAN.—Your prints must be prepared for varnishing by having two coats of size laid on them, made of isinglass or parchment cuttings boiled in water If the paper on which the engravings are printed be tolerably hard, one coat may suffice. The best varnish is that called "*crystal varnish*," which is made thus:—Genuine pale Canada balsam and rectified oil of turpentine, equal parts, mixed, and placed in a bottle in warm water, shaken well, and set aside in a moderately warm place for a week, and then poured off clear, or the "*soft brilliant varnish*," made thus — Gum sandarac, 6 oz, genuine elemi, 4 oz, amme, 1 oz, camphor, ½ oz, rectified spirit, 1 quart, made as above

S. R. (Aberdeen).—The *first* volume of the "Illustrated Exhibitor and Magazine" is just completed, and it is a paragon of beauty and cheapness. As to your question, "How many volumes there will be of it?" we answer, it will continue to be published so long as there are works of art to exhibit, or persons to appreciate them

J. BRENT.—The Manor of Strathfeldsay,—the country seat of the Duke of Wellington,—is situated in the north of Hampshire, about three miles and a-half east of Silchester. It was purchased for him by a parliamentary grant, as a token of gratitude for his services in several successful campaigns.

J. WELLS.—Nineveh was the seat of an Assyrian kingdom, till the year before Christ, 625, when it was taken by Nabopolassar of Babylon, and Cyaxares, king of the Medes, which led to the destruction of the Assyrian kingdom. Nineveh flourished no more, and Strabo, who lived in the reigns of the first two Roman emperors, represents it as lying waste In the second century of the Christian era there was not a single monument of it remaining.

T. W. (Exeter).—What is called "the Phosphorus disease," is, we believe, peculiar to persons engaged in the manufacture of lucifer matches. The disease generally begins with pains in the teeth, then follows a decaying of the jaw-bone, pieces of which either work themselves out, or are extracted by a surgeon, if neglected, life is endangered. In manufactories where there is plenty of space and of good air, cases of this disease occur very rarely.

LIEGE.—If you can prove, as you say, that your dog died in August, 1850, you cannot, certainly, be liable to the dog-tax for the year ending April, 1852.

R. I. K. (Waterford)—We do not wonder that you searched Johnson and Walker in vain for the word "*phonothetically*" We suppose that the advertiser meant that he would teach the Irish language according to its true sounds; it would have appeared less pedantic had he said *phonetically*.

B. THOMPSON (Berwick).—A good knowledge of arithmetic would be required in the Government situation to which you refer. As to the routine duties of the office, you would acquire the knowledge of them by degrees.

BONUS PUER.—The compound term "Electro Biology," is formed from three Greek words—*electron*, electricity, *bio*, forces, and *logos*, the theory; it means, the science of electrical forces, as shown in mesmerism.

J. YATES.—We have no influence in the Army office; but if you have, as you state, applied for your brother's discharge, and have received for answer, that "discharges by purchase are suspended," it will be in vain for you or your friends to make further application at present.

CHAMPETRE.—It is not necessary that you should be "asked in church;" all you have to do is to give due notice to the registrar. As to your other question, an apprentice cannot honourably "leave his master before the term of apprenticeship has expired," even though they may be "no legal indenture or written agreement."

E. B.—We recommend you to study English grammar first: this is the most natural process and a good knowledge of your own language will greatly assist you, should you wish to learn French. As to your penmanship, it wants freedom, which constant practice will give you.

A TEETOTALER.—The processes required for preserving the juices of vegetables are somewhat delicate and difficult Two processes may be specified:—1. Vegetable juices may be preserved in alcohol, thus:—Bruise the leaves in a marble mortar, and then press them in a powerful press Allow the juice to remain twenty-four hours in a cool place, then decant the clear portion from the dregs, add one-fourth part by measure of rectified spirit, shake well, and in twenty-four hours again decant the clear, and filter it through white blotting-paper. If, as a teetotaler, you object to this mode; then, 2. Put the juices into strong glass bottles, with necks of a proper size, corked with great care, and luted with a mixture of lime and soft cheese, spread on rags, and the whole bound down with wires across it Place the bottles in an oven, the temperature of which is cautiously raised to 212 degrees, or enclose them separately in canvass bags, and put them into a copper of water, which is gradually heated till it boils, and thus keep them for several minutes; the whole must then be left to cool, and the bottles taken out and carefully examined before they are laid by, lest they should have cracked, or the luting have given way For many purposes the latter end would be answered by drying the leaves when in their full maturity, and reducing them to powder, and preserving them carefully in well corked bottles. If boiled in water when wanted, a strong taste would be infused

T. B.—Sir John Franklin started on his last voyage in 1845.

W. WATKINS.—We believe that the exact duty on the paper used by the *Times* newspaper amounts to £16,000 a year, and the stamp duty to about 70,000 annually. Your inquiry about "the probable profits realised by the *Times*" had better be put to the proprietor himself.—William Caxton was born in Kent, in 1410, and his first English work, "The Book of the Chess," was issued in 1474.

A MASON.—You will not find "Pitt's Bridge" named in any recently published description of London That name was originally given to what is now called "Blackfriars Bridge," in honour of William Pitt, the renowned Earl of Chatham The bridge was the work of Robert Mylne, a Scotch architect, and the first stone was laid October 31, 1760.

"YOUNG JACK."—The "deepest sounding" of which we have read was that made in November 1849, about 300 miles to the eastward of Bermuda. The sounding was 5,700 fathoms, or six miles and a half, and even at that depth no bottom was found. The time occupied by this length of wire in running out was one hour and a half; in winding it up, the whole length parted at the surface and was lost.

W. B. A. (Wolverhampton).—The "Olympiad," was the space of four years, by which the Greeks reckoned their time. That epoch was so named from the games celebrated every fourth year in honour of Jupiter Olympus.

INQUIRER.—The word "*prevent*" has two significations which seem opposed to each other. In many old books it means, to go before, or, to guide; its more modern acceptation is, to obstruct, to hinder. The first of these senses is the most critically correct, as the word is derived from the Latin, *præveno*, to come before, to prevent, to anticipate; the latter, however, is almost the only sense in which it is now used.

SPAIN AND ITS PEOPLE.—III.

A BRIEF HISTORY OF SPAIN.—THE MOORISH DYNASTY.

A SPANISH DANCE AT A FESTIVAL.

We have seen how the Goths, having driven the Romans out of Spain, remained possessors of the fair land for more than 130 years, till they were themselves overcome by those Saracens, Arabs, and Africans, who have since become known under the one general title of Moors. In our last number, we gave a table of the kings of Spain, from Abdoulrahman, the first of the independent Moorish monarchs, to the time when the crown of Spain became merged in one individual. We must

now retrace our steps a little, and show briefly how a people professing a creed whose principal dogma declares that "there is no god but God, and Mahomet is his prophet," held possession of the peninsula for more than eight centuries,—merely premising, as our previous remarks will have made apparent, that the history of Spain at this period is the history of an antagonism between two victorious races, that of the German Visigoths from the north, and the Saracens and Arabs from the east and south; the first a half-christianised people, and the last a warm, enthusiastic tribe of wandering warriors, eager to propagate the religion of Mahomet. When the Arabs crossed the Mediterranean at Gibraltar, in the year 711, they aimed at no less than the subjugation of Europe, and Spain was selected as the theatre of their first triumphs. It was one of the doctrines of their faith to spread their religion by the sword; and, though not ultimately successful, the Moors were made the instruments, in the hands of Providence, of carrying forward a civilisation and refinement, at once broad, vast, and irresistible.

We have seen how the Moorish kingdom in Spain was established; how the Arab strangers, with a moderation at once graceful and active, became tolerant of the religion of the Roman Goths; how the faith of the usurper became acknowledged, if not established, among a whole people; how various influences led to the subjugation of Spain by an alien race, whose victory over that country was far more complete than that of William the Conqueror in England, or even of that of the Spaniards in Peru; how, under the Saracenic rule, the nation advanced to a high state of civilisation and refinement; and how at last the Moors came to consider themselves as fairly established in Europe. We must now speak of the causes which led to the decline of a power so great and a sway so complete.

Although the Moorish rule in Spain was moderate to a proverb, the spirit of her ancient people was not yet entirely subdued, the hope of ultimate liberation from a foreign yoke was not yet quite lost; the religious antagonism of the Crescent and the Cross was not yet altogether extinct. There still existed in the northern part of Spain two Christian kingdoms, Leon and Castile, in which the principles of liberty were alive and active. For three centuries the Moors had held almost supreme power in Spain; but, about the year 1013, a great revolution took place, and Hissem III., the last of the Omeyade caliphs was deposed, and in him the caliphate of Cordova was overthrown. "A perfect crop of kings sprung up at this juncture, struggling with each other for the sovereignty of Moorish Spain, and failing that, for the possession of some little bit which they could erect each into a snug kingdom for himself. Not to mention smaller territories, Almeria, Denia, Valencia, Saragossa, Huesca, Toledo, Lerida, Seville, Malaga, Granada, Algesiras, Tuledo, and Badajos had all their separate kings. Every day one or other of these multitudinous sovereigns was getting killed by a stronger neighbour, and the smaller kingdoms were soon amalgamated with the larger; still, even at the end of the eleventh century, there were at least four different Moorish sovereigns in Spain,—the Caliph of Seville, the Caliph of Toledo, the Caliph of Saragossa, and the Caliph of Badajos and part of Portugal."

From this period, then, the power of the Moors in Spain may be said to be on the decline. The spirit of conquest had died out from among them, and the ancient love of liberty arose again in Christian breasts with more than former power and independence. For two centuries a continual struggle went on between the Christian and the Moslem; and a long series of battles took place, which, with various success, went to the widening the breach already existing. Many were the exciting stories told of individual bravery and heroic sacrifice about this period; many a ballad records the daring of the combatants, and many a high and chivalrous deed was performed, of which no record remains.

Under the conduct of the kings of Arragon and Castile, the Christians of Spain determined to reconquer their beloved country. Of the kings of Castile, one of the most distinguished for his successes against the Moors was Alfonso I., who, already in possession of Leon, was crowned king of Castile in 1073. This sovereign is known indiscriminately as Alfonso I. of Castile, or Alfonso VI. of Leon. In his reign flourished the most renowned of all the Spanish heroes, Rodrigo Diaz de Vivar, surnamed the *Cid*, from the Moorish term *el Seid*, or the lord. The monarch and his subject gained many victories over the Moorish sovereigns, against whom they directed their enterprises. In 1085 Alfonso took, after a desperate siege of three years, the city of Toledo, the ancient capital of the Gothic monarchy, and with it the whole Moorish kingdom of New Castile was recovered from the Moslems. No sooner was this conquest won, than Alfonso prepared to attack the kingdom of Seville and Cordova—the most powerful of the sovereignties with which the caliphate of Cordova had been split. To assist him in this formidable invasion, Mohammed, king of Seville, after deliberating with his allies, the smaller Moorish kings, invited over from Africa a new Moorish tribe, called the Almoravides, founded by one of those Mohammedan enthusiasts, imitators of the prophet, who were so frequently springing up in various parts of the Mussulman empire. These Almoravides—men devoted to the service of God—had overrun and conquered the whole of northern Africa. The old spirit of conquest seemed to be revived in them; and in inviting them over to fight against the Christians, the Moorish sovereign of Seville was apparently adopting the only measure that could save his kingdom. Yusef, the leader of the Almoravides, eagerly accepted his proposal, and, crossing the strait with a large army, he united his forces with those of the king of Seville. Alfonso, finding himself too weak to conduct an invasion against such a coalition, obtained succours from his brother monarchs, the kings of Arragon and Navarre. A great pitched battle took place between the two armies in the month of October, 1086, at Zalaca, near Badajoz. The enthusiasm of the Almoravides gained the day for their allies, and the Christians were totally defeated. This defeat proved a temporary check to the progress of the Christian armies.

The king of Seville, however, had reason to repent having invited such formidable guests as the Almoravides into his dominions; for, tempted by the prospect of possessing such a fine country in perpetuity, they refused to return to Africa when their services were no longer required. To such extremities was Mohammed reduced by his visitor Yusef, that at last he was obliged to solicit the assistance of his enemy Alfonso, that he might not be deprived of his kingdom The Almoravides, however, triumphed. Mohammed was deposed and sent over to Africa, and Yusef mounted the throne in his stead. The condition of affairs in Spain now assumed a strange aspect; other petty Moorish sovereigns, alarmed by the fate of the kings of Seville, and fearful of sharing it, united amongst themselves, and also with Alfonso of Castile, against Yusef; and for many years there might be seen the spectacle of Christian knights and Moorish warriors fighting side by side in the same battle, or exchanging chivalrous courtesies in the same camp:—

> "Different are the creeds we swear by,
> But in breast of knight or dame,
> Be they Saracen or Christian,
> Flows not Adam's blood the same?"

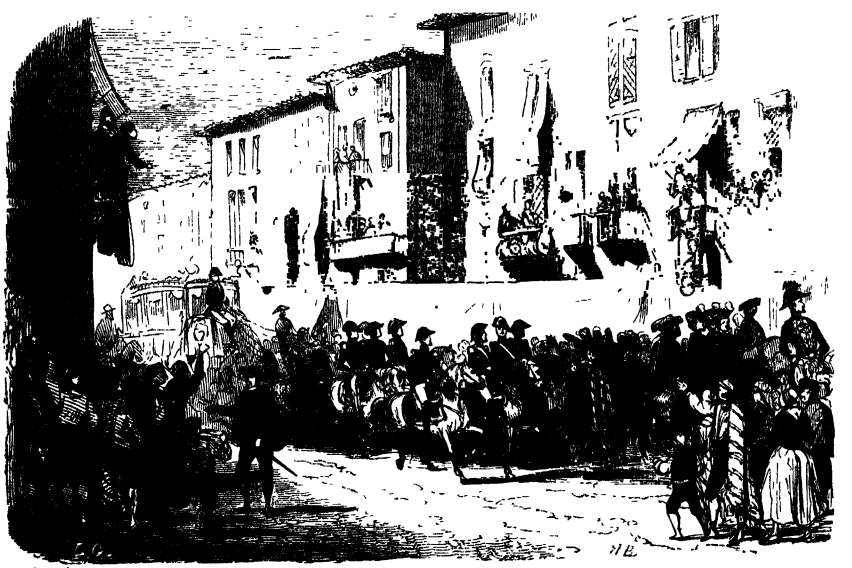
Not even the valour of the Cid, however, could prevent the Moorish princes from falling under the yoke of the conquering Yusef; and in the year 1094, the whole of Moorish Spain was again united under one dynasty. During the life of Yusef, neither Alfonso nor the sovereigns of Navarre and Arragon could gain any very decided success against the Moors; and again, for a while at least, the Moorish power in the peninsula seemed to be on the ascendant.

Yusef died in 1107, leaving his son Ali his successor; and for twenty years the hereditary struggle of Christian against Moor was carried on between Ali and Alfonso, king of Arragon and Navarre, who, having married Urraca, the daughter and heiress of Alfonso of Castile, might be considered as the general Christian monarch of the Spanish part of the peninsula. By his successes during these twenty years, Alfonso earned for himself the warlike surname of *El Batallador*—The Battle Giver. In nine-and-twenty successive battles he defeated the Moorish hosts; and over all Europe he was celebrated as the champion of the Christian faith against the infidels of Spain. Tuleda, Saragossa, Tarragona, and Daroca, were all conquered by him. He trebled the size of Arragon; and he carried his banners farther south of the Ebro than any Christian prince had done before him. In 1133,

however, he sustained a defeat from the Mussulmans, and shortly afterwards died. On his death, as he left no family, the Christian territories of Spain were again disunited. Leon and Castile were inherited, or rather had for some time been possessed, by Alfonso Raymond, the son of his wife Urraca, known indiscriminately as Alfonso II. of Castile, or Alfonso VIII. of Leon, and also by the name of Alfonso the emperor. Navarre chose for its sovereign Garcia Ramirez, or Garcia IV., grandnephew of Sancho IV., Alfonso's predecessor. Arragon elected Ramiro II., brother of the deceased Alfonso, who, being a monk, obtained the pope's permission to marry; but had no sooner begotten a daughter to succeed him, than he resigned the throne, and again retired to his monastery, leaving his infant heir, Petronilla, queen of Arragon, under the guardianship of Raymond V., count of Barcelona, to whom he had affianced her—an alliance which had the effect of incorporating the hitherto French province of Catalonia with the Spanish kingdom of Arragon. It is necessary now to add a word or two respecting Portugal. This country had no separate existence earlier than the beginning of the twelfth century. That part of it which lies between the Minho and the Douro had been recovered from the Moors by the kings of Galicia, the successors of Pelayo, and consequently it formed a mere province of the territories of Leon and Castile. When, however, by the victories of Alfonso I. of Leon and Castile, Portugal, as far south as the Tagus, had been wrested from the Moors, it became necessary to appoint a distinct officer or viceroy to guard this important part of the peninsula against the incursions of the Almoravides, then newly arrived in Spain. For this office Alfonso chose his son-in-law, Henry of Besançon, who, after extending his territory by further conquests, bequeathed it, in 1112, with the title of Count of Portugal, under the Castilian king, to his infant son, Alfonso Henriques. This Alfonso, on growing up, proved a formidable enemy to the Moors, and, disdaining any longer to be a mere viceroy to the Castilian kings, threw off his allegiance to Alfonso the emperor, and proclaimed himself independent king of Portugal in 1139 *

We pass on a hundred years, during which the several kingdoms of the peninsula had been alternately at war with each other and with the Moors, and come to the grand breaking up of the Mohammed power in Spain. That power, so long on the decline, fell at last before the victorious arms of Ferdinand and Isabella. Of the various Moorish princes there remained in the year 1248 only one, Mahomet Ibn Alahmar, who had assumed the title of king of Granada, and who was obliged, in order to retain even this diminished sovereignty, to acknowledge himself the vassal of Ferdinand, the Christian king of Castile. At this epoch,—the epoch of the erection of the Moorish kingdom of Granada out of the ruins of the once potent sovereignty of Cordova, we may pause ere we resume the history of this famous land. In our next chapter we shall have to speak of the siege of Granada, and the expulsion of the Moors from Spain.

"This renowned kingdom," we are told by Washington Irving, in his admirable account of its siege, "in the southern part of Spain, bordering on the Mediterranean Sea, and defended on the land-side by lofty and rugged mountains, locking up within their embraces deep, rich, and verdant valleys, where the sterility of the surrounding heights was repaid by prodigal fertility. The city of Granada lay in the centre of the kingdom, sheltered, as it were, in the lap of the Sierra Nevada, or chain of snowy mountains. It covered two lofty hills, and a deep valley that divides them, through which flows the river Douro. One of these hills was crowned by the royal palace and fortress of the Alhambra, capable of containing forty thousand men within its walls and towers. Never was there an edifice accomplished in a superior style of barbaric magnificence; and he stranger who, even at the present day, wanders among its silent and deserted courts and ruined halls, gazes with astonishment at its gilded and fretted domes and luxurious decorations, still retaining their brilliancy and beauty in defiance of the ravages of time. Opposite to the hill on which stood the Alhambra was its rival hill; on the summit of which was a spacious plain, covered with houses, and crowded with inhabitants. The declivities and skirts of the two hills were covered with houses to the number of seventy thousand, in narrow streets and small squares, according to the [illegible]led-by Moorish cities. The houses had interior courts and [illegible]s of refreshed by fountains and running streams, and set out oranges, citrons, and pomegranates; so that, as the edifices of the city rose above each other on the sides of the hill, they presented a mingled appearance of city and grove delightful to the eye. The whole was surrounded by high walls, three leagues in circuit, with twelve gates, and fortified by a thousand and thirty towers. The elevation of the city, and the neighbourhood of the Sierra Nevada, crowned with perpetual snows, tempered the fervid rays of the summer; and thus, while other cities were panting with the sultry and stifling heat of the dog-days, the most salubrious breezes played through the marble halls of Granada. The glory of the city, however, was its vega or plain, which spread out to a circumference of thirty-seven leagues, surrounded by lofty mountains. It was a vast garden of delight, refreshed by numerous fountains, and by the silver windings of the Xenil. The labour and ingenuity of the Moors had diverted the waters of this river into thousands of rills and streams, and diffused them over the whole surface of the plain. Indeed they had wrought up this happy region to a degree of wonderful prosperity, and took a pride in decorating it, as if it had been a favourite mistress. The hills were clothed with orchards and vineyards, the valleys embroided with gardens, and the wide plains covered with waving grain. Here were seen in profusion the orange, the citron, the fig, and the pomegranate, with large plantations of mulberry-trees, from which was produced the finest of silk. The vine clambered from tree to tree, the grapes hung in rich clusters about the peasants' cottages, and the groves were resound by the perpetual song of the nightingale. In a word, so beautiful was the earth, so pure the air, and so serene the sky of this delicious region, that the Moors imagined the paradise of their prophet was in the heavens which hung over Granada.



But in this place we may consistently consider the influence of the Saracens upon European civilisation. It had doubtless been the aim of this hot-blooded and aggressive people to subjugate the whole of Europe—so large was their ambition and so high their hope. Finding themselves masters of the fair land of Spain, they had even tried to push their way across the Pyrenees into the country of the Gaul. But they were stopped on the field of Poictiers by Charles Martel, the father of the Carlovingian dynasty in France. Although the tawny Moor was king over the white Christian; although the Arabian conqueror was enabled to lord it in a land of vines and honey; although the Romano-German submitted, as we have seen, to the Syrian; although the mosque and minaret rose side by side in the blue sky with the Christian steeple; although the language of the Saracen seemed destined to become that of western Europe; although the royal legion seemed to be firmly planted in Cordova,—there yet remained in the conquered country a spirit of rebellion and a love of liberty; and the seeds of disunion and revolt were found to exist even among the conquerors themselves.

Nevertheless, the influence of the Moor in Spain was a good influence. Wild and fiery, and impulsive and energetic as was the Saracenic character, it was also a highly teachable one. No sooner was the conquest of Spain complete than the arts of peace were studied and practised. Europe owes much to the Moor; for his genius was capable of mastering the whole circle of human knowledge, and that, too, in an incredibly short space of time. Through the Arab's power, Spain became, as it were, the vehicle of intercommunication between the learning of the past and the rude military spirit of the middle ages. Arabic art and Arabic splendour exist even in the present day in a thousand well-known forms: to their abstinence from the use of human and animal forms in their architecture we owe the beautiful style of ornamentation known as the *arabesque*. Music, literature, science, history, criticism, fiction, and the higher branches of speculative science, as well as astronomy and mathematics, found, good, able, and enthusiastic conservators in the Moors; chemistry, agriculture, horticulture, and the Gothic style of architecture owe much to their inventive faculties; in the processes of dyeing, tanning, and the preparation of drugs, nearly all that we know we have derived from them; and the Alhambra, or palace of the Moorish kings

* The Moors in Spain.—*Chambers's Miscellany.*

this day a wonderful evidence of magnificent conand brilliant workmanship.

Spain Arabian learning shone with a brighter lustre," s Dr. Crichton, "and continued to flourish to a later period han in the schools of the east. Cordova, Seville, and Granada, rivalled each other in the magnificence of their academies, colleges, and libraries. Casiri has enumerated the names and writings of nearly 170 eminent men, natives of Cordova alone. Hakem founded here a college, and a royal brary containing 400,000 volumes: he had carefully examined every work, and with his own hand wrote in each the genealogy, birth, and death of its respective author. The academy of Granada was long under the direction of Shamseddin of Murcia, so famous among the Arabs for his skill in polite literature. Casiri has recorded the names and works of 120 authors—theologians, civilians, historians, philosophers, and other professors—whose talents conferred dignity and fame on the university of Granada. Toledo, Malaga, Murcia, and Valencia, were all furnished with splendid literary apparatus.

THE STREETS OF MADRID ON A FETE DAY.

In the cities of Andalusia alone, seventy libraries were open for the instruction of the public. Middeldorpf has enumerated seventeen distinguished colleges and academies which flourished under the patronage of the Saracens in Spain, and has given lists of the eminent professors and authors who taught and studied in them. While little attention, comparatively, was bestowed by the Moors on the exterior of their mansions, on the furniture and accommodation within everything was lavished that could promote luxurious ease and personal comfort. Their rooms were so contrived that no reverberation of sound was heard. The light was generally admitted in such a manner as, by excluding external prospects, to confine the admiration of the spectator chiefly to the ornaments and beauties of the interior. Their arrangements for ventilation were admirable; and by means of caleducts, or tubes of baked earth, warm air was admitted, so as to preserve a uniform temperature. The utmost labour and skill were expended in embellishing the walls and ceilings. The tiles had a blue glazing over them. Their paving bricks were made of different colours—blue, white, black, or yellow, which, when properly contrasted, had a very agreeable effect. Nothing is more astonishing than the durability of the Moorish edifices. The stucco composition on their walls became hard as stone; and even in the present century, specimens are found without a crack or flaw on their whole surface. Their woodwork also still remains in a state of wonderful preservation. The floors and ceilings of the Alhambra have withstood the neglect and dilapidation of nearly 700 years: the pine-wood continues perfectly sound, without exhibiting the slightest mark of dry rot, worm, or insect. The coat of white paint retains its colour so bright and rich, that it may be mistaken for mother-of-pearl."

The Moors "gave us astronomy, our system of numeral notation, and algebra; they gave us our first notions of Aristotle's philosophy, and a new style of architecture; they gave us a system of national police; they gave us the notion of public libraries; they gave us the telegraph; some say also gunpowder, paper-making, the pendulum, and the mariner's compass; they gave us morocco leather; they gave us the principle of rhyme in verse, which did not exist among the ancients; and lastly, to conclude a list which might be extended to much greater length, they gave us that spirit of chivalrous devotion to the fair sex which, although, since the time of the Crusades, it has attained such strength as to be regarded as innate in European society, is yet in reality an importation from the East, and had only a very modified existence among the Greeks and Romans of antiquity. The conquest of Spain by the Moors was the opening of the door for all these influences. As soon as they had fairly entered, the door was shut; or, in other words, the Moors were expelled from Europe."

AUTHORITY AND SUBMISSION.—One very common error misleads the opinion of mankind, that, universally, authority is pleasant, submission painful. In the general course of human affairs, the very reverse of this is nearer to the truth. Command is anxiety, obedience, ease.—*Paley.*

THE LAST REVOLUTION IN LONDON.

"Non fumum ex fulgore, sed ex fumo dare."
(Not to elicit smoke from splendour, but splendour from smoke.)

Our country friends will no doubt open their eyes at this announcement; and with their minds filled with ideas of death and slaughter, picture to themselves this huge metropolis in the hands of a rude mob, who, like their brethren over the water, are prepared for all extremes of violence, from turning the queen out of the palace, and demolishing the marble arch, to setting free the prisoners in Newgate, and declaring the Charter on Tower-hill. But to set at ease the minds of all and several, our timid country friends aforesaid, we beg to assure them that the revolution of which we have to speak has hitherto been attended with no such direful consequences, and although streets have been blockaded, pavements torn up, houses entered, barricades erected, and other mob and military movements accomplished; although London from Temple Bar to Mile End, and from Mile End to Bromley, has been in the possession of a strong and numerous body of workmen; although camp fires have been lighted nightly, at which hundreds have bivouacked; and, although, as in other popular movements, there has been a vast expenditure of big words, which in one instance, as is also common in like cases, actually led to blows; and although on that occasion, which was no less an occasion than the storming and valiant defence of Bow Common Bridge (a name in future history second only to Arcola), a considerable quantity of blood was spilled—from the noses of the combatants—and a whole detachment of the metropolitan police were called into requisition, in the untoward absence of the military,—the trade of the metropolis went on as usual; and at the moment we are writing, there are no visible indications anywhere of the extreme discomfort and alarm to which its inhabitants have been lately subjected.

And what, pray, has been the cause of all this commotion? asks some innocent country cousin of ours,—what led to the occupation of the town by the people and the police? what reason was there for breaking up the streets, tearing up the paving-stones, lighting the fires and bivouacking at night beside them? Why, my dear creature, they could not very well do what was done without all these manœuvres; and the reason for them may be easily explained—the Great Central Gas Company were laying down their pipes!

And that we may allay entirely any natural apprehensions in the bosoms of our friends—for a revolution in London is not a *very* common occurrence—it is our intention to give them a short history of that very remarkable phenomenon, the triumph of common sense over monopoly and prescriptive right, in the name and person of the agitation for artificial illumination, at once pure and cheap, but lately brought to a successful conclusion in the city of London.

Some forty years ago, soon after the invention of gas, it was decided to light the city of London by means of the new illuminating medium, and power was given by the authorities to two companies to lay down their mains within the city and its liberties; and in 1823 they, instead of competing with each other, wisely determined to divide the debatable ground between them, and from that period to the present they have so effectually contrived to hold a close monopoly, that the entrance of all other competitors for the honour and profit of lighting the city has been entirely and successfully barred. In those days, scientific knowledge, as far as the article gas was concerned, was at a low ebb, and various since-proved errors were held to be undeniable truths. For instance, the explosive nature of gas was so little understood, that it was deemed highly dangerous to allow more than six thousand cubic feet of the article to be confined in one gas-holder, and, with something of old superstition, it was held improper for two gas-pipes to cross each other at right angles, or even to lay side by side, it being absurdly supposed that in the event of a fracture of one of the pipes, a general explosion of the whole would be the inevitable consequence. The last cause of alarm, however, was effectually set at rest a few years since, by an experiment performed by Mr. Samuel Clegg, the veteran gas engineer; who, taking a pickaxe in his hand, deliberately fractured a socket-joint in a gas-pipe situated in the midst of others equally charged with the explosive air. To the astonishment and alarm of the bystanders, he then applied a lighted candle to the orifice, and instead of a general explosion, as was anticipated, a huge dull flame was the only result—for it was not then generally known that until gas became incorporated in certain proportions with the atmosphere, it will neither explode nor ignite.

The city companies having it all their own way, of course made a tolerable profitable business of it, and charged their consumers a pretty considerable sum for their privilege—gas being sold at that time at about fifteen shillings per thousand feet. With regard to the other notion, that also exploded instead of the gas; and when the subject was brought before the consideration of a parliamentary committee, to whom various reports from Sir William Congreve and the Royal Society had been submitted, it was declared, after hearing evidence, that "the danger likely to arise from gasholders and gas works is not so great as has been supposed, and that, therefore, the necessity of interference by legislative enactment does not press at the present period." And gasometers are now being made to hold upwards of half-a-million instead of six thousand cubic feet of gas.

Well, the monopoly went on as such things do go on, the companies making occasional slight reductions in their prices as the districts beyond the city came to partake of the benefits of gaslight, and they were forced to supply gas at something like the rate charged by their neighbours; and the shareholders getting swinging dividends every half year, it was, of course, quite a comfortable and family sort of compact, in which all parties, except the consumers, were equally well pleased, and equally determined to oppose a rival, being unanimously of opinion that competition was an excellent thing in every business but gas-making.

But this state of things was too good to last, and from time to time murmurs of discontent were heard in the city. Mr. Charles Pearson, the city solicitor, and late M.P. for Lambeth, being bold enough on several occasions to advise the Commissioners of Sewers, with whom the power lay, to purchase the pipes of the old company and take the manufacture of gas into their own hands, confidently promising them a reduction of thirty per cent. on their outlay. This, however, was not to be, so long as the public lamps were supplied at the cost price of the article—and for fifteen years the city solicitor went on urging the adoption of a better system without effect, the commissioners regularly advertising for parties to supply the public lamps, and being as regularly answered and supplied by the one company who possessed the mains, and consequently the power to comply with their demand; the other company, the Chartered, having their pipes laid without the boundaries of the city, or rather within its liberties.

As there is always a man for the occasion, be the occasion what it may, so it happened that in course of time there arose an opponent of the monopoly in the person of Mr. Angus Croll, a gas engineer of ten years standing, who had been employed by one of the city companies, the Chartered, for six years, and who, besides being a well read experimental and manufacturing chemist, was what is called "a self-made man." Fortunately for the interests of the public, Mr. Croll and the original agitator, Mr. Charles Pearson, were introduced to each other, and from that moment the doom of the gas monopoly in the city was sealed. The city solicitor, whose continual agitation for cheap gas had come to be considered somewhat of a hobby by his friends and the Commissioners of Sewers, was, we may be certain, by no means displeased to find himself in company with a man who not only held opinions similar to his own, but actually contemplated carrying those opinions into practice.

"Two or three years ago," says Mr. Pearson, in his evidence before a parliamentary committee assembled to consider the propriety of bringing a new gas company into the city, "I accidentally became acquainted with Mr. Croll. I entered a room where they were talking about gas, when one of the company exclaimed, 'Here, Mr. Pearson, is a gentleman who can tell you something about gas.' I was then introduced, and soon found that Mr. Croll knew more about the subject than I did, and from a talker I was soon transformed into a listener. I was informed by that gentleman that he had a project for supplying the city with gas, and that he proposed the laying down of pipes by the corporation. I immediately challenged

Mr. Croll with taking my invention out of my hands," continues the solicitor, "and invited him to my office to see a printed statement I had issued some years before." He accepted the invitation, examined my plans, and finding our opinions agree, from that moment we became friends."

Thus, by "a strange concatenation of unforeseen circumstances," to use the hackneyed schoolboy phrase, these two cheap gas agitators, instead of quarrelling about priority of idea, united their forces and determined to bring about a reform in that much overcharged and almost indispensable article of commerce. Mr. Croll was at that time engaged at Coventry, having taken a lease of the works there, and so greatly had he improved the property, that he was enabled by his plan of operations, not only to lower the price of the commodity to the consumer, but actually to pay a large dividend to the shareholders, in the place of a hitherto annual loss. He was now advised to relinquish the Coventry gas-works and turn his attention to the new project, and exercise his talents in a larger sphere of action, but other less sanguine friends counselled him to "bide his time," and not venture his savings in what might possibly prove an unlucky speculation. This occurred about three years since; and capitalists, having only just then passed through the ordeal of the railway mania, were by no means willing to look with favour on a project promising merely a dividend of ten per cent. But undismayed by apparent want of support, the engineer went on maturing his plans, and in the summer of 1849—the feeling against the old companies being then very strong, and the energy of the city solicitor being no way weakened—he was called before the commissioners of sewers to explain his plans, but as Mr. Croll was then, and is now, a partner in an extensive manufactory for dry gas-metres, whose chief customers were the different gas companies, it was not thought advisable to make his name public just then. At that meeting Mr Croll explained to the commissioners that he was willing to supply the corporation with a pure and brilliant gas at 2s. 6d. per thousand feet,—the price then charged to the public by the old companies being six shillings! the half-crown per thousand not being the gross price, but the net price to the consumer—not 2s. 6d. from the gasometer, but from the burner—the corporation undertaking to erect the necessary works.

Well, after considerable agitation, much talking, fierce opposition from the old companies, a vast deal of deceiving from various interested parties, a company was eventually formed, and in December, 1849, provisionally registered under the Joint Stock Companies' Act, by which it was proposed to erect works and supply the public in the city at 1s. per thousand cubic feet, with an article whose minimum illuminating power should be, for every five feet of gas equal to twelve mould candles, six to the pound—the average of the present supply in the metropolis being equal to not more than nine-and-a-half.

It was then determined to apply to Parliament for a bill to enable them to carry their project into effect; and, after an examination of various witnesses for nine days—including, amongst others, Sir James Duke, lord mayor of London, Mr. S. Clegg, Mr. Charles Pearson, and Mr. Croll himself—it was unanimously resolved that the preamble of the bill was proved. But although the company were successful thus far, it must not be supposed that they encountered no opposition, for in truth the old companies employed eminent counsel to argue against them, and they were, during the course of the examination, obliged to amend their bill in consequence of a technical error,—so ready are the lawyers to take advantage of the least real or apparent flaw in the case of their opponents. Nothing now remained, therefore, but to obtain the sanction of the Lords, which, strange to say, was, after reading the bill a second time and referred to a committee which for three days examined witnesses in its support, most unaccountably refused.

This was a blow the company had been by no means led to anticipate; but, after having obtained nine thousand eight hundred and sixty-five signatures to their petition,—which petition emanated from bankers, merchants, and large consumers, resident in the city,—they were of course unwilling to abandon their project; and in this dilemma they determined to act upon the permission of the Commissioners of Sewers, and the authorities of trusts through which their mains must necessarily pass, and go on with their works. In this they have been so successful, that at the moment we write six thousand consumers are enjoying the fruits of this peaceful revolution over monopoly, and public lamps are being lit with the improved commodity.

On a late visit to the manufactory at Bow Common, we were there initiated into the secret of the present company's success, and when we came to consider the promises made to the shareholders and consumers—which promises they are bound both in law and honour to keep—that gas shall be supplied to the consumer, of superior brilliancy and purity, at a maximum charge of four shillings per thousand feet; that the article shall be tested from time to time by an eminent professor of chemistry, that the metres supplied free to the consumers shall be under the superintendence of an officer appointed by the corporation of the city; that ten per cent. dividend shall be paid to the shareholders, and that all profits in excess of that rate shall go towards decreasing the price of the article, that no more than that rate of profit shall ever be divided among the shareholders, and that a public auditor appointed by the corporation, or the Board of Trade, shall examine the accounts of the company at stated periods,—it was with no small degree of admiration that we followed the chief engineer, and listened to his explanations The secret of their promised success, then, consists simply in the use of the most improved systems of gas-making, and in the observance of the most rigid economy in the distribution of their funds. To compass the first, a new plan of retorts has been adopted, which, by the union of clay and iron receptacles for the coal to be distilled, effects the object intended with a much small expenditure of fuel than has been hitherto considered necessary in the production of gas; a branch railway will be built, so that the coal may be brought direct from the pit's mouth to the works; a new plan of purification has been invented by Mr Croll, which, by the union of chloride of manganese with wet lime, effects a great saving in the production of the raw material, gas; two are being built, one is finished. Three immense telescope gas-holders have been built, capable of containing nearly half a million cubic feet of gas each; mains of sufficient size and power to carry fifty per cent. more gas than is at present used in the city have been laid, and the whole manufactory is upon a scale sufficiently large to allow of almost indefinite extension. Besides all these advantages, the present company, instead of having their works in the city, where the land is of course excessively dear, have purchased property in a neighbourhood where it is not only comparatively cheap, but sufficiently far removed from human habitations ever to become a nuisance—no small advantage in these days of sanitary reform, the best talent consistent with economy, is employed, and every improvement in science is brought to bear to the profit of the shareholders and the benefit of the public.

It is not within the compass of our space, or intention, to allude further to the means adopted by the new company to ensure themselves success; but we may just mention that the use of the dry metre invented by their engineer is likely to prove advantageous to both the public and themselves, as by its construction it is self-detective, so that the fair consumer pays for no more gas than he actually uses, and the fraudulent customer is at once found out. By the old water-metre it was in the power of a dishonest consumer to cheat the company to almost any extent he pleased; and from the defective working of the machine itself, it frequently happened that more gas was registered than was actually consumed—both these disagreeable contingencies are now avoided.

To conclude, as soon as the company found there was no hope of success in the Lords, they being pledged to supply gas to their consumers by the 29th of September, immediately set to work, and by the help of seventeen hundred navvies, nine hundred and fifty paviers—the revolutionists aforesaid—besides about five hundred men employed in the works and the streets, as plumbers, carpenters, bricklayers, masons, blacksmiths, &c., they contrived, being ably assisted by Messrs. Rigby, the contractors, to open the roads and streets, lay their main and service pipes, carry an electric wire throughout the mains from the office in the city to the works, and complete the building of their factory in the short space of ten

weeks! And this, too, without a single accident of any kind. Cheapside was opened, the pipes laid down, the connexions made, and the street repaved and made straight as if nothing had happened, in a single night. And with equal celerity was the whole of the work in the city accomplished, no main thoroughfare having been stopped in the daytime, and business never having been suspended, or pedestrians inconvenienced. And when we come to consider that within the area of the city, less than a square mile, upwards of seventy miles of main and service pipes have been laid without inconvenience or obstruction, our surprise at this peaceful revolution may be well expressed.

But another phase of the affair must yet be mentioned. Before the new company began their operations, deputations from the rate-payers waited on the magnates of the existing city gas company, and requested them to lower their prices to four shillings per thousand feet; promising to continue to take their gas, should they comply. This proposition the old company peremptorily refused to accede to; and if a larger unremunerative sum of money has been expended in this contest than is altogether consistent with political economy, the monopolists, and not the reformers, have themselves alone to blame, as they have fanned the flame of what may prove to their shareholders a ruinous competition. To supply the public at the price charged by their rivals is of no avail now, the time for making concession having been allowed to pass away.

And so, in acquainting our dear country friends with the particulars of this movement, we trust we have altogether allayed their fears with regard to the last London revolution, assuring them that, in the opinion of not a few thinking people, the opening the streets to enable a gas company to lay their mains in the earth beneath, is at least as profitable, though not half so exciting, as tearing up the flag-stones to erect a barricade.

C. F. P.

THE MAGISTRATE SMUGGLER.

A LESSON FOR WIVES

A GENTLEMAN holding a high official position in the courts of law in Paris, during the long vacation, went, in company with his wife, on a tour of pleasure in Belgium. After having travelled through this interesting country, they were returning home by the railway, the husband with his mind quite at rest, like a man blessed with an untroubled conscience, while the lady felt that uncomfortable sensation which arises from the recollection of some imprudence, or a dread of some approaching danger. When they were near the frontier, the lady could no longer restrain her uneasiness. Leaning towards her husband, she whispered to him:—

"I have lace in my portmanteau—take it and conceal it, that it may not be seized."

"What! as a smuggler!" exclaimed the husband, with a voice between astonishment and affright.

"It is beautiful Malines lace, and has cost a great deal," replied the lady. "We are now quite near the custom-house, hasten and conceal it."

"It is impossible; I cannot do it," said the gentleman.

"On the contrary, it is very easy," was the reply. "The lace would fit in the bottom of your hat."

"But do you recollect," rejoined the gentleman, "the position I occupy?"

"But recollect," said the wife, "that there is not an instant to be lost, and this lace has cost me 1,500 francs."

During the conversation, the train rapidly approached the dreaded station. Imagine the consternation of the worthy magistrate, who had been always in the habit of considering things with calm and slow deliberation, thus unexpectedly placed in a position so embarrassing and so critical. Overcome and perplexed by his difficulties, and losing all presence of mind, he allowed his wife to put the lace into his hat, and, having placed it on his head, he forced it down almost to his ears, and resigned himself to his fate.

At the station the travellers were invited to come out of the carriage, and to walk into the room where the custom-house agents were assembled. The gentleman concealed his uneasiness as best he could, and handed his passport with an air of assumed indifference.

When his position as a judge became known, the officials of the custom-house immediately hastened to tender their respects, and declared they considered it quite unnecessary to examine the luggage labelled with the name of one who occupied such a high and important situation in the state.

Never had the magistrate more sincerely valued the respect attached to his position; and if a secret remorse for a moment disturbed his mind, at least he breathed more freely when he recollected the danger was passed, and that the violation of the revenue laws he had committed would escape discovery.

With this comfortable assurance, and while a severe examination was passing on the property of the other passengers, the head of the custom-house and the commander of the local gendarmerie, having heard of the arrival of so distinguished a person, came to offer him their respects. Nothing could be more gracious than their manner. To their profound salutation the judge responded by immediately raising his hat with the utmost politeness. Could he do less? But, alas! in this polite obeisance, so rapid and so involuntary, he had forgotten the contents of his hat. He had scarcely raised it from his head when a cloud of lace rushed out, covering him, from head to foot, as with a large marriage-veil.

What language can describe the confusion of the detected smuggler—the despair of his wife—the amusement of the spectators—or the astonishment of the custom-house officers, at this scene? The offence was too public to be overlooked.

With many expressions of regret on the part of the authorities, the magistrate was detained till the matter should be investigated. After a short delay, he was allowed to resume his journey to Paris, and we can easily believe that the adventure formed a subject for much gossip and amusement in that gay capital.

THE SKULL.

(*From the Russian of Prince E. Baratinsky.*)

SLEEPING brother, who hath sought thee
And profaned thy silent dust?
From the halls of death I brought thee,
Dark, thy skull, with age and rust!
One slight lock of hair was clinging
Round the emblem of decay—
Thoughts of sad reflection bringing,
Of a being past away!

Comrades, young and happy hearted,
Gamboll'd round me near thy tomb;
Had thy voice, oh! long departed,
Spoken to them through the gloom—
Telling how stern Time was pressing
Youth, and hope, and joy beneath,
Thou hadst proved, perchance, a blessing
Warning them to think of death.

Could the skull I now am holding
Whisper secrets of the grave;
Fate mysterious, dark, unfolding,
Many a sinful heart to save.
On the brink we should, recoiling,
Place our trust in yonder skies,
And the tempter's meshes foiling,
Look to love that never dies!

But, I err—since Heav'n ordain'd thee
Thus, in silence, to repose;
Dews of mercy once sustain'd thee,
Ev'n to thine ev'ning's close!
Thus, while through life's road we wander,
Let us cheerful hail the light,
Not ungrateful, ever ponder,
On the shadows and the night.

Onward—while the sun is dawning—
Onward—while the step is free—
Onward—while the summer morning
Wakes the soul to ecstasy!
Grateful for the glories round us,
Scatter'd plenteous on the way;
Thankful for the comforts found us,
And renew'd from day to day!

Then, without weak fears or trembling,
We can sleep, like thee, below,
Gentle, loyal, undissembling,
Such can never sink in woe!
Skull, may none again molest thee!
Sacred be thy haunt from strife!
In the gloomy charnel, rest thee,
While we taste the sweets of life!

GEORGE WASHINGTON.

CERTAIN great names occur as landmarks in the world's history—the names of men who have made themselves conspicuous by noble daring, indomitable perseverance, unerring faith in their own peculiar powers, and a patient waiting upon Providence. Such are those, among a host, of Cæsar, Napoleon, Cromwell, and Washington. Each had a mission, and, to the best of his ability, each fulfilled it. To Englishmen, the name of George Washington is one of peculiar interest. Old England may well be proud of such a son. Nor need she blush when, as each year passes into the tomb of time, she remembers that the fourth day of July is the anniversary of the declaration of American independence. No other instance occurs in history of one nation springing out of another, and each remaining great and glorious contemporaries. As year follows year, and event succeeds event, the prophecy of Anglo-Saxon power and greatness seems to be nearer and nearer its fulfilment. In Europe, the English name and language stand first among the nations; in Asia, the English rule a whole people; in Africa, the English are spreading themselves rapidly; in America, a great nation sprung from out of England, but, when the time came, declared itself free; and in that vast new world millions yet own our mild paternal sway, and love to speak of these islands as the "old country" and their "home." We have no quarrel with the Americans of the United States. It is true that our fathers and their fathers fought hand to hand, and battled inch by inch for "rights" acknowledged since; but do we love them a whit the less because they had the spirit and determination to be free? Oh, no; we look on the great nation in North America as a younger brother in liberty, destined one day to be the greatest on the earth. And so, also, with the people waxing numerous in the islands of the South Pacific ocean. The day *must* come when, having grown to man's estate, the now infant colony will feel its strength and declare itself no longer dependent upon English rule. And when the time *does* come, let us hope that our sons will be wiser in their generations than their ancestors, and that they will give gracefully that which, if wrested from them, must be yielded *ungracefully*.

The name of Washington is connected indissolubly with that of American independence. When the American revolution broke out, in 1773, George Washington was in his forty-second year,—about the age of Cromwell at the commencement of the great rebellion. Although living, however, at this time on his estate as a country gentleman, he had already not only served in a military capacity, but had distinguished himself as a brave and skilful officer. From the beginning of the quarrel with the mother-country, he had taken the patriotic side; and immediately after the sword was first drawn, in 1775, he was, by an unanimous vote of the general congress (of which he was a member), appointed commander-in-chief of the forces of the thirteen provinces.

At the moment when he was placed in this conspicuous station, the cause which had been committed to him was in circumstances which demanded all his exertions, all his vigilance, and all his moral courage. The congress had found a general; to the general himself was left the task of organising an army. Between 14,000 and 15,000 men were indeed enlisted, and bound to serve for a short period: but the force thus collected could only be said to constitute so much rude material, which might help in the formation of an army. An effective army consists not of soldiers only, but of many other things equally essential. The soldiers must be officered, and disciplined, and armed, and clothed; there must be a commissariat to supply them with provisions, and financial arrangements to secure them regular pay. Of all these indispensable requisites the American troops were either entirely or nearly destitute when Washington took the command of them. In the state in which the country was, with scarcely an established government, and the whole social edifice violently shaken, the difficulties with which he had to contend were necessarily of the most formidable and trying nature; but his patience and perseverance gradually overcame them. The caution of the congress, and the jealousies and competing claims of individuals in the camp, gave way before the influence of his character, and the manifest disinterestedness of his whole conduct; and in no long time he had the satisfaction of seeing order established in every department of the service.

We cannot here follow him through his military career; but we may remark that the greatness of his character was shown, not so much in a series of splendid victories as in the unfaltering courage with which he bore up against the multiplied embarrassments which long continued to press upon him, and in that dauntless spirit and reliance on the eventual success of his cause which no temporary reverse was ever able to shake. His situation only a few months after he accepted the command is strikingly described in one of his own letters to the Congress. "It gives me great distress," he writes on the 21st of September, 1775, "to be obliged to solicit the attention of the Honourable Congress to the state of this army in terms which imply the slightest apprehension of being neglected. But my situation is inexpressibly distressing,—to see the winter fast approaching upon a naked army,—the time of their service within a few weeks of expiring,—and no provision yet made for such important events. Added to these, the military chest is totally exhausted;—the paymaster has not a single dollar in hand;—the commissary-general assures me that he has strained his credit, for the subsistence of the army, to the utmost;—the quartermaster-general is precisely in the same situation;—and the greater part of the troops are in a state not far from mutiny upon the deduction from their stated allowance." Thus left without the support necessary to render his exertions of any avail, had the American commander-in-chief been an ordinary man he would have thrown up his commission. But nothing could move Washington. In the circumstances in which he was placed, he could not even venture upon the chance of offensive operations, and was obliged to suffer in silence all the strictures that were passed upon an inactivity to which he was constrained by embarrassments, the extent of which was known only to himself, and which it was of the utmost importance to conceal from the public. These complaints and clamours were heard not only throughout the country, but even in the camp itself, and the disgust with the service which was thus produced became so general, that full a third of the men, after their original term of six months had expired, refused to enlist again, and returned to their homes.

A new army, however, having at length been raised by great exertions on the part of Dr. Franklin and other commissioners appointed by Congress, Washington, at length, on the 17th of March, 1776, made an attack upon the British garrison in Boston, the result of which was their expulsion from the town. But a succession of disasters speedily followed this success. In the following August the American general was driven from Long Island (which he had fortified), in the neighbourhood of New York; and, soon afterwards, that important town itself, in spite of his best endeavours to save it, fell into the hands of the enemy. From this point Washington was gradually driven, first to the opposite bank of the Hudson, and then across the whole province of Jersey to the Delaware. By this time, also, through losses and desertions, the number of his troops had fallen to about 3,000 men. The Congress had fled from Philadelphia to Baltimore; and, dismayed by the victorious progress of the enemy, the spirit of the country was quite broken.

Washington, however, neither lost heart nor relaxed his watchfulness for an opportunity to strike a blow which might yet save his country; and this opportunity he at length found. He had now crossed the Delaware, and his pursuers were only waiting for the setting in of the frost to follow him, when on the evening of Christmas-day he suddenly recrossed the river, and, falling upon a division of the British army which lay at Trenton, took nearly the whole of them prisoners. "This successful expedition," says an American writer, "first gave a favourable turn to our affairs, which, after this, seemed to brighten through the whole course of the war." Following up his success, Washington, on the 28th, attacked another detachment of the British at Princeton, which he also completely dispersed, killing 60 men and taking 300 prisoners. The importance of these exploits, however, is to be measured, as we have said, by their moral effect in dispelling for ever the despondency into which the Americans were fast sinking, and rousing them to new hopes and new exertions. The advance of the British troops was not permanently checked,

GENERAL GEORGE WASHINGTON, FIRST PRESIDENT OF THE UNITED STATES OF AMERICA.

within a year Lord Cornwallis found himself in possession Philadelphia; but the acquisition was rendered useless by energetic spirit of resistance that was now everywhere akened and in action in every part of the country which l lately been supposed to be all but conquered. Recruits re now easily raised in large numbers, both for the forces nmanded by Washington in the south, and for those sent der General Gales to oppose Burgoyne in the north. Lord rnwallis found himself shut up in Philadelphia, without power of moving from the ground he occupied; and the edition of General Burgoyne ended in the surrender of nself and his whole army.

The history of the rest of the war—down to the annihilation of the army of Lord Cornwallis by Washington, at w York, on the 19th of October, 1781, with which it may said to have terminated—would, if we had room to detail illustrate in the same manner in its whole course the rare l noble qualities of the American commander. Few military leaders, however, had such a complication of difficulties struggle with as beset him to the very end of his career, l in triumphing over them as he did, he showed himself be rich in many higher endowments than mere military acity and skill. It was therefore with great fitness that, r having saved his country by his sword, he was chosen to ect her in her entry as an independent nation upon the h of peace.

Washington was unanimously elected the first president of United States in March, 1789. In this high office he layed the same wisdom and firmness, which had distinshed his previous services; and in circumstances of conerable difficulty through which, not without opposition n various quarters, he had to guide the young republic, ved himself born to attain and hold ascendancy not less in l affairs than in arms. His grateful and admiring country in recognised him as her first citizen, by continuing him at head for a second term of four years after the expiration his first appointment; and he might have been a third time ted if he had not found it necessary to decline further lic service from his advancing years and declining health.

last act in office, however, was one of the most useful of useful and glorious life; we allude to the address in which took leave of his countrymen as a public character, and in ch he left them as admirable a legacy of political wisdom was ever bequeathed by any patriot of any nation. This ress, if his country and the world owed him nothing else, ld be enough to immortalise the name of Washington. the life, of which this was the last act, was throughout wded with eminent services, and its whole course was such o entitle his memory to be held in everlasting remembrance all the reverers either of public greatness or private worth, ion have the two been exhibited in the same character in h beautiful and perfect combination.

Washington did not long survive his retirement from office the quiet of domestic life. He died on Wednesday, the a of December, 1799—less than three years after he quitted lic life. He was buried in the family vault at Mount non, and the following Monumental Inscription was nded to be placed on his tomb:—

WASHINGTON,
The Defender of his Country, the Founder of Liberty,
The Friend of Man.
History and Tradition are explored in vain
For a Parallel to his Character.
In the Annals of modern Greatness,
He stands alone;
And the noblest names of Antiquity
Lose their Lustre in his Presence.
Born the Benefactor of Mankind,
He united all the Qualities necessary
To an Illustrious Career.
Nature made him Great,
He made himself Virtuous,
Called by his Country to the Defence of her Liberties,
He triumphantly vindicated the Rights of Humanity,
And on the Pillars of National Independence,
Laid the Foundations of a Great Republic.
Twice invested with Supreme Magistracy
By the Unanimous Voice of a Free People,
He surpassed in the Cabinet
The Glories of the Field,
And, voluntarily resigning the Sceptre and the Sword,
Retired to the Shades of Private Life.
A Spectacle so new and so sublime
Was contemplated with the profoundest Admiration;
And the Name of WASHINGTON,
Adding new Lustre to Humanity
Resounded to the remotest Regions of the Earth.
Magnanimous in Youth,
Glorious through Life,
Great in Death,
His highest Ambition, the happiness of Mankind;
His noblest Victory, the conquest of Himself.
Bequeathing to Posterity the Inheritance of his Fame,
And building his Monument in the Hearts of his Countrymen,
He lived the Ornament of the Eighteenth Century,
He died regretted by a mourning World.

TWO WAYS OF VISITING THE POOR.

(From "Bleak House," by CHARLES DICKENS.)

MRS. PARDIGGLE, leading the way with a great show of moral determination, and talking with much volubility about the untidy habits of the people (though I doubted if the best of us could have been tidy in such a place), conducted us into a cottage at the farthest corner, the ground-floor room of which we nearly filled. Besides ourselves there were in this damp offensive room a woman with a black eye nursing a poor little gasping baby by the fire; a man all stained with clay and mud, and looking very dissipated, lying at full length on the ground, smoking a pipe; a powerful young man fastening a collar on a dog; and a bold girl doing some kind of washing in very dirty water. They all looked up at us as we came in, and the woman seemed to turn her face towards the fire as if to hide her bruised eye, nobody gave us any welcome

"Well, my friends," said Mrs. Pardiggle; but her voice had not a friendly sound I thought; it was too much business-like and systematic. "How do you do all of you? I am here again. I told you you couldn't tire me, you know. I enjoy hard work; and the harder you make mine the better I like it."

"Then make it easy for her!" growled the man upon the floor. "I wants it done and over. I wants a end of these liberties took with my place. I wants a end of being drawed like a badger. Now you're a going to poll-pry and question according to custom; I know what you're going to be up to. Well you haven't got no occasion to be up to it; I'll save you the trouble. Is my daughter a washin'? Yes, she *is* a washin. Look at the water. Smell it! That's wot we drinks. How do you like it, and what do you think of gin instead? An't my place dirty? Yes it is dirty—it's nat'rally dirty, and it's nat'rally unwholesome; and we've had five dirty and unwholesome children, as is all dead infants, and so much the better for them, and for us besides. Have I read the little book wot you left? No, I an't read the little book wot you left. There an't nobody here as knows how to read it; and if there wos it wouldn't be suitable to me. It's a book fit for a babby, and I'm not a babby. If you wos to leave me a doll I shouldn't nuss it. How have I been conducting myself? Why, I've been drunk for three days; and I'd a been drunk four if I'd a had the money. Don't I never mean for to go church? No, I don't never mean for to go to church. I shouldn't be expected there if I did; the beadle's too gen-teel for me. And how did my wife get that black eye? Why, I guv it her; and if she says I didn't she's a lie!"

He had pulled his pipe out of his mouth to say all this, and he now turned over on his other side and smoked again. Mrs. Pardiggle, who had been regarding him through her spectacles with a forcible composure, calculated, I could not help thinking, to increase his antagonism, pulled out a good book, as if it were a constable's staff, and took the whole family into custody. I mean into religious custody of course; but she really did it as if she were an inexorable moral policeman carrying them all off to a station-house.

Ada and I were very uncomfortable. We both felt intrusive and out of place; and we both thought that Mrs. Pardiggle would have got on infinitely better if she had not had such a mechanical way of taking possession of people. The children sulked and stared; the family took no notice of us whatever, except when the young man made the dog bark, which he usually did when Mrs. Pardiggle was most emphatic. We both felt painfully sensible that between us and these people there was an iron barrier, which could not be

removed by our new friend. By whom or how it could be removed we did not know; but we knew that even what she read and said seemed to us to be ill chosen for such auditors, if it had been imparted ever so modestly and with ever so much tact. As to the little book to which the man on the floor had referred we acquired a knowledge of it afterwards; and Mr. Jarndyce said he doubted if Robinson Crusoe could have read it though he had had no other on his desolate island.

We were much deceived under these circumstances, when Mrs. Pardiggle left off. The man on the floor then turning his head round again said moiosely,

"Well! You've done, have you?"

"For to-day, I have, my friend. But I am never fatigued. I shall come to you again, in your regular order," returned Mrs. Pardiggle with demonstrative cheerfulness.

"So long as you goes now," said he, folding his arms and shutting his eyes with an oath, "you may do wot you like!"

Mrs. Pardiggle accordingly rose, made a little vortex in the confined room from which the pipe itself very narrowly escaped. Taking one of her young family in each hand, and telling the others to follow closely, and expressing her hope that the brickmaker and all his house would be improved when she saw them next, she then proceeded to another cottage. I hope it is not unkind in me to say that she certainly did make in this, as in everything else, a show that was not conciliatory of doing charity by wholesale, and of dealing in it to a large extent.

She supposed that we were following her; but as soon as the space was left clear, we approached the woman sitting by the fire to ask if the baby were ill.

She only looked as it lay on her lap. We had observed before that when she looked at it she covered her discoloured eye with her hand, as though she wished to separate any association with noise, and violence, and ill-treatment, from the poor little child.

Ada, whose gentle heart was moved by its appearance, bent down to touch its little face. As she did so, I saw what happened and drew her back. The child died

"O Esther!" cried Ada, sinking on her knees beside it. "Look here! O Esther, my love, the little thing! The suffering, quiet, pretty little thing! I am so sorry for it. I am so sorry for the mother. I never saw a sight so pitiful as this before! O baby, baby!"

Such compassion, such gentleness, as that with which she bent down weeping, and put her hand upon the mother's, might have softened any mother's heart that ever beat. The woman at first gazed at her in astonishment, and then burst into tears.

Presently I took the light burden from her lap; did what I could to make the baby's rest the prettier and gentler, laid it on a shelf and covered it with my own handkerchief. We tried to comfort the mother, and we whispered to her what our Saviour said of children. She answered nothing, but sat weeping—weeping very much.

When I turned, I found that the young man had taken out the dog, and was standing at the door looking in upon us, with dry eyes, but quiet. The girl was quiet too, and sat in a corner looking on the ground. The man had risen. He still smoked his pipe with an air of defiance, but he was silent.

An ugly woman, very poorly clothed, hurried in while I was glancing at them, and coming straight up to the mother, said "Jenny! Jenny!" The mother rose on being so addressed, and fell upon the woman's neck.

She also had upon her face and arms the marks of ill usage. She had no kind of grace about her but the grace of sympathy; but when she condoled with the woman, and her own tears fell, she wanted no beauty. I say condoled, but her only words were "Jenny! Jenny!" All the rest was in the tone in which she said them.

I thought it very touching to see these two women, coarse and shabby and beaten, so united; to see what they could be to one another; to see how they felt for one another; how the heart of each to each was softened by the hard trials of their lives. I think the best side of such people is almost hidden from us. What the poor are to the poor is little known, excepting to themselves and God.

UNDIVIDED ATTENTION ESSENTIAL TO SUCCESS.—Almost all useful discoveries have been made, not by the brilliancy of genius, but by the diligent direction of the mind to one object. In all trades, in all professions, in all undertakings, success can be expected only from undivided attention.

THE CELT AND THE SAXON.

A CONSIDERATION of the differences of races, and the causes on which those differences depend, has engaged the attention of the learned for ages. In a lecture lately delivered by Mr. Macintosh at the Birmingham Polytechnic Institution, the diversity in the physiological peculiarities of the people of Great Britain was ably treated. After speaking of the permanence of national character, the fluctuations of language, the analogy between the progress of inductive ethnology and geology, and the limitation of British emigration to certain ethnographical areas, the lecturer proceeded to notice the provisional classification of the varieties of the great Caucasian tribe from which the English people are principally descended.

Many learned men (said he) are of opinion that the great Mongolian wave of population, which, at a very early period, swept over Europe, must have reached as far as England—that the real aboriginal population of this country must have been Tartars, Kalmucks, or Finns—and that thus the remarkable prevalence of concave noses, retreating eyes, angular cheek-bones, prominent mouths, and other Mongolian characteristics among the operatives of many parts of England, may be explained. But it is possible that these peculiarities may have been indirectly derived at a later period, through the medium of the Belgæ, whom the Saxons enslaved, or directly through the invasions of Finnian Scandinavians; so that there is no necessity for supposing that any race existed in England previous to the Celtic, which must have been driven westward by a great Suevian or Germanic wave many centuries before Christ. The Suevians, or High Germans, described by Tacitus as having large bodies, ruddy hair, and sparkling eyes, must have colonised Sweden and Norway previously to the great Gothic (or mixed Tartar and Suevian) invasion, as these are the only countries where the Suevian characteristics now prevail to any great extent. Regarding the derivation of the third pure Caucasian variety, whose descendants are found in England,—namely, the Saxon—nothing is positively known.

After a few observations on the classification of ancient tribes, the lecturer went on to describe the Celtic variety, which he divided into Iberians, Cimbrians, and Gauls. These varieties he treated in the following manner:—

Physical Peculiarities of the Celts.—1. Iberians. It is probable that the inhabitants of a considerable part of South Wales and the neighbourhood, a part of Cornwall and Lancashire, are of Iberian descent. At all events, many remnants of a race with the following characteristics are there to be met with:—Jet black hair, stern and staid dark eyes, rather marked and angular features, prominent chins, narrow though high shoulders, and small chests; among the women, flat breasts, small long waists, and wide lateral hips—the gloomy mien being enhanced by the dark dresses in which they generally appear. Temperament, *bilious-sanguine*.—2. Cimbrians. Black or very dark hair and eyes—the latter frequently half closed; face wide, with the under part an obtuse angle; shoulders high and broad, figure, that of an inverted pyramid; generally under middle height. Temperament, *bilious*. (This variety forms the basis of the Welsh.)—3. Gauls or proper Celts. Black hair; skull rather narrow, and elongated from front to back; dark sparkling eyes; rather long oval face, skin of a brownish-white colour, often pale, but never clear; shoulders high; tendency to stoop forwards; waist sunken in front, particularly among the women; breasts placed high, and frequently pigeon-shaped, body short; legs long, small, and placed comparatively forward; narrow loins, small ankles, feet, and hands; gait unstable, accompanied by a tendency to lateral oscillation, arising from the weakness of the lower part of the trunk. Temperament, *nervous-bilious*. In comparative dimensions, the average width of the Celtic shoulders is 16¼ inches among the men, and 15½ among the women; loins, 11 inches; while the shoulders of the male Teutone measure 16 inches; those of the female, 14 inches loins, 13½ inches.

Mental Character of Gaulish Celts.—General tendency to "boldness, fickleness, and levity;" quickness in perceiving things individually apart from their general relationship; remarkable power of concentrating the mind on occupations requiring little foresight or reflection, such as pin-making and other monotonous mechanical pursuits; tendency to morbid sentimentalism; liability to extremes; disposition to subordinate everything to amusement; sexual gallantry, and great external politeness, without a corre-

sponding degree of inward sympathy; tendency to make noisy demonstrations occupy the place of real improvements; excitability of temper; fondness for sensational novelty; brilliancy in contradistinction to depth of imagination; humorous and witty; expertness in repartee; "national pride; not forgetful of injuries; disposition for foundling hospitals; bad seamen and colonisers; general want of moral and mental stability.

Social Condition.—It is generally admitted that the social condition of the Celts does not admit of a very favourable comparison with that of the Teutonic communities. We see this in the low state of the dark or Celtic, compared with the fair or Teutonic population of Ireland. We likewise see the difference in the vast superiority of the inhabitants of Saxony to those of Bohemia. Among Celts in general there is naturally a great deficiency in that cleanliness for which Teutons are celebrated, and a tendency to conceal filth with finery. Among the operative Celtic population there is a great want of providence, and an absence of that manliness which spurns being burdensome to others. Those of the ancient Britons who were of Gallic origin were spoken of by Roman historians as living in a state of the most unmitigated communism—the law of marriage being unknown to them, and the parents not knowing the children, nor the children their parents. The same state of society existed among the Gallic peasantry under the Normans in France This is consistent with the all-absorbing tendency of the Celtic mind to have everything in common, and to place all mankind on a level. It has been well said that the Celts live in and for society, and not in and for himself. His great defect consists in a forgetfulness of personal identity. Immersed in the gaieties of social life, he loses his individuality, and with its loss the power of self-government.

But the character of the Celt will be best understood by contrasting it with the extreme Teutonic character, as manifested in the Saxon. In the business of life the Celt is quick and uncertain—the Saxon slow and sure. The Celt can succeed well on a level plane, and still better downhill; but the Saxon shines most in working up an acclivity. In such an undertaking as damming back the sea, the Celt would erect a spacious embankment, and celebrate its completion by a public demonstration; but after the first downbreak his perseverance would fail, and the ocean would soon be left in possession of its former domain. Thus the Celt is often the sport of the elements, while the Teuton generally makes the elements his sport. The Celt is perhaps more dexterous than the Saxon in erecting social fabrics, but what he builds he delights to pull down; whereas the Saxon continues to build on. Herein consists the great fundamental difference between the Celt and the Saxon. There can be no progression without change; but the change may return to the point whence it set out, or it may go on exceeding from that point. The one is progression in a circle—the other is progression in a straight line. The Celt, in his fondness for the circular mode of progression, builds up to-day, and demolishes to-morrow, that he may have materials and space for a fresh erection. The Saxon builds slower, and is more particular about his foundation, knowing that it will have to sustain a superstructure which will never be levelled with the ground, but which will continually go on increasing in height. In the literature and science of the Celtic race, the same want of slow, steady, and onward progress is apparent. The philosophy of the ancient Greeks and Romans (who were fundamentally Celtic) was wanting in the element of actual progression; it consisted to a great extent of verbal quibbling; it disowned the labour of collecting facts, and thereby *darkening* the field of positive investigation; and it altogether exhibited a mental tendency quite different from that *slowly accumulative* tendency which characterises English Saxon philosophers.

In speaking of the religion of the Celts, Mr. Mackintosh remarked that the Cimbrian Celts (Welsh, &c.) were generally Calvinists, frequently Antinomians. Gallic Celts (and probably Iberian) are, almost without exception—that is, in at least 99 cases out of 100—Roman Catholics, as Dr. Kombst has lately shown. In Ireland, it is well known, Roman Catholicism is the religion of the Erse or Celtic, and Protestantism the religion of the fair or Teutonic inhabitants. It is the same in Belgium, and in the Highlands of Scotland. Roman Catholicism is fitted to the Celtic mind, and the Celtic mind to that religion; and this fact ought to modify the enthusiasm which has lately characterised the controversies between Protestants and Romanists.

The lecturer concluded by expressing his confident hope that civilisation and refinement will progress with the amalgamation of the races, till, in the end, the good points of the Celtic character will be added to those of the Saxon, and the weight and vigour of the Saxon mental conformation will correct the too vivid imagination of the Celtic mind.

DESCRIPTION OF AN ENGLISH FOG.

BY AN AMERICAN VISITOR.

Reader, have you ever travelled in a fog—a true English fog—a real unadulterated penetrator that chills a man to the heart's core if he happens to be exposed to it for half an hour? If you have not, then may you never be obliged to endure a ride of twenty-odd miles through one so dense as to prevent your seeing ten feet ahead of the four horses attached to the stage-coach. To look at the bleared sun through the misty veil, from a cheerful parlour window does very well, and you may derive an inward delight in trying to trace from such a point of sight the dim outline of the houses on the opposite side of the street, or the phantom-like figures of the almost invisible creatures who pass before you; but to grope your way or ride through it is enduring and not alone seeing.

The walk is not so bad as the ride, for in that you navigate yourself, and roll along like a ship in a veil of mist at sea, and when a fellow-mortal heaves in sight and you trace his outline through the vapour you shape your course to steer clear of him, and in nautical phrase "give him a wide berth." You see a gaslight occasionally to cheer you, its dull rays glimmering like a beacon on a dreary cliff to guide the lonely, mariner and if you choose you can come to anchor alongside a shop window or the door of a chop-house, where you can recruit your energies—make observations—get your latitude and longitude, and renew your journey with a prospect of completing it satisfactorily.

But the ride is a different thing—muffled up on a stage-coach and enveloped by fog—you soon become chilled and cheerless. You look at your neighbours and see their hair and whiskers white with accumulating frost—each one is as cold and comfortless as yourself, and the keen air cuts your face with its damp breath as you move through it. The houses are moving phantoms—there's no sky—no road—no sun—no fence—no houses—no fields—no nothing but fog—thick and impenetrable. When you come to a hill the driver tells you to hold on and not be alarmed, for the stage may escape being upset by a special Providence, but the chances are in favour of going over. You are going, but where to is the question. To upset? Yes, just as likely as not. But you escape that, and thump your feet on the foot-board to get them warmer, and put your blood in circulation, until you are tired; and then you probably will try to see the beauties of the charming country through which you are passing so agreeably. Yes! magnificent landscape it is too! All fog-banks—all so beautifully misty—so admirably obscured—so dreamy—so like Melville Island, Spitzbergen, or some other equally splendid northern land of fairies and fogs! You enjoy it so, and if blest with a happy imagination, you can build such airy castles, and have so much material to form them of, all ready to your mind. The cottages—the parks—the mansions are all before you, and all totally beyond your vision—but still before you—and decorate them to your own satisfaction, in such colours as your fancy may supply.

But while you are thinking of these things, something goes wrong, and a reality surely enough rouses you to cold matter-of-fact things. What's up now? Oh, only run into the fence—soon we'll all be right. You don't like the idea of backing out while on the coach, and descend until the horses are extricated.—They are soon put into the road—you mount again, and start, but do not get far on your journey before the driver "believes that the horses have been turned completely round, and we are going back again." Here's a pretty mess, indeed! Don't know where you are. The whip swears—the passengers don't pray—but the stage does stand still, and "What's to be done?" comes from every mouth. Go back and see whether the coach really was turned, you can tell by the marks of the wheels in the road. Away goes the driver, and with him a passenger, to learn the truth. They soon return out of breath, declare we are wrong, turn the horses and pursue the journey. After considerable trouble, a good deal of grumbling and a thorough chilling, you at last reach your destination, fully satisfied with your ride in the fog, and pretty sure you won't readily forget it.

THE CEDARS OF LEBANON.

"Coeval with the sky-crown'd mountain's self,
Spread wide their giant arms." MASON.

THERE is peculiar fascination in all subjects connected with the east. The hot sands of the desert, the stately palms, the strips of verdure on the mountain-side—the wide-spreading inland seas, the deep blue sky overhead—are a very romance in themselves; the narrow streets, the gay bazaars, the solemn mosques, the alcoves, the fountains, the piazzas, the public walks, are full of interest; the fair Circassian, the dark Egyptian, the unfamiliar visages, the flowing beards, the turbaned heads, the graceful robes, suggest a thousand fancies.

Amid our historical recollections the record of the East stands prominent. Our thoughts revert to Mahomet, with his sagacious honest face, his brown florid complexion, his deep black eyes, and the horse-shoe vein like Scott's Redgauntlet—to the hosts of the Christian army, made up of Europe's chivalry, that in the old time fought and died to win the Holy Land from Moslem sway—but holier thoughts connected with a holier history recur to our mind as we think of the East.

THE CEDARS OF LEBANON.

Ararat, Sinai, Carmel, Tabor, Olivet, Calvary, are suggestive words. In the East the history of the world begins, there after the flood the history begins again—when the new world has become the sepulchre of the old. Journeying in the Holy Land, we travel on the ground angelic feet have pressed, and every scene wakes up old memories deep and tender

Lebanon is one of the highest, and most celebrated, of a chain of mountains separating Syria from Palestine This chain is almost in the form of a horse shoe, beginning above Smyrna, at three or four leagues from the Mediterranean, and going from north to south towards Sidon, thence bending east towards Damascus, and at last returning from south to north. The west part of this chain of mountains is properly Libanus; the other which is opposite to it to the east, and extends from south to north is called Antilibanus. None of the summits of Libanus or Antilibanus have been measured. De la Roque thinks that Lebanon is higher than the Alps or Pyrenees. By comparing the accounts of different travellers as to the continuance of snow upon the higher summits, and adjusting them with reference to the point of perpetual congelation in that latitude, a rough estimate may be made, that the average height of the Libanus mountains from the top of which the snow disappears in summer, must be below 11,000 feet above the level of the sea; the highest point from which the snow never disappears must be considerably above that measurement. The Arabs call the principal eminence Jebel el Sich, and the snow, beneath the burning beams of an eastern sun completely cover the upper part of it, not lying in patches, as in the summer-time it may be seen upon Ben Nevis, but investing all the higher part with that perfect white and smooth velvet-like appearance which snow only exhibits when it is very deep; "a striking spectacle," says Dr. Clarke, "in such a climate, where the beholder, seeking protection from a burning sun, almost considers the firmament on fire"

The mountains of Lebanon are of limestone-rock, generally of a whitish hue, and from the aspect of which it derives its name, Lebanon, which signifies white. Looking on their vast rugged masses of naked rock, traversed by deep wild ravines, running down precipitously to the plain, no one would suspect, among the existence of a multitude of thrifty villages, and a population of hardy, industrious mountaineers. Here among the crags of the rocks are to be seen the remains of the renowned cedars, mention of which is so frequently in the figurative language of the Bible.

The cedar of Lebanon is a widely-spreading tree, varying from fifty to eighty feet in height, and when standing alone, covering a space with its branches, the diameter of which is much greater than its height The wood is of a reddish-white colour, of a flagrant smell, and fine grain; it is almost incorruptible by reason of its bitterness, which renders it distasteful to worms or insects. Maundrell mentions one which, on measuring, he found twelve yards in circumference, and yet sound. Its branches spread to a compass of thirty-seven yards. The horizontal branches, when the tree is exposed on all sides, are very large, and disposed in distinct layers or stages, the distance to which they extend diminishing as they approach the top, where they form a pyramidical head, broad in proportion to its height. The leaves, produced in tufts, are straight, about one inch long, slender, tapering to a point, and on short stalks When the tree is grown on mountains, the annual layers of wood are much narrower, and the fibre much finer than when it is grown on the plain. The cones when they approach maturity, become from 2½ inches to 5 inches long. Every part of the cone abounds with resin, which sometimes exudes from between the scales.

Modern naturalists have denied the superiority of the cedars of Lebanon to other forest trees. Mr Loudon, in his *Arboretum*,

describes it as light and spongy, easily worked, but very apt to shrink and warp, and by no means durable. Dr. Parisel, in 1629, had a piece of cedar which he had brought from Lebanon, made into an article of furniture, when it presented a surface agreeably veined, and variously shaded, and which, on the whole, might be considered handsome. But Dr. Pococke says, that with regard to a piece of one of the large cedars which had been blown down by the wind, it did not differ in appearance from white deal, and did not appear to be harder; the testimony of Sir Joseph Banks is similar in effect.

Very different from this was the opinion of Evelyn, who in his *Sylva* sums up the cedar's merits in the following words - "It resists putrefaction, destroys noxious insects, continues a thousand or two years sound, yields an oil famous for preserving books and writings, purifies the air by its effluvia, *inspires worshippers with a solemn awe when used in wainscoted churches.*"

There is an air of grandeur and strength in the cedar, when full grown, which renders it far superior in appearance to any other of the cone-bearing tribes. Its mantling foliage is its greatest beauty, this, from the peculiar sweeping horizontal growth of its branches, forms a graceful covering of foliage impervious to the heat and rays of the sun, thus producing a depth of shadow that greatly increases the majestic effect. In the old time it was considered the emblem of greatness, strength, and prosperity; thus the righteous were to spread abroad like the cedar of Lebanon, and thus Assyrian power was set forth—"Behold the Assyrian was a cedar of Lebanon, with fair branches and with a shadowy shroud, and of an high stature, and his top was among the thick boughs, his boughs were multiplied, and his branches became long. The fir-trees were not like his boughs, nor the chestnut-trees like his branches, nor any tree in the garden of God like unto him in beauty."

The wood of the cedar-tree was used for a variety of purposes. When Moses dictated the cleansing of the leper, he bid him take an offering of two sparrows, *cedar wood*, wool dyed in scarlet and hyssop, when Moses and Aaron were commanded to sacrifice, the priest was to take *cedar wood*, and hyssop and scarlet. At a later period we are informed of the negotiations with Hiram king of Tyre for the supply of cedar-trees out of Lebanon, and of the uses to which the timber was applied in the construction of that glorious temple, when

> "No workman's axe, no ponderous hammer rung—
> Like some tall palm the graceful fabric sprung."

But the glory of Lebanon has departed, says Lamartine,—"These trees diminish in every succeeding age. Travellers formerly counted thirty or forty, more recently seventeen, more recently still only twelve. There are now but seven. These, however, from their size and general appearance, may be fairly presumed to have existed in biblical times. Around these ancient witnesses of ages long since past, there still remains a little grove of yellow cedars, appearing to me to form a group of from 400 to 500 trees or shrubs. Every year, in the month of June, the inhabitants of Beschierai, of Eden, of Kandbin, and the other neighbouring valleys and villages, climb up to these cedars, and celebrate mass at their feet. How many prayers have resounded under their branches, and what more beautiful canopy for worship can exist?"

A PEEP INTO THE MYSTERIES OF PATER-NOSTER-ROW.

THE business of the day begins at nine o'clock, or in some houses a little earlier. Punctuality of attendance is so essential that, in houses where many assistants are kept, it is customary to have a book in which they sign their names as they arrive. This book is (I can answer for one firm at least) removed into the private counting-house as the last stroke of nine vibrates, and the unlucky arrivals after that instant have to proceed thither to sign their names in red ink, and sometimes with a pen handed to them with studious politeness, by one of the heads of the establishment. This contrivance is generally successful in enforcing punctuality, and punctuality is necessary, for "the post is in."

The medium post of a first-rate house is from 100 to 150 letters, but often the number will run as high as 300, and these almost all contain orders for books, nearly the whole of which will be packed and sent off the same night, though each letter may require twenty different places to be visited to collect the various works required.

The letters are first received by the head porter, who is a very superior man to the porters generally employed. He cuts them open, and takes them into the counting-house, where they are inspected by one of the principals, or by a party appointed for that purpose. Their contents if remittances are handed to one party, if orders, to a second, if other business, to a third. Each department is complete in itself; and, from constant practice, there is no difficulty in assigning every communication to one or other of them. As the execution of the orders is the most laborious part of the business, I follow a clerk with a bundle of open letters in his hand into the "country department." The arrangements of this important branch are admirably adapted for executing the numerous and complicated orders from the country quickly and accurately. The portion of the house allotted to this part of the business is divided into compartments, each fitted with desks and benches and all necessary conveniences. Each compartment is called a "division" and each division takes entire charge of so many letters of the alphabet as are allotted to it. All customers whose names begin with those letters are of course the property of that particular division, and to those whose names it attends and to none other. These compartments are each as distinct and complete in all their arrangements as so many separate houses of business. Each one consists of a "head" or manager, a "second" or assisting clerk, two or three collectors, a packer, and frequently there are several "extras" or assistants. These divisions are from two or three to six in number, according to the size of the house. Round each division are several wooden compartments, to receive the books ordered as they are collected, the orders are placed with them, that the goods may be called over with the letter previous to packing. Each head of a division finds sundry signs affixed to the letters he receives for his special instruction. Thus those orders which the firm may not wish to execute, from the correspondent's account being overdue or doubtful, or from any other cause, is marked with a round O, signifying that the order is to be read as nought, books on which no commission is to be charged for the trouble of getting are marked with an X; and there are marks for other matters requiring attention.

Seated at his desk, the head of each division receives the letters handed to him by a clerk from the counting-house of the principal. First, the name and address of each correspondent is entered in a diary, and opposite each is put certain cabalistic signs to denote by what conveyance the parcel is to be sent off. Then the letter is handed to one of those under his direction, to be "looked out." I am allowed the privilege of seeing how this is done, and am attached to a "collector," who, for some reason unknown to me, rejoices in the cognomen of "Shiney." The stock of books kept by a large house is immense. The "London Catalogue" of modern publications contains the titles of 46,000 distinct works, and it will be easily understood that without careful and exact arrangement it would be impossible to pick out particular books from a vast collection as soon as wanted. All the walls of every room are covered with shelves, and on these the books are ranged in piles in alphabetical order. There are usually twenty alphabets of books—one for quarto, cloth, another for quarto, sewed, one for imperial octavo, cloth; another for imperial octavo, sewed, and so on, according to the size of the book, from quarto, a sheet folding into four leaves, down to 32mo, a sheet folding into thirty-two leaves, and sometimes there is a folio, and a miniature alphabet, for sizes above and below these.

Every book has a label stuck in its side, with its name and price clearly written on it, and when the last copy of a book is taken out of the alphabet, the label is what is called "thrown up,"—that is, put into a box kept for the purpose. The stock-clerk visits these boxes every day, and clears them, and the alphabets are replenished with such books as are kept tied up in large quantities. Those that cannot be thus replaced are kept in a book called the "Out-of-book" and the labels are arranged alphabetically in a drawer or cupboard until wanted again.

Following Shiney in his "looking-out" expedition, I go upstairs and down-stairs, through what seems to me endless rooms and passages, passing by miles of books, sometimes stooping to the floor, sometimes mounting ladders to the ceiling—occasionally getting glimpses of heaven's light, but most often pursuing the search by aid of candles. Shiney is one of those who reads as he runs, his practised eye catches the titles of books far off, almost before I can discern the label. He is not sorry to have a companion in his labour, for his hands soon get full, and he asks me "just to hold the light," and "just to hold the ladder," and "just to hold a pile of books," until his letter is "looked," and we return to the division to which Shiney is attached.

This process is repeated with each letter of orders until the whole of them are "looked," or, in other words, until all the books ordered in them that are contained in the stock are procured. But as a large proportion of the works ordered are not "kept in stock," it is necessary to despatch messengers to purchase such books from their various publishers. This is the next business of the collectors. They carry with them a blue bag, and a book containing the orders they have to execute. By one o'clock it is expected that the work of "looking out" from the stock is finished. The head then goes through each letter, and marks thos book not found in stock with an X or O, according as the books wanted are published east or west of the Row. The

letters are then passed through the hands of the east and west collectors, for each to extract the orders which belong to him. This done, the collectors' books are carefully read over by a person who has the most extensive knowledge of literature and publishers, and whose business it is to check every order, and see that nothing is purchased which is contained in stock, and that the collectors thoroughly understand the books wanted. The parties who thus watch over the stock and the collectors are remarkable for their capacious memories, and one or two of them are perfect living catalogues. The late Mr. Taylor, of Simpkin and Marshall's house, had most marvellous powers of recollection in this way. His knowledge of the titles of books would have called forth an emphatic "prodigious!" from Dominie Sampson himself, and his memory was as ready as it was retentive.

The process of "taking down" in the memorandum-books being completed, I take my departure with Shiney, who is a West End collector, to commence the second part of his day's labours I accompany him through the great arteries of London, where the life-blood of the metropolis rushes in a continuous torrent, up Fleet-street, the Strand, Pall-mall, Piccadilly, in and out various side-turnings, then into Regent-street and its tributaries, down Oxford-street, through Holborn, to the Row again; and, during all his journey, Shiney has been diving under horses' heads, dashing over perilous crossings, never stopping for the rain which has come down unexpectedly; shouldering loungers aside—for there is no time for politeness—darting into dozens of shops, and making inquiries of the shopmen, who instantly bring forth the article they sell, paying in a hurry, scarcely counting the change, tired and jaded, and with his burdensome bag growing continually heavier as he moves onward. It is six o'clock, and we have been walking three or four hours at the top of our speed, and while we have been west another collector has been east, and thus every petty country bookseller has had the books he requires collected for him over a surface of many miles, and from scores of publishers.

Still every order is not executed some books are "out of print," some being printed in the country, and the London agent being out of them, are described as "none in town," others are binding, and said to be "none done up," and others again cannot be met with at all, and are set down in the invoice as "can't find." While the collectors are out the heads and seconds of the divisions are entering up the day-books and preparing the invoices, and until the collectors return at five or six o'clock the houses are very quiet As they come in the parcels are "called," which consists in calling over each item, and carefully examining the books "looked out" or "collected." The invoices are then completed, the prices are filled in from the collectors' books, and the parcels are handed over to the packers, and, lastly, despatched to the booking-offices for conveyance to their destinations. The invoices are usually sent off by post that evening.

This is the general routine of each day's business of the wholesale houses; and when we consider the magnitude of the publishing trade, and the number of new books continually issued, it is surprising to what perfection the system is carried, and how correctly it works.

But "magazine-day" is the time to see the Row, or as a punster, in reference to the excitement which then prevails, would write it, the *sow* in its glory. Think what it must be, in addition to the ordinary business, for the trade to have to deal with two millions and a half of periodicals The number of parcels (many of very large size) sent out by one house alone is stated at between five and six hundred. On the night preceding the last day of the month, at about nine o'clock, the divisions begin to "call" Shiney informs me that it is sometimes one o'clock in the morning before the business on such occasions is disposed of. And the extra work is almost as great at "almanac time" or "school book time" Some persons of feeble constitutions dread these periods, but Shiney is brave, he knows the public must be served, and he buckles cheerfully to his work.

[This graphic sketch is taken from the BRITISH JOURNAL, a new monthly contemporary of considerable talent]

THE FORMATION OF AN ICEBERG.—The glacier is composed of fresh water Its elements are modified more or less by the character of its base. The fracture and disruption is caused by wave action, by gravitation and temperature. The iceberg is a liberated glacier. I know not how to describe it. In colour, its whiteness is opaque, like frosted silver. Its base is cobalt blue, and its edges flash and sparkle. Its shape depends on the influence around it. You find all landscape forms and features upon it. Mingled with these pleasing associations are higher feelings of grandeur. I have measured them, and have found them to be 300 feet, and the entire height of one such is, therefore, 2,100 feet. Millions of tons are embraced in it, and it moves sometimes three miles an hour. There is something infinitely imposing in its march through the ice-fields.

A SELF MADE MAN.—Mr. Lindsay, the gentleman whose name may be known to our readers in connexion with the proceedings at the late election for Monmouth, is at present a candidate for the representation of Dartmouth, and in a speech to the electors, delivered lately, he defended himself against the attacks of a Tory agent, and gave the following interesting account of his fortunes.—"He should be the last to mention a word about himself had he not been taunted with falsehood He was told he was a mere commonplace shipbroker God knew he was commonplace enough once; he was the architect of his own fame, and he hoped no one would despise him on that account He was but a young man now, and at the age of fourteen he was left an orphan boy to push his way in the world He left Glasgow to find his way to Liverpool, with 1s 6d only in his pocket, and so poor was he that the captain of a steamer had pity on him, and told him that he would give him a passage if he would trim the coals in the coal-hole of the steamer He did so, and thus worked his passage He remembered that the fireman gave him a part of his homely dinner, and never had he ate a dinner with such relish, for he felt that he had wrought for it and earned it; and he wished the young to listen to this statement, he had derived a lesson from that voyage which he had never forgot At Liverpool he remained for seven weeks before he could get employment, he abode in sheds, and [illegible] a week [illegible] he found shelter in a West Indiaman, he continued [illegible] before he was nineteen he had [illegible] At twenty-three he retired from the sea, his friends, who, when he wanted assistance, had given him none, having left him to act which they could no longer keep He settled on shore—his career had been rapid, he had acquired prosperity by close industry, by constant work, and by keeping ever in view that great principle of doing to others as you would be done by And now, instead of being a commonplace shipbroker, he would tell them at thirty-five—for he was no older—what was the amount of business which the firm he had established, and was at the head of and acting partner in, transacted During the last year alone their charters executed amounted to upwards of 700, and this year it bade fair to be larger The amount of their insurances was £3,000,000 sterling, they had shipped, as contractors, upwards of 100,000 tons of coal, and upwards of 150,000 tons of iron. They had imported in the famine year, as brokers, 1,500,000 quarters of corn Then, as to the next charge, that he was no shipowner, and did not own a ton of shipping In consequence of this statement he had been induced to copy out a list of the ships in which he owned a proportionate rate, and was managing owner of all, a large and high class of British-built ships. He then read a list of eighteen vessels, besides steamers and others, ranging from 860 to 310 tons burden, the total tonnage being 21,002—the largest portion of which he owned himself, and was manager for the whole."

LITERARY NOTICES.

THE ILLUSTRATED EXHIBITOR AND MAGAZINE OF ART.—The First Volume of this splendidly embellished work, handsomely bound, price 6s 6d, or extra cloth gilt edges, 7s 6d, is now ready, and contains upwards of Two Hundred principal Engravings and an equal number of minor Engravings, Diagrams, &c

HISTORY OF HUNGARY, WITH UPWARDS OF EIGHTY ILLUSTRATIONS—The First Volume of the New Series of THE WORKING MAN'S FRIEND, neatly bound in cloth, price 2s 6d, contains the completest History of Hungary ever published, also a History of China and the Chinese, with Forty-six Illustrations of the Manners, Customs, Public Buildings, Domestic Scenes, &c, of this most remarkable people, together with numerous instructive Tales and Narratives, Biographies, with Portraits, Scientific and Miscellaneous Articles, &c

CASSELL'S EMIGRANTS' HANDBOOK, a Guide to the various Fields of Emigration in all Parts of the Globe, Second Edition, with considerable Additions, and a Map of Australia, with the Gold Regions clearly marked, is now ready, price 9d.

THE PATHWAY, a Monthly Religious Magazine, is published on the 1st of every month, price twopence—32 pages enclosed in a neat wrapper Vols. I and II, neatly bound in cloth and lettered price, 2s 3d each, are now ready

CASSELL'S SHILLING EDITION OF EUCLID.—THE ELEMENTS OF GEOMETRY, containing the First Six, and the Eleventh and Twelfth Books of Euclid, from the text of Robert Simson, M.D., Emeritus Professor of Mathematics in the University of Glasgow; with Corrections, Annotations, and Exercises, by Robert Wallace, A.M., of the same University, and Collegiate Tutor of the University of London, will be ready with the Magazines for August, price 1s in stiff covers, or 1s 6d neat cloth

SCRIPTURE LIBRARY FOR THE YOUNG, in Shilling Volumes.—The first two volumes of this instructive series of works, "The LIFE OF JOSEPH," illustrated with sixteen choice engravings and maps, and "The TABERNACLE, its PRIESTS, and SERVICES," with twelve engravings, are now ready. "The LIFE OF MOSES" is in the press.

MISCELLANEA.

A YANKEE IN ITALY.—A correspondent of the *Boston* (U S.) *Transcript*, writing from Naples, thus describes an amusing interview with a live Yankee:—"The other day, on reaching the top of Vesuvius, I descried a man sitting astride on a block of lava, I don't know why, but I marked him at once for one of my countrymen. As I advanced towards him I could not help noticing the cool manner in which he and Vesuvius were taking a smoke together His long nine was run out like a bowsprit, and he took the whole affair as calmly as one could look at a kitchen fire at home As soon as I came up with him, he bawled out, 'Hallo, stranger' pretty considerable lot of lavy around here! Any news from down below? You haint tuckered out yet, be ye?' On asking him if he had looked in the crater, he replied, 'Yass! but I burnt the legs of my trousers though, I tell *yew*' He turned out to be a man from New England, who came up from Marseilles to see the volcano."

A SAFE OFFER.—Mr. Barnum, in a recent temperance address, said that he would give more for a drunkard who succeeded in business, as a public curiosity, than for anything he ever exhibited

SCIENTIFIC EDUCATION.—A lady who lately visited an infant school was treated to the following exhibition —Schoolmistress (unfolding her umbrella)—"What is this, my dear?" Pupil—"An umbrella, ma'am" "How many kingdoms does it contain?" "Three."—"What are they?" "Animal, mineral, and vegetable."—"Name the animal?" "Whalebone."—"The mineral?" "The brass."—"The vegetable?" "The cotton."

TO MAKE WATER COLD IN SUMMER —The following is a simple mode of rendering water almost as cold as ice —Let the jar, pitcher, or vessel used for water, be surrounded with one or more folds of coarse cotton, to be constantly wet. The evaporation of the water will carry off the heat from the inside, and reduce it to a freezing point. In India, and other tropical climes, where ice cannot be procured, this is common. Let every mechanic and labourer have at his place of employment two pitchers thus provided, and with lids or covers, one to contain water for drinking, the other for evaporation, and he can always have a supply of cold water in warm weather. Any person can test this by dipping a finger in water and holding it in the air on a warm day; after doing this three or four times he will find his finger uncomfortably cold

A MONSTER.—The bones of an enormous animal have recently been found twelve feet below the surface of the ground at Hampton, near Evesham, including a tusk four feet long, and a molar tooth weighing 9½ lb

LOOK OUT!—A Frenchman thinks the English language is very odd. "Dare is 'look out,'" he says, "which is to put out your head and see; and 'look out,' which is to haul in your head not for to see—just contraire."

PROTECTIONISM is said to be like putting a turnpike gate on the throat of Great Britain.

TOO TRUE.—An Irishman being asked why he left his country for America, replied,—"It wasn't for want. I had plenty of that at home."

THINK OF THIS.—"What would I give," said Charles Lamb, "to call my mother back to earth, for one day, to ask her pardon upon my knees for all those acts by which I gave her gentle spirit pain!"

GALLOWAY SUPERSTITIONS.—Good signs of a happy year:—To be sitting when you see the first swallow of the season. Also, if the first foal of the season which you see is standing before its dam, or if the first lamb you see is looking at you.

SCOTCH MARRIAGES.—In a recent case at the Westminster Police-court, involving the validity of a Scotch marriage, a Mr. James Law, said he was acquainted with the Scotch practice, and gave it as his opinion that the marriage was legal, that a man in Scotland was often married without knowing it, that a sweep or an applewoman might perform the ceremony, and it would still be a legal marriage, if the two persons declared themselves man and wife, and that it would be equally legal if the bride and groom were drunk, provided they could say "Yes," and "No."

POLITENESS AND PIETY.—A lady who was a strict observer of etiquette, being unable to go to church one Sunday, sent her card.

ANGER, says Clarendon, is the most impotent passion that influences the mind of man, it effects nothing it undertakes, and hurts the man who is possessed by it more than the object against which it is directed

NEGRO POETRY.—The *New York Mirror*, in an article on negro minstrels, says, "There is something in 'Uncle Ned' (who loses his wool, but ultimately goes 'where the good niggers go') like Ossian's music of memory, pleasant and mournful to the soul" "Dearest May" has become classic, —a sort of Venus Africanus, with

> "Her eyes so bright they shine at night,
> When the moon is gone away"

And as for "Poor Lucy Neal," the "whole world is redolent of the sweet and plaintive air in which her charms are chanted, and the beauty of her shining form often comes over us like a pleasant shadow from an angel's wing!"

WORTH KNOWING.—A veterinary surgeon writes to the papers warning cowkeepers against allowing their animals to eat the plant known as the Water Breeder (*Phelararum Aquaticum*), which is highly poisonous to cattle.

WALKING LIKE A FLY, HEAD DOWNWARDS.—We learn from the *Scientific American*, published in New York, that a Mr. M'Cormick has been rather astonishing some of the natives lately by walking on a marble slab head downwards, in one of the amphitheatres It is somewhat frightful to see a fellow-mortal perched up in mid-air, with his head to the ground, but a long way above it, and his feet to the roof It is the first feat of the kind ever performed, so far as we are aware, and Mr. M'Cormick has been dubbed with the title of professor for his scientific performance. The feat is performed upon well-known principles of science, by using air-pumps, and working them step by step, to extract all the air under appendages on his feet, so that the outward pressure on one foot will exceed his whole weight. If he is 150 lb weight, it requires 10 square inches of atmospheric pressure to balance that, for the atmospheric pressure is fifteen pounds on every square inch of the earth's surface. This pressure must be on one foot, while the other is being moved forwards. The courage required to perform the feat is not small, and the labour is very severe and tedious It is needless to say that, although the polished marble slab is the greatest wonder to some, he could not perform the feat on rough, porous boards.

ANSWERS TO CORRESPONDENTS.

A COUNTRYMAN.—Good black ink in dragons may now be bought cheap at most general shops or stationers; but if you wish to make it yourself, the following receipt has been well recommended Bruised Aleppo nut-galls (the best blue sort) 1 lb.; logwood in their chips, ½ lb; sulphate of iron, ½ lb; gum-arabic, 6 oz., sulphate of copper, 1 oz., sugar-candy, 1 oz. Boil the galls and logwood in 2½ gallons of water for one hour, or until reduced to one half, strain, add the other ingredients and stir well till all are dissolved; when clear, pour off and preserve in stone bottles well corked. This will make a full coloured ink. If wanted chiefly for *steel pens*, use less gum. A few drops of creosote will prevent ink from turning mouldy.

JUNIOR.—Microscopes may be had from 10s. to £10. We think one at 20s. or 30s. would answer your purpose.

A YOUNG MECHANIC.—We cannot now give you our opinion as to the "influence of strikes" on the condition of mechanics and labourers, but we can state, upon competent authority, that upwards of *thirty thousand pounds* weekly have been lost in wages during the fifteen weeks' strike by 20,000 skilled operatives, or *four hundred and fifty thousand pounds* in all! A moderate calculation places the loss of profit and the fixed expenses of employers at the same amount; so that nearly a *million sterling* has been deducted from the fund for the payment of wages, by the agency of those whose great aim was artificially to raise wages

G. EDWARDS.—We believe a "Total Abstinence Benefit Society," such as you wish to join, will be found at "the Good Samaritan Temperance Hall," Little Saffron Hill, Clerkenwell The publication you inquire about will, most likely, extend to many volumes

PHILOMATH.—The process of preparing "patent yeast" is kept a secret by the proprietor, but we have by us the following formula, which may answer your purpose.—Bean flour, 4 lb., water six quarts; boil for half an hour, pour the decoction into any suitable vessel, and add wheat flour 4½ lb, stir well together, and when the temperature reaches 55 degrees, add beer yeast 2 quarts, mix well, and keep the mixture in a situation where it will not be chilled. In twenty-four hours after the commencement of the fermentation add barley or bean-flour 7 lb, make a uniform dough by thorough kneading, roll it out as thin as a crown-piece, and cut it with a wine-glass into small cakes, which must be placed on sieves or laths, and dried in the sun, and then preserved in a dry situation. *For use*, one of these cakes is to be broken in pieces, laid in warm water, and set in a warm place during twelve hours, when the soft mass will serve the purpose of beer yeast. Of course, a smaller quantity can be made, observing the above proportions

AN INQUIRER.—We cannot undertake to prescribe for you. "Fatness" is a diseased condition. If the assimilating vessels supply new matter faster than the absorbents take away the old,—that is, faster than there is need,—obesity, or fatness, is the consequence. This diseased condition should be judiciously treated by a competent medical practitioner.

METALLAD.—Glass and silk are non-conductors; either of these will probably suit your purpose.

H. Y.—The account of the *Cycada Septendecim*, which appeared in No. 56 of the old series of the "Working Man's Friend," was taken from Latrobe's travels in North America. Its existence and periodical appearance has been noticed by other writers, but we have not heard whether it visited Maryland or Virginia in 1851, as predicted.

S. L. and S.—Above we have furnished a receipt for making *black* ink. A superb liquid *blue* ink is made thus:—Pure Prussian-blue, powdered, 1 oz., concentrated muriatic acid, ½ oz. to 2 oz. Mix in a glass bottle, or matrass, and after thirty hours dilute with sufficient quantity of water. Add a little clear gum-arabic. For a very fine *red* ink:—powdered cochineal, 1 oz.; hot water, ½ pint; digest, and when *quite cold*, add spirit of hartshorn, ½ pint, diluted with 3 or 4 oz. of water; macerate for a few days, then decant the clear.

All Communications to be addressed to the Editor, at the Office, 335, Strand, London.

SPAIN AND ITS PEOPLE.—IV.

THE CONQUEST OF GRANADA AND EXPULSION OF THE MOORS.

UPWARDS of eight hundred years were passed and gone, says Washington Irving, since the Arabian invaders sealed the perdition of Spain, by the defeat of Don Roderick, the last of the Gothic kings. From the period of that disastrous event, kingdom after kingdom had been gradually recovered by the Christian princes, until the single but powerful territory of Granada alone remained under the domination of the Moors.

At the period of which we are now speaking, Ferdinand and Isabella sat on the throne of the united kingdom of Arragon, Leon, and Castile, and Muley Aben Hassan was the lord of Granada. This Moorish monarch was the descendant of a direct line of conquering kings, and had succeeded his father Ismael in 1466, while Henry the Fourth, the brother and immediate predecessor of Queen Isabella, was king of Leon and Castile. The Moorish power in Spain had been for years declining, and the Christian princes had even gone so far as to exact tribute-money and captives from the king of Granada. This kind of submission had been observed by Ismael, but when Aben Hassan came to the throne he contemptuously refused to acknowledge the right of the Spaniards; and when, in 1718, Don Juan De Vera arrived at the gates of Granada, to demand tribute in the names of Ferdinand and Isabella, he was received with a cold, haughty, and proud denial. "Tell your sovereigns," said the Moor, "that the kings of Granada who used to pay tribute to the Castilian crown are dead. Our mint at present coins nothing but blades of scimitars and heads of lances." This bold defiance was speedily carried by the ambassador back to Ferdinand, who saw in it sufficient excuse for immediate action. "I will pick the seeds from out this pomegranate one by one," said he playing upon the word which is Spanish for Granada; and, as we shall see, he was as good as his word.

A SPANISH BULL-FIGHT.

During the stay of the ambassador and his retinue in the Moor's chief city, they had cast their eyes about them, and noted well the strength and situation of Aben Hassan's warrior's. They saw at once that they had a noble foe to contend with—fierce, implacable, and ready for hostilities, come from what quarter they might. They saw that the Moor was well prepared. His walls and towers were of vast strength, in complete repair, and mounted with lombards and other heavy ordnance. His magazines were well stored with all the munitions of war; he had a mighty host of foot-soldiers, together with squadrons of cavalry, ready to scour the country, and to carry on either offensive or defensive warfare. The Christian warriors noted these things without dismay, their hearts rather glowed with emulation at the thought of encountering so worthy a foe. As they slowly paraded through the streets of Granada, on their departure, they looked around with eagerness on its stately palaces and sumptuous mosques; on its alcayceria or bazaar, crowded with silks and cloth of silver and gold, with jewels and precious stones, and other rich merchandise, the luxuries of every clime; and they longed for the time when all this wealth should be spoil of the soldiers of the Faith, and when each tramp of their steeds might be fetlock deep in the blood and carnage of the infidels.*

Here was an opportunity to pick the first stone from the pomegranate; but before preparations could be made by Ferdinand, the first blow was struck by the Moor. Aware of the intentions of the Spanish king, Aben Hassan made a hasty descent upon the fortress of Zahara, a frontier town, situated on a rocky mountain between Roda and Medina Sidonia, and hitherto considered impregnable. Ferdinand being engaged in a war with Portugal at that moment could not prevent this taking place; but he determined to be revenged in kind. Repressing his indignation, he sought counsel among his friends; and hearing that Alhama, the "key of the kingdom of Granada" was but poorly guarded, it was determined to make a descent upon that fortress when the Moors should least expect them. The expedition was conducted by Don Roderigo Ponce de Leon, Marquis of Cadiz, a champion, whose fame in Spanish history almost equals that of the Cid. It was so entirely successful, that before the Moors could well recover from the surprise of the first attack, Alhama was in the hands of the Christians. It had been foretold by a Moorish prophet that the Christians should conquer; and when, at last, the news reached Granada that the cavaliers of Ferdinand had actually obtained possession of the town and fortress of Alhama, nothing was heard in the streets but terror and lamentation. "Alhama is fallen! Alhama is fallen!" exclaimed the terror-stricken inhabitants. "The Christians garrison its walls; the key of Granada is in the hands of the enemy!" The fall of this celebrated city is still commemorated in plaintive verse, and the grief of the people of Granada was vented in one mournful cry—"Ay de mi, Alhama." Lord Byron's translation has rendered the Moorish romance of "Woe is me, Alhama," familiar to English ears.

But Muley Aben Hassan was not the man to sit coolly down and see his enemies in possession of one of his strongholds without an effort. On the contrary, he immediately laid siege to Alhama; and to such straits were the Christians reduced, that it became very questionable whether they could hold out till succour arrived. A reinforcement, however, under the command of the Duke of Medonia, the hereditary enemy of the marquis, came at last, and the Moorish monarch was compelled to raise the siege.

The question now arose as to whether it would be most prudent to retain or abandon their new possession. A council of war was therefore held at Cordova to consider this subject. Various were the opinions of the counsellors; but in the midst of the debate the queen arrived. On hearing the subject of their discourse, she was highly indignant. "What!" she exclaimed, "shall we destroy the first fruits of our victory—shall we abandon the first town we have wrested from the Moor? You talk of the expense of maintaining Alhama! Did we not know when we undertook the war, that it would be one of infinite cost, labour, and bloodshed? And shall we shrink from the task, the moment a victory is obtained, and the question is merely to guard or abandon its glorious trophy? Let us hear no more about the destruction of Alhama; let us maintain its walls sacred, as a stronghold granted us by Heaven in the centre of this hostile country; and let our only consideration be, how we may extend our territory on all sides, till we shall have driven the infidel out of the land." These words of the brave Isabella silenced the warriors, and Alhama was forthwith fortified and garrisoned by the Spaniards.

Following the course of the events which took place in the peninsula, we must glance at the Moorish king in his capital of Granada.

Muley Aben Hassan had of course, like most of his race, a number of wives. Of these, two were sultanas, or wives-in-chief—Ayxa, a Moor; and Fatima, a Christian, called, for her beauty, Zoroya, or the Light of Dawn. Ayxa had borne a son to him, named Mohammed Abdalla, or, more frequently in the Christian chronicles, Boabdil el Chico, or the Younger; and, in the natural course of things, Boabdil would succeed to the sovereignty on his father's death. It had been prophesied, however, by the astrologers on Boabdil's birth, that although he should sit on the throne of Granada, the downfall of the kingdom would take place in his reign. Influenced partly by this prophecy, partly by natural ferocity of temper, and partly by the blandishments of his young wife Fatima—who hated the son of her rival Ayxa, and who was anxious to exclude him from the throne, that one of her own children might obtain it—the old king had contracted such a dislike to Boabdil, that he at last gave orders to put him to death. His mother Ayxa, however, contrived to secure his escape, and taking refuge in the city of Guadix, Boabdil gained the adherence of a large party, and set his father at defiance. Thus, at the time of the breaking out of the war between the Christians and the Moors, Granada was torn asunder by the discord of two hostile factions—at the head of one of which was the old king, Muley Hassan, at the head of the other his son, Boabdil el Chico.

The Moors at first had the fortune of war on their side; and, as a natural effect of this, the subjects of Muley Hassan, who had at first blamed his rashness in beginning a war with the Castilian sovereigns, now hailed him as a successful man is usually hailed by the multitude. As the interests of the old king advanced, those of his son Boabdil declined: and the young chief found it necessary, if he would retain any hold upon the affection of the Moors, to do some brave deed against the Christians, which might eclipse, or at least equal, his father's successes. Accordingly, accompanied by his father-in-law, Ali Atar, Boabdil invaded the Christian territory at the head of 9,000 foot and 700 horse. They had not gone a day's march across the border, when they were met by the Count de Cabra, who had hastily armed a handful of retainers, to signalise himself by a deed worthy of the fame of a Castilian knight. A desperate battle ensued, in which the Moors were totally defeated: twenty-two Moorish banners were taken, old Ali Atar had his skull cloven by the sword of a Spanish cavalier, and the young king Boabdil el Chico, was taken prisoner. When the news of this defeat reached Granada, there was great mourning, especially among the partisans of El Chico. Queen Ayxa, his mother, and Morayma, his sultana, gave themselves up to lamentations; and the minstrels whom they summoned to cheer them, tuned their instruments to strains of sorrow. "Beautiful Granada," they said, "how is thy glory faded! The vivarrambla no longer echoes to the tramp of steed and the sound of trumpet; no longer is it crowded with thy youthful nobles, eager to display their prowess in tourney and the festive tilt of reeds. Alas! the flower of thy chivalry lies low in a foreign land. The soft note of the lute is no longer heard in thy mournful streets; the lively castanet is silent upon thy hills; and the graceful dance of the zambra is no more seen beneath thy bowers. Behold, the Alhambra is forlorn and desolate! In vain do the orange and myrtle breathe their perfumes into its silken chambers; in vain does the nightingale sing within its groves; in vain are its marble halls refreshed by the sound of fountains and the gush of limpid rills. Alas! the countenance of the king no longer shines within these walls; the light of the Alhambra is set for ever!"

The captivity of his son Boabdil left Muley Hassan in undisturbed possession of the sovereign power; and the partisans of the young sovereign—"Young Granada," as we might now term them—were obliged for the time to yield pretended alle-

* Washington Irving's "Conquest of Granada."

giance to the tiger-tempered old king, who, it is said, entered into communication with Ferdinand, with a view to get possession of his son's person. Ferdinand, however, saw the policy of keeping up the internal dissensions of the Moors. Accordingly, after some months, he set Boabdil at liberty, loaded him with kindness, and sent him home to Granada, after having obtained from him an acknowledgment of perpetual vassalage to the Castilian crown. This measure was well-judged. No sooner had Boabdil reappeared in Granada, than the struggle for sovereignty broke out again between him and his father; half of the kingdom declaring for the one, and half for the other.

The war still continued between the Christians and the Moors who acknowledged Muley Hassan for their king. "It possessed," says a writer in the Quarterly Review, "extraordinary materials of interest, in the striking contrast presented by the combatants of Oriental and European creeds, costumes, and manners, and in the hardy and harebrained enterprise, the romantic adventures, the picturesque forages through mountain regions, the daring assaults and surprisals of cliff-built castles and cragged fortresses, which succeeded each other with a variety and brilliancy beyond the scope of mere invention. The time of the contest also contributed to heighten the interest. It was not long after the invention of gunpowder, when fire-arms and artillery mingled the flash, smoke, and thunder of modern warfare with the steely splendour of ancient chivalry, and gave an awful magnificence and terrible sublimity to battle, and when the old Moorish towers and castles, that for ages had frowned defiance to the battering-rams and catapults of classic tactics, were toppled down by the lombards of the Spanish engineers." In this protracted struggle the Spaniards were almost continually victorious, and by the end of the year 1485, the Moorish power had been greatly weakened, and many places of strength had fallen into the hands of the Christians

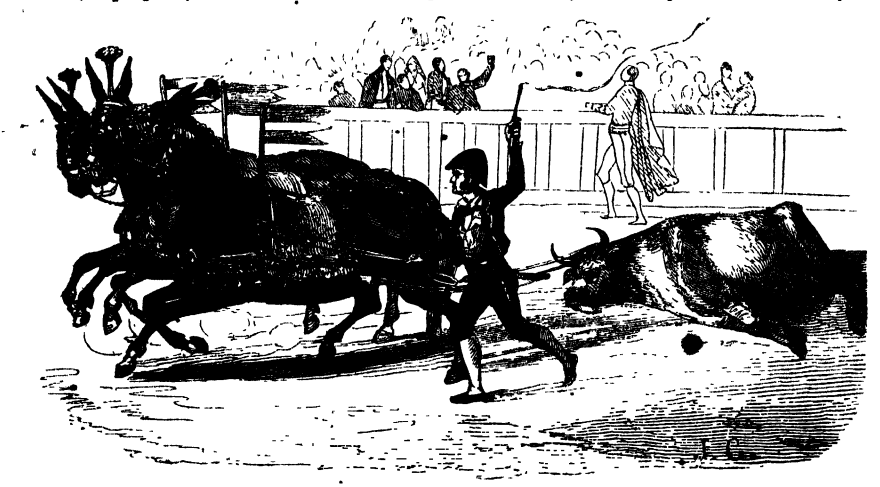
Meanwhile the Moorish king, Muley Hassan, having become infirm through age, had retired to the little city of Almuncar, on the Mediterranean coast, to spend the remainder of his life in repose, leaving the administration of the government in the hands of his younger brother, Abdallah el Zagal. His death shortly afterwards left Abdallah in the possession of the entire regal power—the acknowledged chief of the patriotic party in the kingdom. Between the uncle and nephew the same struggle continued as had been carried on between the father and son; but for the time, El Zagal had the the popular suffrages on his side, and Boabdil's interests waned. Occupying Velez el Blanco, a strong town near the Spanish frontier, Boabdil watched the progress of the war between Ferdinand and Abdallah, ready to render assistance to the former, and to avail himself of his success to become sovereign of Granada. Collecting a large army, which was recruited from all parts of Europe, Ferdinand carried on the war with great energy. Town after town was taken, and battle after battle fought; and at last, in the year 1189, the Spaniards laid siege to the city of Baza, the key to all the remaining possessions of El Zagal in Granada. The war of the Christians with the Moors of Granada had by this time become the theme of the whole world; and all Christendom looked on with admiration at the part which the Spaniards were performing After a resistance of nearly seven months, Baza surrendered on the 4th of December, 1489. With the surrender of Baza all hope failed El Zagal and the patriotic portion of the Moors. They yielded to their fate. El Zagal abdicated his crown for a stipulated revenue; and Boabdil el Chico became the vassal-king of Granada under Ferdinand and Isabella.

Boabdil el Chico, however, had served his purpose; and now that there was no longer occasion for his assistance, Ferdinand resolved to be rid of him. Accordingly, upon various pretexts, which it was easy to form, the vassal-king was required to surrender the city and crown of Granada. On this the Moors prepared for a last effort against their conquerors; and Ferdinand, assembling an army of fifty thousand men, laid siege to Granada, "the last seed of the pomegranate." The siege of the Moorish capital lasted eight months—eight months more thickly crowded with bold actions and romantic exploits than almost any other equal period in Spanish history. On the 25th of November, 1491, however, the city capitulated on the following conditions:—"All Christian captives were to be liberated without ransom; Boabdil and his principal cavaliers were to take an oath of fealty to the Castilian crown, and certain valuable territories in the Alpuxares mountains were to be assigned to the Moorish monarch for his maintenance; the Moors of Granada were to become subjects of the Spanish sovereigns, retaining their possessions, their arms, their horses, and yielding up nothing but their artillery; they were to be protected in the exercise of their religion, and governed by their own laws, administered by cadis of their own faith, under governors appointed by the sovereigns; they were to be exempted from tribute for three years, after which term the pay was to be the same as they had been accustomed to render to their native monarchs; those who chose to depart for Africa within three years, were to be provided with a passage for themselves and their effects, free of charge, from whatever port they should prefer."

In January, 1492, the Spanish sovereigns made their entry into the Moorish capital, while the fallen monarch quitted it. The following is Mr. Irving's fine description of this remarkable event —

"The sun had scarcely begun to shed his beams upon the summits of the snowy mountains which rise above Granada, when the Christian camp was in motion. A detachment of horse and foot, led by distinguished cavaliers, and accompanied by Hernando de Talavera, bishop of Avila, proceeded to take possession of the Alhambra and the towers. It had been stipulated in the capitulation that the detachment sent for this purpose should not enter by the streets of the city. A road had therefore been opened outside of the walls, leading by the Puerta de los Molinos (or the Gate of the Mills) to the summit of the Hill of Martyrs, and across the hill to a postern gate of the Alhambra.

"When the detachment arrived at the summit of the hill, the Moorish king came forth from the gate, attended by a handful of cavaliers, leaving his vizier, Jusef Aben Comixa, to deliver up the palace. 'Go, senior,' said he to the commander of the detachment, 'go, and take possession of those fortresses, which Allah has bestowed upon your powerful lord in punishment of the sins of the Moors!' He said no more, but passed mournfully on, along the same road by which the Spanish cavaliers had come, descending to the vega to meet the Catholic sovereigns. The troops entered the Alhambra, the gates of which were wide open, and all its splendid courts and halls silent and deserted.



"The sovereigns waited here with impatience, their eyes fixed on the lofty tower of the Alhambra, watching for the appointed signal of possession. The time that had elapsed since the departure of the detachment seemed to them more than necessary for the purpose, and the anxious mind of Ferdinand began to entertain doubts of some commotion in the city. At length they saw the silver cross, the great standard of this crusade, elevated on the Torre de la Vela, or great watch-tower, and sparkling in the sunbeams; and a great shout of 'Santiago! Santiago!' rose throughout the army Lastly was reared the royal standard by the king of arms with the shout of 'Castile! Castile! For King Ferdinand and Queen Isabella!' The words were echoed by the whole army, with acclamations that resounded across the vega At sight of these signals of possession, the sovereigns fell upon their knees, giving thanks to God for this great triumph. The whole assembled host followed their example; and the choristers of the royal chapel broke forth into the solemn anthem of *Te Deum laudamus!*

"The procession now resumed its march with joyful alacrity, to the sound of triumphant music, until they came to a small mosque, near the banks of the Xenil, and not far from the foot of the Hill of Martyrs, which edifice remains to the present day, consecrated as the hermitage of St. Sebastian. Here the sovereigns were met by the unfortunate Boabdil, accompanied by about fifty cavaliers and domestics.

"He delivered the keys of the city to King Ferdinand, with an air of mingled melancholy and resignation.

"Having surrendered the last symbol of power, the unfortunate Boabdil continued on towards the Alpuxares, that he might not behold the entrance of the Christians into his capital. His devoted band of cavaliers followed him in gloomy silence; but heavy sighs burst from their bosoms as, shouts of joy and strains of triumphant music were borne on

the breeze from the victorious army. Having rejoined his family, Boabdil set forward with a heavy heart for his allotted residence, in the valley of Porchena. At two leagues' distance, the cavalcade, winding into the skirts of the Alpuxares, ascended an eminence commanding the last view of Granada. As they arrived at this spot, the Moors paused involuntarily, to take a farewell gaze at their beloved city, which a few steps more would shut from their sight for ever. Never had it appeared so lovely in their eyes. The sunshine, so bright in that transparent climate, lighted up each tower and minaret, and rested gloriously upon the crowning battlements of the Alhambra; while the vega spread its enamelled bosom of verdure below, glistening with the silver windings of the Xenil. The Moorish cavaliers gazed with a silent agony of tenderness and grief upon that delicious abode, the scene of their loves and pleasures. While they yet looked, a light cloud of smoke burst forth from the citadel, and presently a peal of artillery, faintly heard, told that the city was taken possession of, and the throne of the Moslem kings was lost for ever. The heart of Boabdil, softened by misfortunes, and overcharged with grief, could no longer contain itself. 'Allah achbar!' (God is great!) said he; but the words of resignation died upon his lips, and he burst into a flood of tears. His mother, the intrepid Sultana Ayxa la Horra, was indignant at his weakness. 'You do well,' said she, 'to weep like a woman for what you failed to defend like a man!' The vizier, Aben Comixa, endeavoured to console his royal master. 'Consider, sire,' said he, 'that the most signal misfortunes often render men as renowned as the most prosperous achievements, provided they sustain them with magnanimity.' The unhappy monarch, however, was not to be consoled. His tears continued to flow. 'Allah achbar!' exclaimed he; 'when did misfortunes ever equal mine?' From this circumstance the hill, which is not far from Padul, took the name of Feg Allah Achbar; but the point of view commanding the last prospect of Granada is known among Spaniards by the name of *El, ultimo suspiro del Moro*, or, 'The last sigh of the Moor.'"

REMOVING THE DEAD BULLOCK FROM THE CIRCUS.

It was not in accordance with the spirit of the age, above all, with the spirit of such a devotedly Catholic country as Spain, that a portion of the subjects of a kingdom, however peaceable and useful, should be allowed to remain undisturbed in the exercise of a religion different from that of the majority. Accordingly, within ten years of the conquest of Granada, the system of forced conversions was employed. Thousands of Moors and Jews, to save their lives, allowed themselves to be baptised; and thousands more left the peninsula for Africa and the east. In the reigns of the successors of Ferdinand and Isabella, the same policy was continued. The bigoted Philip II. especially distinguished himself by his persecuting zeal against the Moors; insomuch that, during his reign, Granada was often in a state of revolt. To crush the Moorish spirit more effectually, and secure their conversion to Christianity, Philip removed them from their original seats on the sea-coast, and distributed them through the interior of Spain. Crushed and conquered as they had been, these sons of Arabia still retained much of their ancient superiority of temperament; and wherever they went, it was remarked that they monopolised all places of wealth and commercial consequence, so that a Moor thrived where a Spaniard would have starved. This, co-operating with the hereditary dislike—which no intermixture or studied conformity on the part of the Moors could extinguish—at last determined the Spanish government to adopt the atrocious policy of expelling the Moors from Spain. The expulsion was finally carried into effect in the reign of Philip III., at the beginning of the seventeenth century. By a decree of that monarch, upwards of a million of his most industrious subjects were expelled from the country in the course of a few months, because they were of Moorish blood. It is calculated that two millions had, in the course of the previous century, voluntarily left Spain. By the edict of Philip III., six Moorish families out of every hundred were to be allowed, or rather forced, to remain for a time in Spain, to teach the Spaniards certain arts and manufactures for which the Moors were celebrated. This was a miserable device to save the country from the effects of the expulsion of her best subjects; and it proved so; for the decline of Spain, as a commercial country, dates from this disastrous event. The fate of the poor outcasts themselves we need not trace. Such of them as survived the sufferings which attended the act of their expulsion, took root in other countries, principally Mohammedan, and there lived in peace.*

The anniversary of the surrender of Granada to the arms of Isabella and Ferdinand is still celebrated throughout the peninsula, with gay festivities and grotesque dances, a kind of pleasure the Spaniards seem to have a genius for; but the glory of the land had departed, and its light was hushed in darkness when the Moors left Spain. In what remains of them we still discover the marks of a great and intelligent people.

FRIENDLY SOCIETIES:

HOW CAN THEY BE MADE TO BENEFIT WORKING MEN?

BY A CONTRIBUTOR.

ALL human institutions are imperfect—they are an admixture of good and evil. Regarded as means to an end, they possess parts, they are both necessary and unnecessary—parts that aid, and parts that retard. Those organisations going under the appellation of Friendly Societies, and designed to aid the working man in laying up for a "stormy day," though primarily good, are, and have been, characterised by so much that is wrong, that it is a question whether their influence has not been for evil instead of good. But because their career has been thus dubious, shall we give them over as unsafe and impracticable? Shall we refrain from labouring to obtain a *certain* help and advantage, because from former efforts it is *questionable* whether evil instead of good has flowed? Oh, no! We think the matter of too much importance either to be discarded or neglected. With this conviction we propose, in this paper to review the claims of the several kinds of Working Men's Friendly Societies now in operation, and to propound, or rather to make more public a plan which, if carried out, will secure more fully the desired end.

First: The Old Clubs—designated more particularly Benefit, Friendly, or Brotherly Societies. Sick-pay, medicine, and medical attendance; and reversionary interest on the death of a member or member's wife, are the objects generally aimed at by these confederations. We deny not but that these clubs have done good. To a greater or less extent they have stayed the flood of sorrow—have kept want out of doors—have enabled the member to do without parochial relief—have caused sickness and suffering to be attended and alleviated—and have spared the heart of the widow or widower many a pang. But while in these points they have done good, in how many others have they done harm? How often has it been that when the fund of a club has attained to a tolerable round sum, that some few members—two, three, or half-a-dozen desperate characters—feeling the sharpness of the circumstances their own sins have entailed upon them, have, to rescue themselves, artfully and unjustly commenced and persevered in agitating the society until they have succeeded in breaking it up and dividing its capital. This course, which has been gone through over and over again, has made multitudes to mourn the loss of the source of their expectations and reliance, and caused them unwillingly to occupy the seat of the reckless and improvident. Again, very many, perhaps the majority of these clubs have commenced with a scale of contributions which are quite inadequate to the liabilities they incur. Those who do not calculate and think are captivated by the trifling outlay and large returns—they become members, and repose on the unfounded assumption that for sickness, old age, and death, they are secure of relief—and the spell is broken only when the day of trial comes, and the society is insolvent and cannot give the promised and expected aid. And then the meetings of these societies are held at public-houses—a fixed amount of liquor-money must be paid by each member—all are forced to contribute to and engage in the pageantry of Whitsuntide. All the members, young and old, pay alike for the same amount of sick-pay and the same reversionary interest on death, and those who are single are forced to contribute for the special benefit of the married. On these and other grounds into which we cannot here enter, we conclude that in many respects the principles of these societies are unjust; that though they do some good, they furthermore, either directly or indirectly, do more harm, that they do not deserve the support, and are unworthy of the confidence, of the working classes.

Secondly: Odd Fellows, Foresters, Old Friends, &c. These are to the mechanic and artisan what the clubs are to the labourer and the unskilled workman. The Manchester Unity of Odd Fellows, the most numerous of this class of societies, have of late taken steps to put their payments on a safe footing. This was wise of them, not only for the purpose of averting bankruptcy, but also to remove from the body the obloquy resting on it for inspiring hopes which could not be realised, in their scheme for supporting the widows and orphans of deceased members. This fact, which is also true of others of these fraternities, exonerates them from a serious charge. But these associations are objectionable in that they mostly meet at public-houses; it is optional with the member whether he purchase liquor, the society paying a rent for the room they use, yet their meetings are very frequent, and visits to an inn are inseparable from temptation—and that temptation assumes an attractive guise in the Odd Fellows' Lodge and Foresters' Court. Doubtless thousands of young men have acquired habits of almost pernicious kind through stated visits to their society. The husband and parent is also too often overcome by the allurements which beset him here—neglected homes, sorrowing wives, and downcast children are sad and certain proofs of this. The objections to the old clubs before instanced, in some particulars apply with greater force to the societies now before us. They do not adopt a scale of contributions graduated to the age of the assurer, they therefore tax the young for the old. The paraphernalia and parade so extravagantly indulged in, and which absorbs so much capital, shows only the egregious folly of its promoters, and when coupled with philanthropy and benevolence is sinfully absurd. The "secret" character of these societies, which government scarcely tolerates, much more sanctions, is also hurtful; and the very doubtful advantages arising from a large number of societies being united are points, with others we could name, which lead us to look upon these associations with no great degree of favour. We are not insensible to the good these bodies have done; we deny not but that in very many cases they have answered the ends for which they were instituted; but the objections given above are, to our minds, fatal; and notwithstanding the intelligence, number, and wealth of these bodies, we are convinced that they do more hurt than good, therefore, we cannot give our sanction to them.

It is to be regretted that the institutions of which we have been speaking, which sprang up spontaneously from the people themselves, and the management of which they have retained in their own hands (all as it should be), should have so frequently disappointed those who trusted in them, and done, indirectly and ultimately, so much that cannot be approved. The existence of County and District Friendly Societies, under the patronage, presidency, and guidance of the upper classes, indicates the failure of the societies just viewed, for it was the faults and failings of the people's institutions that furnished a plea for the establishment of these. Let us look then, at,

Thirdly: County and District Friendly Societies. In addition to sick-pay and reversionary interest on death, these bodies provide for old age by means of annuities, and encourage provident parents to pay in for the endowment of their children. So much care has been taken in the establishment of these societies, that they cannot be charged with disappointing the expectations they had raised; they have generally, perhaps uniformly, attained the objects at which they aimed. Some of the most odious features of the people's societies are not observable in these; in fact, as before stated, they were formed for the very purpose of avoiding them. Truth and justice demand these admissions, which we freely yield. It therefore appears that their claim to the attention and support of young men, is superior to the claims of any other existing order of friendly societies. But we must remark, that though in their wider field their performances are creditable, yet they are not popular. They go on a serious radical error. It is assumed that the people *cannot* do for themselves; hence these associations are founded, supported, and in the main controlled by the upper classes. We freely, yet sorrowingly, admit that the people in these matters *have* acted most injudiciously, but we deny that they *cannot* do differently. We firmly believe that they *can*, that they *must*, and that they ultimately *will* do all they require. We could adduce many arguments against these societies, constituted as they are, as a *permanent* help to the working man, it will suffice to say that these charities have a degrading and pauperising tendency, and that it is morally impossible for a people to be elevated or truly benefited from *without*—it is and must be their *own* work; hence, those who need and compose benefit societies must support and control them. When this is carefully done, the most unmixed good will be derived. This is the consummation we devoutly desire. In closing our remarks on these societies, we unhesitatingly pronounce them as more worthy of support than those before noticed; but, at the same time, we believe that the self-dependent provident spirit of the English people, rightly directed, could create associations infinitely more honourable to themselves, and much more worthy their confidence and support; and this we say while we give to the promoters and patrons of County and District Societies full credit for sincere and philanthropic motives.

The three orders of Benefit Societies we have reviewed, it is presumed, will embrace the whole body. Of these associations we have spoken freely, plainly, and, we believe, fairly; and now, to

turn our reflections to account, let us see, as we do not think either kind of society free from serious objections, how the evil can be avoided and the good be retained and increased. But before we proceed further, we remark that all these societies are alike, in that they are to the working man inadequate and unfit. First, as to their inadequacy. A *multitude* of contingencies are liable to arise out of man's living which he *can* prepare himself to meet, and yet all of these federations together contemplate providing for not more than *half-a-dozen* of them! We need not dilate here in enumerating points; the reader will readily perceive that our charge is not unfounded. These societies should tend to foster and conserve provident habits. They should stimulate the individual to lay up in days of prosperity so that he may be prepared for the numerous and varied ills to which he is exposed. Here existing societies are almost powerless. They incite only to the fulfilment of the contract between the member and the society—the payment of the one or two shillings per month; and if the member is fortunate enough to be able to do this, then he may rest, for aught the society teaches, and fancy himself secure from the ills of life; then he may recklessly squander the remainder of his, it may be, ample means. Then as to *unfitness*. A society should be so constituted, that an individual's membership should not depend on his regular contribution. Thousands of persons, when sickness and death have come upon them, have been deprived even of the advantages accruing from the present societies, in consequence of a temporary embarrassment which has prevented them paying their contribution, and have thus lost all claim on the institution. The uncertainty of a working man's income, &c. &c., and the enrolment book of any friendly society of standing, will testify to the unfitness of these associations in this very important point.

Societies to stimulate and aid working men in providing against the uncertainties connected with *their* lives is what we want. We believe that these objects may be realised, as near as may be, by the adoption of a plan which has been worked out by a benevolent clergyman of Wilts. We subjoin a sketch of this scheme, extracted from the "Report of the Secretaries of the Wilts Friendly Society," which body has added the scheme to their other modes of assurance. This will explain the manner in which they speak of it.

"The principle of mutual assurance is combined with that of deposits. According to this plan, the account of each member is kept separate, and a general fund is raised for sick allowances by a rate on each member's deposit fund, according to the amount of sick-pay to which he is entitled. Upon admission into the society in this class, each member fixes upon the amount of sick-pay which he desires to receive, and for every shilling to which he thus has a claim a sum of 1d. is taken as his contribution towards the sick-fund, whenever a rate is required to keep that fund in an efficient state. When a member becomes sick, a proportion, say half, of his allowance is drawn first from his own fund, the other half from the sick-fund. The fund of each member is his own, and he may withdraw any part of it at any time, provided he does not reduce it below a certain minimum permanent balance, which we may call his Rest; but his power of drawing an allowance in sickness will depend on the amount of his deposits being sufficient to supply his proportion of the sick-pay, and is suspended when that is exhausted, but it may be renewed, and he does not cease to belong to the society so long as he continues to pay 1d weekly for the steward's and surgeon's salary, and to keep his Rest at the amount which may be appointed by the rules." The advantages of this plan are thus enumerated:—

"1. Those who are at present excluded from our society, by the high premium required for advanced life, in this way may be admitted.

"2. Those whose means may diminish after their admission, need not therefore cease their connexion with the society.

"3. Tables and nice calculations will not be wanted each person will put in his money as it suits his convenience.

"4. All fear of imposition or unfairly drawing on the funds will be removed, since it will be the direct interest of the sick member to spare the fund, lest he should drain his own deposit.

"5. Infirm persons, who could not in justice be admitted for benefit insurances payable out of a common fund, may be admitted in this deposit class, on such terms as the surgeon may determine; as for instance, that two-thirds or three-fourths of their sick-pay should be drawn from their own deposit.

"6. The deposit will be at the command of the member just as if it were in a savings bank: he may withdraw a part, or the whole amount (but then he must cease to be a member), or not; and whatever sum may stand in his name at the decease will go to his family, or as he may direct.

"7. There can be no fear of the computations on which this class is established proving insufficient or erroneous, for exactly so much will be raised for the sick-fund, each year, as may be wanted for allowances to sick members.

"It appears, to say the least, that there can be no risk or injury to any person, or to our society, in adopting this plan in addition to our present tables. . . . It may do much good, and enable us to embrace in our association many respectable and industrious persons who could not otherwise join us; and whether few or many accept it, they will in no way interfere with our other members or with the principle upon which our society was established."

Such is the scheme which we most earnestly commend to the intelligent working men of England. We beg that it may have a candid and full examination. It is our impression that it is altogether the best plan that we have yet seen. We are persuaded that it may be made a source of comfort, happiness, and independence to many of England's horny-handed sons of toil. But to realise this in any great degree, it must be done apart from the public house, and quite distinct from the drinking usages of society, which in their nature and operation tend to an opposite course. The more than 10,000 enrolled friendly societies of our kingdom speaks volumes for the energetic self-relying spirit of the people who themselves have founded and supported by far the greater portion of them. This glorious fact more than warrants our conviction, that friendly societies should be self-supporting; that those who *need* and *compose* them should *support* and *control* them. In asking the attention of working men to this "Deposit" scheme, we implore them to consider it in the spirit of our paper, and more particularly in connexion with the few plain hints which we have just thrown out.

STRATFORD-ON-AVON.

(*From the Swedish of* FREDERIKA BREMER.)

It was a most glorious afternoon! The air was delightful. The sun shone with the softest splendour upon the green cultivated meadow-land, divided into square fields, each enclosed with its quickset fence, and within these, small farm-houses and cottages with their gardens and vine-covered walls. It was altogether a cheerful and lovely scene. Westward, in the far distance, raised themselves the mist-covered Welsh mountains. For the rest, the whole adjacent country resembled that which I had hitherto seen in England, softly undulating prairie. There will come a time when the prairies of North America will resemble this country and the work has already begun there in the square allotments, although on a larger scale than here, the living fences, the well-to-do, farm-houses, they already look like birds'-nests on the green billows, for already waves the grass there with its glorious masses of flowers, over immeasurable, untilled fields, and the sunflowers nod and beckon in the breeze as if they said, "Come,—come, ye children of men! The board is spread for many!"

The glorious flower-spread table, which can accommodate two hundred and fifty millions of guests! May it with its beauty one day unite more true happiness than at this time the beautiful landscape of England! For it is universally acknowledged, that the agricultural districts of England are at this time in a much more dubious condition than the manufacturing districts, principally from the fact of the large landed proprietors having, as it were, swallowed up the small ones; and of the landed possession being amassed in but few hands who thus cannot look after it excepting through paid stewards, and this imperfectly. I heard of ten large landed proprietors in a single family of but few individuals. hence the number of small farmers who do not themselves possess land, and who manage it badly, as well as the congregating of labourers in houses and cottages. The laws also for the possession of land are so involved, and so full of difficulty, that they throw impediments in the way of those who would hold and cultivate it in much smaller lots.

The young barrister, Joseph Kay, has treated this subject explicitly and fully, in his lately published work "On the Social Condition and Education of the People."

I, however, knew but little of this canker-worm at the vitals of this beautiful portion of England, at the time when I thus saw it, and therefore I enjoyed my journey with undivided pleasure.

In the evening, before sunset, I stood before Shakspeare's house. "It matters little being born in a poultry-yard, if one only is hatched from a swan's egg!" thought I, in the words of Hans Christian Andersen, in his story of "The Ugly Duckling," when I beheld the little, unsightly, half-timbered house in which Shakspeare was born and went through the low small rooms, up the

narrow wooden stairs, which were all that was left of the interior. It was empty and poor, except in memory; the excellent little old woman who showed the house, was the only living thing there. I provided myself with some small engravings having reference to Shakspeare's history, which she had to sell, and after that set forth on a solitary journey of discovery to the banks of the Avon; and before long, was pursuing a solitary footpath which wound by the side of this beautiful little river. To be all at once removed from the thickly populated, noisy manufacturing towns into that most lovely, most idyllic life, was in itself something enchanting. Add to this the infinite deliciousness of the evening, the pleasure of wandering thus freely and alone in this neighbourhood, with all its rich memories; the deep calm that lay over all, broken only by the twittering of the birds in the bushes, and the cheerful voices of children at a distance; the beautiful masses of trees, cattle grazing in the meadows; the view of the proud Warwick Castle, and near at hand the little town, the birthplace of Shakspeare, and his grave, and above all, the romantic stream, the bright Avon, which in its calm winding course seemed, like its poet-swan—the great Skald—to have no other object than faithfully to reflect every object which mirrored itself in its depths, castles, towns, churches, cottages, woods, meadows, flowers, men, animals This evening and this river, and this solitary, beautiful ramble shall I never forget, never! I spent no evening more beautiful whilst in England

It was not until twilight settled down over the landscape that I left the river-side When I again entered the little town, I was struck by its antique character as well in the people as in the houses, it seemed to me that the whole physiognomy of the place belonged to the age of Shakspeare Old men with knee-breeches, old women in old-fashioned caps, who with inquisitive and historical countenances, furrowed by hundreds of wrinkles, now gazed forth from their old projecting doorways, thus must they have stood, thus must they have gazed when Shakspeare wandered here, and he, the black-garmented, hump backed old man who looked so kind, so original and so learned, just like an ancient chronicle, and who saluted me, the stranger, as people are not in the habit of doing nowadays—he must certainly be some old rector magnificus who has returned to earth from the sixteenth century Whilst I was thus dreaming myself back again into the times of old, a sight met my eyes which transported me five thousand miles across the ocean, to the poetical wilderness of the new world This was a full blown magnolia-flower, just like a magnolia grandiflora, and here blossomed on the walls of an elegant little house, the whole of whose front was adorned by the branches and leaves of a magnolia reptans, a species with which I was not yet acquainted I hailed with joy the beautiful flower which I had not seen since I had wandered in the magnolia groves of Florida, on the banks of the Welika (St John), and drank the morning dew as solitary as now

Everything in that little town was, for the rest, *à la Shakspeare* One saw on all sides little statues of Shakspeare, some white, others gilt—half-length figures—and very much resembling idol images. One saw Shakspeare-books, Shakspeare-music, Shakspeare-engravings, Shakspeare articles of all kinds. In one place I even saw *Shakspeare-sauce* announced, but that did not take my fancy, as I feared it might be too strong for my palate True, one saw at the same place an announcement of *Jenny Lind-drops*, and that did take my fancy very much, for as a Swede, I was well pleased to see the beautiful fame of the Swedish singer recognised in Shakspeare's town, and having a place by the side of his

Arrived at my inn, close to Shakspeare's house I drank tea, was waited upon by an agreeable girl, Lucy, and passed a good night in a chamber which bore the superscription, "Richard the Third" I should have preferred as a bedroom "The Midsummer Night's Dream," a room within my chamber, only that it was not so good, and Richard the Third did me no harm

I wandered again on the banks of the Avon on the following morning, and from a height beheld that cheerful neighbourhood beneath the light of the morning sun. After this I visited the church in which were interred Shakspeare and his daughter Susanna. A young bridal couple were just coming out of church after having been married, the bride dressed in white and veiled, so that I could not see her features distinctly

The epitaph on Shakspeare's grave, composed by himself, is universally known, with its strong concluding lines—

> "Blessed be the man that spares these stones,
> And cursed be he that moves my bones."

Less generally known is the inscription on the tomb of his daughter Susanna, which highly praises her virtues and her uncommon wit, and which seems to regard Shakspeare as happy for having such a daughter. I thought that Susanna Shakspeare ought to have been proud of her father. I have known young girls to be proud of their fathers—the most beautiful pride which I can conceive, because it is full of humble love. And how well it became them!

For the rest, it was not as a fanatical worshipper of Shakspeare that I wandered through the scene of his birth and his grave. I owe much to this great dramatist; he has done much for me, but—not in the highest degree. I know of nobler grouping, loftier characters and scenes, in especial a greater drama of life than any which he has represented, and particularly a higher degree of harmony than he has given and as I wandered on the banks of the Avon, I seemed to perceive the approach of a new Shakspeare, the new poet of the age, to the boards of the world's stage, the poet who shall comprehend within the range of his vision all parts of the earth, all races of men, all regions of nature—the palms of the tropics, the crystal palaces of the polar circle—and present them all in a new drama in the large expression and the illuminating light of a vast human intelligence

Shakspeare, great as he is, to me, nevertheless, only a Titanic greatness, an intellectual giant-nature, who stands amid inexplicable dissonance. He drowns Ophelia, and puts out the eyes of the noble Kent, and leaves them and us to our darkness. That which I long for, that which I hope for, is a poet who will rise above dissonances, an harmonious nature who will regard the drama of the world with the eye of Deity, in a word, a Shakspeare who will resemble a—Beethoven

On my way from Stratford to Leamington I stopped at Warwick Castle, one of the few old castles of the middle ages in England which still remain well preserved, and which are yet inhabited by the old hereditary families The old Earl of Warwick resides now quite alone in his splendid castle, his wife having been dead about six months Two days in the week he allows his castle to be thrown open for a few hours for the gratification of the curiosity of strangers. It is in truth a magnificent castle, with its fortress-tower and its lofty gray stone walls, surrounded by a beautiful park, and gloriously situated on the banks of the Avon—magnificent, and romantically beautiful at the same time.

In the rooms prevailed princely splendour, and there were a number of good pictures, those of Vandyke in particular I remarked several portraits of Charles the First, with his cold gloomy features, several also of the lovely but weak Henrietta Maria; one of Cromwell, a strong countenance, but without nobility; one of Alba, with an expression harder than flint-stone—a petrified nature, and one of Shakspeare, as Shakspeare might have appeared, with an eye full of intense thought, a broad forehead, a countenance elaborated and tempered in the fires of strong emotion; not in the least resembling that fat jolly, aldermanic head usually represented as Shakspeare's.

The rooms contained many works of art, and from the windows what glorious views! In truth, thought I, it is pardonable if the proprietor of such a castle, inherited from brave forefathers, and living in the midst of scenes rich in great memories, with which the history of his family is connected,—it is pardonable if such a man is proud

"There he goes!—the Earl!" said the man who was showing me through the rooms, and, looking through a window into the castle-court, I saw a tall, very thin figure, with white hair, and dressed in black, walking slowly, with head bent forward, across the grass-plot in the middle of the court That was the possessor of this proud mansion, the old Earl of Warwick!

FORGIVE AND FORGET.

FORGIVE and forget—it is better
To put every feeling aside
Than to wear deep-cut rusting fetter
Of revenge in thy breast to abide;
For thy step through life's path shall be lighter,
When the load from thy bosom is cast,
And the sky that's above thee be brighter
When the cloud of displeasure has pass'd.

Though thy spirit swell high with emotion
To give back an injustice again,
Let it sink in oblivion's ocean,
For remembrance increases the pain.
And why should we linger in sorrow,
When its shadow is passing away?
Or seek to encounter to-morrow
The blast that o'erswept us to-day?

Oh, memory's a varying river,
And though it may placidly glide
When the sunbeams of joy o'er it quiver,
It foams when the storm meets its tide.
Then stir not its current to madness,
For its wrath thou wilt ever regret,
Though the morning beams break on thy sadness,
Ere the sunset forgive and forget. ILION.

BRONZES:

HOW THEY ARE MADE.

In a former article (pp. 40—43) we spoke of the process of producing a marble statue: we now propose to speak of bronzes.

Bronze is essentially a compound of copper and tin, which metals appear to have been among the earliest known. Copper is not unfrequently found in its metallic state, and fit for immediate use; and tin, though not so met with, often occurs near the surface, and its ore is easily reduced. These metals, though neither of them possesses the hardness requisite for making instruments either for domestic or warlike purposes, appear to have been early found capable of hardening each other by combination; the bronze, which is the result of this

STATUETTE OF AN ANGEL IN BRONZE.

combination, consisting of different proportions of them, according to the purposes to which it is to be applied.

Bronze is always harder and more fusible than copper; it is highly malleable when it contains 85 to 90 per cent. of copper; tempering increases its malleability; it oxidises very slowly even in moist air, and hence its application to so many purposes. The density of bronze is always greater than that of the mean of the metals which compose it: for example, an alloy of 100 parts of copper and 12 parts of tin is of specific gravity 8·80, whereas by calculation it would be only 8·63.

The green hue that distinguishes ancient bronzes is acquired by oxidation and the combination with carbonic acid; and the moderns, to imitate the effect of the finer antique works, sometimes advance that process by artificial means, usually by washing the surface with an acid. Vasari alludes to this practice among the artists of his time, and to the means they adopted to produce a brown, a black, or a green colour in their bronze.

Bronze was well known to the ancients. Among the remains of bronze works of art found in Egypt none are of large dimensions. Many specimens of bronze works found in India are doubtless very ancient. In the time of Homer, arms, offensive and defensive, are always described as being made of bronze, or perhaps copper alone, which it is possible they had some means of tempering and hardening. The art of casting statues seems to have been first practised in Asia Minor, Greece, properly so called, being then probably too uncivilised to undertake such works. The first and most simple process, among the Greeks, appears to have been *hammer-work*, in

BOY AND SQUIRREL,—A STATUETTE IN BRONZE.

which lumps of the material were beaten into the proposed form; and when the work was too large to be made of one piece, several were shaped, and the different parts fitted and fastened together by means of pins or keys.

The art of metal-casting in regular moulds was undoubtedly known very early, though its adoption in European Greece is probably of a comparatively late date. Its progress was evidently marked by three distinct stages. The first was beating out the metal, either as solid hammer-work or in plates. The next was casting it into a mould or form, the statue being of

course made solid. The last stage was casting it into a mould, with a centre or core to limit the thickness of the metal. Bronze-casting seems to have reached its perfection in Greece about the time of Alexander the Great. The ancient statuaries seem to have been extremely choice in their selection and composition of bronze; and they seem also to have had a method of running or welding various metals together, by which they were enabled to produce more or less the effect of natural colour. Some works are described that were remarkable for the success which attended this curious and, to us, unattainable process. They also tinted or painted their bronze with the same view of more closely imitating nature. Pliny states that there were three sorts of the Corinthian bronze; the first, called candidum, received its name from the effect of silver which was mixed with the copper; the second had a greater proportion of gold; the third was composed of equal quantities of the different metals.

The Romans never attained any great eminence in the arts of design. Their earliest statues were executed for them by Etruscan artists. Rome, however, was afterwards filled with a prodigious number of works of the best schools of Greece; and artists of that country, unable to meet with employment at home, settled at Rome. Zenodorus executed some magnificent works in the time of Nero. But Pliny, who lived in the reign of Vespasian, laments the decline of the art, and the want of skill in the artists, in his time. The practice of gilding bronze statues does not seem to have prevailed till taste had much deteriorated. The practice of art among the Romans declining rapidly, and with but few interruptions, ceases to interest us about A.D. 300. In the beginning of the thirteenth century, at the taking of Constantinople, we read that some of the finest works of the ancient masters were destroyed for the mere value of the metal. Among the few works saved are the celebrated bronze horses which now decorate the exterior of the church of St. Mark at Venice.

Passing over the intermediate age of barbarism, we arrive at the epoch of the revival of art in Italy, under the Pisani and others, about the fourteenth and fifteenth centuries. The celebrated bronze gates of the Baptistery at Florence, by Ghiberti, which M. Angelo said were fit to be the gates of Paradise, are among the more remarkable works of the time. In the succeeding century we find Guglielmo della Porta practising the art with great success; and he is distinguished by Vasari for adopting a mode of casting that was considered quite original, in executing his colossal statue of Paul III. The metal when run from the furnace, was carried downwards by a duct, and then admitted to the under side or bottom of the mould, and thus, acted upon by a superior pressure, as in a common fountain, was forced upwards till the mould was entirely filled. It is necessary in this process that the mould should be kept in a state of great heat, in order that the metal may not cool before the whole is run. But among the artists who are celebrated for their skill in bronze-casting, Benvenuto Cellini holds a distinguished rank: there are few collections that cannot boast some specimens of his smaller productions, while the larger works that remain, particularly at Florence, prove that his high reputation was not undeserved. In his process the metal was allowed to flow at once from the furnace into the channels or ducts of the moulds.

BOY AND BUTTERFLY, A GROUP IN BRONZE.

The modern practice of the English, French, Italian, and German artists does not differ materially in its principle from that of the earlier Italians.

Before any article can be cast in metal it is necessary that a *model* of it be prepared. The models must be made of various substances; clay or wax, or sand with clay, are those usually employed; but they may also be made of wood, stone, or any other material. Upon those models *moulds* must be made. These are commonly composed of plaster of Paris, mixed with brickdust, sometimes sand, or sand with a mixture of cow-hair. For moulds for iron and brass work a yellowish sharp sand is preferred, which is prepared by mixing it with water and then rolling it on a flat board till it is well kneaded and fit for use. If the article is cylindrical, or of a form that admits of it, it is moulded and cast in two pieces; these two parts are then carefully joined together, and the edges or seams carefully cleaned. For the smaller class of works, instead of running the metal at once from a large furnace, earthen crucibles are used, into which the metal is thrown in small pieces: the crucible is placed in a strong heat in a close stove, and as the metal is melted and sinks, more is added till the vessel is full. It is then lifted out by means of iron instruments adapted to the purpose, and the metal is poured from it into the moulds, in which channels or ducts for receiving it have been previously made.

In noticing the different ways of casting, mention has been made of one in which a core is used. The *core*, as its name

denotes, is a part or portion situated within the body of the cast; and its purpose is to form a centre to the work by which the thickness or substance of the metal may be regulated. In coring, the mould is first made complete; into this, clay or wax, or any other fit substance or material, is then squeezed or pressed in a layer of uniform thickness; in large works it is usually from half an inch to an inch thick. This layer represents the metal. The mould, if in parts, is then put together, the above-mentioned layer being left within it, and into the open space in the centre a composition (usually of plaster of Paris with other substances mixed with it) is introduced, and made to adhere to the clay or wax, or rather is filled up to it. This is the core, and it is often made to occupy the whole interior of the mould. When this is *set*, or dry, the mould is taken to pieces, and the material which has been made to represent the metal removed. The mould is then again put carefully together round its core or nucleus, the two portions being secured from contact by stops and keys properly arranged for that purpose. The mould and core are dried to dissipate moisture; and large moulds are strengthened with iron hoops. Channels or ducts are made for the entrance of the melted metal, and others are also made for allowing the air to escape as the melted metal enters the mould, these are called vents. With respect to placing the mould, it is only important to secure a sufficient inclination of plane from the mouth of the furnace to the mould that the metal may run easily and uninterruptedly, and not have time to grow cool and therefore sluggish. The usual method in bronze works of large size is to bury the mould in a pit a little below the level of the furnace, and by ramming sand firmly round it to ensure its not being affected by any sudden or violent shock, or by the weight of the metal running into it When everything is ready, and the metal found to be in a state fit for running, the orifice or mouth of the furnace (which is usually plugged with clay and sand) is opened, when the metal descends, and in a few minutes the mould is filled. The metal is allowed to run till it overflows the mouths of the channels into the mould. The work is then left to cool, after which the mould is scraped or knocked off, and the cast undergoes the necessary processes (such as cleaning, chasing, &c.) to render it fit for the purpose designed.

Large bells and statues are cast in the way first described. Brass ordnance is always cast solid. The model is made round a nucleus of wood called a spindle, and the mould of loam and sand made over it. When this is perfectly dry, the model and spindle within are removed, and the mould is well dried or baked. When ready for casting, it is placed upright in the pit, and the metal is allowed to run into it till filled. What is called a dead head is left at the upper and smaller or mouth end of the gun, which presses the metal down, and prevents its becoming porous as it settles and cools. After a few days the mould is knocked off, and the gun is ready for finishing. The dead head is turned off, and the boring, which is an operation requiring great care, is effected.

After the founding, the metal cast is often finished by chasing, burnishing, lacquering, plating, or gilding.

One of the largest cylinders, cast and bored in iron, is that employed at the Mostyn colliery in Flintshire. It was made at the Haigh Foundry at Wigan, in 1848. It is 17 feet long, by 8 feet 4 inches in diameter, it weighs 22 tons, and the quantity of metal brought to a liquid state for the purpose of casting was 30 tons.

A silver statue was cast at Paris in 1850. In the preceding year M. Pradier exhibited at the Luxembourg a bronze statue of Sappho, which was much admired for its beauty; and a silver copy of this statue was prepared in 1850, as a prize for a sort of Art Union lottery. The founding was intrusted to M. Simonet, who has produced many beautiful specimens in this department of art. The weight of silver used was about four thousand ounces.

The largest cast statue of recent times is the allegorical figure of *Bavaria*, placed in front of the Ruhmeshalle on the Theresien meadow near Munich. The figure is 63 feet high, and stands on a granite base 30 feet high; so that the wreath held in the uplifted hand of the figure is nearly 100 feet from the ground. A winding staircase leads entirely up the interior of the statue. It is said that no fewer than 26 musicians were placed within the head of the statue, on the occasion of the inauguration. The length of the forefinger, 38 inches, w give an idea of the size of the statue. The statue was modell by the great sculptor Schwanthaler, who hastened his death his intense application to it. The founding or casting w intrusted to Stiglmayer; but as he also died, the work w carried out to a successful completion by his pupil Ferdina Miller. The statue was cast in many pieces, one of whi required 380 cwt. of molten bronze!

A new method of casting has been lately adopted f statuary. It is thus described by a writer in the *Athenæum*: "On the 26th of June, we spent some hours at the foundry Mr Robinson, in Pimlico, for the purpose of being witnesses the new process of casting in bronze by which works of gre size and importance are moulded entire, instead of piecem as of old. Every multiplication of the acts by which a wo of Art is to be transferred from its original Art-language in another increases, it will be obvious, the risk of some sacrifi of the author's intentions or proportions —so that, Mr. Robin son's new method, by which a single act of translation is mad to suffice, is at once a simplification and a most valuab improvement. Our readers may remember that the fi experiment on a large scale was made with Mr Behnes Peel statue for the town of Leeds,—and the success was su as to establish the process for future great works. In t present case, the subject was the fine statue, upwards of t feet in height, which Mr. Baily has modelled for Sir Robert native town, Bury, in Lancashire. Of old, the casting of lar pieces, even when such works were divided, took place in pr dug to contain the mould,—and the legs and trunk would hav received the burning stream which was to harden to immor tality within them in upright posture. On the presen occasion, a huge iron case, strongly bound and rivetted, ha been built on the surface of the floor, of dimensions to receiv the full-length figure in a horizontal position. Close at han glowed and roared the huge furnace in which the fusion o metals was, under the compelling fire of a heat intensifie into almost invisibility, for hours going on. When th process of fusion was accomplished, the mixed metal, to th weight of more than two tons, was received into an iro caldron, and swung by machinery to the case which enshrine the mould. In the black roof that formed the roof of th case and of the mould there was one great vortex for th reception of the flaming material,—and from this, channel running in all directions to convey it horizontally to ever part of the figure at once. Here, the liquid flame was skimmed —and after a few minutes of breathless pause—under th influence of some strong excitement to ourselves, and of dee anxiety no doubt to those more immediately concerned—th final signal was given. The caldron was turned over at th mouth of the vortex by the machinery from which it swung,— and in thirty seconds by a stop-watch, the Bury 'Peel' wa cast! The thing was like the creation of an enchantment The workmen at once proceeded to the task of knockin away and uncovering,—and the result is, a cast of surpassin beauty—almost perfect from the mould itself—and scarcel needing the chaser's hand.—We understand, Mr. Robinso will set up the statue and exhibit it in his gallery before i takes its departure for its final abode in the town of Bury.

[The illustrations introduced in this article represent figures the work of German artists, which were shown at the Crysta Palace, in 1851.]

GEMS OF THOUGHT.

The faithful minister (says Thomas Fuller) is as hospitable a his estate will permit, and makes every alms two by his cheer ful giving it.

Church music (says Atterbury) makes our duty a pleasure, and enables us, by that means, to perform it with the utmost vigou and cheerfulness.

Anger (says Clarendon) is the most impotent passion that in fluences the mind of man. It effects nothing it undertakes, and hurts the man who is possessed by it more than the object against which it is directed.

I tell you honestly (says Abernethy) what is the cause of the complicated maladies of the human race. It is their gormandising and stuffing, and stimulating the digestive to excess, and thereby producing nervous disorders and irritations.

ANDRE WOLSKI.

THE province of Cracow is one of the few Polish provinces traversed by a branch of the Carpathian mountains, and in a sweet little valley at the foot of one of these mountains, and but a few miles distant from the source of the river Nida, which flows through its midst, is situated the beautiful and romantic village of Goldstadt. Surrounded on every hand by the landscaped magnificence of nature, embosomed amid the lofty trees that stretch far up the mountain-side, and washed by the gentle stream that wends slowly through the vale; it seems to the traveller as he approaches it to be the very impersonation of repose, of happiness and peace, yet whilst

"Distance lends enchantment to the view,"

a closer inspection and more intimate acquaintance does not seriously alter the preconceived notions of the beauty of this secluded spot. Its inhabitants are honest, industrious, and brave, earning their livelihood by agricultural pursuits or by employment in the neighbouring mines. But at the time of our tale there were none more industrious, none were happier than was the family of John Wolski, who lived in the neat little cottage at the lower end of the village. The small but fertile tract of land that lay near his home, and bordered on the banks of the river, had been tenanted by the Wolski's for generations. His father had there brought up his family; it was there, when weak and infirm with age that he had blessed his three noble sons as they left their homes to rally round the standard of Polish liberty that Kosciusko unfurled in 1794. But one only returned from the bloody fight of Maciejovice that concluded this short but brilliant campaign, and crushed for the time the hopes of his country, and he it was who now occupied the paternal dwelling.

His own family were growing up around him. His two sons, Andre and John, were in the full vigour of youth, robust, strong, and active; and Marie, the orphan daughter of an only sister whom he had adopted as his own child was fast merging into the loveliness of womanhood. Wolski and his wife were true Poles at heart, and they had imbued their family with their own feelings and their own patriotism. Their country, it was true, groaned beneath the yoke of Russia, Austria, and Prussia; but, in common with their countrymen, they entertained the hope that the blow might yet be struck for freedom and for liberty. The success of the French arms against Prussia in 1806, and the erection into a sovereign state of the duchy of Warsaw by Napoleon, reanimated the hopes of the Poles to see their country restored, and they turned with all their national enthusiasm to the man who dexterously used their gratitude for his own aggrandisement. The new state was obliged to maintain an army which was at the disposal of Napoleon, and it was speedily raised; the youth of Poland flocked to the standard of the emperor, and none more readily, none more enthusiastically than the two sons of John Wolski.

It was a bright morning in Autumn when they took leave of their home; the love of country is strong, yet the love of home will assert its power, and it was not without a struggle that they prepared to say farewell to the home of their childhood, it might be for years, perhaps for ever. Then mother blessed them with a full heart, and her feelings well-nigh overcame her as she bade them remember their God and their country; their father lifted up his eyes to heaven, and prayed that the God of battles would watch over his brave sons, Marie wept aloud as John bade her farewell, and when Andre took her hand she trembled with emotion, and she felt that if she loved John as a brother she loved Andre as something more; their emotion was mutual, gradually had their affections been intwining around each other, and it was only at the hour of parting that they learned the strength of those ties that united them. Andre drew her gently aside, and in a few hurried words they exchanged vows of unalterable constancy and love; she threw a little crucifix around his neck, he strained her to his bosom, and imprinting a kiss upon her lips, he tore himself away. He and his brother went on their way in silence. They were soon, however, joined by many of their companions bound on the same errand as themselves; but it was not until the distance between them and their native village was considerably increased that their natural gaiety began gradually to return. They soon reached their destination, when they were enrolled under the banner of France. Napoleon invited Kosciusko, then in Switzerland, to join him, but that wise patriot saw through the ambitious projects of "the child of destiny," whilst thousands of his countrymen swelled the ranks of the French army, in the vain hope that thus they were serving their country. The lancer regiment, to which the brothers were attached, was speedily organised and accoutred; every day added to their efficiency; in a short time they were marched into France, and little more than twelve months elapsed before they were on the way to the scene of operations in the peninsula.

In the height of his ambition, Napoleon placed his brother Joseph upon the throne of Spain, and the army of Murat established him in the palace at Madrid. The French arms seemed everywhere triumphant, the Spanish troops made but a feeble resistance, and the intervention of England had hitherto been ineffectual. Moore was obliged to retire before the French marshals; he had executed his masterly retreat to Corunna, where "he nobly fighting fell," and although

"Not a soldier discharged his farewell shot
O'er the grave where our hero was buried,"

the generous-minded Soult erected a marble monument over the remains of his noble and courageous opponent. But a mightier spirit was rising upon the scene, that was to wreath still brighter laurels around the brow of Albion, and check the insatiable ambition of the man whose arms bid fair to conquer Europe, and the spring of 1809 saw Sir Arthur Wellesley at the head of the British forces in the peninsula. Soult was speedily driven out of Portugal, and the victories of Vimiero and Talavera taught Napoleon that British valour was a match for French chivalry; and in the spring of 1810 he gathered together in Spain the immense force of 86,000 men, with 22,000 more, as a reserve under Drouet at Valladolid; the whole was placed under the command of Massena the hero of Aspern, who as "lieutenant of the Emperor" was ordered to "drive the English leopards into the sea."

The Polish regiments, on entering Spain, formed part of the force concentrated around Burgos, and whilst they as yet saw no active service, they were met on every hand by the fiercest and most inveterate hatred, on the part of the guerilla bands, who lost no opportunity in wreaking their vengeance upon any bodies of French troops that came within their reach; convoys were cut off in all directions, and in the conflicts which were of such frequent occurrence, Andre Wolski distinguished himself by his bravery and steadiness, and was soon raised to the rank of corporal, and in a few months more to that of sergeant. Napoleon was determined to drive the British out of the peninsula, and the Poles received orders to join the main army under Massena, who immediately commenced operations. The fortresses of Ciudad Rodrigo and Almeida yielded to this imposing force, and the British retired slowly down the valley of Mondego, closely followed by the French cavalry; but on the junction of Hill and Wellington a temporary suspension of the pursuit ensued, as a general engagement seemed inevitable. It was at this time that an event took place that materially affects the interest of our narrative. The Polish regiments, under the command of Count Von Golstein, occupied a small village at the foot of a range of hills called the Serria de Murcella, that separated them from the main body of the troops. This separation, though somewhat hazardous, was rendered imperative by the scarcity of forage and provisions, and the immense consumption of such a vast body of men; whilst the Spaniards laid waste and destroyed everything that seemed likely to support their invaders. But whilst the numbers of the Poles made them confident of safety from attack, every precaution was taken to guard against surprise. Their arrival in the village had been unexpected, and a most welcome prize was made in a large quantity of grain that fell into their hands. As this was rather a scarce article in the French army, Von Golstein determined to communicate the intelligence to head quarters that they might avail themselves of it. The morning sun was shading his early beams over the "purpling east," when Andre Wolski was in the saddle and on his way through the mountains. He journeyed on at an easy pace, his mind filled with thoughts of home, of happiness, and Marie; and it was not until he arrived at an abrupt turn in the road which

narrowed into a defile, and where a ravine was crossed by a rude bridge, that he roused himself from his revery; cautiously eyeing every portion of the road, he pushed his charger into a quicker pace, and in a few minutes he emerged into opener ground, when he again slackened his speed and gave way to his thoughts.

In due time he reached the quarters of the commanding officer, to whom he communicated the welcome intelligence of the prize they had obtained. Two trains of mules were ordered to be in readiness for the following morning, to convey the grain to the magazine in the rear, and two officers of commissariat were to return with Andre to take charge of it, and prepare it for removal. Andre retired to partake of some refreshment, and to rest his horse; and it was late in the afternoon before he prepared to return to the village. His companions were both middle-aged men, one a German and the other from the south of France. They chatted away very pleasantly, talking of the war, inquiring after the village, and as to the probable quantity of grain, and made shrewd guesses as to its intended destination by the Spaniards. The three journeyed on, and the daylight was just beginning to decline, and heavy clouds were gathering overhead, as they came within sight of the ravine that had somewhat disturbed the reveries of Andre in the morning. He related to his companions his fears on the former part of the day as to this part of the road, and urged them to mend their pace; and, although his fears were still strong, he offered to lead the way through the pass. He put his charger into a smart trot, and proceeded rapidly onward, closely followed by the German, the Frenchman bringing up the rear. They sped on without exchanging a word, and the hoofs of their well-shod horses re-echoed through the defile. Andre had crossed the bridge, and the German was upon it, when the sharp report of half a dozen rifles reverberated through the air. The Frenchman fell from his saddle; the German's horse was struck, and rising on his hind legs he sprang with his rider over the low parapet of the bridge, and both were dashed to pieces in the torrent below. The firmness of Andre did not forsake him, and he at once saw his deperate situation. He pushed his horse on at the top of its speed, whilst a storm of bullets whistled around him, and gained the abrupt turn in the road. But here a new obstacle met his view; the few trees that stood by the wayside in the morning were now cut down and laid across it. His mind was made up on the instant; to turn was certain death, and to try the daring leap was his only chance. He knew the qualities of his gallant steed, and firmly gathered it together for the attempt. But at that moment a ball entered the breast of the noble animal, and with a neigh of agony he sprang forward and rolled in the dust. Andre was thrown, his head struck against one of the prostrate trees, and for a few minutes he remained insensible. On recovering, he found himself surrounded by a motley group of about twenty fierce-looking guerillas, who scowled savagely upon him. They were all dressed in the fantastic style of their country, and armed with all manner of weapons, whilst each one carried a long deadly rifle. They were evidently a detached party stationed for some particular service, and at the command of a tall powerful-looking man. Six of the guerillas prepared to move off with their prisoners; they bound Andre's hands behind his back, but the Frenchman was so severely wounded that they were obliged to carry him. They proceeded a short way along the road leading to the village, when turning abruptly to the right, they entered a narrow gorge which they followed until they were challenged by a man who was perched upon a high rock which commanded a view of the way they had come. After exchanging a few words with the guerillas, the man gave a signal which was answered at no great distance, and they were soon joined by two men in the garb of goatherds, who proceeded to conduct them onward, as it was now almost dark. They passed over a rude bridge made of two planks thrown across the bed of a mountain stream, and struck into a narrow and tortuous path which the darkness rendered more dangerous, but in a short time they arrived at what appeared to be their destination for the time. Here a scene presented itself to the eyes of Wolski, which, whilst it excited his fears to the utmost, showed him at once the nature of the enterprise in which the guerillas were engaged, and left but little doubt as to the drama about to be enacted. The extremity of the pathway on which they had halted for a few minutes opened into a long narrow valley in the side of the mountain, which rose precipitous on one side, while on the other, after rising to a ridge of a few feet which formed this miniature valley, it sloped gently down into the plain beneath, as if the huge mass had been moved from its primitive unity by some superhuman power, and sliding gently down to its present position had left this fissure between; and from the volcanic character of Spain such features as these are often to be met with among the mountains of the peninsula.

The moon had just risen amid dark and heavy clouds, by the piled arms and glittering bayonets that stretched far up this mountain-hollow reflected brightly the straggling rays that fell upon them and on the dusky figures that were gathered around them; there might be about five hundred assembled together in that secluded spot, yet all was quiet and still. Andre felt confident, from this stillness, that the village where his friends were posted was close at hand; for the faint notes of a bugle, borne on the still midnight air, struck upon his ear. He felt at once that it was immediately in the plain beneath that his troop was encamped. That the object of the band now assembled was to surprise the village during the night, his experience in guerilla warfare left him in but little doubt; and his soul burned within him to think that he were not able to give his companions a warning of the dangerous enemy that lay crouched and concealed so near to them. He was soon, however, disturbed in his meditations, and ordered forward towards a large stone building into which he was hurried by his captors. His hands were already bound behind his back, and his feet were now tied together, and he was left lying on the ground with the wounded Frenchman. This poor fellow was fast sinking under his wound; the ball had entered near the groin, and, notwithstanding the rough bandage that had been tied around him, he had bled profusely, and he was now on the point of death: he cried faintly for "water! water! but, alas! no helping hand was near to soothe the couch of agony, and his fellow-prisoner was as helpless as himself and, with a fervent prayer that God would watch over his widowed wife and fatherless children, the spirit of the prisoner left its tenement of clay.

All was now still within the building, and the solemn silence was only broken by the deep breathing of Andre, as he lay helpless by the side of his dead companion. Death stared him in the face. It is hard to die in the prime of life and manly vigour, and it is hard, under such circumstances, to reconcile the mind to the dread alternative. Andre's thoughts wandered back involuntarily from the present to the home of his childhood: he thought of his aged father and his loving mother, who might soon be childless; he thought of his only brother, the companion of his youth; he thought of Marie, but, oh! the thought was distraction; his dreams of bliss, his bright visions of happiness, were about to be annihilated for ever. He groaned and writhed in his bonds; and, struggling fearfully with a convulsive effort, he raised himself upon his knees, and lifted up his soul to the great Father. He clasped his hands in the anguish of his spirit; and, as if in answer to the voice of his supplication, a bright ray of hope beamed into his soul. His fingers came in contact with the long polished rowels of his cavalry spurs, and with anxious excitement he proceeded to apply their sharp extremities to sever the cords that bound his wrists; and in a few minutes they began to slacken, and soon dropped from his hands. He now commenced to undo the cords from his ankles, which was a matter of no great difficulty now that his hands were free; and he presently stood up freed from the shackles that held him powerless, and silent but heartfelt ejaculations of thankfulness rose to his lips. The building in which he was still a prisoner was of considerable size. It was built of large rough pieces of stone, and had originally been of two stories, the goatherds living in the upper part, whilst the ground-floor afforded a shelter for their flocks; but the roof had long since fallen in, whilst the walls were still strong and firm. All means of egress had been carefully walled up, excepting the door by which they had entered, and the only means of escape appeared to be from the roof, which at the farthest end from the door had been severely injured by the wind, and the heavy rains pouring in had considerably enlarged an opening, through which Andre could perceive two or three stars faintly shining. But it was such a

height from the ground that his heart failed him, and he turned away to the door to see if any chance could be met with there; but he found it strongly fastened from without, and on listening attentively he heard the measured tread of the sentinel, as he kept his silent watch. Convinced that there was no hope in that quarter, he turned back to the opening in the roof; and, as he groped his way in the darkness, his hand encountered the upright post which is so commonly to be met with in the centre of all Spanish rustic buildings, and which, extending to the roof, forms a support to the beams and rafters. There was now a chance that he might climb to the roof, and escape through the opening. He turned to the dead Frenchman, who was now cold as the ground upon which he lay, and laying his own elegant but ponderous shako beside his more unfortunate companion, and placing the light foraging cap of the commissariat officer upon his head, he proceeded to the upright post. He clasped his arms around it, and soon rose from the ground. He had often climbed the bare trunks of the lofty pines that grew on the sides of the Carpathians, and this was an easy task to him. Carefully swinging himself along the rafters, he approached the verge of the opening. He listened, and there was still that ominous silence; and cautiously raising his head above the roof, he saw again that line of piled arms and glittering bayonets and dusky figures. The night was darker, the clouds were heavier; it wanted but a short time of midnight, and in less than an hour the moon would go down; Andre knew too well that this would be the time when the attack would be made. There was yet time, if he could escape unseen over the ridge, to give the alarm to the village; and his heart swelled with anxiety as he cautiously drew himself through the opening and lowered himself down by the rough projecting stones upon the soft turf. The moon was then between two clouds, and shone out brightly; and, oh! how anxiously did he watch till it should again be obscured behind the big dark cloud that was bearing down upon it! Andre stood under the shadow of the building, and the sentinel paced in the moonlight within a few yards of him, and during this interval was softly accosted by one of his companions:—

"Wilt thou not join the wine-skin to night, Gomez?"

"We must attend to duty before enjoyment," replied the sentinel.

"If I were Mina I would not encumber my soldiers with prisoners."

"Yes; but while we are under him we must obey his orders, and not forget the fate of Pedro who allowed the French officer to escape."

"Bueno, you will soon be relieved when our captain shall have arrived."

"Yes, and a halter will soon relieve this gay young Monsieur from all further interest in the affairs of our country, and the other poor devil is too badly wounded to require our assistance to the other world."

The guerilla laughed, and said, "In half an hour we shall be on our way down the mountain, and Mina must soon be here."

"Hark!" cried the sentinel, "if I mistake not that is the sound of his horse ascending the stony path to the right. Adieu."

The guerilla fell into his place, and the sentinel kept his watch before the building. Andre listened to the conversation in terrible suspense, he was now aware how nearly he was in the power of the cruel and relentless Mina; but the lives of others as well as his own still depended upon his exertions, and every minute was valuable. The building was at the farthest end of the little valley, and behind it the ridge rose higher, sheltering it from the wind, and over this barrier was the only chance of escape for Andre. The edge of the cloud touched upon the moon and as it drew on gradually, became more opaque, and darkness covered the face of the sky. Then cautiously, but with a firm step, he mounted the ridge and sunk with excitement on the other side. He speedily recovered himself, the moon was again shining forth, and he was enabled to see the village in the plain beneath. He began to descend with extreme caution until he was at some distance, when he quickened his pace and made directly for a grassy slope between gray and rugged rocks that led directly into the plain; as he drew near he heard the distant jingling of accoutrements, and soon a merry laugh struck upon his ear; he threw himself upon the ground and listened, and as he did so the bright gleam of a musket-barrel standing against a rock but a few yards in advance of him caught his eye, and he soon discovered the dark form of a guerilla in the shadow peering earnestly from his concealment upon a small body of horsemen passing within a hundred yards of him. Andre knew at once as they passed so merrily, that this was the patrol; but this was no time for inaction; and, taking advantage of the intentness of the guerilla sentinel he struck into the brushwood on the left; and, carefully wending his way amongst the rocks, soon came upon a pathway that led directly into the village. Along this he journeyed as fast as he could, and stopped only when he was challenged by the guard. But he instantly gave the watchword "Poland," and immediately found himself surrounded by a body of his companions. His non-appearance had excited some little alarm; but, without waiting to answer the inquiries that were showered upon him, he hurried to the quarters of the general. Von Golstein had not retired, and Andre speedily informed him of the vicinity of Mina's band, of his own escape, and the probability of an immediate attack. Von Golstein was an able officer, and he saw at once the dangers of his position. He issued his orders instantly, and in less than fifteen minutes his men were assembled and in the saddle. The shrill voice of a bugle sounding the recall rose from the plain, and the patrols came galloping into the village. In a few words all were apprised of their danger. Nothing had been seen to excite alarm, yet Von Golstein had too much confidence in Wolski, and was too well experienced in Spanish character, not to be aware that on the suddenness of the attack would its success depend; and he was determined to be prepared at all points. He placed a chain of sentinels around the village, and also strong guards at various points, more particularly those facing the mountains from which the attack was most likely to be made. The low brushwood on the plain would scarcely afford concealment to the advancing foe, but a little stream that descended from the hills and washed the northern side of the village, and whose banks were fringed with low but thickly growing shrubs and trees, was regarded with some suspicion, and a strong picket of dismounted lancers was stationed at the point of its junction with the village; the remainder were drawn up in the centre, ready to move to any point where danger might threaten. General Von Golstein after seeing every man to his post, advanced to Andre, who was relating to his brother his adventurous escape, and after listening attentively to the circumstances and asking a few questions, he explained that on the non-appearance of Andre he conjectured that some movement was going on in front, or that he was detained to accompany the mule trains in the morning. After shaking him warmly by the hand, the general thanked him for his timely warning, and assured him that if they survived the night his gallant conduct would not be forgotten.

All were now on the alert within the village. The moon had gone down and silence reigned throughout the plain. Half an hour passed away yet no signs of an attack. Both parties shrouded their movements in silence. One of the advanced sentinels placed at a bend in the stream was the first to give the alarm; he was stationed beneath a clump of trees, and, fully aware of the importance of his post, remained silent and immovable, listening eagerly to catch the faintest sound of approaching danger. The wind as it sighed along the mountain-side sometimes aroused him to a more earnest watchfulness, but as it died away in the distance he sunk again into a position of motionless but steady attention. The stream flowed on with a sullen gurgle at his feet, yet he could scarce suppress an involuntary start as a slight splash struck upon his ear. The darkness rendered objects at any distance almost invisible; and almost before he was aware, a dark human form rose from the bed of the rivulet, a little ahead of him, and within a few feet of where he was standing. He remained motionless, partly from surprise, and because his presence was unseen. The figure mounted the bank upon its knees; raised its cap, and bending forward, listened eagerly for any sounds that might come from the village. It then made a movement as if to rise, but at that moment the butt of the soldier's musket descended heavily upon its unprotected head, and the guerilla spy was stretched lifeless upon the ground. The Pole now

tened again and easily distinguished above the gurgling murmur of the stream, the sounds of a body of men advancing saithily up the shallow bed of the rivulet. He hastily retired om the picket, and announced the approach of the guerillas. he officer in command immediately communicated the intelli- nce to the general. They were reinforced by another body their comrades, and firmly and steadily awaited the attack the Spaniards. The sound of the approaching party, utiously disguised, could now be heard, and as they ap- oached nearer, the dark mass could be discerned as it moved , noiselessly to all but to the ears of the awaiting Poles. hey still approached, but, at a given signal, a hundred uskets found their deadly fire upon them. They recoiled be- ath it for a moment; and, with a wild shout of revenge and ge, rushed forward with furious impetuosity. But every- here they were met by the long sharp lances of the Poles, hilst volleys of musketry poured into the moving mass. Their forts were unavailing, and they began to retire. Two uadrons of cavalry were now on the plain on either side of e rivulet, but the guerillas retreated as they had come by e bed of the stream; and, sheltered as they were by its banks d favoured by the darkness of the night, they escaped with ifling loss to the mountains, where the lancers were unable to llow them.

The morning was breaking when the Poles returned to the llage after the pursuit, and in a short time the sun rose ightly above the Serria de Mureilla. But before any definite rangements could be made, to establish communications with ead quarters, and if possible secure the grain for the French my, an orderly officer was seen galloping along the road hich led directly to the village from the south. He brought rders for an immediate junction with the main body, which ad moved forward at early dawn as the British and allied my had retired upon Busaco. In an hour more Golstein's ncers were all in the saddle, and having set fire to the grana- es they marched southward leaving the mountains on the ft and joined the French army after midday. That night ey lay at the foot of the heights upon which the allied army ad taken position. On the next day the 21st of September, e battle of Busaco was fought, and from the repulse the rench then suffered, resulted the permanent retreat of Mas- na from Portugal. The French marshal having exhausted l his resources before the celebrated lines of Torres Vedras hich the British occupied, commenced a retreat by the line of e Mondego, and Wellington slowly followed him. But from e peremptory orders Massena received from the emperor, he oncentrated his forces and attempting the relief of Almeida, he ttacked the British forces at Fuentes d'Onore. This was one of he fiercest and bloodiest contests that took place during the pro- racted struggle of the peninsular war. The village, from which he battle has its name, was forced by the French, and afterwards etaken by the British, and held by the Highland regiments uring the remainder of the day. The French charged in verpowering numbers into the village; the cuirassiers and ancers were hurled upon them in a continuous stream; but ought could move the stern array of the kilted warriors. Andre's regiment was fearfully cut up, and he himself was truck by a ball which broke his sword arm, and, falling into he arms of his brother, he was borne from the fatal fight.

When the night fell, the British troops held their position, nd, leaving Almeida to its fate, the French army continued ts retreat to Salamanca.

The hospitals were crammed to excess, but Andre's arm was soon set, and in the way of recovery. He had now ample time for reflection, and his heart yearned to revisit his home, nd again to behold all that was dear to him on earth. In a few months he was declared convalescent and unfit for further military service. He received his discharge, and prepared to return to his native land. His brother wished to accompany him; but the iron power that dragged the conscript from his home, bound the soldier sternly to the ranks; and, after an affectionate parting, Andre set out for his home.

It was a long, weary journey, but time and patience con- quered many obstacles; and one evening in Autumn, after a long day's march, he found himself within a short distance of his native village. He walked joyously on, and pausing as he came to a turn of the road, the valley of Goldstadt lay before him. The sun was setting in the western heavens, and its resplendent beams shed a radiant glow over the landscape, as, gathering his golden mantle around him, he sank majestically beneath its folds. Andre gazed long and earnestly; five years had almost passed away, yet every portion of the scene was to him as the old familiar face of a friend, and fraught with some dear and cherished associations. The shades of evening gathered around him, as with a quick step and a full heart he entered the village. In a few minutes he entered the pa- ternal dwelling. He found his father and mother still there, and Marie was now a beautiful and lovely woman; but what pen would attempt to describe their joy when they discovered in the dusky twilight that the tall, noble looking soldier who stood upon the threshold was Andre Wolski.

Their joy was unbounded that this one of the wanderers had returned; and but few weeks elapsed before Andre and Marie were united in the bonds of marriage; and, turning his sword into a ploughshare and his spear into a pruning- hook, our hero experienced to the full those social endearments and sanctified pleasures that are only to be found, and can only prosper, beneath the overshadowing wings of PEACE.

All that was now wanted to complete their happiness, was the return of John. His regiment had been ordered into France, and when Napoleon designed that crowning act of his folly, the invasion of Russia, they were speedily re- cruited in the duchy of Berg, and incorporated with the grand army. He was permitted to pay a hurried visit to his parents, and he left them again in high spirits, telling them, "We are going to Moscow, and shall soon return." He dis- tinguished himself nobly in the various encounters with the Russians, and before entering Moscow the captain's epaulets glittered on his shoulders. In the disastrous retreat that fol- lowed, his regiment formed part of the rear-guard under Ney. The men were sacrificed by thousands, and the Poles were almost cut to pieces. Wolski was the senior officer of what remained of his regiment, but at the fearful passage of the Beresina, they were wholly annihilated, and he fell covered with wounds beneath the overwhelming attacks of the cossacks.

The news of this fearful route reached Goldstadt, and the Wolskis mourned with many the loss of their friends. Their sad experience taught them, when too late, the delu- siveness of the hope, that Napoleon would re-establish their country. The sons of Poland enthusiastically, but unadvis- edly, struggled to roll onward the tide of victory that crushed nations and peoples beneath the heel of an ambitious despot; and had that same power been employed in its more legiti- mate and proper channel, their country might still have had a name and a place amongst the nations of Europe.

HOW THE "FIRST-CLASS" MONEY-LENDER HELPS THE ARISTOCRACY TO "RAISE THE WIND"

MR. WELLINGTON TADPOLE is an ensign in the 152nd foot—a highly-distinguished regiment of "heavies." Mr. Tadpole's pay is £98 per annum, his father, who is a country clergy- man, with a living of £800, and a family of six children, allows him £150 a year in addition, so that the gallant ensign's income is in round numbers £240. The 152nd are "fast" men—at least many of them are. Tilburies and tandems, drags and dog-carts, are much affectioned by them— not to mention champagne picnics, and a little occasional trifling with *écarte* and blind hookey. Mr. Wellington Tadpole soon finds himself very "hard-up;" he writes a pathetic note to his mother for a little extra supply of cash—details the numerous expenses thrust upon him in first joining his re- giment (omitting, however, those alluded to), and receives in return a £50 note, with many cautions to avoid extrava- gances, and a strong intimation that his father will never be induced to assist him in such a manner again.

A very few weeks suffice to dissipate the remittance, and Mr. Wellington Tadpole's finances are again at the very lowest ebb. Feeling assured that the "governor wouldn't bleed" any more, he confides his misery to his bosom friend, Lieutenant Keen- sight. The lieutenant smiles a smile of ineffable pity for the ensign's "verdancy," when he hears that his whole debts amount only to £100, and that he is merely in want of a little

"ready cash." "My dear fellow," he says, "you are an exceedingly lucky dog; lucky in owing nothing (for what's a trumpery hundred?); lucky in having a governor to draw on; lucky in being quartered at Chatham when Amos pays us a visit every three weeks; and lucky in coming to me the very day before that worthy gentleman is expected." "Who is Amos?" asked the ensign. "*Who* is Amos?" repeats the lieutenant in amaze; "my good friend, if you had asked 'who is the duke?' 'who is Prince Albert?' 'who is Jenny Lind?' or any such person, I should have respected your ignorance more than I do now; but not to know Amos, the prince of money-lenders, the Jew of Jews, the banker of the improvident, the friend of the distressed,—not to know Amos 'argues yourself unknown.'" "Well," replies Mr. Wellington Tadpole, "then if Amos is a money-lender, I suppose he will let me have £50 at good interest." "No, he won't; but he'll let you have £500, £400, £300, or £200. Anything less than that sum is 'low,' and Amos would scorn so seedy a transaction." The ensign looked surprised, but, fearing to display further ignorance, he asks no more questions, mentally resolving, however, to see Mr. Amos to morrow.

The next morning, as Ensign Wellington Tadpole sits smoking the morning cigar, his servant announces "Mr. Amos" He is desired to admit him. Thereupon, a stout-built and carefully "got-up" gentleman walks into the room and makes his bow. Mr. Amos has decidedly Hebrew features, nevertheless he is a good-looking man, with very white teeth, which he always shows whenever he smiles. His hair is worthy a place in Truefitt's window; his shirt is a miracle of elaborate embroidery; his waistcoat is of the newest and gayest pattern, so are his nether garments! while his fingers display a perfect blaze of diamonds, and across his ample chest is trained the most massive and astounding of watch-chains "Beg pardon, Mr. Tadpole, for intruding so early; but heard from Mr. Keensight that you wanted some of my commodity—eh?—ha—ha—ha—ha!" and as though unconsciously the money-lender scatters a heap of bright sovereigns and crisp bank-notes on the table. What a bait to a man who has changed his last sovereign! The ensign stammers out that he *does* require cash, but vainly tries to look as if he were indifferent about the matter. "How much?" asks Amos pleasantly "Well, suppose we say £200," replies Mr. Tadpole. "Be it so; whom do you draw on?" "Dear me, I really couldn't ask any one such a favour," says the ensign hastily. The money-lender looks rather grave for a moment; protests that he never does business without two names; but as that is Mr Tadpole's first transaction, and as he understands that his liabilities are so very small, he will venture to take his promissory note alone. "How will you take it?" he asks. The ensign, who has been asked that question before at a banker's, answers innocently, "Say two 'fifties' and the rest 'long.'" A smile, which he with difficulty restrains from emerging into a roar of laughter, passes over the money-lender's face. At length he explains. "My dear sir, I see you don't quite understand me—the matter will stand thus. The discount for three months on £200 is £30—leaving £170 for you to receive. Of this £170 you can have £100 in cash, and the other £70 in wine or jewellery. "I never say 'pictures;' because I think it is a great imposition. Young gentlemen never want pictures; but wine and jewels are of course necessaries of life." The ensign is in a horrible fright at the recklessness of the action he is about to commit, but the money-lender has already tossed over to him £100 cash which looks so tempting; and in five minutes more he has signed his 'promise to pay," and confided to Mr. Amos, leaving that worthy gentleman to send him £70 of jewellery, according to his own taste in that commodity.

Three months have passed away, and so has all the £100 received by Ensign Tadpole, and the £25 for which he is only too happy to sell the "£70 worth" of jewellery. The bill is due, and there are no funds in hand to meet it. Mr. Amos—blandest, kindest, and most accommodating of men—will take the joint note of the ensign, and one of his brother officers for £250 at three months more, instead of cash. Tadpole's feelings of shame having been growing blunter every day; he asks Ensign Spooney to join him; the latter does so, and three months later they have to go through the same process again to the tune of £320. At length Mr. Amos begins to get troublesome; Tadpole writes home and confesses all; his father is indignant and refuses to help him; Amos presses still closer; Tadpole sells his commission and pays the bill to save himself and Spooney from a gaol; and the money-lender pockets £820 for the advance of £100 cash and £30 worth of jewels for nine or ten months, which is at the rate of nearly £200 per cent. per annum. Such is the "first class" money-lender, who does business only with the army of the peerage, and such is the nature of his ordinary transactions.

SUMMER VOICES.

Beneath the shining trembling leaves that drape the bowers of June,
I sit and list, with raptured ear, to sweetly varied tune
Of Nature's thousand melodies, above, below, around,
Sweet sights, sweet scents, but sweeter far the mingling charms of sound

The silvery lapse of tinkling streams, the river's rushing voice,
The lucent waves that lap the shore, in murmuring tones rejoice;
The fitful cadence of the breeze, that skims with silken wings
O'er bending waves of odorous, hay, and through the woodland sings.

The tell-tale voice beloved of spring, the wail of forest dove;
The thousand swelling warbling throats, that sing of bliss and love,
The voice of woods in soft commune with twilight's dewy airs,
Where parent thrush, on darkling bough, beguiles his brooding cares —

The shadows fall, O gentle bird, thy liquid voice is mute!
But hark! that sweetly thrilling strain, breathed from the plaintive flute,
No eye but thine, soft star of Love, the rapt musician sees,
Slow wandering by the lonely lake, beneath the sleeping trees.

Now, Scotia, pour thy native airs, so wildly, simply sweet;
For this the hour, and this the scene, when rustic maidens meet
By cottage door, by village spring, o'erhung with wilding rose;
Hark! from their lips the Doric lay in gushing music flows.

Sweet Summer sounds! I love ye all, but dearest, holiest, best,
The song of praise from cottage hearth that hails the Sabbath rest
The birds, the streams, the breeze, the song, to *earthly* sounds are given,
This mounts the wings of summer morn, and singing flies to Heaven!

Longlone, near Coatbridge, N B. Janet Hamilton.

LITERARY NOTICES.

Extraordinary — This Popular Educator — An Extra Edition of this work, on fine paper, at 1½d per Number, or in Monthly Parts, in a neat wrapper, at 7d, or when Five Numbers, 8½d, is now published, which is issued without the weekly headings Persons wishing for this edition must be careful to order the "*Extra* Edition" The whole of the Numbers may now be obtained, or the first Three Parts—Part I, 7d, Part II, 8½d.; Part III, 7d. The Common Edition, at One Penny per Number, Monthly Parts, 5d, or 6d, is regularly issued

The Illustrated Exhibitor and Magazine of Art —The First Volume of this splendidly embellished work, hand-omely bound, price 6s 6d, or extra cloth gilt edges, 7s 6d, is now ready, and contains upwards of Two Hundred Principal Engravings, and an equal number of Minor Engravings, Diagrams, &c

Completion of John Cassell's Library.—This invaluable Work is now complete, in 26 Volumes, 7d. each in paper covers, double Volumes, cloth, 1s. 6d., or when 3 Vols. in 1, 2s 3d. The entire Series may be had, bound in cloth, 19s. 6d, or arranged in a Library Box, 25s.

The Emigrant's Handbook, a Guide to the Various Fields of Emigration in all parts of the Globe, Second Edition, with additions; to which has been appended a "Guide to the Gold Fields of Australia," with copious Instructions, Government Regulations, &c., accompanied by a Map of Australia, in which the Gold Regions are clearly indicated, is now ready, price 9d.

The Pathway, a Monthly Religious Magazine, is published on the 1st of every month, price twopence—32 pages enclosed in a neat wrapper. Vols. I. and II., neatly bound in cloth and lettered, price 2s. 3d. each, are now ready.

Cassell's Shilling Edition of Euclid —This work will be ready with the Magazines for August, price 1s. in a neat wrapper, or 1s. 6d. in cloth boards.

MISCELLANEA.

SELF-TAXATION.—The taxes are, indeed, heavy; and if those laid on by government were the only ones we had to pay, we might more easily discharge them,—but we have many others, and much more grievous to some of us. We are taxed twice as much by our idleness, three times as much by our pride, and four times as much as our folly; and from those taxes the commissioners cannot ease or deliver us by allowing any abatement.—*Franklin.*

CONTENTIOUS SOULS.—I never loved those salamanders, that are never well but when they are in the fire of contention I will rather suffer a thousand wrongs than offer one: I will suffer a hundred rather than return one. I will suffer many ere I will complain of one, and endeavour to right myself by contending. I have ever found, that to strive with my superior is furious, with my equal, doubtful; with my inferior, sordid and base; with any, full of unquietness.—*Bishop Hall.*

WRONG ENDS OF KNOWLEDGE.—It is not the pleasure of curiosity, nor the quiet of resolution, nor the raising of the spirit, or victory of wit, nor faculty of speech, or lucre of profession, nor ambition of honour or fame, nor enablement for business, that are the true ends of knowledge —*Lord Bacon.*

HUMAN HELPLESSNESS.—Animals go rightly, according to the ends of their creation, when they are left to themselves, they follow their instinct and are safe; but it is otherwise with man the ways of life are a labyrinth for him His infancy does not stand more in need of a mother's care, than his moral and intellectual faculties require to be nursed and fostered where these are left to starve for want of nutriment, how infinitely more deplorable is his condition than that of the beasts that perish!—*Southey.*

THE EDUCATION OF THE FEELINGS.—Bad temper is more frequently the result of unhappy circumstances than of an unhappy organisation, it frequently, however, is a physical cause, and a peevish child often needs dieting more than correcting Some children are more prone to show temper than others, and sometimes on account of qualities which are valuable in themselves. For instance, a child of active temperament, sensitive feeling, and eager purpose, is more likely to meet with constant jars and rubs than a dull passive child; and, if he is of an open nature, his inward irritation is immediately shown in bursts of passion. If you repress these ebullitions by scolding and punishment, you only increase the evil, by changing passion into sullenness. A cheerful good-tempered tone of your own, a sympathy with his trouble, whenever the trouble has arisen from no ill conduct on his part, are the best antidotes; but it would be better still to prevent beforehand all sources of annoyance. Never fear spoiling children by making them too happy. Happiness is the atmosphere in which all good affections grow—the wholesome warmth necessary to make the heartblood circulate healthily and freely; unhappiness is the chilling pressure which produces here inflammation, there an excrescence, and, worst of all, "the mind's green and yellow sickness—ill temper."

ACTON PLAN.—The formation and steady pursuit of some particular plan of life, has justly been considered as one of the most permanent sources of happiness. — *Malone.*

TALKATIVENESS.—It is a secret known to few, yet of no small use in the conduct of life, that when you fall into a man's conversation, the first thing you should consider is, whether he has a greater inclination to hear you, or that you should hear him.—*Addison.*

SUAVITER IN MODO.—There is not any benefit so glorious in itself, but it may yet be exceedingly sweetened and improved by the manner of conferring it. The virtue, I know, rests in the *intent;* the profit in the judicious application of the *matter*, but the beauty and ornament of obligation lies in the *manner* of it.—*Seneca*

HUMAN LIFE.—As the rose-tree is composed of the sweetest flowers and the sharpest thorns, as the heavens are sometimes fair and overcast, alternately tempestuous and serene; so is the life of man intermingled with hopes and fears, with joys and sorrows, with pleasures and with pains —*Burton.*

USEFULNESS.—How barren a tree is he that lives, and spreads, and cumbers the ground, yet leaves not one seed, not one good work to generate after him I know all cannot leave alike; yet all may leave something, answering their proportion, their kinds.—*Owen Feltham.*

DANGEROUS PLEASURES.—I have sat upon the sea-shore and waited for its gradual approaches, and have seen its dancing waves and white surf, and admired that He who measured it with his hand had given to it such life and motion; and I have lingered till its gentle waters grew into mighty billows, and had wellnigh swept me from my firmest footing So have I seen a heedless youth gazing with a too curious spirit upon the sweet motions and gentle approaches of an inviting pleasure, till it has detained his eye and imprisoned his feet, and swelled upon his soul, and swept him to a swift destruction.—*Basil Montague*

POWERFUL REASONING.—At a young men's debating society in Indiana, United States, the question for discussion a few weeks since, was—"Which is the greatest evil, a scolding wife or a smoky chimney?" After the appointed disputants had concluded the debate, a spectator rose, and begged the privilege of "making a few remarks on the occasion" Permission being granted, he spoke as follows—"Mr President, I've been almost mad a-listening to the debate of these 'ere youngsters They don't know nothing at all about the subject. What do they know about the evils of a scolding wife? Wait till they have had one for twenty years, and been hammered and jammed and slammed all the while—and wait till they've been scolded because the baby cried, because the fire wouldn't burn, because the oven was too hot, because the cow kicked over the milk, because it rained, because the sun shined, because the hens didn't lay, because the butter wouldn't come, because the old cat had kittens, because they came too soon for dinner, because they were one minute too late, because they sung, because they tore their trousers, because they invited a neighbour woman to call again, because they got sick, or because they did anything else, no matter whether they couldn't help it or not,—before they talk about the evils of a scolding wife; why, Mr. President, I'd rather hear the clatter of hammers and stones, and twenty tin pans and nine brass kettles, than the din, din, din, of the tongue of a scolding wife Yes, sir-ee, I would. To my mind, Mr. President, a smoky chimney is no more to be compared to a scolding wife, than a little negro is to a dark night."

NOTICES TO CORRESPONDENTS.

F. INMAN; J. G.; C. THORP; M. RICHARDS; and several others.—To answer all the questions put to us as to emigration, it would be necessary to have a clerk wholly devoted to that office. Mr Cassell has collected all the information he can obtain, and has published it in "*The Emigrants' Handbook*," which may be had at our office, or, by order of any bookseller. As to specific, or peculiar cases, application should be made to Her Majesty's Commissioners for Emigration, Parkstreet, Westminster.

A FRIEND (Manchester).—We are not aware that there is any portrait extant of the Rev. B. Parsons. That gentleman *does* write for the publication to which you refer.

J TILLCOCK.—The best mode of "preserving the teeth from decay" is to keep them very clean. They should be brushed with a soft brush and cold water the first thing in the morning, and, if possible, at the conclusion of every meal, especially where animal food or vegetables are eaten. Washing the mouth frequently with cold water will not only keep the teeth clean, but strengthen the gums, the firm adhesion of which to the teeth, is of the greatest importance in preserving them sound and secure.

RICHARD.—We cannot account for the irregularities of which you complain. Perhaps, considering the distance at which you live from the metropolis, it will be best for you to take our work in *Monthly Parts*. Some small country booksellers do not keep the weekly numbers on hand.

F. J. H.—We feel some difficulty in recommending particular books, as the reading of a Sabbath School teacher ought to be extensive You will, however, derive much valuable information from Dr Kitto's "Popular Cyclopædia of Biblical Literature."

X. Y. Z.—Suitable cases in which to bind the "Illustrated Exhibitor," may be had at our office, or, by order, from any bookseller; as may also covers for the volumes of the "Popular Educator" and the "Working Man's Friend."

R. E (Tiverton).—The article you have sent us is very creditable to your talents; but it is scarcely suitable for our pages.

CATO.—The ch in Achilli, is sounded hard, as k; thus, *A-kil-li*.—You will find a receipt for destroying cockroaches in No 33, page 112.

A YOUNG ANTIQUARY.—You may obtain very beautiful impressions of medals and coins thus.—Melt a little stiff isinglass gine, and pour it thinly and evenly over the coin or medal, so as to cover its whole surface. Let it remain on for two or three days, till it has become thoroughly dry and hard, then take it off, and you will have an elegant impression, fine, clear, and hard as glass. If the wrong side of the isinglass be breathed upon, and gold leaf applied, it will adhere, and have a pleasing effect on the other side. Impressions so taken will resist the effects of damp air.

A WORKING MAN AND A TEETOTALER.—"The Freeholder" is the paper you mean, it is published every Monday afternoon at 337, Strand.—Your other question will be best answered by the Secretary of the Freehold Land Society, King's Arms Yard, Coleman-street, City.

A. X. B. AND AN INTENDING EMIGRANT.—Beware of sending for information as to emigration to persons advertising to furnish "every requisite information," &c., "on the receipt of twelve uncut postage stamps;" they are, in general, impostors.

TRIO.—The following are the names of "the Nine Muses," and "the offices assigned to them:" *Calliope*, the muse of heroic poesy; *Clio*, of history; *Erato*, of amorous poetry; *Euterpe*, of music; *Melpomene*, of tragedy; *Polyhymnia*, of rhetoric; *Terpsichore*, of dancing, &c.; *Thalia*, of lyric poetry and comedy; *Urania*, of astronomy.

W. K.—Ignatius Loyola was born in the year 1491. He established the Order of the Jesuits in 1540. He died in 1556. It was Pascal who wrote the powerful books against them to which you allude. His most celebrated work on this subject is entitled, "Provincial Letters." It was published in 1656, under the name of Louis Montalte. No book ever did the Jesuits more injury.

All Communications to be addressed to the Editor at the Office, 335, Strand, London.

Printed and Published by JOHN CASSELL, 335, Strand, London.—July 19, 1852.

THE

WORKING MAN'S FRIEND

AND FAMILY INSTRUCTOR.

NEW SERIES.—VOL. II., No. 43.] SATURDAY, JULY 24, 1852. [PRICE ONE PENNY.

SCIENCE AND COMMERCE.

IN the early ages of the world, Labour, the sturdy son of Industry and Want, worked alone in the fields, and toiled day by day for the support of his numerous family. He was a strong well-built fellow, whom no fatigue could conquer and no disappointment depress. He had married early—as was then, and still is, the custom among the toilers of the earth—but he chose a helpmeet fitting his condition. She was called Endurance, the daughter of Poverty, but her real name was Courage. Many children blessed their union, some of whom were strong and handsome, while the rest were weakly and deformed. These children, the offspring of Labour and Endurance, are known among men by various names. The elder sons and daughters are called Content, Hopefulness, Enterprise, Self-Reliance, Perseverance, Prudence, and Ambition; while the later-born have received the titles of Idleness, Unthrift, Recklessness, Combination, Riot, Intemperance, Scoff, and Ignorance. As the family grew up, many were the little bickerings which their parents had on account of their several propensities—the father inclining to the well-conducted among them, while the mother, as is the custom among women, strove to excuse the shortcomings of her younger children, for in her great love she was apt to overlook their faults. With the care of so many sons and daughters, of such opposite tempers and inclinations, constantly pressing upon him, it was no wonder that Labour failed to become rich. But, in spite of all this, he was still a hard-working, contented, and hopeful man; and as years crept unconsciously upon him, and he was no longer able to endure the heat and burden of the day, he was fain to rely on the strength of character which peculiarly distinguished the wife of his youth, and the good qualities common to the elder branches of his family. If Riot and Intemperance caused, as they often did, confusion and discontent in the household, the kindly feelings of Prudence, and the quiet smile of Hopefulness, were sure to make peace among them; if Unthrift and Recklessness dissipated in a day the earnings of a whole week, the genius of Enterprise and the impulse of Perseverance made up, in some measure, for their lack of knowledge and worldly wisdom. And so, in the course of years, the daughters married, and left the house of their parents, and the sons went out into the world to seek their fortunes, and their families increased and multiplied exceedingly throughout various ramifications—and the old couple were again left alone, as in the days of their youth.

SCIENCE AND COMMERCE. A GROUP IN MARBLE BY A GERMAN ARTIST.

But it pleased God to comfort their age with yet another little child. He was fair and comely and pleasant to look upon, with light-brown curling hair and bright sparkling eyes; and

parents esteemed themselves blessed in the possession so handsome an image of themselves. To the father's ength and energy was added the mother's simplicity and auty; and, as the child grew up, they noted that he possed the characteristics of Activity and Courage, as well as e better qualities which distinguished his elder brothers. e was the last-born of a large family, and his parents called m Commerce.

Years passed away, and the child grew to be a man. In earliest youth, however, he had exhibited a disposition fering very much from that of any of his brothers. Instead working in the fields with his father, it appeared to be the ecial object of Commerce to relieve Labour of the severer orts of his toil, and to give honour to his mother Endurance, associating his brothers Enterprise, Self-Reliance, and Amtion with all his schemes. Thus, if Commerce determined find a new field for his exertions in a distant and hitherto known region, Enterprise went before, and reported well of m, so that when he arrived with Self-Reliance and Ambition, was honourably received by the inhabitants. If, in his avels, Commerce encountered any of the children of Unthrift, Intemperance, and Ignorance—which he often did, for they id intermarried and become extremely numerous in the orld—it was his endeavour to correct their faults in the ntlest manner, and relieve their necessities without offending eir prejudices. And so, wherever he went he was well reived, and the name of Commerce grew familiar in the ouths of mankind, and the youngest child of Labour was noured of his brethren.

Strong, well-formed, and in the full vigour of manhood, ommerce grew daily into greater repute, so that many parents ught him in marriage for their daughters. Literature, Phisophy, and Religion were fain to ally themselves to him, it he turned coldly away, and chose for a wife Science, the ir daughter of Experiment and Study.

The marriage was celebrated with all becoming splendour, id a numerous family was born unto the happy pair. United mind and in love with each other, Science and Commerce ent hand in hand about the world, doing good wherever they journed. Though Labour still toiled and Ignorance still velt in dark places, it was their office to relieve the overasked energies of the one and awaken the slumbering activies of the other; though Riot and Intemperance had become ighty, and had enlisted under their banners the children of lleness, Combination, and Scoff, it was the pleasure of Science id Commerce to teach, by their own example, and to counter- t the evil influences of their relations.

Energetic and tireless, the pair went forth among men, and this day are known and honoured in strange and distant laces, whither they have found their way in ships across the ackless waters. What is wanting in the character of the usband is supplied in the firm yet kindly disposition of the ife. If Commerce be less scrupulous in his dealings than he ould be (as has been more than once alleged of him by his nemies), the undeviating exactness of Science removes the ting from the reproach. and if Science be too severe in her emands (as some of those who have no capacity for abstruse alculations have asserted), then the more popular character f Commerce is brought to her rescue; and thus have the husand and wife divided between them the sympathies and activies of mankind. Hand in hand they have travelled over the orld, the husband appearing to lean rather on the wife, than he wife upon the husband. While he possesses the strength nd energy necessary to their enterprises, she finds the mind nd spirit which make them successful; while he pushes forward with a seeming disregard to the feelings of others, she eaches and explains, and reasons with men till they are put ight in the path of usefulness. On the brow of Commerce ay be seen the stamp of wealth and gain, while in the face of cience shines the light of speculation and thought. Of their many children, the favourite of both parents is their youngest-born, Civilisation—a noble youth whose destiny seems to point o no meaner enterprise than the subjugation of the world.

THE TALENT OF SUCCESS is nothing more than doing what you an do well; and doing whatever you do—without a thought of me. If it come at all, it will come because it is deserved, not ecause it is sought for.

JOHN BUNYAN.

A MAN like Bunyan requires many biographies; for the first few, and indeed more than the first few, are pretty sure to be biographies of bits of him. One writer is entirely taken up with his being a Baptist; another, who admires his piety, regrets that he was a "Dissenter," a third takes the poetic ground, and views his spiritual sufferings just as he would the contortions of a dervish. The popularity of Southey has, of course, made his "Life of Bunyan" a text-book. But it is written so entirely from the point of view of a decorous friend of the church of England, that you are perpetually under the impression that the biographer is patting his hero on the head—wondering that so much genius and piety could come out of a nonconformist—and haunted by a pitying remembrance that his *protégé* was once a tinker. You form to yourself a notion of a scene in which Bunyan is introduced by Mr. Southey to a large and respectable circle, and given a glass of wine as a man who has "raised himself by his own exertions." It is curious, too, to see how Mr Southey is perplexed in dealing with the account of those terrible spiritual conflicts which Bunyan has recorded for us in the "Grace Abounding." The same embarrassment hampers and twists Southey's "Wesley." Nothing can be more clear—Mr. Southey would seem to imply—than the extravagance of Bunyan's religious emotions: nothing certainly can be more unlike (you fancy him reflecting) the mild spiritualism of a dean! Yet one cannot ignore them. The autobiographical "Grace Abounding" contains nothing else. The "Pilgrim's Progress" is a picture of the same—drawn from memory in an ideal form—a poetic record of those sufferings of the soul, as the "Iliad" is a record of the wars under the walls of Troy. Yet they are condemned and poohpoohed as outrageous. The truth is, these sad conflicts were the very essence of Bunyan's being, and differ only in circumstance and detail from the strifes of the most pious men in history. Mr Southey watches and pronounces on them from the outside, and always measures them by a moderate episcopal standard of respectability. Hence, it is no wonder that he should characterise some of poor Bunyan's later proceedings under prosecution as tainted with the "smut of his old occupation." As if the tinkering had been the primary fact about pious Bunyan? As if, indeed, his stern contempt for the triumphant officials of the Restoration were not part of the same earnestness of piety which, elevating his whole being, had raised him from a tinker into a priest. It is really unpleasant to reflect that a man of Southey's goodheartedness and strong sense should have been so spoiled by a long conformity to the worldly side of orthodox opinion as to make his later works almost worthless but for their style. We cannot see how anybody who really respected and appreciated Bunyan could have spoken of him as a "blackguard"—an expression of Southey's, which has been very properly reprehended by Mr. Macaulay.

John Bunyan was born at Elstow, within a mile of Bedford, in 1628. His father's occupation was that of a journeyman tinker. It is a very reasonable suggestion of Sir Walter Scott's that his family was probably of gipsy origin. Young Bunyan is found asking his father whether they were of the "seed of Abraham"—hoping to claim under the Bible promises. This would surely argue a consciousness of something peculiar about his race. And indeed his portrait betrays a swarthiness which reminds one of the eastern types. He got some little schooling and married at nineteen—supporting himself by his semi-vagabond trade. His "Grace Abounding" is made up of his real history. It was the history of his soul, of which it contains a report as minute as the report of a disease in a medical book. That he was a miserable sinner, the chief of sinners; that Satan was ever tempting him, that he sometimes thought of "selling Christ," and heard voices crying, "Sell him! Sell him!"—this painful story may be read till the horror merges into sheer tedium. "Experiences" like these, however, were not confined to Bunyan, they were raging in the blood of many hundreds of his day. They were not a whit more violent than the conflicts of Loyola had been in the previous century, in far different circumstances. But here was the important distinction: the southern sufferer tortured the body to appease the sufferings of the mind. When he recovered from his agonies, he recovered not as a man—but woke up a Jesuit. But poor Bunyan when wounded, flew for relief to his Bible. That pasture was always open to him; and as the wounded animal finds by instinct an herb, the restless Bunyan lighted on text after text. Fit of pain succeeded fit; but there were copious varieties of remedies, and Bunyan gradually developed into a strong, brave, healthy man.

The important phenomenon for Bunyan and hundreds of others was, that there was no Church capable of adequate treatment of their case. For John Bunyan was, first of all, a loyal man. He explicitly tells us that "he began by having a most superstitious

veneration for the high place, the priest, the clerk, and what else belonged to the Church." But there was no church worthy of that veneration to be found; and, most fortunately, there was not a church like that of Rome to avail itself of his high-minded piety and enthusiasm for base and worldly purposes—which Roman policy Macaulay has well described. But there was a Bible, and a people to be reformed, and Bunyan became Mr. John Bunyan, a "servant of the Lord Jesus Christ,"—he had acted his "Christian," and the time had now arrived to act his "Evangelist," and to lead others to the "delectable mountains." Of course, he came into conflict with the authorities, the authorities have always considered that the English Reformation was to bound itself within the limits of "the Church"—and the history of that idea is the history of the immense success of "dissent" whenever dissent has begun with the slightest genuineness at the bottom of it.

Mr. John Bunyan was "one of the first persons who was punished after the Restoration for nonconformity." He was described as "a pestilent fellow in the country"—in fact we know what kind of "fellow" he must have appeared to the gentry and such persons as "Dr Lindale," in Bedfordshire—a wandering, "fellow" worse than a poacher a regular bore—an interrupter of all good practices - a wandering, noisy, plebeian dog—making a hubbub about religion, which was clearly not his business,—he being a tinker, intended by nature for a priest—and not a priest intended by nature for a tinker, like the regular orthodox "fellows." He was brought up before the magistrates—compared to "Alexander the Coppersmith" by "Dr Lindale" (the wag!)—and so sent to Bedford Gaol Mr Southey thinks in the luckiest thing possible for him and perhaps it had its favourable side—no thanks to the [illegible] He stayed here twelve years, and wrote the "Pilgrim's Progress" under the shadow of an iron *chevaux de fr* When [illegible] he wandered about performing his [illegible] in London in 1668. He is buried in Bunhill Fields

By his "Pilgrim's Progress," John Bunyan will be known and loved when all else about him is forgotten and only to be found in Biographical Dictionaries It is a wonderful work and the most popular religious book in the English language. Allegory is never calculated to be popular, but Bunyan's allegory is so, though it is all allegory, and though the scenery has no mere romantic attraction, such as there is in the scenery of the Arabian Nights The scenery suggests no luxury like that of oriental scenery; nor either has it the merely human allurement of the island of Robinson Crusoe Both these celebrated works convey the intense feeling of "illusion" which makes the many feel them to be real—but anything is almost credible to a northern peasant about the East and the homely daily life—the realism of the animal life—in Defoe's romance, endows it with the same interest.

On the other hand, Bunyan's tale—that narrative so popular as a mere story—sets out with an obvious intention to teach religion—is interrupted by conversations, discursive and argumentative—gives names associated with the school and the bush to its personages—and yet one can fancy its being perfectly enjoyed by the vulgarest reprobate who ever raved about Tom Paine or denounced "the parson" Its distinct religious object prevents the "illusion" ever being complete, you never have time to get lost in "Vanity Fair" and mingle as a native there, as you do in Lilliput Your revery is always broken by a tap from honest John Bunyan's pastoral crook And yet the treatment is intensely real The abstractions are solid personages The scenes are real. In truth, the extreme truthfulness of the dramatic phraseology gives that air of reality to the whole. We may call this art, if we like; but it is an art which springs not from labour to produce effect, but from the entire and homely simplicity of John Bunyan's soul. He tells the tale of the marvellous journey with perfect good faith. You believe, and wonder, and you scarcely know whether you are asleep or awake. Reading the "Pilgrim's Progress" is like dreaming and knowing that it is a dream It carries you back in belief to the time when dreams were "from Jove;"—to the tree in the old mythology whose leaves were full of dreams. And indeed it illustrates singularly the passage about the gates of dreams in Virgil, it conveys its divine truths in the homeliest form as the true dreams are said, there, to come through the gate of horn.

The "Pilgrim's Progress" has been translated, not only into all the languages which disseminate genius among modern nations, but it is to be found in the Arabic and the Persian, and even in the tongue spoken by the people of Madagascar Never was any work more poetic, and yet never was any work written in more undeniable prose. Bunyan's life had told him that there is poetry and beauty in everything for those who have eyes to see. And the reader of his "Grace Abounding" who comes to the "Pilgrim's Progress," sees there the struggle of this man; how, when a mere stubbly or theological part of his feelings,—for he lived amid the din of "sects"—had burned itself away in smoke and noise, the steady light within him rose up, clear, and bright, and shadowless!

SPAIN AND ITS PEOPLE.—V.

THE LATER HISTORY OF SPAIN EPITOMISED.

The history of a country is discovered in the acts of her people, rather than in a narrative of the lives and doings of a succession of her kings. We shall endeavour, therefore, to bring our epitome down to the present day by a general description of events, in the place of the more ordinary chronological arrangement.

We have seen how the Moors—those brave and polite people, who did so much for the glory and honour of Europe—were driven out of the peninsula during the reign of Ferdinand and Isabella—a period distinguished by an event of the greatest importance to Europe,—namely, the discovery of America by Columbus, under the patronage of the haughty Isabella. Another kind of interest attaches to the history of Spain from this period. We see her now, for the first time, intermeddling with, and mixed up in, the politics of the other European powers. The conquest of Granada, besides having the effect of driving the Saracens and Jews from that part of Europe, had also taught the Spanish kings the value of greatness; and the discovery of America was quickly followed by such extensive conquests and acquisitions in the New World, as could not fail to raise Spain into the very highest position with regard to the monarchies in the old.

The establishment of the inquisition, and the interference of Ferdinand in the affairs of France and Italy—an interference which had the effect of injuring the Italian peninsula, while it benefited none of the combatants—were the next important events in Spain On the death of Isabella, in 1506, the crown of Castile devolved on her daughter Joanna, the wife of Philip, archduke of Austria; and, on the death of the latter, on his son Charles V., afterwards Emperor of Germany. A few years later—on the 23rd of January, 1516—Ferdinand also died, after having appointed Cardinal Ximenes regent of Castile, until the arrival of his grandson Charles, who was then only sixteen years of age. The next year, then, saw the youthful Charles ascend the throne of Spain. Descended from two illustrious men, Ferdinand and Maximilian (the emperor elect of Germany), Charles was received by the Spaniards with the greatest enthusiasm; and his reign is considered one of the most splendid in Spanish history. In his time began a long and fearful struggle, which at one time threatened the liberties of Europe, but which was eventually settled by the intervention of England, on his retirement to the sovereignty of his paternal dominions, and the marriage of his son Philip to the English princess, and afterwards queen, Mary.

The war which Charles carried on with France was too vast an undertaking for his son; and as soon as the latter ascended the throne, his first care was to negotiate a peace through the instrumentality of England In this he was so far successful as to induce the pope to declare the French interlopers in Italy, and to persuade the rest of Europe that Spain was still a first-class power, so delusive are the notions of wealth obtained from a distant and unknown country—for it must be recollected that at this period the Spanish were the only people who had made any progress in colonising America. In the reign of Charles, Mexico was conquered by Hernandez Cortez, Peru was taken by Pizarro, the Straits of Magellan were discovered, and the germ of the Reformation was first felt in Europe; but during the feeble rule of Philip, no very great or worthy acts are recorded. Dying in 1598, he bequeathed to his successor the kingdoms of Naples, Sicily, Belgium, and Portugal. In the reign of Philip III.—a weak and superstitious prince—the remnant of the Moriscoes, or descendants of the Moors, were finally expelled from Spain.

The reign of Philip IV. began in 1621, and was marked by few acts of importance, if we except the insurrection of Portugal in 1640, and an unsuccessful war carried on against France, chiefly in the Netherlands, and concluded in 1659 by the peace of the Pyrenees. To this monarch succeeded

Charles II., the last prince of the house of Austria. He was feeble in body and incapable in mind, and though he reigned thirty-two years (1668-1700) no splendid acts of private or national concern are recorded of the period. On his death began the well-known war for the succession to the Spanish dominions, which lasted thirteen years, and in which Spain, France, England, Holland, and Italy, all engaged.

The victories of our great Marlborough and the chivalrous Prince Eugene, could not prevent, however, the French branch of the royal family from gaining the Spanish throne; and so it was decreed—by the peace of Utrecht, in 1713,—that the grandson of Louis XIV. should reign in the peninsula, and that the Belgian provinces should revert to the house of Austria. Though these may be somewhat dry details, they are nevertheless necessary to be remembered by all who would obtain a knowledge of the history of Spain; and having gone thus far with us, we doubt not that the reader will accompany us to the end of our journey.

Philip V., the first Spanish king of the house of Bourbon, reigned long, but not prosperously. In 1718 he lost the greater part of his navy in a war with England, and in 1733 he recovered the kingdom of Naples. The peace of Utrecht had stripped Spain of her European possessions, and nothing was left to Philip but the Peninsula and the American colonies, the latter consisting rather of honorary titles than profitable dominions. By that peace, Belgium, Naples, Sicily, and Milan were given to Austria, Sardinia to Savoy, Minorca and Gibraltar to England, which latter fortress we still possess. Although Alberoni afterwards conceived the bold design of restoring Spain to her former rank among the nations, the quadruple alliance between England, France, Austria, and Holland defeated all his plans, and in 1721 king Philip abdicated in favour of his son Louis. The prince dying, however, of the smallpox a few months afterwards, Philip was compelled to resume the crown; and, after renewing hostilities with England in 1739, died in his turn (in 1746), and his son Ferdinand VI. reigned in his stead.

This Ferdinand, a brave and prudent prince, appears to have had no disposition to keep up the war which his father had begun; and in his reign, therefore, we find Spain once more at peace with all the world. Unfortunately for his count he died too early—in 1759—and his son Charles III. succeeded to his throne. Wanting the strength of character of Ferdinand, Charles was soon engaged in the war then raging between France and England; and the consequence was that many of the transatlantic possessions of Spain were transferred to this country. After wasting much blood and treasure in fighting, the only course was to make peace, and so a peace was concluded between the island and the peninsula, which continued till 1778. In that year, however, Spain, hitherto neutral, was induced to take part in the quarrel between England and her North American colonies Out of this war she came, however, with somewhat better success; for, by the peace of 1783, she obtained the Floridas and the island of Minorca.

The next king of Spain was Charles IV., who succeeded to the throne in 1788, and speedily became involved in the great European quarrel at that time in full progress. Though at first allowed to be neutral, the monarch was soon made a party to the coalition against republican France; but was, after Prussia, the first of the great powers to conclude a treaty of peace. This took place in July, 1795, but in a little more than a year the wavering cabinet of Spain joined its late opponent, declared war against Great Britain, and received, on the 14th of February, 1797, from Lord St. Vincent, a most memorable proof of our naval superiority.

In the war of 1803, between England and France, Spain, though subject to the influence of Bonaparte, and paying him a monthly tribute of five millions of francs, avoided an open rupture with her ancient enemy. But the British government, believing that the Cabinet of Madrid only waited the arrival of the treasure ships from South America to openly declare war and side with Napoleon, boldly, and without any previous declaration of war, seized on and captured four Spanish frigates returning from the New World freighted with precious metals. This measure, which is indefensible, considered by itself, was sufficient to arouse the dormant energies of a fiery and courageous people, and war with Great Britain, was declared forthwith. But sad reverses awaited the Spaniards; and in the battle of Trafalgar, fought in 1805, the naval supremacy of Great Britain over Spain and France was at once and completely established.

But the interest of foreign warfare was, ere long, overborne by intestine divisions. Ferdinand, the heir apparent to the Spanish throne, coming to open variance with his father, the existing dissensions were eagerly seized by Bonaparte as a pretext for invading the peninsula. The description of the battles on land, and the engagements at sea at this period, belong to a more exact relation than is here attempted; but the compulsory abdication of the royal family of Spain—which took place at Bayonne in 1808—was one of their well-known consequences. This abdication was followed by a general insurrection against the French; which, though kept down for a time by military force, continued in active, though desultory operation, shortened greatly the movements and supplies of the French, and contributed most materially to the success of the British arms.

The evacuation of the Spanish territory by the French took place in the western Pyrenees, after the battle of Vittoria (June 21, 1813), and in the eastern division of the county in the succeeding spring. Ferdinand VII. was now restored to the throne—a consummation to which the reverses of Bonaparte in Egypt, no less, perhaps, than the successes of Wellington, Graham, and Hill in the peninsula, most materially and directly contributed. "Thus ended, after six years of continual struggle, one of the most sanguinary wars on record, in which one is at a loss which to admire most, the courage and perseverance of the Spanish nation, or the steady discipline of the British troops, and the high military talent of their commander!"

In the short contest against Bonaparte in 1815, Spain participated in the views of the allied powers, without however entering the French territory Her only subsequent armaments were expeditions, feeble and indifferently conducted, against her insurgent colonies. In the management of the interior of the kingdom, Ferdinand "seemed to study only the revival of abuses, and the degradation of those who had come forward in the cause of their fatherland against the advances of Napoleon." The dissatisfaction and indignation thus excited, led, in the beginning of 1820, to open insubordination on the part of the military force destined for America, and produced "in the course of that and the next years, a revolution of great importance, by which the constitution of the Cortez, as established in 1812, was restored, and such salutary restraints established on the power of the Crown as seemed best calculated for securing the rights of the people."

The more recent history of Spain has been one of intrigue and imbecility. The French revolution of 1830 caused some little commotion in the peninsula; but it was speedily suppressed. Ferdinand had married Christina, daughter of the king of Naples; and in 1830 there was born to them a female child, named Isabella. The war of succession, consequent on the death of Ferdinand in 1833, which took place between Don Carlos, the heir of the old *régime*, and the asserters of the rights of the youthful queen, lasted till 1835, when it was settled through the intervention of England, and in favour of Isabella. The civil wars had lasted three years, and during the course of them much ill-blood had been generated between the Carlists and the adherents of Christina, the queen-mother. Changes of administration, foreign debts, a dissipated people, and a partially cultivated country, were the natural and inevitable consequences of such a state of things. The intervention of France, and the marriage of the children of Louis Philippe into the royal family of Spain, seem only to open a vista of further inquietude for this unhappy country. Bankrupt in fortune and in fame, the government of the present is only enabled to stagger on from day to day, under its load of debt and dishonour, by the favour of the clergy and the prestige of its, even yet, rather formidable army. The greatness and glory of Spain exist only in the records of the past, of which hundreds still remain in the shape of ruined palace and moated castle, and terraced vineyard and picturesque houses, and a half Mohammedan population.

Of the characteristics of these latter, and the general features of the country, as well as of the many peculiarities of this charming but unfortunate corner of Europe, we have yet to speak.

A VOICE FROM AUSTRALIA:

BEING A GENUINE LETTER FROM AN EMIGRANT, *verbatim et literatum*

Lightwood Farm, Mount Moriac.

DEAR CHARLES,—We received your letter of 30th May on the 12th September, and I should have answered it before had I not wished to give you a full account of the state of affairs in Port Philip at the present time. You will of course have heard ere this of the gold discovery both at Bathurst and Bunomyong, and it is extraordinary what a great difference it has made here already, as there are about 9,000 to 10,000 persons at the gold diggings. Some have left responsible situations in town, working men of all descriptions have gone, among them four of my brothers and Mr N——— (my partner), who are doing very well now, although the first fortnight they did not get much. They dug three holes; the first two they came to water, the next one to pipeclay; and then they went to a hole that had been abandoned by a bullock-driver who had got 1 cwt. of gold out of it, and they are now getting about 3 oz a day, and perhaps next week they may get 50 oz a day, or even more, as many have averaged £100 per day per man, although, perhaps, at first unsuccessful Of course there are many who get scarcely any, but then they go expecting to find the gold without any hard-work, and without being properly equipped for it; and after a week or a fortnight they return disgusted, and say they had no luck. Our party took provisions for two months with them, and they went with the determination of stopping, at all events, until harvest, so as to give it a fair trial, and I have no doubt but that they will be very successful. Now to give you some idea of the alteration it makes even at the farm,—our man Tom has been to the diggings with our dray and team since taking our party up there, and has received for the carriage of 2,300 lb of goods, £26, and he went up there and down again in nine days He will start and take a load both up and down again, making upwards of £30, in about ten days, the distance being only 56 miles from Geelong, but it requires a good team, as the road is awful in some places We give him a share in it, as it is much the best plan, for then the more he makes the more he gets, and of course he will do his best for his interest as well as ours

I am sorry you are not here now, as I have no doubt you could get a good situation as manager of a store up there or in town, as so many have left their situations in every station of society But ordinarily this is not the place for either clerks or managers, as merchants, storekeepers, &c, will not employ new comers, except at very small salaries, until they get colonial experience—the mode of doing business here being very different to what it is in England, and there are so many clerks come out here who are glad to do anything, and in fact are obliged to work or starve. Whilst we were stopping at Melbourne, there was an advertisement for a collector to the hospital, and there were no less than 700 applications, so that you will at once see you would not have a chance of getting a good berth, unless you had the appointment in England, or you happened to come out at some such time as the present

If you could come here with some capital, then I have no doubt you would do well, but when here, you would have to determine quickly what course you intended to pursue, as it does not do to dilly dally, as lodgings and necessaries of every kind in town are very high—flour £3 per bag of 200 lb., water in Melbourne 5*s* per cask, and nearly everything in proportion, except meat, which is 2½d. per lb.. for, in consequence of the gold diggings, labour is excessively high, so that nothing is so cheap as it was three months ago, and storekeepers, &c., are obliged to pay their men double wages, and more, even then, very often they will leave But we cannot complain, as, should prices keep up, we shall get from 10*s*. to 12*s*. per bushel for our wheat, and there is every prospect of our getting a good crop, as it looks splendid.

We often think of you and Amelia, and wish you were here You would be astonished at what we have done in nine months, having grubbed more than 50 acres of land, of which 36 are cropped, having sown 30 acres of wheat, between 4 and 5 of potatoes, and better than 1 acre of barley. From our having done so much in such a short time, you may think it very easy work, but I can tell you it is thundering hard work, and I can assure you that although Mr. N. and myself were never accustomed to work in England, we have beaten all our neighbours hollow. Most of them are working men who have saved money and bought small farms; in fact five of them (one of whom has been nine months longer here than us) have not cleared and cropped altogether as much as we have. Besides which, we have dug two water-holes, put up two miles of brush-fences, and fenced and dug a garden of quarter of an acre, out of which we have had peas, cabbages, cauliflowers, radishes, &c. In short, I question if you would believe me if I told you all we have done since we have been here, with the assistance of only one man and my brother Ted, who has been worth a Jew's-eye, he having driven the bullocks during the whole of the ploughing season.

Nancy and myself have been here alone since our party went to the diggings, and we are as comfortable as we could wish. Whenever we want anything, I ride on horseback into town and bring it out in front of the saddle. Our mare is a fine animal, and will do almost anything,—plough, drag off timber, &c., and in fact has been very useful all through the winter, as the road into Geelong was in a most awful state in the wet season, almost impassable for a dray; and the only way that we could get fresh meat was by sending our horse into town with one of my brothers, and it would bring out a hundredweight and a half across the saddle; and now that our team is away it is especially useful Nancy is, I am happy to say, very well, getting quite fat and stout, with such an appetite; and our dear child is very well and very troublesome. We wish, for your sake and Amelia's, that you could come out, as I have no doubt but that this climate would do wonders. We are very pleased, everything looks so beautiful now,—the grass is so splendidly green, and the wild flowers here are lovely, and in millions, in England some of them would fetch any price; and, with our prospects of getting on, I can only say that they exceed my fondest expectations—as even this year, after deducting the amount which we shall require for next year's expenses, we shall clear by the crop alone (independently of the diggings and carting) more than I could make (extra work included) in England in one year, and leave nothing to put by; besides which we have a nice cottage, fifty acres of cleared land and as many more uncleared, so that every year we can either add to our farm or invest the money elsewhere.

We could not have arrived here at a better time, for we have made a home before the diggings were found, and we can now look out and watch for opportunities of investing our spare cash elsewhere. Should my party make anything extraordinary between this and harvest, I shall go with them after then, when one of my sisters will stop with my darling, and we shall get a man and his wife to be on the farm whilst we are away, so as not to neglect the farm for the sake of the diggings.

The price of wheat here being likely to be very high for some time, as the New Zealand settlements will require to be supplied for some years, and many of the labourers have left Van Diemen's Land for Port Philip and Sydney, and will continue to do so as long as the gold fever lasts, besides which I have no doubt but that the emigration from England and elsewhere will be very great, as gold digging in this colony is likely to become a permanent means of livelihood to many thousands, and they must all be fed they cannot eat gold They are finding out fresh places every day, and there seems to be no doubt but that the gold-fields extend all through the high ranges both in Port Philip and New South Wales, and are only terminated by the sea, about from 12 to 60 miles from our farm Indeed, gold has been found only 14 miles from us, out in the Wurnnbeet and Iron Bark Forests; and I intend to go out there prospecting in a week or two, as I can get away early in the morning, and back again from there in the evening

A week or two back, there was some doubt as to whether there would be hands sufficient for reaping, &c, as some of the farmers have a great deal of wheat in, but now they consider it safe. Taken altogether, there is not so much land in cultivation this year as two years back, a good deal of it being run out, but farms will increase very much, I expect, next year, as many of those who have got a quantity of gold are buying land at the Government Land Sales, and some has fetched a very high price. Land four and five miles farther from town than us sold from £2 to £4 per acre I went to town to buy some, expecting it would go cheaper But, however, as it was the first Government Sale at Geelong, there was a good deal of competition. Perhaps next sale I shall have better luck.

The government are selling the land in smaller lots. Formerly it was 640 acres, but now from 78 to 320 acres. I want to get from 200 to 320 acres at £1 per acre—that being the upset price —and then I shall be pretty well satisfied, as, after it is grubbed and fenced, the land is worth from £5 to £6 per acre, and even more than that in some places. So you may judge how property increases in value in a new country.

However, I must now conclude this rambling epistle; and trusting that you may some day join us here with your dear wife's health improved, believe me to be, yours, &c., J. H. R———.

ANGER.—The anger that is violent and transitory is like the rage of a lion—that which is snappish and irritable, and is prolonged through a variety of unmanly and hasty ebullitions, resembles the action of the sneaking, cowardly cur-dog, which growls, barks, and wishes to bite you, but is afraid to approach and assail you in right earnest

THE LITTLE FLOWER:

A DUTCH LEGEND.

A LITTLE child was dead, and its guardian angel bore its soul to heaven. Already they had passed over the opulent city, the fields covered with the ripe corn, the woods, where the axe of the woodsman was sounding. As they glided along, these things seemed unnoticed by the angel, but presently arriving at a poor village he stayed his flight, and his eyes looked down upon the scene. He saw a ruined cottage, everything about it had the appearance of desolation, rank weeds had sprung up in the once pretty garden, and the place seemed a wilderness. The angel looked for a long time upon the deserted home, and, lo! hidden from the sunshine, he saw at last a pale little flower, and descending close by, he plucked it carefully.

The spirit of the child asked why his guardian was thus arrested by so poor a thing as a field flower, without beauty and without perfume. And the angel answered,—

"Thou seest in that cabin a ruin The snow gathers on the roof, the rain pours through the fissures in the wall In that cottage once dwelt a child of thine own age—a child who was afflicted—whose frail and delicate frame was ill-suited for the world's rough life. The child scarcely ever quitted his bed of straw—through the long, long, weary days, and through the long, long nights, he lay there—sometimes supported by crutches getting out into that garden, and taking two or three turns up and down, but very, very seldom—even that little exertion was too much for him to bear He loved to watch the rays of the joyous sun pour through the window, the poor little creature rejoiced in the light, the blood seemed to circulate more freely in his little veins, and as a tender form bent over him, and kissed his forehead, he would say, 'I am better now'

"He never saw the verdure of the fields nor the rich foliage of the forest. When the other children of the village were sporting with the wild flowers, and waking up the echoes in the wood, he lay upon his little bed, when the beautiful flowers of the summer put forth their leaves in the light, when the birds sang merrily and spread their wings, and flew upwards to the sky, when there was not a cloud in the deep blue heaven, and when the autumn came, and fading leaves grew red and golden, and lay on the thick grass—the poor child grew worse One day his eldest sister, who loved and cared for him as a mother, brought him a little flower with its root, and planted it in a pot of earth And God prospered the flower. It was the garden of the sick child. To him it was the deep water, the blue sky, the shady forest,—all creation.

"They placed the little flower on the window-sill, that the sick child might look upon it, and his little heart was glad as he saw its leaves bright and beautiful in the sunshine and he looked upon it as upon the face of a friend But when God took the little martyr to his own home, the child's family quitted the village, and the house was left desolate, the garden was deserted, and the flower was forgotten, but, by the providence of God, that little blossom was preserved, and that it is which I have now plucked from the moist earth'

"But why have you told me all this?" said the spirit of the child.

"I am myself," replied the angel, 'the poor afflicted child, whose chief solace in life was that little flower God permitted me to suffer in the world, but he has given me now the joys of paradise; but old love is strong, and I would have given the brightest star in the heaven which is now my home, for the poor little field-flower I have this day found.'

THE PHILANTHROPIST.

THERE is a large-hearted writer of the present day, with whose name and works we are most of us acquainted; one who has, as much as any man of his period, dedicated his genius to the improvement of his fellow-creatures in a most pleasing manner. Well-known as the possessor of an original mind, he is best appreciated as a nicely selecting and faithful translator, a transplanter from the soil of other languages into the very mould or finest part of our own, of the fruit-and-flower-like ideas of the minds of men belonging to other ages and to other lands. I refer to Leigh Hunt, now well down the vale of years, but young, they say, at heart as ever; who has industriously written during a long lifetime, and through almost the whole of whose works there flows a fine, clear, bold, brotherly feeling, not the fraternity *à la mode* of a neighbouring nation, but fraternity, I do believe, honestly felt as it is ever earnestly and beautifully expressed. Mr. Hunt has made a rhythmical paraphrase of an oriental fable, which is a favourite of mine:—

> Abou-Ben Adhem (may his tribe increase),
> Awoke one night from a deep dream of peace,
> And saw, within the moonlight in his room,
> Making it rich, and like a lily in bloom,
> An Angel writing in a book of gold:—
> Exceeding peace had made Ben Adhem bold,
> And to the presence in the room he said,
> "What writest thou?" The vision raised its head,
> And with a voice made all of sweet accord,
> Answered, "The names of those who love the Lord"
> "And is mine one?" said Abou. "Nay not so,"
> Replied the angel Abou spoke more low,
> But cheerily still; and said, "I pray thee, then,
> Write me as one who loves his fellow-men."
> The Angel wrote, and vanished. The next night
> It came again with a great 'wakening light,
> And showed the names whom love of God had bless'd,
> And lo! Ben Adhem's name led all the rest

And thus it is. God's love and blessing ever must, and will follow man's love to man. What are the words of the Divine Philanthropist, he who came to show us how heavenly a thing, a perfectly good heart is? "This is my commandment, that ye love one another." In contrast to this truly godlike precept, how very appears the prevailing selfishness of the world which we feel in our bosoms, and can trace in the conduct of almost every one about us! How eagerly do we all listen to what Carlyle somewhere calls "the Gospel of Mammonism!" Personal comfort, personal health, personal aggrandisement, personal knowledge, personal salvation—these are what we strive for. Of *pseudo*, or sham philanthropists, the name is legion! There is not a nook or corner but has its philanthropist, its "public-spirited man." There is for instance, the Dreaming Philanthropist, upon whom (it may be, after an unusual enjoyment of his luxuries), the frightful ignorance and misery of the dense masses of our poor, suddenly crowd like a horrid nightmare, shaking him up into a delirious waking state, only to glare blindly out for a moment into a world he thinks too dark to look into long, to marvel at the strange shock he had so unexpectedly experienced, and to close his eyes, to fold his arms, and to compose himself once more to his selfish sleep, praying that he may not again be similarly agitated; or else, who lies in a tranquil and unbroken repose, radiant with elysian visions of what the world might be, and what the world doubtless will be!—sufficient food, sufficient clothing, sufficient employment, sufficient remuneration, to everybody!—all deficiencies in our social system remedied, all abuses terminated, all old things of this nature passed away, and a new world begun; and yet who is all the while as motionless and as useless as a dead body.

Then there is the talking Philanthropist, who exhausts his vocabulary in benevolent speech, and who will prattle "good will on earth" by the hour. He will deafen you with jeremiads over "the sad state of things,"—with censure of "public bodies"—with his schemes of "total reformation." He will even talk against mere talking; and, regarding him, we might be satisfied that if words, and above all "I might, could, would, or should," were able to arrest the busy arm of drunkenness, or could drag out of our crowded wynds and courts the grim hag Filth, who squats or creeps along muttering fever-curses; or could lighten the cares and increase the domestic comfort of the toil-worn mechanic, or could in any way strengthen the weak and raise the bowed down—earth would ere long become one round Eden, and mankind once more enjoy celestial happiness, even here!

Then there is one whom I would call (though it may sound paradoxical) the Professional or Interested Philanthropist; and of this class the number is very great. Without being more particular, I would simply remark, that in my opinion to it belongs a large body of literary men in this day; who, taking advantage of the wonderful and glorious movement and elevation in the minds of our working classes, live by expressions of feigned sympathy and unfelt appeal: nay, who take to themselves in no small degree the credit of the change. "Movement-men," I think they call themselves. Just as if a puny mortal, borne along by a resistless and sublime billow, should, lifting up and clapping his hands, exclaim, "Here we go. I said it. Let us still advance!" Oh, it is eminently

absurd! The minds of such men, to the minds of those they profess to teach, are whipt cream to the surge of the sea. The most influential are but instruments in great changes; and many of the most important changes which happen seem little indebted even to human agency. Of those *pseudo*-friends of mankind, I would only refer to two others—and these are the Philanthropists in one direction, whose benevolence, like a lantern with one side, only sends out a single and solitary beam of scrutiny and cheerfulness into the surrounding gloom, and who, strange to say, can be almost cruel to all the rest of the world to be kind to a particular section of it; and the Philanthropist who is one from his love of scheme, his ambition of being successful in a plan, and who resembles a tiger in this respect, that, if he misses his leap, he retires into his jungle. Now, in opposition to these, what is the true Philanthropist? First of all, he is rare. Unlike the dreamer he is what may be called a wakened and risen man; he has "got up and set to work." He has looked, and continues to look with daylight eyes into suffering and abuse. He sacrifices, or rather devotes, for it is no sacrifice, his thought, his means, his life, to doing good. He may pay more particular attention to one subject than another, but he is comprehensive and impartial in his good-heartedness. No wrong escapes his observation; no opportunity of being of advantage to others is lost by him, if possible. If he fails in one scheme, he tries another. He is unchilled by the want of co-operation, unstaunted by opposition, not discouraged by present failure. He remembers that his cause is good, although some of his means may have proved, and others may again prove useless. He keeps his eye, as it were, on the distant light, although he may have no companion, though he may be surrounded with brakes, and often may have gone far and hopefully upon the wrong path. Above all, he acts, and without action and perseverance he is no true philanthropist. If Howard had merely been a dreamer about their sufferings, what gloom and squalor might not prisoners be enduring at this very time in their lonely dungeons, in addition to their loss of liberty! If Wilberforce had merely gossiped of the damning disgrace, instead of labouring incessantly, and in many ways for fifty long years, the slave might even now be clanking his fetters and shivering beneath the whip, an article of traffic and the subject of mockery and brutelike degradation. If the amiable Elizabeth Fry had merely sat and wept in her closet over her fallen sisters, instead of going, as she did, into their crowded and sin-festering cells, and raising a voice there, like that of Ben Adhem's vision, "made all of sweet accord," how many miserable women might still be blaspheming and moulding into eternal ruin there! If Lord Ashley had been a mere philochemist, and notoriety-seeking man, instead of being actuated by true and increasing humanity (which grows by what it feeds on), how many poor girls might still, with belt-rutted brows and straining limbs, be dragging the heaped trucks through the narrow and dark avenues of the coal-mine! And how many poor children might still be lifting up the cry—

> "Oh, we are weary,
> And we cannot run or leap—
> If we cared for any meadows, it were merely
> To drop down in them and sleep.
>
> Our knees tremble sorely in the stooping—
> We fall upon our faces, trying to go,
> And, underneath our heavy eyelids drooping
> The reddest flower would seem as pale as snow.
>
> For all day long we drag our burdens tiring
> Through the coal-dark underground,
> Or, all day, we turn the wheels of iron
> In the factories, round and round."

THERE are prouder themes (says Verplank) for the eulogist than the schoolmaster. The praise of the statesman, the warrior, or the orator, furnishes more splendid topics for ambitious eloquence; but no theme can be more rich in desert, or more fruitful in public advantage.

Of satires (says Frederick the Great) I think as Epictetus did.—"If evil be said of thee, and it be true, correct thyself; if it be a lie, laugh at it." By dint of time and experience I have learnt to be a good post-horse. I go through my appointed stage, and care not for the curs who bark at me along the road.

THE WONDERS OF THE GREAT METROPOLIS.

THE population of London exceeds that of the Grand Duchy of Tuscany by 300,000, that of the Grand Duchy of Baden by upwards of 500,000, and is nearly or about five times the amount of the population of Nassau. According to kingdoms that fill more or less prominent rôles on the great stage of the political drama, we get the following results.—London is within 4 or 500,000 of half the population of Bavaria, exceeds by upwards of 100,000 half the population of Belgium, and by 400,000 half the population of Holland; is equal to the whole population of Hanover; exceeds the whole population of Westphalia by 450,000, and is considerably more than the whole population of Greece.

Some of us may learn for the first time that "if the streets of the metropolis were put together they would extend 3,000 miles in length," that "the main thoroughfares are traversed by 3,000 omnibuses and 3,500 cabs, employing 40,000 horses." Few of us, perhaps, have considered what amount of meat and drink is annually required to keep London on the move. In 1849, Murray tells us the metropolis alone consumed 1,000,000 quarters of wheat, 240,000 bullocks, 1,700,000 sheep, 28 000 calves, and 35,000 pigs. One market alone supplied 4,024,400 head of game. London, the same year, ate 3,000,000 salmon, which were washed down by 43,200,000 gallons of porter and ale, 2,000,000 gallons of spirits, and 65,000 pipes of wine. 13,000 cows are yearly required for London milk, and reckoning two gallons a-day from every cow, we have here, "say" 72,000 gallons of "London peculiar" consumed, if not enjoyed, by the London inhabitants. 360,000 gas lights range the streets. London's arterial or water system supplies, it seems, a quantity of 44,383,328 gallons per day," a thousand men are employed in bringing annually to London 3,000,000 tons of coal, and to clothe and wait upon London's people we have no fewer than 23,517 tailors, 26,579 bootmakers, 2,000 milliners and dressmakers, and 168,701 domestic servants.

There are 3,000 omnibuses in London and the suburbs, which carry not less than 300,000,000 passengers yearly, a number equal to one-third of the population of the world—employing 11,000 men, and working a capital of £1,000,000, with an annual expenditure of £1,700,000, and paying to the revenue a duty of £100,000, or as much as all the stage-coaches in the empire contributed before the establishment of railways.

These dry figures suggest a lively idea of the perfection to which we have brought the art of packing, illustrating to the last extremity the economical problem of the greatest possible number in the smallest possible space. Assuming the area of London to be nineteen square miles, it yields us a population on each mile of 130,000 human creatures, performing within that stinted compass all the operations of life and death, mixed up in a fearful *melée* of passions and interests, luxury and starvation, debauchery and criminality, hard work and idleness, besides an infinity of occupations—useful, ornamental, and mischievous, making love, begging alms, picking pockets, juggling, grinding organs, rolling in carriages, exhibiting "happy families" in the streets, and returning at night to unspeakable misery at home.

STATISTICS OF LONDON PAWNBROKING.

THE number of duly Licensed Pawnbrokers in London, and the suburban parishes, is about four hundred, but this does not include Loan Societies, or Money Lenders, whose transactions are in sums over £10. The number of persons entering, and transacting business at the various Licensed Pawnbrokers in London, daily, is one hundred and sixty thousand, or about forty-eight millions annually. The amount of Capital invested in the various Pawnbroking Establishments of London is about one million four hundred thousand pounds. The amount of Money Loaned by them, in various sums but principally in sums of less than £1, amounts to upwards of five millions of pounds annually. The amount of Interest paid to the various Pawnbrokers in London is upwards of three hundred and fifty thousand pounds annually, and that chiefly by the working classes. The amount of property left unredeemed, with the various Pawnbrokers of London is upwards of two hundred thousand pounds annually.

The amount of stolen property pledged with Pawnbrokers is very low, being as one to nine thousand compared with their other transactions.

When we consider that these figures do not include Loan Societies which are but pawnbroking establishments of a higher class, or the numerous public houses and "Dolly Shops" where a regular system of pawnbroking is carried on, we must conclude this to be a subject well worthy the attention of the statesman and the philanthropist.

PARTHUS.

ANOTHER REMINISCENCE OF THE GREAT EXHIBITION.

CHINA, PORCELAIN, EARTHENWARE, &c.

In Classes I., XXV., XXVI., and XXVIII. of the Official Catalogue, we have first the raw materials of which pottery and porcelain are composed, and secondly the finished articles in various forms. We purpose, without entering at large into the history of the manufacture, to speak of the British contributions in china, earthenware, &c. The taste for elegant designs in statuary porcelain, parian, &c. has greatly increased of late; the consequence, doubtless, of the untiring efforts made by our great manufacturers, assisted by the master-mind of the artist. The difficulties to be overcome consequent on the shrinking of the clay in the process of burning, the comparative novelty of the art and the want of the necessary experience in the artists, have combined to render statuary porcelains rather expensive; but there is little doubt that, as these difficulties are gradually conquered, exquisite designs in art-manufacture may be brought within the reach of the artisan and the cottager.

The ceramic art in England owes its celebrity mainly to the exertions and enterprise of Josiah Wedgwood. Before his time the pottery made in this country was of a rather poor and meagre description; but the improvements he introduced both in material and design, speedily attracted public attention, and a market was found for English earthenware in every country in the world. In 1763 he procured a patent for a superior kind of table porcelain called Queen's ware, and besides this he introduced into his works at Etruria—the village built by him in Staffordshire, and not inappropriately named,—various kinds of porcelain, hitherto but little known in England, such as biscuit ware and a terra-cotta resembling porphyry. This public-spirited man was the projector of the Grand Trunk Canal, which unites the Trent and the Mersey, and the inventor of an instrument for measuring degrees of heat called the Pyrometer. From a mean beginning he rose to great wealth and consideration; and when he died, in 1795, was a member of several royal and learned societies.

For the ordinary purposes of domestic life the pottery of Staffordshire—the great hive of this manufacture for more than two centuries—is all sufficient; but the great success achieved in the royal establishments of Sèvres and Dresden has at length induced our manufacturers to turn their attention to the production of the fine and more expensive kinds of porcelain. And with what success, a glance at the engraving introduced will be the best answer.

Sixty exhibitors represented the progress of the ceramic art in the Great Exhibition of 1851; of whom, on the part of Great Britain, one—Messrs. H. Minton and Co., of Stoke-upon-Trent—obtained a council medal; twelve were rewarded with the prize medal; and thirteen received honourable mention in the report of the commissioners. The only other council medal was awarded to the French porcelain manufactory at Sèvres; and of the remaining prize medals, France obtained five; Austria, two; the States of the German Zollverein, four; and Russia, Portugal, Denmark, Bavaria, and India, each one. The "honourable mentions" twenty-seven in number, were thus apportioned. United Kingdom, thirteen; France and Algiers, six; the Zollverein, four; Austria, two; Turkey and Switzerland, each one. By this it will be seen that our manufacturers have no reason to complain of want of consideration at the hands of the jury, they having individually received the same kind of compliment bestowed on the royal manufactories of Dresden, Copenhagen, Meissen, St. Petersburg, and Prussia.

Of the British Exhibitors the highest places must be assigned to Messrs. Minton and Copeland, the first for the application of new means and resources in the art, and the last for the general excellence of their display. But while we select the productions of the first of these firms for illustration, we must by no means forget that Messrs. T. and R. Boote, Mr. J. Bourne, Messrs. T. Wedgwood and Sons, the successors of the famous Josiah—Messrs. John Ridgway and Co., Mr. S. Alcock, Mr. T. Dimmock, and Messrs. J. Rose and Co., have, each in their own way, produced excellent specimens of porcelain and earthenware, china and chemical pottery. If, in the higher branches of the art, our manufacturers must at present yield to the claims of their continental neighbours, it must not be forgotten that their experience in the production of ordinary domestic utensils is the best possible apprenticeship they could undergo, to enable them to compete with the artists of Sèvres and Dresden. Where strength and utility are the main requisites, the wares of Staffordshire may challenge the world; but if to these be superadded beauty of design, elegance of colour, chaste ornamentation and truthfulness of detail, we fear the palm of victory will be bestowed elsewhere. Educate the workman, make the artisan an artist, and the public will speedily second your endeavours and applaud your exertions; but neglect the advantages which the display of 1851 opened up to you, and the pre-eminence of foreign art will be established, and the seal for ever set on national improvement.

But to return to our illustration. The contributions of Messrs. Minton consisted of the raw materials employed in the manufacture and ornamentation of porcelain,—clay from the decomposed rocks of Cornwall, calcined bone, oxides, &c.,—many specimens of colours after having been tested in the furnace; earthenware in the different stages of its manufacture; chemical utensils in hard porcelain; terra-cotta tiles in imitation of majolica ware; vases, flower-pots, &c. in terra-cotta; encaustic tiles, ornamental vases, &c., in fine porcelain, with statuettes and bas-reliefs in parian, after designs by Cellini Thorwaldsen, John Bell, Westmacott, Daneker, and others.

The clay of Cornwall, which is used in the production of the finest porcelain, consists wholly of decomposed felspar of granite, large masses of which abound in the neighbourhood of the Land's End. It is technically known in the potteries as "china clay," and is prepared on the spot. It was discovered, in 1765, by Mr. Cookworthy, of Plymouth, to contain the elements, silica and alumina, of the true kaolin and "petuntsee" of the Chinese. It is occasionally found in a partially decomposed state; when it is broken up in small lumps and laid in a stream of running water. By these means the light argillaceous parts are washed off and kept in suspension; and the quartz and mica being separated, are allowed to subside. The pure clay being thus carried along with the stream, is eventually recovered by a very primitive process. Every here and there the water is arrested in a kind of catchpool; and, being allowed to subside, the clay is afterwards dug out in square masses. These are placed on a series of shelves called "linnees," which are so arranged as to allow of the passage of a free current of air to properly dry the clay. Thus prepared, the Cornish clay is of a pure white; and, being afterwards crushed, forms the impalpable powder so useful to the potter.

In the production the different kinds of porcelain and earthenware various combinations of similar materials are used by all manufacturers in all countries; the clay furnishes the plasticity necessary to the formation of a graceful outline, the bone assists in producing that semi-transparency, so much admired, and the flint imparts to the object the necessary vitreous or strengthening quality. All manufacturers, however, have their secrets; and from the potter, so often alluded to in the Scriptures, down to the latest artist in parian, each has probably had his own peculiar method of producing the necessary hardness, strength, and colour. Into the secrets of the "mixing room," however, we have no desire to intrude.

The group of porcelain, known now as the "Queen's dessert service," from the fact of its having been purchased by Her Majesty,—a fact of no slight importance, when the known good taste of our gracious sovereign is considered,—is, perhaps, one of the most splendid ever produced by an English manufacturer. Its peculiarities consist in the free introduction of parian figures, the immense variety and beauty of its colours,—turquoise and gold, rose tint and or-molu,—and the exquisite taste with which the whole is made to harmonise. In fact the service is "royal" in every respect.

No fewer than eighteen pairs of vases, many of which are after the old Sèvres pattern, and decorated with new and elegant designs, appear in Messrs. Minton's collection. Of course they are resplendent with gold and colours, wreaths of flowers, and fairy landscapes, such as never existed beyond a poet's imagination; birds of paradise with even more than nature's bright adornings; and groups of fruit more blooming and more rich than could by any possibility have ever grown on trees. Besides these, there are vases and flower-pots in terra-

cotta from designs by Baron Marochetti and Thorwaldsen; wine coolers of porous ware, ornamented with festoons of vine-leaves and grapes, ewers, garden-seats, tiles, and tea-urns in every variety of colour and form. The group our artist has chosen for illustration consists of a large figure of Galatea with Cupid and the Dolphin, designed for a conservatory fountain; pillars of enamelled bricks, introduced to show how the exterior of houses may be decorated and rendered waterproof without the aid of paint or other ornament; perforated flower-stands with porcelain plants; nautilus and stand, in the majolicas or old Italian style, in which the glaze is imitated with great success; and an encaustic tile showing the kind of ornament which is proposed as a substitute for paper in the decoration of interiors.

Statuettes in parian, after the most successful models; busts of Michael Angelo and Raphael, by John Bell; candlesticks with figures in the style of Louis XV.; chimneypieces, brackets, jugs, butter-coolers, tazzas, Pompeian cups, inkstands, cardtrays, and a set of chessmen from designs by John Bell, complete the magnificent show made by Messrs. Minton and Co. in the Great Exhibition of the Nations.

Stoke-upon-Trent is prolific of art and industry; for here are situated the porcelain works of Mr Alderman Copeland, of whose contributions to the World's Fair most of our readers will remember specimens. To the competitive industry of this gentleman we are indebted, not only for many charming figures in parian, carrara, &c., but in no small degree for the improvement of the public taste—for it is admitted that he was the first to carry forward the views of those artists who considered the introduction of beautiful forms at an available price as likely to become popular. Nor is this all. The taste for graceful forms being found on the increase, Mr. Copeland was not slow in supplying the demand created. And thus employment was found for numerous artists, and many a dwelling was made to look gay, and almost classical, which else had wanted decoration.

Form is the grand essential in porcelain works, and that no amount of colour or ornamentation can supply its deficiency, a glance at some of the "old china" on our sideboards—prized as heirlooms it may be, or brought from far over sea by an adventurous cousin, the captain—will sufficiently prove. And so, the demands of good taste arresting the attention of manufacturers, the public were speedily supplied with copies of famous sculptures in parian; and vases in which the exquisite outlines of Etruria, Pompeii, Greece, and Rome were rendered familiar to the public eye.

In the production of these the works of Mr. Copeland have been prolific indeed; and thus we have the "Ino and Bacchus" of Foley, from the original in the possession of the Earl of Ellesmere; the "Narcissus" of Gibson, as executed for the Art Union of London; the "Dancing Girl Reposing," and "Sabrina," after the originals by W. C. Marshall, R. A.; "Sappho," by W. Theed, from the original; "Lady Godiva," by M'Bride, from the poem by Tennyson, executed for the Art Union of Liverpool; the "Indian Girl" and the "Nubian Girl," an exquisite pair, by Cumberworth: and a group of seven figures called "the Vintage."

Besides these, Mr. Copeland exhibited portrait statuettes of the royal children, under the names of the "Four Seasons," after the originals executed for the queen by Mrs. Thorneycroft; Sir Robert Peel, by Westmacott; Lord George Bentinck, by Count D'Orsay; Shakspeare, the Duke of Wellington, Sir Walter Scott, the Duke of Sutherland, and Jenny Lind.

But the stall of Mr. Copeland, though plentifully supplied with, was by no means confined to, statuettes; for, besides various specimens of fine porcelain in the shapes of dinner, tea, and dessert services, redolent of gold and emblazoned with bright colours, there were vases, tazzas, and jugs of all forms, and in all varieties of earthenware, from the red earthen waterjug of Pompeii to the Warwick vase, 24 inches in height and 28 in width, in royal blue and chased and burnished gold. Several slabs for tables, fireplaces, panels, &c., ornamented in enamel and colours, also testified to the great taste and skill employed in the Staffordshire potteries.

Looking at the productions of our manufacturers in the ceramic art, and remembering that all they exhibit is the result, not of royal patronage, as in the porcelain establishments on the continent, but of private, unassisted enterprise, we can sincerely congratulate them on the evident signs of advancing taste. To be sure, much might be said, were we inclined to be captious, against the evident imitation of ancient forms—for, design and alter as we will, we must come back to the old Greek shapes at last—much might be said of the too frequent recurrence of stereotyped ideas and a tendency to redundancy of ornamentation; but leaving all this unsaid, and endeavouring to realise the great lesson so lately open for our perusal, we may, while we still go on the path of improvement, again express our satisfaction at the beauty and excellence of the porcelain shown in the Crystal Palace.

PRINCE SCHWARZENBERG.

The kind of death by which it has pleased Providence to summon from this world the Prime Minister of Austria, in what may be considered, for a statesman, the flower of his age (he was but fifty-two or three, does not surprise us, however awful and sad the visitation. Prince Schwarzenberg appears to have been from the beginning to the end of his administration in one prolonged and towering passion. Rendered furious by the events of 1848, he seems never to have been able to reconcile himself even to what was inevitable, or to what might have been left, or made, beneficial in them. To him that popular outburst was a profanation, an insult to God and to man. To destroy it and its instruments by the sword, to pass the searing-iron of red-hot vengeance over its events, and all that appertained to or recalled them—this was the pervading sentiment of Schwarzenberg's breast. His policy was in fact a passion. There was neither reasoning nor calculation in it. It bore him up and on, even to a reckless sacrifice of the honour of his sovereign and the good faith of his country, in the hope and with the determination of crushing Hungary into the dust, its liberties, and its constitution. When treachery notwithstanding was found to have failed, Prince Schwarzenberg did not shrink from what to statesmen of his school must have been a greater sacrifice. He did not hesitate to place Austria and its Prince at the feet of Russia, and thus become beholden for their very existence to a foreigner, a rival, and a foe, rather than he would conciliate or make a compromise with those whom he abhorred as rebels. He hated insurrection, in short, as the pope detests heresy. There was fanaticism in his execration of it. He succeeded, for the time in overbearing Hungary by the weight of Russian Artillery; and when faith in Russian generosity and honour induced the Hungarian generals to surrender after the treachery of Gorgey. Schwarzenberg's fanatic hate was not to be satisfied with less than their blood. The same spirit led him to insist on the execution of Louis Batthyani; and when the semi-suicide of that noble victim had superseded the office of executioner, the greed of Austrian vengeance felt as mortified as at the loss of a battle, nor could anything satisfy it short of the cruel ceremony of execution performed on an almost inanimate corpse.

Yet the statesman who gave such orders had lived in the polite circles of Western capitals, and had mingled in the highest society of London, of the dissipation of which it would seem that a man may drink without imbibing any sense of either honour or humanity. We have read of savages kidnapped as it were into educated habits, and for a time accustomed and reconciled to the circles of civilised life, who accidentally brought back once more within sight of their native woods, have rushed to them, throwing off their garments, and resuming the tomahawk with the habits and attributes of the barbarian. So seemed it to have been with Schwarzenberg. All dandy as he was with us, he no sooner found himself in the old clime of despotism and serfdom, than he resumed the cruel barbarism, the malignant passions, and that contempt for human liberty and progress which unfortunately prevails where the Slavic race begins.

Schwarzenberg had a rival in the councils of Austria, a most able and liberal man, Count Stadion, who strenuously maintained that to terminate the revolution by a restoration of the old system, or by a negation of all constitutional rights, would inevitably entail the future destruction of Austria. Unfortunately, Count Stadion's brain gave way under the excitement and anxieties of the epoch; and Schwarzenberg was

left uncontrolled to accomplish not merely a restoration of the old system of despotism, but the establishment of a despotism ten times more concentrated, more absolute, and more intolerant.

The provincial rights and liberties which formerly existed he has completely abrogated. The constitutional and parliamentary privileges, together with the fiscal exemptions of Hungary, he has mowed down with the scythe. Yet this all-powerful minister has been unable hitherto to put anything in the place of that which he has destroyed. An imperial magistracy he has not been able to establish, and the destruction of the fiscal independence of Hungary has not the better enabled him to get a revenue from the Hungarians. The Austrian exchequer is far more empty at this moment than when Austria had far less power over the pockets and revenues of its subject provinces.

Prince Schwarzenberg knew but two sources of authority, the army and the church. The latter it had long been the policy of Austrian princes to keep in due subordination. But Prince Schwarzenberg no sooner obtained full sway, than he reversed the hereditary principles of the House of Austria in this respect, giving up the educational institutions to the Jesuits, and placing the censorship and the academies completely in the hands of the Church. Charles the Tenth of France laid down as a maxim of state that no one should have place, or keep it, in his reign, who did not go to confession. That the same would at last have been the rule throughout Austria, had Schwarzenberg survived, there is little doubt.

The policy of the Austrian statesman, then, cannot be denied the merit of extreme simplicity. It was in all things coercive—in matters of conscience, in matters of provincial right, in matters of administration; and this coercion, being the sole argument he deigned to employ at home, constituted also the entire gist and spirit of his diplomacy. His mode of conduct with regard to Prussia was precisely the same as that with regard to Hungary. In the same spirit he pointed out the one, or the other, to the Czar, as guilty of liberalism For Schwarzenberg and Nicholas had agreed most fully in this—that they could recognise no difference between constitutionalism and democracy. The one was to both of them as heinous as the other; the former more so indeed, as but a disguised and hypocritical democracy. Nor was Nicholas less ready to back Austria with his legions against the Prussians than against the Hungarians. The Prussians, however, unlike the Hungarians, thought discretion the better part of valour; and it must be confessed, though an open rupture was avoided, that Schwarzenberg certainly compelled the old enemy of the House of Austria to "eat dirt." Of course the Austrian monarch and minister would have preferred a campaign and a conquest; but Manteuffel's suppleness balked them of that gratification; and the manner in which the Prussian has more lately out-manœuvred them in the matter of the Conferences on trade, we have made the subject of a separate article.

Schwarzenberg's greatness (littleness some would call it) was that of a foe. He was a good hater. He was a powerful instrument to crush. But he knew not how to consolidate, to establish, or to strengthen. He destroyed every institution that the revolution had spared; and he neither knew how, nor cared to make the attempt, to establish others. If he could have hanged Kossuth, himself turned Lord Palmerston out of office, and put his feet on the neck of the King of Prussia, Schwarzenberg would have died more contented than he has done. He appeared to have none save personal aims, and those rather of vengeance than of ambition.

As a statesman Schwarzenberg, we believe, had no party and no friends. He disliked the old aristocracy and the old functionaries, not less than the new placemen whom the revolution turned up. But he played one against the other, and tried to keep in the Bachs and the Brucks against the influence of the court. It was thought that the old aristocratic party, favoured by the court, would, as soon as it was able to rally under Metternich's direction, have undermined and succeeded Schwarzenberg. There was neither time nor need, however, or the maturing of such a plot, apoplexy having carried off the Prime Minister in the apparently full enjoyment of imperial favour and military power.

[Prince Felix Lewis John Frederic Schwarzenberg died of apoplexy, at Vienna, on Monday, the 2nd of April, in the 52nd year of his age. He was born on the 2nd of October, 1800, and was a nephew of the celebrated Prince Schwarzenberg, who, in 1813 and 1814, commanded the allied armies against Napoleon. The immense estates of the family were inherited by his elder brother John. Felix devoted himself chiefly to diplomacy. In 1825 he was Secretary to the Austrian Legation at St. Petersburg, and in that capacity sheltered Prince Troubetskoi, who was concerned in the famous conspiracy which attended the accession of the present Czar to the throne. The ambassador was absent at the time, and Schwarzenberg, as acting head of the embassy, resisted all demands of the Russian authorities for the surrender of the fugitive. Finally, the house was surrounded, and Troubetskoi gave himself up; but his friend and protector was obliged to leave Russia in consequence. Subsequently he went to London, where he distinguished himself in a not very honourable manner. He was afterwards ambassador at Naples, where he became notorious for his unscrupulous gallantry. This embassy he resigned on March 28, 1848, as we believe, to serve under Marshal Radetzky in Northern Italy. Finally, on November 21, of the same year, after Windischgratz had extinguished every trace of liberty at Vienna, and was on the point of marching to renew the process in Hungary, Schwarzenberg was made the Prime Minister of the Empire, which post he filled until his decease.

The recent death of this prince, whose name and doings are doubtless familiar to our readers, will render this admirable sketch of his character acceptable. It is taken from our contemporary the *Krammer*, a newspaper which however liberal in its political views, and however excellent in its style, is one not likely to have a large circulation among working men]

GOOD TEMPER.

BY CHARLES SWAIN.

There's not a cheaper thing on earth,
Nor yet one half so dear,
'Tis worth more than distinguish'd birth,
Or thousands gain'd a year
It lends the day a new delight,
'Tis virtue's firmest shield,
And adds more beauty to the night
Than all the stars may yield.

It maketh poverty content;
To sorrow whispers peace,
It is a gift from heaven sent
For mortals to increase
It meets you with a smile at morn;
It lulls you to repose,
A flower for peer and peasant born,
An everlasting rose.

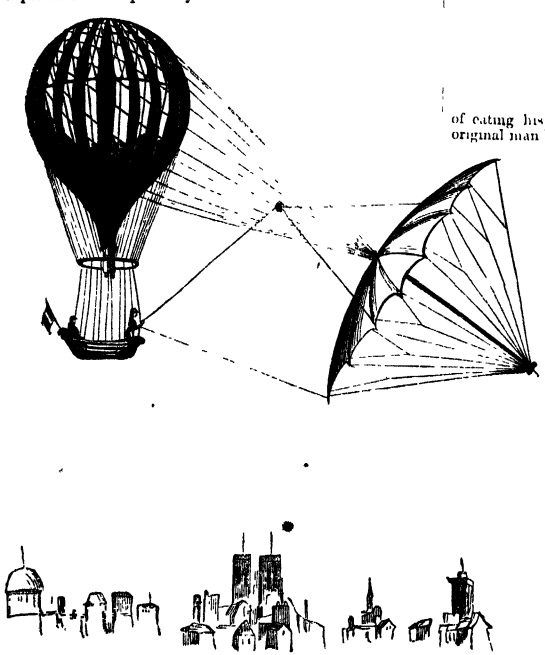
A charm to banish grief away,
To snatch the brow from care;
Turns tears to smiles, makes dulness gay—
Spreads gladness everywhere,
And yet 'tis cheap as summer dew,
That gems the lily's breast,
A talisman for love, as true
As ever man possess'd.

As smiles the rainbow through the cloud
When thund'ring storm begins—
As music 'mid the tempest loud,
That still its sweet way wins—
As springs an arch across the tide,
Where wave contends with wave,
So comes this seraph to our side,
This angel of our home.

What may this wondrous spirit be,
With power unheard before—
This charm this bright divinity?
Good temper—nothing more!
Good temper—'tis the choicest gift
That woman homeward brings,
And can the poorest peasant lift
To bliss unknown to kings

BALLOONS AND BALLOONING.

It is curious and interesting to witness the inflation and ascent of a balloon. To see the silken bag gradually expanding, to notice how it jerks, and struggles with the ropes that hold it down, as if it were a thing of life and anxious to be free; to see the aërial voyagers seated within the car, the signal given, and the huge machine emancipated from its bondage, rising higher, higher, higher in the deep clear sky, until borne onward by the wind it is lost at last to view. Still more curious and interesting it is to be within that car, the observed of all observers, to quit the earth, to leave the groundlings behind us, to look upon the host of upturned faces, and then upon the mystery of trees that mingle, then on the roofs and spires, and streets and lanes and courts, all blended in a wonderful confusion; to take a bird's-eye view of the country that stretches out beneath like an embossed map, fields and towns and villages scarcely distinguishable from the height we have attained; and presently to have the scene shut out by clouds that float betwixt us and the world we live in. To know that down below people are wondering where we shall descend, as we go sailing onward in the air, as if we were the modern instance of the old nursery rhyme, and had gone—



"To sweep the cobwebs out of the sky,
But meant to be back again by-and-by"

What an inventive animal is man! He is not content to live as his father lived; he will not consent to adopt the stereotyped thinkings of people who may have chanced, right or wrong, to say something or other before him, he builds on the experience of the past only so far as he is assured that the foundation is a good one; and is not willing to fall asleep beneath an opium sky that continually rains soporifics. If man had no originality, and no inventive genius, we may readily imagine his condition, occupied solely in subsisting, with a poor hut and a poor dress, though even these were the efforts of originality. Impelled by hunger to the laborious exertion

MONTGOLFIER.

of eating his dinner, after running six miles to obtain it, an original man begins to speculate upon the possibility of venturing on the back of a horse; he carries that speculation into effect, and secures a deputy labourer. The houses have been built of wood, an original man thinks stone or brick would be far better; the smoke has been allowed to escape at the door, an original man invents a chimney; a deal board has been sent for a love-letter (a billet-doux about the size of an ordinary trencher), somebody thinks parchment would be better; somebody else invents paper. Step by step man has made progress, here a little and there a little, till the very elements are subject to him. He intersects the land with a metallic network of broad and narrow gauge; he talks by electricity, and takes your portrait with the sunshine; he lights his streets with gas, travels over the good salt water without a sail or oar, and rides in the air above the clouds.

AERIAL MACHINE INVENTED BY THE BROTHERS MONTGOLFIER.

It is a strange fancy for a man to leave the earth, and go right up a thousand feet above it; but it is one which was indicated in many an old fable in times long gone. Roger Bacon, in the thirteenth century, described a machine consisting of two hollow globes of thin copper, which, if the air were exhausted within them, would float in the atmosphere like a bird. But four hundred years passed before anybody thought anything about it, except that the unfortunate friar was either a great fool, a great knave, or a great wizard; no one gave him credit for superior wisdom till Bishop Wilkins, in 1630, re-issued the idea by suggesting the possibility of constructing a chariot upon philosophical principles, capable of traversing the regions of air. The idea met with little encouragement—it was a new-fangled notion, and one might as well talk of boring a hole through the sea, or riding from Lon-

don to Liverpool in less than six hours. A Jesuit named Lana, in 1670, was the first who attempted to turn it to any account. He proposed to raise a vessel by means of metal balls, strong enough, when exhausted, to resist the pressure of the outward air, but still thin enough to render them lighter than their bulk of air. The fallacy of the plan is evident at once, as it would be impossible to combine the two qualities of thinness and strength in the degree necessary for such a purpose. It was not on this account, however, that the design was abandoned; "he felt assured that God would never allow an invention to succeed which might so readily be made use of to disturb civil government."

Father Gusman, in 1709, was less scrupulous and less doubtful, he constructed a machine in the form of a bird, with tubes and bellows to supply the wings with air. He was rewarded with a pension by the Portuguese government, but the experiment entirely failed. Undismayed by want of success, and with the true spirit of indomitable perseverance, he, nearly thirty years afterwards, produced a new and original plan. He carefully covered a wicker-basket, 7 feet in diameter, with prepared paper, and the air having been exhausted, the basket rose to the height of 200 feet.

About the same period a treatise was published by Joseph Galhen, of Avignon, suggesting the expediency of bags of prepared cloth filled with air lighter than the common atmosphere. In 1766 hydrogen gas was discovered by M. Cavendin, and in

ASCENT ON THE BACK OF A HORSE, BY M. P. HEVIN, FROM THE CHAMP DE MARS, PARIS.

1782 M. Cavallo made trial of this gas with some success, but the practical triumph was yet to come.

In 1782 two brothers, named Montgolfier, paper manufacturers of Annonay, near Lyons, taking a hint from Lana, made the first balloon. It was a huge contrivance covered with paper and filled with hydrogen gas. But they soon found that the hydrogen tore the paper, and the plan was therefore abandoned. It appears that they were under the impression that

GLIMPSES OF BOOKS.

THE HOUSES AND COMFORTS OF OUR FOREFATHERS.—The list may be soon made—for it was scanty enough—of the household furniture of our forefathers in the twelfth and thirteenth centuries That large class called "cabinet goods" were wholly unknown, and the carpenter supplied the tables—then merely long boards placed on trestels, and the benches and joint-stools. The windows at this period were always made with seats in them, and it is curious to observe how this partiality continued through the era of stone houses, of lath and plaster houses, of the clumsy red-brick houses, even to the days of our grandfathers, who, though well provided with huge settees and mahogany chairs, and cross stitch-worked stools, still considered the window-seat indispensable to the parlour and dining-room But our earnest forefathers, if unsupplied with mahogany and rose-wood furniture, did not sit on bare benches, nor eat their meals, "back-wood fashion," on an unplaned board. The benches were always covered, mostly coloured, and the table, even in "upland" villages, displayed its ample folds of snowy napery. Indeed, the indispensability of a tablecloth seems to have been universally recognised among our forefathers In the curious and suggestive "Rolls of the King's Court," we find napery in the possession of quite the inferior classes, in the Subsidy-roll, too, of the twenty-nine of Edward I, for the city of Colchester, we find tablecloths of the tradesmen there valued at from ten to fifteen shillings each of the present money, while in inventories and wills of a later period we meet with household linen, evidently of a superior kind, in great abundance Now, arguing from analogy, can we believe that our forefathers were so deficient in domestic comfort, or so negligent of personal cleanliness, as some writers seem to imagine, when tablecloths, and even napkins were in ordinary use? Thus, too, however rude might be the general style of furniture, the bed was as comfortable, and as well supplied with appendages—counterpanes and "linen sheets" being found, even among the poorest householders, as the modern Arabian, or four-post Few notions have been more ridiculous than the common one, that a *feather*-bed was a luxury almost unknown to our forefathers—a notion which not only the most cursory glance at the homelest Saxon illumination would disprove, but the mere exercise of common sense. While abundant flocks of wild geese haunted every fen, and scores of tame geese fed on every common—when the goose was the appropriate dish for both Michaelmas and Martinmas days, and the feather of the grey goose winged the shaft of the bowman, is it possible that our forefathers contented themselves with straw beds and a log for their pillow? That feather-beds are not distinctly mentioned in records, we think may be accounted for by their not being purchasable articles They were, doubtless, of home manufacture, like the common cloth, both woollen and linen, of this period, and we are greatly inclined to believe that all such articles were exempted from taxation. We have, therefore, no notice of them in the rolls, any more than of the benches and tables, or the cups and trenchers —*British Quarterly*

MEXICAN BOA SNAKES.—I stepped aside for a moment to admire a rich tuft of large purple flowers, my mule having plodded on about eight or ten yards ahead, when, as I turned from the flowers towards the path, a sensation as of a flash of lightning struck my sight, and I saw a brilliant and powerful snake winding its coils round the head and body of the poor mule It was a large and magnificent boa, of a black and yellow colour, and it had entwined the poor beast so firmly in its folds, that ere he had time to utter more than one feeble cry, he was crushed and dead The perspiration broke out on my forehead as I thought of my own narrow escape, and only remaining a moment to view the movements of the monster as he began to uncoil himself, I rushed through the brushwood, and did not consider myself safe until I was entirely free of the forest.—*Mason's Pictures of Mexico*

A SKETCH OF ENGLISH SCENERY.—Would you like to know what old England is like, and in what it most differs from America? Mostly, I think, in the visible memorials of antiquity with which it is overspread; the superior beauty of its verdure, and the more tasteful and happy state and distribution of its woods Everything around you here is historical, and leads to romantic or interesting recollections. Grey-grown church-towers, cathedrals, ruined abbeys, castles of all sizes and descriptions, in all stages of decay, from those that are inhabited to those in whose moats ancient trees are growing, the ivy mantling over their mouldered fragments Within sight of this house, for instance, there are the remains of the palace of Hunsden, where Queen Elizabeth passed her childhood, and Theobalds, where King James had his hunting-seat, and the "Rye-house," where Rumbald's plot was laid, and which is still occupied by a maltster—such is the permanency of habits and professions in this ancient country. Then there are two gigantic oak stumps, with a few fresh branches still, which are said to have been planted by Edward III., and massive stone bridges over lazy waters; and churches that look as old as Christianity; and beautiful groups of branchy trees, and a verdure like nothing else in the universe, and all the cottages and lanes fragrant with sweetbriar and violets, and glowing with purple lilacs and white elders; and antique villages round-wide, bright greens, with old trees and ponds, and a massive pair of oaken stocks preserved from the days of Alfred. With you everything is new, and glaring, and angular, and withal rather frail, slight, and perishable, nothing soft and mellow and venerable, or that looks as it would ever become so —*Life of Lord Jeffrey*

ALL PROGRESS COMPARATIVE —It is now the fashion to place the golden age of England in times when noblemen were destitute of comforts, the want of which would be intolerable to a modern footman, when farmers and shepherds breakfasted on loaves, the very sight of which would cause a riot in a modern workhouse, when men died faster in the purest country air than they now die in the most pestilential lanes of our towns, and when men died faster in the lanes of our towns than they now die on the coast of Guinea. We, too, shall, in our turn, be outstripped, and in our turn be envied. It may well be, in the 20th century, that the peasant of Dorsetshire may think himself miserably paid with 15s. a week, that the carpenter of Greenwich may receive 10s a day, that labouring men may be as little used to dine without meat as they now are to eat rye bread, that sanitary police and medical discoveries may have added several more years to the average length of human life, that numerous comforts and luxuries which are now unknown or confined to a few may be within the reach of every diligent and thrifty working man. And yet it may then be the mode to assert that the increase of wealth and the progress of science have benefited the few at the expense of the many, and to talk of the reign of Queen Victoria as the time when England was truly merry England, when all classes were bound together by brotherly sympathy, when the rich did not grind the faces of the poor, and the poor did not envy the splendour of the rich

THE FRENCH WOMEN IN THE TIME OF LOUIS XV —They rose from bed towards evening, put on their hoops they had sometimes good reason for wearing hoops; they daubed themselves with rouge and patches, in those days there was no space left for a blush, and put on their loose robes with flowing trains. After having wasted three or four hours in powdering their hair and laughing at their husbands, they went out to listen to some fashionable preacher, or to behold some *à la mode* On all sides was heard, "*Ah, zevalier, que c'est joli!*" ("Ah, my lord, how charming!") The letter *z* was used at every chance, in lisping it the mouth made such a pretty smiling pout. Afterwards they would go to some sad tragedy, as *The Execution of Damiens*, for instance, and they would exclaim (Madame de Preandeau is our witness), while they were quartering the criminal, by dragging his limbs apart with horses, "*Ah! les pauvre, zevaux, que ze les plains!*" ("The poor horses, how I pity them!")—*Men and Women in France, during the last Century.*

LITERARY NOTICES.

THE POPULAR EDUCATOR —An EXTRA EDITION of this extraordinary work, on fine paper, at 1½d per Number, or in Monthly Parts, in a neat wrapper, at 7d, or when Five Numbers 8½d., is now published, which is issued without the weekly headings. Persons wishing for this edition must be careful to order the "*Extra* Edition" The whole of the Numbers may now be obtained, or the first Three Parts—Part I, 7d, Part II, 8½d, Part III., 7d The Common Edition, at One Penny per Number, Monthly Parts, 6d, or 6d, is regularly issued.

THE ILLUSTRATED EXHIBITOR AND MAGAZINE OF ART —The First Volume of this splendidly embellished work, handsomely bound, price 6s 6d, or extra cloth gilt edges, 7s 6d, is now ready, and contains upwards of Two Hundred Principal Engravings, and an equal number of Minor Engravings, Diagrams, &c

COMPLETION OF JOHN CASSELL'S LIBRARY.—This invaluable Work is now complete, in 26 Volumes, 7d. each in paper covers, double Volumes, cloth, 1s 6d, or when 3 Vols. in 1, 2s. 3d. The entire Series may be had, bound in cloth, 19s 6d., or arranged in a Library Box, 20s

The EMIGRANT'S HANDBOOK, a Guide to the Various Fields of Emigration in all parts of the Globe, Second Edition, with additions; to which has been appended a "Guide to the Gold Fields of Australia," with copious Instructions, Government Regulations, &c., accompanied by a Map of Australia, in which the Gold Regions are clearly indicated, is now ready, price 9d

THE PATHWAY, a Monthly Religious Magazine, is published on the 1st of every month, price twopence—32 pages enclosed in a neat wrapper. Vols I and II, neatly bound in cloth and lettered, price 2s 3d each, are now ready.

CASSELL'S SHILLING EDITION OF EUCLID —This work will be ready with the Magazines for August, price 1s. in a neat wrapper, or 1s. 6d in cloth boards.

MISCELLANEA.

HARSH WORDS are like hailstones in summer, which, if melted, would fertilise the tender plant they batter down.

THE LAW is a dainty lady; she takes people by the hand who can afford to wear gloves, but people with brown fists must keep their distance.

SUPERIOR TASTE OF WOMEN.—Women have a much finer sense of the beautiful than men. They are, by far, the safer umpires in matters of propriety and grace A mere school-girl will be thinking and writing about the beauty of birds and flowers, while her brother is robbing the nests and destroying the flowers

EVERY MAN HIS OWN DOCTOR.—Since no man, says Bacon, can have a better physician than himself, nor a more sovereign antidote than a *régime*, every one ought to follow my example that is, to study his own constitution, and to regulate his life agreeable to the rules of right reason

FIXING OUR THOUGHTS ON THE FUTURE —All the great and good of the earth have given us examples of their cultivation of this faculty. It is, indeed, at the foundation of greatness of mind, which consists in acting with great views, from great motives, to accomplish great purposes. No one who cannot lift himself out of the present, and realise, or rather live, in the future, is capable of such feeling or action, and often, indeed, he must fail in performing the commonest duties of life.—*Clara Harrington.*

A LITTLE WORK AND A GREAT END — If every man and woman would work four hours a day at something useful, employment want and misery would vanish from the world, and the remaining portion of twenty-four hours might be leisure and pleasure.

COMMON ERRORS.—We are never more deceived than when we mistake gravity for greatness, solemnity for science, and pomposity for erudition

TROUBLE.—It is said that none have ever been so great or so high as to be above the reach of troubles This was strikingly illustrated in the case of the great aeronaut who went up very high in a balloon, when a rocket pierced it, and all that was left of him was his memory and the bag.

A MODEL VILLAGE.—A man in Pawtucket lately made application for insurance on a building situate in a village where there was no fire-engine. In answer to the question, "What are the facilities for extinguishing fires?" he wrote - "*It runs sometimes.*"

NEGLECT OF RELIGION —Where religion is neglected, the duties of morality are never regularly practised —For such is the propensity of our nature to vice, so numerous are the temptations to a relaxed and immoral conduct, that stronger restraints than those of mere reason are necessary to be imposed upon man.

POWER ON PUBLIC OPINION.—A writer in the *Times* says, "There is but one power on the increase in the country, and that is the power of public opinion, there is but one profession will certainly be stronger in 1860 than in 1851, and that is the profession of a journalist"

DON'T GET IN DEBT!—Men generally, says a philosopher, look upon a debtor as in some degree their own property Pecuniary difficulties break all ties, absolve from all courtesy, raise the creditor to the eminence of a despot, and often inspire him with the desire of exercising the arbitrary powers of one. The helpless debtor must be suspected, accused, insulted in silence. The attacks of others are unsupported by self-approbation and the natural independence of man. He is a slave, chained, to be spit upon by the angry, and laughed at by the unfeeling; and his own heart, alas! joins his enemies and pleads against him.

LITTLE TRUISMS often give the clue to long, deep, intricate, undisplayed trains of thought, which have been going on in silence and secrecy for a long time before the commonplace result in which most meditations end is expressed

RESULT OF CHEMICAL PHYSIOLOGY — Any substance that has to make its way from the human stomach, through the vessels which proceed to the various parts of the body, must be capable of being dissolved by the fluids of the body. An insoluble substance will pass unchanged and unabsorbed along the alimentary canal, and escape from the body in the usual manner, without producing any material sensible effect A soluble substance, on the contrary, passes into the blood, and if nutritious, nourishes, if poisonous, more or less injuriously affects the functions of life Thus chemists are now familiar with methods by which in their laboratories many soluble poisonous substances can be united with other bodies, so as to become insoluble, and in this new state be rendered capable of being introduced into the stomach without injurious consequences To perform such an experiment in the stomach, is to administer an antidote of more or less certain efficacy, against a poison which has been previously swallowed In this way, lime and magnesia are antidotes against oxalic acid, the white of egg against corrosive sublimate, hydrated per-oxide of iron against white arsenic, and so on. These severally combine with the poisonous substance when brought into contact with it in the stomach, render it insoluble, and consequently inert

YOUNG AMERICA —"Father," exclaimed the hopeful son and heir of a gentleman of our acquaintance, not long since, while the latter was congratulating the youth upon his smartness and scholastic studies—the youngster having attained eight years of age,- "Father, I'm an American, ain't I'" —"Yes, my boy, you are," responded the delighted parent —"Well father, you ain't, are you?"—"Not by birth, my son"— "Well, then," exclaimed young America, in a thoughtful manner, "when I grow up to be a man, I will be able *to lick two like you*—won't I?"—The proud parent's answer is not recorded

RELIGION OF COUNTRIES NEAR THE NORTH POLE.—In Nova Zembla (as the Dutch who travelled there relate) the inhabitants have no regular prescribed religion, but they worship the sun as long as he is with them, and during his absence the moon and pole-star To these they offer yearly sacrifices of deer, which they burn, except the head and feet, they sacrifice also for their dead —The Samoiades, who live a little to the south of Nova Zembla, are great idolaters and believers of witchcraft. Each family has its own temple, priest, and sacrifice. The priest is the oldest man in the family, and his ornaments are small ribs and teeth of fish and wild beasts, which hang about him On his head he wears a white garland. During his officiating he howls, gradually increasing in loudness and fierceness of manner, till at last he appears like a madman. He then falls down and imitates death for some time, then, suddenly starting up, he orders five deer to be sacrificed, and after a few more equally disgusting and senseless actions the ceremony is ended.

NOTICES TO CORRESPONDENTS.

A READER OF NEWSPAPERS. — "*For the nonce;*" the origin of the word, "nonce" is uncertain; it signifies a purpose, intent, or design. It had become nearly obsolete, but recently it has been revived. It means something done for a particular occasion, or to answer a special purpose or intention.

MATTHEW (Edgbaston). — Thanks for your commendation of our humble efforts; do all you can to introduce us to your friends.

W. J. P. (Yarmouth).—You will find your questions as to the formation of the various strata of the earth answered in the Lessons on Geology in the "Popular Educator."

A SUFFERER.—In "using opium daily," you are employing a delusive and dangerous remedy. However valuable it may occasionally prove, when prescribed by skilful practitioners, its habitual use cannot be too much reprobated. It impairs the digestive organs, weakens the vigour of the whole body, and gradually destroys the mental energies. Good air, exercise, and temperance, with active engagement in some useful pursuit, will, no doubt, restore you.

AN ARTIST.—The "receipt for making artificial marble" is here given; but as we have not seen any of the casts made with it, you must try it for yourself. "A quantity of plaster of Paris is soaked in a strong solution of alum, and baked in an oven. When cold it is ground to powder, and used as wanted by being mixed with water, as plaster is mixed, and poured into moulds" Our correspondent informs us that this, when set, becomes a very hard composition, capable of taking a high polish. Coloured minerals or ochres may be mixed with it, so as to represent various coloured marbles.

J. B. (Chester).—The word "*Tenement*," in its original, proper, and legal sense, signifies anything which may be *holden*, provided it be of a permanent nature, but in its narrowest sense, it means merely a house, or home-stall.

ALEXIS.—An engraving from Murillo's celebrated painting, "The Assumption of the Virgin," is given in No. 1 of the "History of the Painters of All Nations," but it is not likely that it will be given in the "Illustrated Exhibitor.'

W. B. (Settle).—You are the fourth or fifth correspondent who has urged us to say whether "*upwards of a hundred* means *more* or *fewer* than a hundred! Such questions, put seriously by correspondents, whose letters prove them to be tolerably well acquainted with the English language, do indeed surprise us. What can the word "upwards" mean, except "beyond," "above," or "more than?"

A YOUTH.—*Pelion* and *Ossa* were the names given to two mountains in Thessaly. It is fabled that the giants, in their wars against the gods, placed Mount Ossa upon the top of Mount Pelion, in order to scale the heavens with more ease. The expression, "placing Ossa upon Pelion" is used metaphorically, when an advocate is spoken of who adds one powerful argument to another, or who multiplies proofs and demonstrations, in order to carry his point.

B. DIXON.—We have before given receipts for removing warts, but we add the following, which has been sent us by a correspondent: Break the stalk of the *ranunculus arvensis*, or common crowfoot, a drop of milky juice will be found hanging to the stem; if this be allowed to drop on the wart, so that it be well saturated with the juice, in three or four dressings the wart will die, so that it may easily be picked off.

SAMUEL FORD.—The tinning of the inner surfaces of cooking utensils and other vessels of capacity informed by scouring the surface until it is perfectly bright and clean; then heating the vessel, pouring in some melted tin and rolling it about, and rubbing the tin all over the surface with a piece of cloth or a handful of tow: powdered resin is used to prevent the formation of oxide. Small articles, such as bridle-bits, chains, &c, are tinned by immersing them in fluid tin.

ERRATUM.—The motto over the article, "The Last Revolution in London," in No. 41, should be

Non fumum ex fulgore sed ex fumo dare lucem.

—"Not to elicit smoke from splendour, but splendour from smoke."

All Communications to be addressed to the Editor, at the Office, Belle Sauvage Yard, London.

THE WOLF.

As man advances the inhabitants of the forest retreat. Time was when foxes, wolves, bears, and even lions, were common to the woods and fastnesses of Great Britain; but the last wolf was killed in Scotland more than a hundred and seventy years ago (in the year 1680, in fact), and the British Lion stalks abroad only in the speeches and placards of the behind-the-age order of politicians. Nor does the fact of the retreat in a few years their manners and habits will only be known to the million from the descriptions of Fennimore Cooper, the novelist.* In these respects the forced migration of men and animals is precisely similar. Though the wolf and the bear are still found in the northern parts of Europe, and in both continents of America, it may be considered certain that, when the dense forests are cleared, when farms and

WILD HORSE ATTACKED BY WOLVES.

f the four-footed denizens of the woods stand alone; wher-ver the white man pitches his tent it is found that the abori-es decline. The continent of North America was once eopled by a race of red Indians, from Texas to the Esqui-aux; but the white man came, civilisation followed, and he red man went back and back, till, in the present day, hole tribes have become extinct, and the probability is, that homesteads take the place of tangled woods, and dreary moors, and unhealthy swamps, the wild animals will become gradually extinct. Years must pass, however, before this

* There has lately appeared, in the United States, from the pen of Mr. R. Schoolcraft, a valuable work, entitled, "Information respecting the History, Condition, and Prospects of the Indian Tribes of North America.

takes place; for if, as was the case, the English were the first to extirpate the wild beasts of the forest, we must attribute it not as much to the circumscribed space of the island as to the energetic character of its inhabitants. We learn from old chronicles that in the tenth century, King Edgar promoted the destruction of wolves in England by various means. Amongst others, he decreed that for certain crimes a commutation or pardon should be awarded to the offender if his friends could, within a certain time, produce a number of wolves proportioned to his offences. With the same end in view, this monarch is said to have converted the tax of gold and silver payable by the people of Wales into an annual tribute of three hundred wolves' heads. For years after, the magistrates of the various forest districts were empowered to offer pecuniary rewards for the destruction of wolves, and the heads of the animals were purchased just as the farmers of our day buy mole-skins, simply to rid the land of them. It appears that, in the early part of the thirteenth century, our dear old England was very much troubled by the depredations of wolves. Possibly the barons and magistrates of the land doubled the reward in consequence, for we hear very little of them afterwards—though one was killed, they say (having escaped, perhaps, from a travelling menagerie), as lately as the year 1701, somewhere in Ireland

The wolf belongs to the genus *Canis* (dog-kind), and the class *Mammalia* (animals which suckle their young with milk furnished by the mammæ, or teats of the females). Its general characteristics are cruelty, cowardice, and voracity In height the wolf averages about two feet six inches, though instances have been known of its attaining upwards of three feet; and in length, from the tip of the muzzle to the junction of the tail with the body, it measures about three feet eight or ten inches. It has a straight and rather bushy tail, a greyish brown hide, which varies in colour according to the country the animal inhabits; oblique bright eyes, sharp, well-set teeth; and a gaunt, fierce, hungry appearance.

Except when greatly pressed by hunger, the wolf will not venture to attack man, but with them, as with dogs and other animals, the principle of association is strongly developed, and they will not hesitate, when in flocks, to attack horses and the larger kinds of quadrupeds Our engraving shows how fiercely and determinedly they will select one wild horse from a herd, and hunt and worry it to death, In various parts of Russia and the forests of Northern France the wolves abound. In the dreary nights of winter they will assemble in troops; and, boldly entering a village, bear away and destroy any kind of animals they may chance to encounter. On such occasions they will not fly at the presence of a single man, but will unhesitatingly attack him; and, without assistance is immediately at hand, the fate of the peasant is sealed. It is said, that the wolf, like the tiger, having once tasted human blood, has no relish for any less exciting food; but in our day we have fewer reliable accounts of his ferocity—at least in Europe—than were current during the last century.

Many exciting anecdotes are told of the wolf—some giving him the gentleness of a spaniel-dog, and others the untameable ferocity of the hyena; but with most of these our readers are probably familiar. Cuvier gives a most interesting account of a tame wolf which was confined in the menagerie at Paris. It had been given to the naturalist when quite a cub, and had been brought up with all the gentleness possible. As it grew older, it displayed the greatest attachment for its master, and would come when it was called, and leap and play about his person with all the fondness and security of a lap-dog. When full-grown, Cuvier presented the animal to the menagerie, and did not see it again for many years. At first the poor brute was quite disconsolate, would not take any food, and became fierce and angry with his keepers; but, in course of time, he became attached to those about him, and seemed to have transferred his affections from his old master to his new ones. After a lapse of several years, however, the naturalist returned, and visited his old favourite. The wolf heard his voice amid the crowd in the gardens, and rushed frantically to the bars of its cell. Its master came and set it at liberty, and its joy was unbounded. It licked his face, put its paws upon his shoulders, rushed hither and thither in all the gladness of affection, and would not be put back again into its cell. Again the master left it, and again returned. The wolf recognised him immediately, and displayed the most frantic and touchir pleasure. Once more its master left it, but the poor wc could not bear the desertion. It could make no new frien ships, and so it pined away and died.

But this is the fair—the very fairest—side of the wolf character. The fabulists—and they had rare and exquisi sensibility, and a good knowledge of animals—tell us that t wolf is implacable, revengeful, treacherous; that, wanting th cunning of the fox, the generosity of the lion, the bravery the dog, or the strength of the horse, it unites in its one gau person the savage attributes of the tiger with the cowardice the rabbit, and the brutality of the bear.

In his "Adventures on the Columbian River," Mr. Ros Cox says that the wolf of America is a destructive an rapacious animal; whole herds of them, he tells us, assembl together in the winter time and destroy a vast number horses and cattle, which, in the cold regions, get entangled the snow. In this situation they become an easy prey to thei light-tooted pursuers, ten or fifteen of which will fasten on animal. With their long fangs they fix on the poor horse's neck and in a few minutes drag him down and separate his head fro his body. If, however, the horses are not prevented from pain their legs, they sometimes punish their enemy severely. "A an instance of this, I saw, one morning," says Mr. Cox, "th bodies of two of our horses, which had been killed the nigh before; and around them were lying no fewer than eight dead or mortally wounded wolves; some with their brains scattere about, and others with their limbs and ribs broken by th hoofs of the furious animals, in their vain attempts to escap from their sanguinary assailants."

How vividly does the above short extract recall the account current during the last century, of the ferocity of the wolve of Europe! Thomson, in his immortal "Seasons" [*Winte* v. 389—407] has drawn a picture, the counterpart of whic has doubtless been witnessed in its principal incidents b many a wretched traveller:—

> "By wintry famine roused from all the tract
> Of horrid mountains, which the shining Alps,
> And wavy Apennine and Pyrenees,
> Branch out stupendous into distant lands,—
> Cruel as death, and hungry as the grave,
> Burning for blood; bony and gaunt and grim;
> Assembling wolves in raging troops descend!
> And, pouring o'er the country, bear along,
> Keen as the north wind sweeps the glossy snow,
> All as their prize They fasten on the steed,
> Press him to earth, and pierce his mighty heart;
> Nor can the bull his awful front defend,
> Or shake the murdering savages away.
> Rapacious, at the mother's throat they fly,
> And tear the screaming infant from the breast.
> The God-like face of man avails him nought:
> E'en beauty, force divine! at whose bright glance
> The generous lion stands in softened gaze,
> Here bleeds a hapless, undistinguished prey."

SUMMER SHOWERS—SCORCHED LEAVES.

In the summer, after some days of fine weather, during the heat o the day, if a storm happens, accompanied with a few light shower of rain, and the sun appears immediately after with its usual splen dour, it burns the foliage and the flowers on which the rain ha fallen, and destroys the hopes of the orchard. The intense hea which the ardour of the sun produces at that time on the leave and flowers, is equal to that of burning iron. Naturalists hav sought for the cause of this effect, but few of them have assigne satisfactory reasons. The fact appears to be this.—In the serene days of the summer, there gathers on the foliage and the flowers, a indeed on every other part, a little dust. When the rain falls on thi dust, the drops mix together and take an oval or round form, a may be frequently observed on a dusty floor on which water i scattered before sweeping. These little globes of water form con vex lenses, which produce the same effect as "burning glasses." Should the rain be heavy and last long, the sun would not produc this effect, because the force and duration of the rain will hav washed off the dust that caused these drops of water to assum that form, and the drops losing their globular shape, which alon gave them their caustic power, will be dispersed. The above may operate as a caution to our readers who delight in "pot plants" no to sprinkle water over them while the sun shines hotly. It is alway best to water them at the root.

SPAIN AND ITS PEOPLE.—VI.

SPAIN IN THE PRESENT DAY.

To attempt to describe a people whose general characteristics vary in all specialities, according to the provinces whence they come, and where the Castilian differs in every respect from the Andalusian, and the latter from the inhabitants of Toledo or Valencia, would be difficult indeed—more difficult, in fact, than to generalise the English, Scotch, and Welsh under the name of Britons. To speak of the Spanish as proud, cold, supercilious, idle, mean, and poor, would be, in some sense, true; but to use such general terms with regard to a whole people would be as false as to take the nobler parts of their character—their punctilious sense of honour, their love of truth, their high appreciation of female beauty and virtue, their bravery and chivalrous love of adventure—and to say that they were common to the whole inhabitants of the peninsula. What we have already said in these brief articles, however, will convey to the reader a tolerably correct idea of the general peculiarities of the Spanish people. In this number, therefore, we shall endeavour, in bringing the series to a close, to describe the social condition of Spain as it exists in the present day, even at the risk of a little repetition.

As has already been stated, Spain consists of about four-fifths of the Pyrenean peninsula, and is separated from France by the Pyrenees mountains. The population at the present time cannot be estimated at much less than 12,000,000 souls; though from the want of any reliable official census, no correct data as to the number of inhabitants exists. Besides the Spaniards proper—or Castilians, as they are termed in Spain by way of eminence—there are about half a million Basques, or descendants of the ancient Iberians, Gauls, &c., about 60,000 Modejares, or descendants of the Moors, and 45,000 gipsies.* The established religion of Spain is the Roman Catholic, but at present a liberal toleration exists with regard to other sects, both religious and political. In 1840 the Catholic clergy of Spain numbered eight archbishops—of whom the archbishop of Toledo is primate—77 bishops, 2,393 canons, 1,869 prebendaries, 15,481 curates, 4,929 vicars, 17,411 beneficiaries, 27,757 seculars in orders, 15,015 sacristans, and 3,927 servitors. Besides these there were nearly 2,000 monasteries, with about 40,000 monks, and a proportionate number of nunneries, with about 25,000 nuns; these latter figures, however, cannot be taken as definite, as in 1835 nearly 900 of these cloisters were abolished, and the sale of their estates, yielded the sum of 16,693,260 reals.† This sale of property was designed to alleviate the public burdens, and pay some of the debts of the state, though it is extremely doubtful whether the money so raised was really appropriated to the purposes intended. Of the mountains and rivers of Spain, as well as the general physical conformation, we have already spoken—see pp. 194 and 195); but we may as well repeat that the country is entirely hill and valley, and that the principal rivers are the Ebro, the Guadalquiver, the Tagus, the Duero, and the Guadiana,—the three latter of which run through Portugal. Of the history of this last country we shall speak in another paper.

The climate of Spain is generally mild and pleasant, except in some of the northern coasts. The provinces of Valencia and Murchia enjoy the charms of an almost perennial spring, while in Granada and Andalusia, the sugar-cane, and other tropical productions, thrive amazingly. Noxious winds are the cold and rough gallego from the north, and the scorching and enfeebling salono from Africa on the south, but they do not usually last very long. The soil, of course, varies with the climate; in general it is very fertile; and except in some tracts of the Sierra Morena, and in parts of Granada and Asturias, produces—especially in the Mediterranean provinces—abundance of oil, wine, and southern fruits, especially pomegranates.*

The national riches of the country consist chiefly of salt—rock-salt in Catalonia; spring-salt in Valencia; and sea-salt in Sevilla and the Bellaric isles. Then there are olives and other fruits common to southern Europe, cultivated nearly all over Spain; the finest wines coming from Malaga, Zeres, and Alcante; silks in the southern provinces; horses and mules, fine breeds of which exist in Andalusia and Asturias, though for saddle-riding the mule is the most general animal used in Spain; and sheep in abundance—for which latter animal Spain has been renowned for more than a thousand years. Besides the Merinoes, there are two other less valuable breeds of sheep, called the Churros and Metis. During the summer, the sheep feed on the elevated table-land of Leon and Castile, but in the winter they are driven to pasture on the plains of Estramadura and the adjoining provinces. Since the last great war, however, the flocks have diminished in number, and the quality of the Merino sheep is no longer pre-eminent.

We have already alluded to the riches in gold and silver which Spain possesses. From the remotest ages her mines have been famous, and have been successfully worked by the Phœnicians, Carthaginians, the Moors, and finally by the Spaniards themselves, but the discovery of the rich gold-mines of Mexico and Persia have had the effect of closing them for years, and it is only lately that the attention of the Spaniards has been directed to them. In fact, the possession of colonies has proved of no real benefit to Spain; for, instead of staying at home to cultivate their lands, and produce a trade by making the inhabitants of the New World their customers, the Spaniards have crossed the seas in search of gold and silver, and neglected everything else. The gold of South America has been the curse of Spain; and so vehement was the love of her people for the possession of the precious metals, that even to this day, it is not uncommon in some parts of the country, to see rich gold flagons and centre pieces displayed on tables which exhibit a miserable paucity of wholesome food. In recent times, however, the mines of Spain have been re-opened, and worked so successfully, that in 1848 they yielded 250,000 doublons of silver † But, besides these, there are in Spain—especially in Upper Andalusia, excellent mines of copper, lead, and quicksilver; and in various parts of the Basque provinces, iron, cobalt, alum, &c., have been found in great quantities. The copper-mines, though bad management, have not yet been made profitable; but the quicksilver-mines in the Castilian districts of La Mancha, still supply the European demand for that metal; and next to those of England, the lead-mines of Spain are the most celebrated in the world.

With regard to other branches of industry,—for agriculture, so flourishing in the days of the Moors, have long since declined, and wheat is now only raised in sufficient quantities to supply the inhabitants at a very dear rate—there are indeed manufactures of silk, cotton, and wool; but since the expulsion of the Moors, by which Spain lost nearly a million of her best inhabitants, and as a consequence of the continual and destructive wars of modern times, Spain has ceased to be a manufacturing country. Only the woollen manufactories of Castile, the damask and silk factories of Andalusia, the manufactories of arms in the north-western, and the paper manufactories in the western provinces, were prospering in the seventeenth century, while the cotton manufactures of Catalonia rose in the eighteenth. Nevertheless, the woollen and silk looms did not exceed 10,000 in number, throughout all Spain; and in 1768, there were in the whole country not more than 2,250,000 operatives, mechanics, husbandmen, and others depending for subsistence on handiwork.

Since the beginning of the present century, Spain has been the theatre of almost continual warfare, political convulsion, and internal dilaceration; which, being assisted, fomented, and maintained by the aid of foreign powers, have proved quite fatal to the manufactures, trade, and commerce of the people. It would appear that a British squadron in the Mediterranean, and a British ambassador at Madrid, though they may swell the pride of the Spaniards, are not altogether the means of re-

---

* In Mr. George Borrow's "Gipsies in Spain," "The Bible in Spain," and in his latest work, "Lavengro," the reader will find many curious particulars with regard to these interesting people; but from the nature of these articles we are precluded from entering at any length into a description of their characteristics. We cannot too often repeat that the office of all mentary teaching—and in that light only can these "Glimpses of the ople of all Nations" be considered—is to suggest a larger course of read-rather than to fulfil any particular promise, or exhaust any special ject. The *Friend*, however, advises, but does not attempt to dictate.

A real is equal to about 3½d. English money.

* The word Pomegranate is Spanish for *Granada*. The reader will recollect the saying of Ferdinand, when going to war with the Moors—"I will pick the stones from this pomegranate one by one."

† A Spanish doublon is equal to about 15s. English.

creasing their wealth, importance, or commercial prosperity. The chief articles of export are wines, fruits of Southern Europe, salt, olive oil, cork, quicksilver, and wool, of which latter article scarcely a tithe of the quantity formerly exported now leaves the country. Of 2,830 vessels that in 1844 entered the port of Cadiz, 2,060 were Spanish coasters,—poor, mean, ill-manned, inconsiderable craft, for the most part,—while of the remainder 480 were English vessels, 75 from the United States, 6 from Hamburg, 4 from Bremen, 4 from Prussia, &c.—a poor list indeed for a country which once owned half America, and which still boasts the honour of its discovery.

The nature of the articles imported will give a key at once to the poverty and idleness of the inhabitants: besides colonial products and spices, they consist principally of cloth, calicoes, silks, linen, hardware, copper, pewter, and tin utensils, glass-ware, furniture, toys and trinkets, fancy articles, timber, corn, flax, hemp, dried and salt fish, salted beef, butter, cheese, poultry, and hogs. What can we think of the industry of a people, who, living in one of the finest countries in the world,—a country whose mountains are rich in gold and silver and precious stones, whose plains and valleys are abundant exceedingly in all that is necessary to agriculture, and whose seas and rivers are filled with delicious fish,—who are obliged to seek from across the seas, not only the most common articles of food, but even the ordinary kitchen utensils in which they can be cooked?

The means of education in Spain are in the same backward state as her trade and commerce. We have most of us read in Don Quixote, of Spanish universities, but if we may believe the assertion of a member of the Cortes, or hereditary parliament, in 1850, there are not above 900 schools of every description in all Spain. At this rate 13,333 Spaniards must resort to one single school! Nominally there are still eight universities in Spain.—One at Salamanca, which, though founded in 1222, yet in 1845, was frequented by only 302 students; another at Valladolid, with only 1,300 students; a third at Valencia, with 1,600 students, a fourth at Saragossa, with 1,000 students; a fifth at Seville, with 800 students, a sixth at Granada, with 80 students, a seventh at St Jago, with 1,030 students; and an eighth at Oviedo, with 450 students. But partly owing to the wars of modern times, and partly, perhaps, in consequence of the inert, impassible spirit of the authorities, these colleges are without resources, professors, or influence. Of course where the endowed schools are thus neglected, the private seminaries and ordinary places of education would not be likely to be in a very flourishing condition. Thus we find that, in general terms, the youth of Spain are deficient of all that belongs to learning and wisdom, and that the literature of the country is that of the past—the glorious gone-by of Spain—rather than of the present.

In no country in Europe are the financial affairs in a more deplorable state. Every year brings with it a more or less considerable deficit. According to the official statements the deficit of the last year (1850), was about 175,000,000 million reals; but actually it is a much larger sum, the policy of the government being to estimate the revenue account of the kingdom at too high a standard, and to reckon the liabilities to foreign countries at too low a one. The no-price of Spanish bonds, and the repudiating policy of Spanish ministers is a well known commercial proverb, and a sad national disgrace. The public debt of Spain is acknowledged to be not less than 20,000,000,000 reals (twenty thousand millions)! besides about 400,000,000 of recently contracted and partly unfunded debt, which pays interest or not, just according to the strength and determination of the public creditor! It was noticed above, that the sale of convents yielded large sums of money; but, strange to say, Spanish finances were not improved in consequence. Perhaps the leaders of Spanish revolution and the peddling ministers of Spanish finance could throw some light on this subject. On the occasion alluded to, Mr. Mendizabel, the then minister of finance, sold the estates of convents, a vast deal of church property, sacred vessels and utensils, and even the church bells; and, according to the official return of the month of June, 1835, the sum received from such sales amounted to about one hundred and fifty thousand pounds sterling; and yet, in the very next official quarter the deficit, although no taxes had been remitted than three-quarters of a million sterling. This subject might be advantageously pursued, and it might be asked how the minister of Queen Christina, by birth a Jew, and once a pedlar could reconcile himself, and the government, and the people to these facts; but the question *has* often been asked in councils, and British parliaments, and in British counting-houses and in British widows' homes, and no reply has been received.

Notwithstanding, however, this seeming great want of funds and credit, and notwithstanding the known poverty of the great mass of the Spanish people, the army in Spain is really on a grand scale. It need scarcely be said that the latter fact is a consequence of the former, and that the possession of a devoted army is the only means by which the government of Spain in the present day is carried on. Their navy, once a powerful arm of the peninsula, is scarcely worthy of mention. In 1804 it numbered not fewer than 68 ships of the line, 40 frigates, &c.; but, at present, it may be said to consist of about 2 ships of the line, 4 frigates, and about 18 smaller ships of war, all of them more or less out of repair and unfit for active service. The once famous naval stations of Ferrol, Cadiz and Carthagena, have dwindled down to one navy station at Cadiz. But the honours bestowed by the sovereign are as rife as ever, and the knightly orders of the Golden Fleece, and Isabella, and Charles III., and Maria Louisa, are as much prized as of old, when Spain was a first-class power in Europe.

The colonies left to Spain may be thus estimated: 1, the African towns of Ceuta, Penon de Velez, Alhacemas, and Melilla, opposite the province of Granada; the Canary Isles and two islands in the Gulf of Guinea; 2, the islands of Cuba and Porto Rica in the West Indies, which are all that remain of her once large possessions in America; 3, the Philippine islands in the North Pacific ocean, said to be more than a thousand in number, which are only nominally subject to the Spanish government at Manilla; 4, the Ladrone or Marianne islands in Polynesia, which are eleven in number, and very productive. The Spanish colonies of 1852—which, indeed, are colonies only in name, for they produce no revenue, and very little trade to the mother country—extend over an area of about 111,000 square miles. From the year 1580 to 1640, when the immense Spanish dominions on the American continent and the Portuguese colonies were united, the foreign possessions owning the sway of the successors of Ferdinand and Isabella extended over a space of more than ten millions of square miles!

This would be a gloomy conclusion to our notice of a country proverbially rich and fertile, inhabited by a people the most ancient in Europe; but a better state of things "looms in the distance," as D'Israeli says. The apathetical indifference to commerce and industrial pursuits which has distinguished the Spaniards of the last two or three centuries, seems to be giving way, it is believed, to a more active and inquiring spirit, and the cold consent which the people accord to the measures of the government of the day appears, if we may believe report, to be about to undergo some change for the better. In the Great Exhibition of all Nations, Spain was represented almost entirely by her raw materials. It would seem however, that the contrast, afforded in that great international bazaar, between what she *did* and what she *might do*, is already bearing fruit in an improved system and an awakening spirit among the people of the peninsula. Possessed of more than an ordinary share of the good things of this world—beautiful climate, a rich soil, and an abundance of mineral beneath it—her manufacturers and artisans will do well to bestir themselves, and, no longer contenting themselves with things as they are, endeavour to solve the problem, set before them in a thousand shapes of beauty and utility, beneath that wondrous canopy of glass in Hyde Park,—"How shall Spain be raised again to power and might among the nations?" Not by armies, and navies, and crooked policy and state intrigue, and foreign intervention, and domestic jealousy, and private quarrel,—but by the strong arm and the determined will of her inhabitants. And if the strong arm be rightly raised, it will not grasp the sword or wield the musket; and if the determined will be fitly exercised, it must lead to other and better ends than those which shifting and slippery governments shape out for themselves.

mers of the Spanish people,—their national customs, dances, bull-fights, costumes, language, &c.—but the illustrations we have introduced into this series of papers speak, in a great measure, for themselves. In the next, and concluding paper, we shall have something to say of the *Art* of Spain.

HENRY CLAY.

The world has lost another hero, and liberty another champion. Henry Clay, one of the most famous and popular of American legislators, died at Washington, on the 28th of June last in the seventy-fifth year of his age, after a political career which extended over more than half a century.

To merely sketch the life of Henry Clay, it would be necessary to speak of the principal events of American history from the period when the States, now united, acknowledged themselves colonies of Great Britain, to the last great question of international policy which engaged the attention of governments. It is difficult at all times for ordinary readers to comprehend foreign politics, much less to enter into the feelings of the actual actors in the political dramas in the course of performance in various parts of the world. Nor is the United States exempt from this objection; for, with the exception of some few great leading questions—such as the slave-trade, the agitation in favour of international copyrights, ocean penny postage, the doctrine of non-intervention, peace societies, &c., we possess few political ideas in common with our transatlantic brethren. Not that Englishmen feel no sympathy for the United States of America, or that they look with coldness on the doings of her people; on the contrary, the spectacle of a great nation struggling for liberty must always possess a peculiar interest for a country which numbers among her sons such men as Hampden, Cromwell, and Milton. For these reasons—because of the fact that Henry Clay, from his first political essay to his last intelligible utterance, was a consistent advocate of liberty of conscience and freedom of political action—because, among the men of his time and nation, he stood foremost, and shrunk not from the assertion of the right of every man to a voice in the making of the laws by which he is to be governed—because, during a life of more than the usual span, he was pre-eminently a philanthropist and a lover of his country—because he stood manfully up for principles rather than parties, and considered the ultimate good of the millions of greater importance than the popularity of a day—because the achievement of that true political and moral enfranchisement for which our fathers and his fathers fought and bled, was better worth contending for than the applause of senates and the patronage of coteries—for these reasons will the name of Henry Clay, of republican, slave-holding, repudiating, but progressing, and liberty-loving America, be acknowledged by Englishmen with pride and pleasure, and be enrolled by futurity among the great ones of the earth.

Henry Clay was born of English parents at a place called the Slashes, in the county of Hanover, Eastern Virginia, U.S., on the 12th of April, 1777. He was the seventh child of a large family, some branches of which—amongst others, the baronet just returned M.P. for the Tower Hamlets—still reside in England. His ancestors were among the earliest settlers in Amer[illegible] and his father, who died before the future senator had attained his fourth year, was a well known and respected minister of the Gospel. His mother, being left with numerous young children, married a second time; and the name of Henry's step-father—a man in every way worthy—was Captain Henry Watkins.

Of the childhood of Henry Clay we have seen no account,—nor is it any great matter for posterity to know whether he was a sharp, clever lad, or whether his schoolmaster is said—when the pupil had made himself a name among men—to have "always considered him a very dull boy at his books:" such little matters are of no consequence, as the records of the infancy of heroes is very apocryphal indeed. It is sufficient for us to discover that his mother and father-in-law made him acquainted with real life at a very early period—for in his fourteenth year we find him "assisting" at the store of Mr. Richard Denny, at Richmond, "his education at that time having extended no farther than a graduation at an ordinary school of Mr. Peter Deacon."

But that he was not an "ordinary" boy is quite evident from the fact that the Captain took him away from the store and placed him in the office of his friend, Peter Tinsley, Esq., then clerk to the Court of Chancery. Here, we are told by a writer to the *New York Herald*, he attracted the attention of Chancellor Wythe, who being in want of a private secretary, a connexion was formed which continued four years, Henry being nominally in the office of the Clerk in Chancery, but chiefly employed in the office of the Chancellor. It was in this connexion that Mr. Clay's mind received its high destination. It introduced him to a new sphere of thought and improvement. The Chancellor became much attached to him, and perceiving his uncommon capacities, gave him the use of his library, and superintended his studies for the legal profession. It has been remarked that from the hour when Chancellor Wythe took him by the hand, his fortune was decided, and he was made for life. He was for years the pupil and companion of that distinguished Virginian, who, discovering the high promise of his protégé, was not less ambitious to fit him for his destiny than he himself was to attain it. The benefits of the society and tuition of the venerable Chancellor probably transcended the advantages that could have been provided by an ample fortune.

Mr. Clay, after having left the office of Mr. Tinsley, in 1796, became a student-at-law, and in the following year was admitted to practice. His mother and father-in-law having removed, in 1792, from Virginia to Woodford County, in the State of Kentucky, Henry, in 1797, being then in his twenty-first year, practised in his profession in the town of Lexington, in the latter State. Here he met with the greatest success; and, many years afterwards, alluding to his early life, he declared that at this time "he was without patrons, without friends, and destitute of means." "I remember," he says, "how comfortable I thought I should be, if I could make £100 Virginia money per annum, and with what delight I received the first fifteen shillings fee. My hopes were more than realised; I immediately rushed into a lucrative practice." From this period, then, a fair vista opened itself out to his ambitious vision. He married, of course, and the union appears to have been a happy one. The name of the lady was Lucretia Hart, who survives him, the daughter of Colonel Thomas Hart, of Lexington. Eleven children blessed their union, two only of whom are now living,—his eldest son, Thomas Hart Clay, in whose arms he died, and a son who is yet a child.

Henry Clay first entered the field of politics as member for Lexington, and he soon became a favourite with the liberal party in the State. In 1806 he was elected to the United States senate, and in the next year was elected to the honourable post of Speaker.

In 1811 the prospects of war with Great Britain—a question in which Mr. Clay took a deep interest—induced him to decline a re-election to the United States Senate, and to stand as a candidate for the House of Representatives, preferring that field of action in Congress, at that peculiar crisis in the state of his native country. Being triumphantly chosen by the people of his congressional district, he, for the first time, took his seat in the popular branch of Congress, on the assembling of that body, November 4, 1811, and was elected Speaker of the House, on the first ballot, by a majority of 31, out of 128 members present. This was considered a remarkable honour for a new member of a House, in which, at the time there were many veteran members of the party, to which he belonged. The honour was continuously conferred on him, till 1825, when he was appointed Secretary of State, with the exception of his resignation and absence, to negotiate the treaty of Ghent, in 1814; but on his return he was again chosen speaker, at the opening of Congress, in 1815; and in 1820 he temporarily retired from the Speaker's chair, and in 1821 from Congress, until 1823, when he was returned again to the House, without opposition in the district, and re-elected Speaker, by the large majority of 139 to 42. Mr. Clay, therefore, was elected Speaker of the House six times; viz.—1811, 1813, 1815, 1817, 1819, and 1823, and occupied the chair in all about ten years.

We cannot in this brief notice follow the course of Mr. Clay's political life; neither would it be particularly instructive or interesting to tell again the history of that diplomatic struggle which ended in the treaty at Ghent, in 1814,

and by which another war with the parent country was happily avoided. Men die, but principles, if good, remain for ever. As a United States senator, as a member and speaker of the House of Representatives, as an ambassador of his country, and as a high officer in the executive department of the government—for he was secretary of state under John Quincy Adam's presidency, and was four times proposed by his party for the presidential chair of the United States—he was intimately connected with American politics for fifty years. Beginning life as a friendless boy, he rose by his own perseverance and indomitable energy to be one of the lights of civilisation. "Many of his early contemporaries," says Mr. Breckenridge, in an eloquent speech in the House of Representatives at Washington, "have passed away, and many of the measures in which our departed friend was engaged are remembered only as the occasions which called forth the great intellectual efforts that marked their discussion. Concerning others, opinions are still divided, and they go into history with the reverse on either side rendered by some of the greatest intellects of our time and nation. As a leader in a deliberative body Mr. Clay had no equal in America; in him intellect, person, eloquence, and courage, united to form a character fit to command. He fired with his own enthusiasm, and controlled by his amazing will, individuals and masses No reverse could crush his spirit, nor defeat reduce him to despair—equally erect and dauntless in prosperity or adversity. When successful he moved to the accomplishment of his purposes with severe resolution. When defeated, he rallied his broken bands around him, and from his eagle eye shot along their ranks the contagion of his own courage. Destined for a leader, he everywhere asserted his destiny. In his long and eventful life he came in contact with men of all ranks and professions, but he never felt that he was in the presence of a man superior to himself. In the assemblies of the people—at the bar—in the Senate—everywhere within the circle of his personal presence, he assumed and maintained a position of prominence. But the supremacy of Mr. Clay as a party leader was not his only nor highest title to renown—that title is to be found in the purely patriotic spirit which on great occasions always signalised his conduct. We have had no statesman who, in times of real imminent public peril, has exhibited a more genuine and enlarged patriotism than Henry Clay. Whenever a question presented itself actually threatening the existence of the Union, Mr. Clay, rising above the passions of the hour, always exerted his powers to solve it peacefully and honourably. Although more liable than most men, from his impetuous ardent nature, to feel strongly the passions common to us all, it was his rare faculty to be able to subdue them in a great crisis, and to hold towards all sections of the confederacy the language of concord and brotherly love."

Who does not remember the three periods when the American system of government was exposed to its severe trials? And who does not know, that when history shall relate the struggles that proceeded, and the dangers which were arrested by the Missouri compromise, the tariff compromise of 1832, and the adjustment of 1850, the same pages will record the genius, the eloquence, and the patriotism of Henry Clay? Nor was it the nature of Mr. Clay to lag behind until measures of adjustment were matured, and then come forward to swell a majority. On the contrary, like a bold and real statesman, he was ever among the first to meet the peril, and hazard his fame upon the remedy. It is fresh in the memory of us all, that when the fury of sectional discord lately threatened to sever the confederacy, Mr. Clay, though withdrawn from public life, and oppressed by the burden of years, came back to the Senate—the theatre of his glory—and devoted the remnant of his strength to the sacred duty of preserving the union of the states. With characteristic courage he took the lead in proposing a scheme of settlement; but though willing to assume the responsibility of proposing a plan of settlement, he did not, with petty ambition, insist upon its adoption, to the exclusion of other modes—but taking his own as a starting point for discussion and practical action, he nobly laboured with his compeers to change and improve it, and put it in such a form as to make it an acceptable adjustment. Throughout the arduous struggle, the love of country expelled the spirit of selfishness, and Mr. Clay proved, for the third time, that, although he was ambitious and loved glory, he had no unholy ambition to mount to power on the confusion of his country. And this conviction is lodged in the hearts of the American people.

But the time was coming when so eventful a life must draw to a close, when the silver cord must loosen, and the golden bowl be broken at the fountain. With his native land in mourning,—that land in which all Englishmen may find brothers, speaking one language, acknowledging one faith, owning the same traditions, coming from the same great Saxon forefathers, and glorying in the same love of liberty which distinguished the men of the past, and which is the sign by which we know the true patriots of the present,—this is not the time or place to speak of the shortcomings of such a man as Henry Clay. The biography of him, and the history of his time has yet to be written. We are too near to both to be able to look calmly upon either. Great events, like beautiful landscapes, must be viewed from a fitting station and at a proper distance.

On the first of July, the ceremony of removing the remains of Henry Clay from Washington, the capital of the United States, to New York, took place. All due solemnity and ceremony was observed; and senators, friends, and a whole population assembled to do fitting honour to all that was mortal of a great man. From end to end of the Union the expression of sorrow has been general, and gloom hung over many cities in the visible shape of half-mast-high flags, and tolling bells, and the boom of minute guns. On the fourth day of the present month the body of Henry Clay was committed to its parent earth.

THERE'S NO TIME LIKE THE PRESENT.

Work on! work on! if your cause be good,
The task though hard, is pleasant,
Then strike the iron while it is hot,
There's no time like the present
The bonds are now loosed that enthrall'd the mind,
The fetters are cast asunder
That bigots once forged to enchain the soul,
Enkindling both fear and wonder.
Work on! work on! &c.

By perseverance fair knowledge win,
Bold hearts enlightened love it;
Make bright the age you're living in,
Or the next will shine above it.
Should neglect or sloth intervene
From out of your system wrench them,
And, with heart and hand together join'd,
Drive home the nails and clench them
Work on! work on! &c.

Let heroes of the ensanguined plain,
Proclaim War's bloody mission;
The heralds of Peace shall more proudly stand,
And maintain their high position.
The heroes of Peace are nobler far
Than those thou, grim War, greatest;
Who fight for life, and preserve from death,
Shall ever be counted greatest.
Work on! work on! &c.

Bright pearls are strung on the thread of fame,
Which knowledge and learning brighten;
Strive! and the glorious work advance;
Strive! and your labour lighten.
Your watchwords be, fair learning and peace!
Then blest will be each endeavour.
Cease not to strive! fear not to speak!
For now is the time or never!
Work on! work on! &c.

Pimlico. C. HARRIES.

NEW ZEALAND SUPERSTITION.—When a New Zealander travels by night, if the ideas of his forefathers have not lost their power over his mind, he will carry in his hand a cooked potato, to prevent his being assailed by evil spirits, who are believed to be more mischievous then than by day, but have a great repugnance to come in contact with food of any sort, or any place where it is kept.—*Shortland's New Zealand.*

LOUIS THE EIGHTEENTH IN ENGLAND.*

"Shortly after the queen's death, the king hired Hartwell Hall for the reception of himself and suite. The house, the property then of Sir George Lee, is situated on a gentle ascent on the road between Oxford and Aylesbury. It is hidden from passers-by on the highway, by a screen of superb trees, and it was nearly two centuries and a half old when the king took possession. The rent paid is said, by Alfred Nettement, the Bourbon biographer, to have amounted to six hundred pounds sterling, yearly. The sum, however, was one hundred less. The royal revenue amounted to six hundred thousand francs per annum (some twenty four thousand pounds), granted by the British government; but the king had almost as many claims upon it, and it was moreover so charged with encumbrances, that, at the end of the year, the king found himself little better than steward of a property for the management of which he received little or no income. One hundred thousand francs (£4,000) were assigned to the Duke and Duchess of Angoulême; the like sum to the Archbishop of Rheims, for charitable purposes; and a similar amount was consumed in paying political emissaries. The balance, amounting to about £12,000, did not more than suffice for the expenses of a household, where the retainers, being poor, noble, and numerous, had many wants that were costly of gratification. To do the king justice, his liberality to his faithful followers was of a spirit and quality becoming a prince.

"Among the poor of the place, and among the proscribed French exiles who existed painfully near the capital, as well as among the French prisoners of war, who lay captive in our hulks and inland towns, the name of the Duchess of Angoulême was hailed with warm affection. Her charity was at once munificent and exercised with discretion. Occasionally, visits were made to the capital, not for pleasure's sake, but as pious pilgrimages to the humble little chapel in King-street, Portman-square, which was founded by the poor French exiles of the early part of the revolution.

* * * * *

"The apartments of the Duchess of Angouleme were contiguous to the muniment-room, which was occupied by the Count and Countess of Damas, the faithful attendants of the duchess. The aged mother of the countess, the Duchess de Serent, had allotted to her a small chamber, on the opposite side near that of her daughter. In this house, and in the outbuildings, one hundred and forty persons were quartered. The number, including visitors, often exceeded two hundred. So numerous a party required such extensive accommodations, that the halls, gallery, and larger apartments were ingeniously divided and subdivided into suites of rooms and closets, in some instances to the great disorder and confusion of the mansion. Every hothouse, and each of the ornamental buildings in the park that could be rendered capable of decent shelter, were densely occupied; and it was curious to see how the second and third class stowed themselves away in the attics of the house, converting one room into several by the adaptation of light partitions. On the ledges and in the bows of the roof they formed gardens, which were stocked with plants, shrubs, and flowers, in boxes containing mould to the depth of eighteen or twenty inches; and they moreover kept owls and pigeons there, so that the superstructure was thus loaded with many extra tons of weight. But all was well conducted and cheerful throughout a residence of six or seven years, and in the evenings there was much mirth, music, and dancing, kept up at the cottages around.'

"Such is the description given by Captain Smyth, in his Ædes Hartwellianæ,' printed for private circulation. The gallant, and also learned, captain, further tells us that these eternal transformations were made without any fear of the law of landlord and tenant being before the eyes of the roughless delinquents, and with as little regard to the feelings and interests of the goodnatured proprietor, who saw new windows knocked into his walls, old fixtures displaced, and portions of the parapet balustrade ruthlessly removed, in obedience to some idle caprice that cared nothing for the act committed to gratify it. There was more of the Goth than of the Gaul in the deed of that individual who hung up a gigantic French looking-glass before the exquisite 'Lady Elizabeth Lee,' painted by 'Sir Joshua.' There was no face reflected in the mirror, half so beautiful as the one concealed behind it. The bad taste was indisputable. On each side of the porch that led into the house of the exiles there was to be seen a *fleur-de lis* in the old carving. The king smiled at the coincidence. A similar one, as I shall have to notice later, was connected with the stranger's tomb, which opened to receive the body of Charles X., who died in exile at Gorita. Louis XVIII led a very retired life at Hartwell, but he won a large amount of popularity. He was as affable as he was unostentatious, and would enter into conversation even with strangers whom he casually met in his rare and brief walks. The dinner-party seldom numbered less than two dozen; and at this meal a custom of the old French court was observed about once in three weeks, on which occasion the principal families in the neighbourhood were permitted to walk round the royal table while his majesty and family 'sat at meat.'

"The library was converted into a court reception-room, the drawing-room having been surrendered to the Prince and Princess of Conde, for whom it served as both saloon and dormitory. In the library, the king's couch was raised on a dais. The rooms ordinarily inhabited by him were the study and a small room adjoining. The apartment above the library was that in which the queen died, and in which she lay in a 'state' that excited much wonder, and some admiration, among the simple Buckinghamshire squires and their ladies. The dethroned king of Sweden afterwards occupied this room. The house itself held more exiled princes than were met by Candide at the table-d'hôte in Venice."

* From the *Memoirs of Marie Thérese Charlotte, Duchess of Angoulême.* By Mrs. Romer. London Bentley

HOT SUMMERS.

The excessive heat which for some time past prevailed both in this country and on the continent gives some interest to the following account of remarkably hot summers. It is extracted from *Galignani's Messenger*, the English newspaper published in Paris.

"In 1132 the earth opened, and the rivers and springs disappeared, in Alsace. The Rhine was dried up. In 1152 the heat was so great that eggs were cooked in the sand. In 1160, at the battle of Bela, a great number of soldiers died from the heat. In 1276 and 1277, in France, an absolute failure of the crops of grass and oats occurred. In 1303 and 1304 the Seine, the Loire, the Rhine, the Danube were passed over dry footed. In 1393 and 1394 great numbers of animals fell dead, and the crops were scorched up. In 1410 the heat was excessive. In 1538, 1539, 1540, 1541, the rivers were almost entirely dried up. In 1556 there was a great drought all over Europe. In 1615 and 1616 the heat was overwhelming in France, Italy, and the Netherlands. It 1646 there were 58 consecutive days of excessive heat. In 1678 excessive heat. The same was the case in the first three years of the eighteenth century. In 1718 it did not rain once from the month of April to the month of October. The crops were burnt up, the rivers were dried up, and the theatres were closed by decree of the Lieut. of Police. The thermometer marked 36 degrees Reaumur (113 of Fahrenheit). In gardens which were watered fruit trees flowered twice. In 1723 and 1724 the heat was extreme. In 1746 summer very hot and very dry, which absolutely calcined the crops. During several months no rain fell. In 1748, 1754, 1760, 1767, 1778, and 1788, the heat was excessive. In 1811, the year of the celebrated comet, the summer was very warm, and the wine delicious, even at Suènes. In 1818 the theatres remained closed for nearly a month, owing to the heat. The *maximum* heat was 35 degrees (110.75 Fahrenheit). In 1830, while fighting was going on on the 27th, 28th, and 29th of July, the thermometer marked 36 degrees centigrade (97.78 Fahrenheit). In 1832, in the insurrection of the 5th and 6th of June, the thermometer marked 35 degrees centigrade. In 1835 the Seine was almost dried up. In 1850, in the month of June, on the second appearance of the cholera, the thermometer marked 24 degrees centigrade. The highest temperature which man can support for a certain time varies from 40 to 45 degrees (104 to 113 of Fahrenheit). Frequent accidents, however, occur at a less elevated temperature."

SUMMER-TIME IN LONDON.

Our notions of summer time are all associated with the country—with green fields, blooming hedgerows, umbrageous trees, flowering gardens full of humming bees, shady lanes where the little birds regale themselves, quiet streams where the trout floats deeply down, cool retreats, great blue mountains standing out clear against bluer skies, sun-lit lakes with little boats floating idly on their surface, dashing cascades, and bright expansive waveless seas. No dust, or weariness, or noise, or trouble enter into our ideas; no buzzing flies in the shady lanes, no unbearable heat in the green fields, no toil on the mountains and no sickness on the quiet seas. With our thoughts attuned, the notions of London in the summer-time are dreary ones indeed. Hot pavements and long dusty roads, crowded streets and noisy vehicles, shadeless squares in which grow nothing green, a city of dust and bustle, a west end, too, hot to walk in till the sun has gone down, parks yellow and ragged, and suburbs all too uninteresting to be worth a visit.

The poets have sung of summer, every one of them, but it has been Summer in the Country; who ever heard of a poet celebrating the bright time in London, or invoking the muse to aid him in a description of Hyde Park? It is true that Byron "riots in Rotten Row," but it is in the height of the season, well-mounted and in the cool of the evening; and Byron, of course, is just the exception which proves the rule in this case. The ordinary rhyme-spinner luxuriates in lines of quite a different character, and takes delight in a summer which exists in every man's mind—being more or less true in its details, as the case may be—and in every young lady's album: as, for instance,—

"And who has never felt the joy that summer ever brings,
When every bird with mirthful glee is on its lightest wings;
When wild flowers, springing in the mead and on the upland come,
With beauty's ambient tint, to woo the bees' soft gentle hum;
While slumbering on the deep blue sky, the downy clouds repose,
Till with a wondrous loveliness entaptured nature glows?"

"GRUNSEL FOR YOUR SINGING BIRDS!"

Just so; summer in the country in every line: mirthful birds on lightest wings, wild flowers, humming bees, deep blue skies, downy clouds, wondrous loveliness and the repose of enraptured nature. What can be prettier? Not so much as a passing shower, to say nothing of a storm, to disturb the serenity of the ideas and the flow of the metre. Not a hint of the "severity" of summer, or a syllable about long droughts and hot dusty roads, guiltless of shade and water-carts. Certainly not, why should there be, seeing that it is the poet's habit to look on things from the fairest point of view?

THE FEMALE COSTERMONGER.

But is there no poetry in the summer-time of London? No inspiration and enthusiasm to be got out of long crowded streets and endless suburbs? We think there is. For those who, pent up in close unhealthy courts and alleys, pass their days, and sometimes half their nights, in labour, the flower on the window-sill, though it have no better receptacle than a cracked teapot, and the poor dusty bird in its time-worn cage, have a true meaning and a holy purpose. Go out any summer morning into the wide-spread suburbs—places alike unknown to the courtly loungers of St. James's and the squalid dwellers in St. Giles's—and you shall witness sights that charm, while they dim, your eyes. You shall see in that little court a widowed mother, whose chief care, amid the struggle for daily bread, is to keep her children—the only legacies left of the departed—in cleanliness and moral purity: you shall see from that darkened doorway a man come forth who bravely battles with the world for bread; you shall see how, in spite of poverty and neglect, whole families are proud of their little homes, the which they strive to render gay and garden-like by such poor appliances as cheap plants and common singing-birds: you shall see, amid the filth which corporations and parish authorities cultivate as seething hotbeds of disease, how many a little human flower is reared—here a young mother thinly clad, with her first baby in her arms; there a father, with a crowd of shouting little ones about him; again, an old crone nursing the youngest-born of another generation—uniting, as it were, young life and weary age together. How many a touching picture might be gathered from the streets and alleys where the poor reside, and how many a fair episode and true story, and how many a dark tragedy, of which painters and novelists know little, or perhaps nothing at all!

A little further and the scene changes. A few steps take the pedestrian from the poverty-stricken street to a fair open road, in which a multiplicity of business seems to be going merrily and quickly on. There is a kind of poetry in the picture that we gaze on unequalled in its way, and quite a different feeling agitates the observer, to that which he felt a little while ago. Poverty has shrunk back from the wide sunlit way into strange and unknown nooks; and all before him wears a gay and pleasant aspect. A broad road, with a stream of people passing to and fro on either pathway, and a regular succession of vehicles in the middle—there would seem to be no poetry in such a sight as this. And yet there is, for those who have eyes to see it. There is a greater fascination for many in the presence of human life than in the solitary grandeur of the woods and streams. He who can look on such a scene as this and feel no interest in it, is deficient in the faculty of observation. It is true that the dwellers in London are so accustomed to the sight of thousands in her streets, that they take no note of their well-known aspects; but the poetry of life exists there just the same as if every man were a thinker as well as an actor in them. A unit of the great multitude, it seldom strikes a man *how* great the multitude really is. And so the tens of thousands pass daily up and down amid the bustle and the throng, without a thought of the great human drama in which they are taking a part. Perhaps it is well that it is so; for, if we reflect on these things, if we

"LAVENDER, A PENNY A BUNCH!"

speculate on the doings, thoughts, and aims of the separate items that go to make up this great whole, if we even separate one or two prominent figures from the mass, and try to shape out for ourselves a notion of their probable business and life-ends, we are lost in the multitude of ideas upon the mind. Could men but live with death before their eyes, how changed would be

their bearing! Many a word of harsh reproof, and many a scornful look, would be unsaid, unwrote.

Nevertheless, few persons can walk through the streets of London—those streets so full of life and activity, so redolent of human passion, so crowded with contrasts—here a rich man's palace, there a beggar's hovel; now an earl's retinue, then a widow's starvelings; at one house a gay bridal party, next door a corpse; to-day an Italian sky, lighting up its broad highways and tinting its steeple-tops with gold, to-morrow a dense, black, wet, clinging fog, hanging over river, and palace, and gay park, and dreary suburb with most impartial wretchedness;—those streets so commonplace, and yet so romantic, so dull to untaught eyes, and yet so full of historical recollections to those who read their story rightly;—those streets so teeming with human hopes, and fears, and joys, and sorrows,—those streets in which the thousands move on in their several paths of business or pleasure, and jostle not each other by the way—in which each man's garment covers a world of thoughts and speculations unknown to his neighbour, and in which each woman's shawl environs a beating heart,—those streets like none others in the world in their number and variety, in their close-packed density and their peculiar phases,—few persons can walk through them without discovering new aspects in their familiar looks, new features in their well-known faces, every day. It is a wonderful and merry, or an ordinary and dreary city, just as you choose to look at it. Gaze upon its palaces, and examine its churches; visit its hospitals, and roam through its parks, stand contemplative on its bridge, and look upon the sun-lighted stream beneath, on which the vessels of all nations crowd up to the wharf-sides or float silently in the mid-water, look down from an eminence upon the ever-moving throng of men and vehicles, and watch the evidences of wealth, and greatness, and material power which everywhere surround you—and London is a mighty and a happy city. But look a little deeper, mix more intimately in its ceaseless current, dive into its dark depths and pierce the black, turbid stream of its inner life, and what is London then? The great, mysterious, rushing torrent of existence sweeps along, and carries the dreamer unresistingly away, he knows not whither. But the flood is made up of many little streams, the immeasurable sea is fed by a thousand rivers. And this giant city, so vast as a whole, and so gigantic in its entirety, is but a collection of littlenesses, each one of which, considered singly and without connexion with its fellows, is comprehensible, manageable, and capable of being grasped. Taken by itself, every phase of city life is as easily considered as a single house is examined or a single street traversed. It is then number and variety which puzzles, nothing else.

As it is with the physical so it is with the moral aspects of London. If we attempt to grasp the whole life idea we are as much lost as if we try to comprehend in one picture of the mind its multiplicity of houses, and bridges, and railways, and churches, and streets, with outlying wildernesses of bricks and mortar continually increasing.

But in our erratic gossiping we have almost forgotten the title of our paper—"Summer in London." Well, gentlest of readers, we wish you no worse wish than that, failing to take your usual fortnight "out of town" this charming weather—(no matter where the town may be, for the expression is common to every congregation of houses a thought larger than a village). You may not be less profitably employed than in looking about you in the streets and by-places of London. Of course you are acquainted with the parks and the west end, the picture galleries and the exhibitions, the zoological gardens and the historical Vauxhall—all in their glory from May to September; but perhaps you have never been in Covent Garden market at four in the morning; or visited Spitalfields when the crowds of costermongers are swarming from it with loaded baskets of fruits, vegetables, and flowers,—on their heads or in barrows and trucks; or noticed the number of girls and young men who get their livings in the streets entirely by vending flowers, herbs, and so forth in the suburbs; perhaps you have not observed how musically the cries of "Bow-pots, all a-blowm, all a-blown." "Grunsel for your singing birds," and many similar ones sound in the quiet streets where struggling people—widowed annuitants and half-pay officers with large families—live genteelly on something less than a day-labourer's income." Perhaps, in your notions of London, you forget that for days, and weeks, and months, there is a clear blue sky above you, looking all the more beautiful for the rain-clouds dappled here and there—for we have known clever people who never thought of raising their eyes to the heaven above the city streets;—or perhaps you have no eyes for the picturesque as it is exhibited at steam-boat wharves and suburban stage-coach stations, or railway terminus when the cheap excursion trains are running, and where scores of good-natured faces may be seen good-naturedly beaming at each other, as their owners are pushed and hustled in the throng, with no regard to the pretty bonnets and gay parasols, and cheap clean muslin dresses and light-coloured gloves and ribbons common to such occasions; or, perhaps—but we will not attempt to enumerate the many things which you may not have seen in London in the summer-time; all we would impress upon you is not to rush away in such haste from the "modern Babylon," for there are sights to be seen "free, gratis, for nothing," which are well worth looking at, if you only look at them through the right medium, and the right medium is—That spirit which is in

CHARITY WITH ALL MEN.

G. F. P.

VOYAGE IN A BALLOON.

(*From the French of* JULES VERNE.)

CHAPTER I.

My Ascension at Frankfort—The Balloon, the Gas, the apparatus, the Ballast—An Unexpected Travelling Companion—Conversation in the Air—Anecdotes—At 800 Metres*—The Portfolio of the Pale Young Man—Pictures and Caricatures—Des Rosiers and M. d'Arlandes—At 1,200 Metres—Atmospheric Phenomena—The Philosopher Charles—Systems—Blanchard—Guyton Morveaux—M. Julien—M. Petin—At 1,700 Metres—The Storm—Great Personages in Balloons—The Valve—The Curious Animals—The Aerial Ship—Game of Balloons.

In the month of September, 1850, I arrived at Frankfort-on-the-Maine. My passage through the principle cities of Germany, had been brilliantly marked by aerostatic ascensions; but, up to this day, no inhabitant of the Confederation had accompanied me, and the successful experiments at Paris of Messrs. Green, Godard, and Poitevin, had failed to induce the grave Germans to attempt aerial voyages.

Meanwhile, hardly had the news of my approaching ascension circulated throughout Frankfort, than three persons of note asked the favour of accompanying me. Two days after, we were to ascend from the Place de la Comédie. I immediately occupied myself with the preparations My balloon, of gigantic proportions was of silk, coated with gutta percha, a substance not liable to injury from acids or gas, and of absolute impermeability. Some trifling rents were mended the inevitable results of perilous descents.

The day of our ascension was that of the great fair of September, which attracts all the world to Frankfort The apparatus for filling was composed of six hogsheads arranged around a large vat, hermetically sealed The hydrogen gas, evolved by the contact of water with iron and sulphuric acid, passed from the first reservoirs to the second, and thence into the immense globe, which was thus gradually inflated. These preparations occupied all the morning, and about 11 o'clock the balloon was three-quarters full; sufficiently so,—for as we rise, the atmospheric layers diminish in density, and the gas confined within the aerostat, acquiring more elasticity, might otherwise burst its envelope. My calculations had furnished me with the exact measurement of gas required to carry my companions and myself to a considerable height.

We were to ascend at noon. It was truly a magnificent spectacle, that of the impatient crowd who thronged around the reserved enclosure, inundated the entire square and adjoining streets, and covered the neighbouring houses from the basement to the slated roofs The high winds of past days had lulled, and an overpowering heat was radiating from an unclouded sky; not a breath animated the atmosphere In such weather, one might descend in the very spot he had left.

I carried three hundred pounds of ballast, in bags; the car, perfectly round, four feet in diameter, and three feet in height, was conveniently attached; the cord which sustained it was symmetrically extended from the upper hemisphere of the aerostat; the compass was in its place, the barometer suspended to the iron hoop which surrounded the supporting cords, at a distance of eight feet above the car; the anchor carefully prepared;—all was in readiness for our departure.

---

* A metre is equal to 39·38 English inches.

Among the persons who crowded round the enclosure, I remarked a young man with pale face and agitated features. I was struck with his appearance. He had been an assiduous spectator of my ascensions in several cities of Germany. His uneasy air and his extraordinary preoccupation never left him; he eagerly contemplated the curious machine, which rested motionless at a few feet from the ground, and remained silent.

The clock struck twelve! This was the hour. My *compagnons du voyage* had not appeared. I sent to the dwelling of each, and learned that one had started for Hamburg, another for Vienna, and the third still more fearful for London. Their hearts had failed them at the moment of undertaking one of those excursions, which, since the ingenious experiments of aeronauts, are deprived of all danger. As they made, as it were, a part of the programme of the fete, they had feared being compelled to fulfil their agreements, and had fled at the moment of ascension. Their courage had been in inverse ratio to the square of their swiftness in retreat.

The crowd, thus partly disappointed, were shouting with anger and impatience. I did not hesitate to ascend alone. To re-establish the equilibrium between the specific gravity of the balloon and the weight to be raised, I substituted other bags of sand for my expected companions, and entered the car The twelve men who were holding the aerostat by twelve cords fastened to the equatorial circle, let them slip between their fingers, the car rose a few feet above the ground. There was not a breath of wind, and the atmosphere, heavy as lead, seemed insurmountable.

"All is ready!" exclaimed I, "attention!"

The men arranged themselves, a last glance informed me that everything was right.

"Attention!"

There was some movement in the crowd, which seemed to be invading the reserved enclosure.

"Let go!"

The balloon slowly ascended, but I experienced a shock which threw me to the bottom of the car. When I rose, I found myself face to face with an unexpected voyager,—the pale young man.

"Monsieur, I salute you!" said he to me.

"By what right?"—

"Am I here? By the right of your inability to turn me out" I was confounded. His assurance disconcerted me, and I had nothing to say in reply. I looked at him, but he paid no regard to my astonishment He continued

"My weight will disturb your equilibrium, Monsieur will you permit me?—"

And without waiting for my assent, he lightened the balloon by two bags of sand which he emptied into the air

"Monsieur," said I, taking the only possible course, "you are here,—well! you choose to remain,—well! but to me alone belongs the management of the aerostat"

"Monsieur," replied he, "your urbanity is entirely French, it is the same country with myself! I press in imagination the hand which you refuse me. Take your measures,—act as it may seem good to you; I will wait till you have ended—"

"To—"

"To converse with you."

The barometer had fallen to twenty-six inches, we had attained a height of about six hundred metres, and were over the city, which satisfied me of our complete quiescence, for I could not judge by our optionless flags. Nothing betrays the horizontal voyage of a balloon; it is the mass of air surrounding it which moves A kind of quivering heat bathed the objects extended at our feet, and gave their outlines an indistinctness to be regretted The needle of the compass indicated a slight tendency to float towards the south

I looked again at my companion. He was a man of thirty, amply clad; the bold outlines of his features betokened indomitable energy; he appeared very muscular. Absorbed in the emotion of a silent suspension, he remained immovable, seeking to distinguish the objects which passed beneath his view.

'Vexatious mist!" said he at the expiration of a few moments I made no reply.

'What would you? I could not pay for my voyage, I was obliged to take you by surprise."

'No one has asked you to descend!"

'A similar occurrence," he resumed, "happened to the Counts Laurencin and Dampierre, when they ascended at Lyons, on the 8th of January, 1784. A young merchant, named Fontaine, fled the railing, at the risk of upsetting the equipage. He accomplished the voyage, and nobody was killed!"

'Once on the earth, we will converse!" said I, piqued at the want of lightness with which he spoke.

'Bah! do not talk of returning!"

'Do you think then that I shall delay my descent?"

'Descent!" said he, with surprise. "Let us ascend!"

And before I could prevent him, two bags of sand were thrown out, without even being emptied.

"Monsieur!" said I, angrily.

"I know your skill," replied he, composedly; "your brilliant ascensions have made some noise in the world. Experience is the sister of practice, but it is also first cousin to theory, and I have long and deeply studied the aerostatic art. It has affected my brain," added he, sadly, falling into a mute torpor.

The balloon, after having risen, remained stationary; the unknown consulted the barometer, and said,—

"Here we are at 800 metres! Men resemble insects! See, I think it is from this height that we should always look at them to judge correctly of their moral proportions! The Place de la Comédie is transformed to an immense ant-hill. Look at the crowd piled upon the quays! The Zeil diminishes We are above the church of Dom The Mein is now only a white line dividing the city, and this bridge, the Mein-Brucke, looks like a white thread thrown between the two banks of the river."

The atmosphere grew cooler.

"There is nothing I will not do for you, my host," said my companion "If you are cold, I will take off my clothes and lend them to you"

"Thanks!"

"Necessity makes laws Give me your hand, I am your countryman. You shall be instructed by my company, and my conversation shall compensate you for the annoyance I have caused you."

I seated myself, without replying, at the opposite extremity of the car The young man had drawn from his great-coat a voluminous portfolio, it was a work on aerostation

"I possess," said he "a most curious collection of engravings and caricatures appertaining to our aerial mania. This precious discovery has been at once admired and ridiculed. Fortunately we have passed the period when the Mongolfiers sought to make factitious clouds with the vapour of water; and of the gas affecting electric properties, which they produced by the combustion of damp straw with chopped wool"

"Would you detract from the merit of these inventions?" replied I "Was it not well done to have proved by experiment the possibility of rising in the air?"

"Who denies the glory of the first aerial navigators? Immense courage was necessary to ascend by means of those fragile envelopes which contained only warm air Besides, has not aerostatic science made great progress since the ascensions of Blanchard? Look, Monsieur"

He took from his collection an engraving.

'Here is the first aerial voyage undertaken by Pilatre des Rosiers and the Marquis d'Arlandes, four months after the discovery of balloons. Louis XVI. refused his consent to this voyage; two condemned criminals were to have first attempted aerial travelling. Pilatre des Rosiers was indignant at this injustice, and, by means of artifice, succeeded in setting out This car, which renders the management of the balloon easy, had not then been invented; a circular gallery surrounded the lower part of the aerostat. The two aeronauts stationed themselves at the extremities of this gallery The damp straw with which it was filled encumbered their movement A chafing-dish was suspended beneath the orifice of the balloon, when the voyagers wished to ascend, they threw, with a long fork, straw upon this brazier, at the risk of burning the machine, and the air, growing warmer, gave to the balloon a new ascensional force The two bold navigators ascended, on the 21st of November, 1783, from the gardens of La Muette, which the Dauphin had placed at their disposal. The aerostat rose majestically, passed the Isle des Cygnes, crossed the Seine at the Barrière de la Conférence, and, directing its way between the dome of the Invalids and L'Ecole Militaire, approached St. Sulpice, then the aeronauts increased the fire, ascended, cleared the Boulevard, and descended beyond the Barrière d'Enfer. As it touched the ground, the balloon collapsed, and buried Pilatre des Rosiers beneath its folds."

"Unfortunate presage!" said I, interested in these details, which so nearly concerned me.

"Presage of his catastrophe," replied the unknown, with sadness. "You have experienced nothing similar?"

"Nothing."

"Bah, misfortunes often arrive without presage." And he remained silent

We were advancing towards the south; the magnetic needle pointed in the direction of Frankfort, which was flying beneath our feet

"Perhaps we shall have a storm," said the young man.

'We will descend first."

"Indeed! it will be better to ascend; we shall escape more surely," and two bags of sand were thrown overboard.

The balloon rose rapidly, and stopped at twelve hundred metres. The cold was now intense, and there was a slight buzzing in my ears. Nevertheless, the rays of the sun fell hotly on the globe, and, dilating the gas it contained, gave it a greater ascensional force. I was stupified.

"Fear nothing," said the young man to me. "We have three thousand five hundred toises of respirable air. You need not trouble yourself about my proceedings

I would have risen, but a vigorous hand detained me on my seat.

"Your name?" asked I.

"My name! how does it concern you?"

"I have the honour to ask your name."

"I am called Erostratus or Empedocles,—as you please Are you interested in the progress of aerostatic science?"

He spoke with icy coldness, and I asked myself with whom I had to do.

"Monsieur," continued he, "nothing new has been invented since the days of the philosopher Charles Four months after the discovery of aerostats, he had invented the valve, which permits the gas to escape when the balloon is too full, or when one wishes to descend; the car, which allows the machine to be easily managed, the network, which encloses the fabric of the balloon, and prevents its being too heavily pressed; the ballast, which is used in ascending and choosing the spot of descent, the coat of caoutchouc, which renders the silk impermeable, the barometer, which determines the height attained; and, finally, the hydrogen, which, fourteen times lighter than air, allows of ascension to the most distant atmospheric layers, and prevents exposure to aerial combustion. On the 1st of December, 1783, three hundred thousand spectators thronged the Tuileries. Charles ascended, and the soldiers presented arms. He travelled nine leagues in the air, managing his machine with a skill never since surpassed in aeronautic experiments. The king conferred on him a pension of two hundred thousand livres, for in those days inventions were encouraged. In a few days, the subscription list was filled; for every one was interested in the progress of science"

The unknown was seized with a violent agitation

"I, monsieur, have studied, I am satisfied that the first aeronauts guided their balloons. Not to speak of Blanchard, whose assertions might be doubted, at Dijon, Guyton-Morveaux, by the aid of oars and a helm, imparted to his machines perceptible motions, a decided direction. More recently, at Paris, a watchmaker, M Julien, has made at the Hippodrome convincing experiments, for, with the aid of a particular mechanism, an aerial apparatus of oblong form was manifestly propelled against the wind M Petin placed four balloons, filled with hydrogen, in juxtaposition, and, by means of sails disposed horizontally and partially furled, hoped to obtain a disturbance of the equilibrium, which, inclining the apparatus, should compel it to an oblique path But the motive power destined to surmount the resistance of currents,—the *hélice*, moving in a movable medium,—was unsuccessful I have discovered the only method of guiding balloons, and not an academy has come to my assistance, not a city has filled my subscription lists, not a government has deigned to listen to me! It is infamous!

His gesticulations were so furious that the car experienced violent oscillations; I had much difficulty in restraining him Meanwhile the balloon had encountered a more rapid current We were advancing in a southerly direction, at 1,200 metres in height, almost accustomed to this new temperature

"There is Darmstadt," said my companion "Do you perceive its magnificent chateau? The storm-cloud below makes the outlines of objects waver and it requires a practised eye to recognise localities."

"You are certain that it is Darmstadt?"

"Undoubtedly; we are six leagues from Frankfort"

"Then we must descend."

"Descend! you would not alight upon the steeples!" said the unknown, mockingly.

"No; but in the environs of the city"

"Well, it is too warm; let us remount a little"

As he spoke thus he seized some bags of ballast I precipitated myself upon him; but, with one hand, he overthrew me, and the lightened balloon rose to a height of 1,500 metres

"Sit down," said he, "and do not forget that Brioschi, Biot, and Gay-Lussac, ascended to a height of seven thousand metres, in order to establish some new scientific laws."

"We must descend," resumed I, with an attempt at gentleness "The storm is gathering beneath our feet and around us; it would not be prudent."—

"We will ascend above it, and shall have nothing to fear from it. What more beautiful than to reign in heaven, and look down upon the clouds which hover upon the earth! Is it not an honour to navigate these aerial waves? The greatest personages have travelled like ourselves The Marquise and Comtesse de Montalembert, the Comtesse de Podenas, Mlle. La Garde, the Marquis of Montalembert, set out from the Faubourg St Antoine for these unknown regions. The Duc de Chartres displayed much address and presence of mind in his ascension on the 15th of July, 1784; at Lyons, the Comtes de Laurencin and de Dampierre; at Nantes, M. de Luynes; at Bordeaux, D'Arbelet des Granges; in Italy, the Chevalier Andreani; in our days, the Duke of Brunswick,—have left in the air the track of their glory. In order to equal these great personages, we must ascend into the celestial regions higher than they. To approach the infinite is to comprehend it."

The rarefaction of the air considerably dilated the hydrogen, and I saw the lower part of the aerostat, designedly left empty, become by degrees inflated, rendering the opening of the valve indispensable, but my fearful companion seemed determined not to allow me to direct our movements. I resolved to pull secretly the cord attached to the valve, while he was talking with animation. I feared to guess with whom I had to do; it would have been too horrible! It was about three-quarters of an hour since we had left Frankfort, and from the south thick clouds were arising and threatening to ingulf us.

"Have you lost all hope of making your plans succeed?" said I, with apparent interest.

"All hope!" replied the unknown, despairingly. "Wounded by refusals, caricatures, those blows with the foot of an ass, have finished me It is the eternal punishment reserved for innovators. See these caricatures of every age with which my portfolio is filled."

I had secured the cord of the valve, and stooping over his works, concealed my movements from him. It was to be feared, nevertheless, that he would notice that rushing sound, like a waterfall, which the gas produces in escaping

"How many jests at the expense of the Abbé Miolan! He was about to ascend with Jenninet and Bredin. During the operation, their balloon took fire, and an ignorant populace tore it to pieces. Then the caricature of *The Curious Animals* called them *Miaulant, Jean Miaut, and Gredin.*"

The barometer had begun to rise; it was time! A distant muttering of thunder was heard towards the south.

"See this other engraving," continued he, without seeming to suspect my manœuvres. "It is an immense balloon, containing a ship, large castles, houses, &c. The caricaturists little thought that their absurdities would one day become verities. It is a large vessel, at the left is the helm with the pilot's box; at the prow, *maisons de plaisance*, a gigantic organ, and cannon to call the attention of the inhabitants of the earth or of the moon; above the stern the observatory and pilot-balloon; at the equatorial circle, the barracks of the army; on the left the lantern, then upper galleries for promenades, the sails, the wings; beneath, the cafés and general store-houses of provisions. Admire this magnificent announcement. 'Invented for the good of the human race, this globe will depart immediately for the seaports in the Levant, and on its return will announce its voyages for the two poles and the extremities of the Occident. Every provision is made; there will be an exact rate of fare for each place of destination But the prices for distant voyages will be the same, 1,000 louis. And it must be confessed that this is a moderate sum, considering the celerity, convenience, and pleasure of this mode of travelling above all others While in this balloon, every one can divert himself as he pleases, dancing, playing, or conversing with people of talent. Pleasure will be the soul of the aerial society." All these inventions excited laughter But before long, if my days were not numbered, these projects should become realities."

We were visibly descending; he did not perceive it!

"See this game of balloons; it contains the whole history of the aerostatic art. This game, for the use of educated minds, is played like that of the Jew; with dice and counters of any value agreed upon, which are to be paid or received, according to the condition in which one arrives."

"But," I resumed, "you seem to have valuable documents on aerostation?"

"I possess all the knowledge possible in this world. From Phaeton, Icarus, and Architas, I have searched all, comprehended all! Through me, the aerostatic art would render immense services to the world, if God should spare my life! But that cannot be."

"Why not?"

"Because my name is Empedocles or Erostratus!"

CHAPTER II.

The Company of Aerostiers—The Battle of Fleurus—The Balloon over the Sea—Blanchard and Jefferies—A Drama such as is rarely seen—3,000 Metres—The Thunder beneath our Feet—Garnerin at Rome—The Compass gone—The Victims of Aerostation—Pilatre—At 4,000 Metres—The Barometer gone—Descents of Olivari, Mosment, Bittorf, Harris, Sadler, and Madame Blanchard—The Valve rendered useless—7,000 Metres—Zambecarri—The Balloon Wrecked—Incalculable Heights—The Car Overset—Despair—Vertigo—The Fall—The Denouement.

I SHUDDERED! Fortunately the balloon was approaching the earth. But the danger is the same at 50 feet as at 5,000 metres! The clouds were advancing.

"Remember the battle of Fleurus, and you will comprehend the utility of aerostats! Coutelle, by order of the government, organised a company of aerostiers. At the siege of Maubeuge, General Jourdan found this new method of observation so serviceable, that twice a day, accompanied by the general himself, Coutelle ascended into the air; the correspondence between the aeronaut and the aerostiers who held the balloon, was carried on by means of little, white, red, and yellow flags. Cannons and carbines were often aimed at the balloon at the moment of its ascension, but without effect. When Jourdan was preparing to invest Charleroi, Coutelle repaired to the neighbourhood of that place, rose from the plain of Jumet, and remained taking observations seven or eight hours, with General Morelot. The Austrians came to deliver the city, and a battle was fought on the heights of Fleurus. General Jourdan publicly proclaimed the assistance he had received from aeronautic observations. Well! notwithstanding the services rendered on this occasion, and during the campaign with Belgium, the year which witnessed the commencement of the military career of balloons, also saw its terminate. And the school of Meudon, founded by government, was closed by Bonaparte, on his return from Egypt 'What are we to expect from the child which has just been born?' Franklin had said. But the child was born alive! It need not have been strangled!"

The unknown hid his forehead in his hands, reflected for a few moments, then, without raising his head, said to me,—

"Notwithstanding my orders, you have opened the upper valve!"

I let go the cord.

"Fortunately," continued he, "we have still two hundred pounds of ballast."

"What are your plans?" said I, with effort.

"You have never crossed the sea?"

I grew frightfully pale, terror froze my veins.

"It is a pity," said he, "that we are being wafted towards the Adriatic! That is only a streamlet. Higher! we shall find other currents!"

And without looking at me, he lightened the balloon by several bags of sand.

"I allowed you to open the valve, because the dilatation of the gas threatened to burst the balloon. But do not do it again"

I was stupified.

"You know the voyage from Dover to Calais, made by Blanchard and Jefferies It was rich in incident. On the 7th of January, 1785, in a north-east wind, their balloon was filled with gas on the Dover side; scarcely had they risen, when an error in equilibrium compelled them to throw out their ballast, retaining only thirty pounds. The wind drifted them slowly along towards the shores of France. The permeability of the tissue gradually suffered the gas to escape, and at the expiration of an hour and a half, the voyagers perceived that they were descending. 'What is to be done?' said Jefferies —'We have passed over only three-fourths of the distance,' replied Blanchard, 'and at a slight elevation By ascending we shall expose ourselves to contrary winds Throw out the remainder of the ballast.' The balloon regained its ascensional force, but soon re-descended. About midway of the voyage, the aeronauts threw out their books and tools A quarter of an hour afterwards, Blanchard said to Jefferies,—'The barometer?'—'It is rising' We are lost, and yet there are the shores of France!' A great noise was heard 'Is the balloon rent?' asked Jefferies.—'No! the escape of the gas has collapsed the lower part of the balloon.'—'But we are still descending We are lost! Everything not indispensable must be thrown overboard!" Their provisions, oars and helm were thrown out into the sea. They were now only 100 metres in height. 'We are remounting,' said the doctor.—'No, it is the jerk caused by the diminution of weight. There is not a ship in sight! Not a bark on the horizon! To the sea with our garments!" And the unfortunate men stripped, but the balloon continued to descend. Blanchard,' said Jefferies, 'you were to have made this voyage alone; you consented to take me, I will sacrifice myself to you! I will throw myself into the water, and the balloon, relieved, will reascend!'—'No, no, it is frightful.' The balloon collapsed more and more, and its concavity forming a parachute, forced the gas against its sides and accelerated its motion. 'Adieu, my friend,' said the doctor. 'May God preserve you!' He was about to have taken the leap, when Blanchard detained him. 'One resource remains to us! We can cut the cords by which the car is attached, and cling to the network? perhaps the balloon will rise. Ready! But the barometer falls! We remount! The wind freshens! We are saved!' The voyagers perceived Calais! Their joy became delirium; a few moments later, they descended in the forest of Guines. "I doubt not," continued the unknown, "that in a similar circumstances you would follow the example of Doctor Jefferies."

The clouds were unrolling beneath our feet in glittering cascades; the balloon cast a deep shadow on this pile of clouds, and was surrounded by them as with an aureola! The thunder growled beneath our feet! All this was frightful!

"Let us descend!" exclaimed I.

"Descend, when the sun is awaiting us yonder! Down with the bags!" And he lightened the balloon of more than fifty pounds. At 3,000 metres we remained stationary. The unknown talked incessantly, but I scarcely heard him; I was completely prostrated, while he seemed in his element.

"With a good wind, we shall go far, but we must especially go high!"

"We are lost!"

"In the Antilles there are currents of air which travel a hundred leagues an hour! On the occasion of Napoleon's coronation, Garnerin let off a balloon illuminated with coloured lamps, at eleven o'clock in the evening! The wind blew from the N.N.E.; the next morning, at daybreak, the inhabitants of Rome saluted its passage above the dome of St Peter's We will go farther."

I scarcely heard him, everything was buzzing around me! There was an opening in the clouds!

"See that city, my host," said the unknown. "It is Spire. Nothing else!"

I dared not lean over the railing of the car. Nevertheless I perceived a little black spot This was Spire. The broad Rhine looked like a riband, the great roads like threads. Above our heads the sky was of a deep azure, I was benumbed with the cold. The birds had long since forsaken us in this rarefied air their flight would have been impossible We were alone in space, and I in the presence of a strange man!

"It is useless for you to know whither I am taking you," said he, and he threw the compass into the clouds. "A fall is a fine thing You know that there have been a few victims from Pilatre des Rosiers down to Lieutenant Gale, and these misfortunes have always been caused by imprudence Pilatre des Rosiers ascended in company with Romain, at Boulogne, on the 13th of June, 1785. To his balloon, inflated with gas, he had suspended a *mongolfier* filled with warm air, undoubtedly to save the trouble of letting off gas, or throwing out ballast It was like putting a chafing-dish beneath a powder-cask The imprudent men rose to a height of four hundred metres, and encountered opposing winds, which drove them over the ocean In order to descend, Pilatre attempted to open the valve of the aerostat, but the cord of this valve caught in the balloon, and tore it so that it was emptied in an instant. It fell on the mongolfier, overturned it, and the imprudent men were dashed to pieces in a few seconds It is frightful, is it not?" said the unknown, shaking me from my torpor.

I could reply only by these words

"In pity, let us descend! The clouds are gathering around us in every direction, and frightful detonations reverberating from the cavity of the aerostat are multiplying around us"

"You make me impatient!" said he. "You shall no longer know whether we are ascending or descending"

And the barometer went after the compass, along with some bags of sand We must have been at a height of four thousand metres Some icicles were attached to the sides of the car, and a sort of fine snow penetrated to my bones. Meanwhile a terrific storm was bursting beneath our feet. We were above it.

"Do not fear," said my strange companion; "it is only imprudence that makes victims. Olivari, who perished at Orleans, ascended in a mongolfier made of paper; his car, suspended below the chafing-dish, and ballasted with combustible materials, became a prey to the flames! Olivari fell, and was killed. Mosment ascended at Lille, on a light platform; an oscillation made him lose his equilibrium. Mosment fell, and was killed. Bittorf, at Manheim, saw his paper balloon take fire in the air! Bittorf fell, and was killed Harris ascended in a balloon badly constructed, the valve of which was too large to be closed again. Harris fell, and was killed Sadler, deprived of ballast by his long stay in the air, was dragged over the city of Boston, and thrown against the chimneys. Sadler fell, and was killed. Cocking descended with a convex parachute which he pretended to have perfected. Cocking fell, and was killed. Well, I love them, those noble victims of their courage! and I will die like them! Higher! higher!"

All the phantoms of this necrology were passing before my eyes! The rarefaction of the air and the rays of the sun increased the dilatation of the gas; the balloon continued to ascend! I mechanically attempted to open the valve; but the unknown cut the cord a few feet above my head. I was lost!

"Did you see Madame Blanchard fall?" said he to me. "I saw her, I—yes, I! I was at Tivoli on the 6th of July, 1819. Madame Blanchard ascended in a balloon of small size, to save the expense of filling; she was therefore obliged to inflate it entirely, and the gas escaped by the lower orifice, leaving on its route a train of hydrogen. She carried, suspended above her car

by an iron wire, a kind of fire-work, forming an aureola, which she was to kindle. She had often repeated this experiment. On this occasion she carried besides, a little parachute, ballasted by a firework terminating in a ball with silver rain. She was to launch this apparatus, after having lighted it with a *lance à feu*, prepared for the purpose. She ascended. The night was dark. At the moment of lighting the firework, she was so imprudent as to let the lance pass beneath the column of hydrogen, which was escaping from the balloon. My eyes were fixed on her. Suddenly an unexpected flash illuminated the darkness. I thought it a surprise of the skilful aeronaut. The flame increased, suddenly disappeared, and reappeared at the top of the aerostat under the form of an immense jet of burning gas This sinister light projected over the Boulevard, and over the quarter Montmartre. Then I saw the unfortunate woman rise, twice attempt to compress the orifice of the balloon, to extinguish the fire, then seat herself in the car and seek to direct its descent, for she did not fall The combustion of the gas lasted several minutes. The balloon, diminishing by degrees, continued to descend, but this was not a fall! The wind blew from the north-east, and drove her over Paris There were, at that time, in the neighbourhood of the house, No. 16, Rue de Provence, immense gardens. The aeronaut might have fallen there without danger. But unhappily the balloon and the car alighted on the roof of the house. The shock was slight. 'Help,' cried the unfortunate woman. I arrived in the street at that moment The car slid along the roof, and encountered an iron hook. At this shock Madame Blanchard was thrown out of the car, and precipitated on the pavement! She was killed!"

These histories of fatal augury froze me with horror The unknown was standing upright, with bare head, bristling hair, haggard eyes.

Illusion was no longer possible I saw at last the horrible truth I had to deal with a madman!

He threw out half the ballast, and we must have been borne to a height of 7,000 metres! Blood sputed from my nose and mouth.

"What a fine thing it is to be martyrs to science! They are canonised by posterity!"

I heard no more The unknown looked around him with horror, and knelt at my ear

"On the 7th of October, 1804, the weather had begun to clear up a little; for several days preceding, the wind and rain had been incessant. But the ascension announced by Zambecarri could not be postponed! His idiot enemies already scoffed at him. To save himself and science from public ridicule, it became necessary for him to ascend. It was at Bologna! No one aided him in filling his balloon, he rose at midnight, accompanied by Andreoli and Grossetti. The balloon ascended slowly, it had been rent by the wind, and the gas escaped. The three intrepid voyagers could observe the state of the barometer only by the aid of a dark lantern. Zambecarri had not eaten during twenty-four hours, Grossetti was also fasting

"'My friends,' said Zambecarri, 'I am benumbed with the cold; I am exhausted; I must die,' and he fell senseless in the gallery.

"It was the same with Grossetti. Andreoli alone remained awake. After long efforts he succeeded in arousing Zambecarri from his stupor.

"'What is there new? Where are we going? In which direction is the wind? What time is it?'

"'It is two o'clock!"

"'Where is the compass?'

"'It has fallen out.'

"'Ah, the lamp is extinguished!"

"'It could not burn longer in this rarefied air" said Zambecarri

"The moon had not risen; the atmosphere was plunged in horrible darkness.

"'I am cold, I am cold, Andreoli! What shall we do?'

"The unfortunate men slowly descended through a layer of white clouds.

"'Hush,' said Andreoli; 'do you hear—'

"'What?' replied Zambecarri.

"'A singular noise!'

"'You are mistaken!'

"'No!—Do you see those midnight travellers, listening to that inconprehensible sound? Have they struck against a tower? Are they about to be precipitated on the roofs? Do you hear it? It is like the sound of the ocean!'

"'Impossible!'

"'It is the roaring of the waves!'

"'That is true! Light!—light!'

"After five fruitless attempts, Andreoli obtained it. It was three o'clock. The sound of the waves was heard with violence; they almost touched the surface of the sea.

"'We are lost!' exclaimed Zambecarri, seizing a bag of ballast.

"'Help,' cried Andreoli.

"The car touched the water, and the waves covered them breast high. To the sea with instruments, garments, money! The aeronauts stripped entirely. The lightened balloon rose with frightful rapidity. Zambecarri was seized with violent vomiting. Grossetti bled freely. The unhappy men could not speak, their respiration was short. They were seized with cold, and in a moment covered with a coat of ice. The moon appeared to them red as blood. After having traversed these high regions during half an hour, the machine again fell into the sea. It was four o'clock in the morning the bodies of the wretched aeronauts were half in the water, and the balloon, acting as a sail, dragged them about during several hours. At daybreak, they found themselves opposite Pesaro, five miles from the shore; they were about to land, when a sudden flaw of wind drove them back to the open sea. They were lost! The affrighted barks fled at their approach. Fortunately, a more intelligent navigator hailed them, took them on board, and they landed at Ferrara That was frightful! Zambecarri was a brave man Scarcely recovered from his sufferings, he recommenced his ascensions. In one of them, he struck against a tree, his lamp, filled with spirits of wine, was spilled over his clothes, and they caught fire, he was covered with flame; his machine was beginning to kindle, when he descended, half burned. The 21st of September, 1812, he made another ascension at Bologna, his balloon caught in a tree; his lamp set fire to it Zambecarri fell, and was killed! And in presence of these high facts, shall we still hesitate? No! the higher we go the more glorious will be our death"

The ball on, entirely unballasted, we were borne to incredible heights. The aerostat vibrated in the atmosphere; the slightest sound re-echoed through the celestial vaults, the globe, the only object which struck my sight in immensity, seemed about to be annihilated, and above us the heights of heaven lost themselves in the profound darkness!

I saw the unknown rise before me.

"This is the hour!" said he to me "We must die! We are rejected by men! They despise us! let us crush them!"

"Mercy!" exclaimed I

"Let us cut the cords! let this car be abandoned in space! The attractive force will change its direction, and we shall land in the sun!"

Despair gave me strength! I precipitated myself upon the madman, and a frightful struggle took place! But I was thrown down! and while he held me beneath his knee, he cut the cords of the car!

"One!" said he

"Mercy!"

"Two! three!"

One cord more, and the car was sustained only on one side. I made a superhuman effort, rose, and violently repulsed this insensate

"Four!" said he.

The car was overset I instinctively clung to the cords which held it, and climbed up the outside.

The unknown had disappeared in space!

In a twinkling the balloon ascended to an immeasurable height! A horrible crash was heard The dilated gas had burst its envelope! I closed my eyes A few moments afterwards, a moist warmth reanimated me, I was in the midst of fiery clouds! The balloon was whirling with fearful rapidity! I felt myself swooning! Driven by the wind, I travelled a hundred leagues an hour in my horizontal course, the lightnings flashed around me!

Meanwhile my fall was not rapid. When I opened my eyes, I perceived the country. I was two miles from the sea, the hurricane urging me on with great force. I was lost, when a sudden shock made me let go, my hands opened, a cord slipped rapidly between my fingers, and I found myself on the ground. It was the cord of the anchor, which, sweeping the surface of the ground, had caught in a crevice! I fainted, and my lightened balloon, resuming its flight, was lost beyond the sea.

When I recovered my senses, I was in the house of a peasant, at Harderwick, a little town of Gueldre, fifteen leagues from Amsterdam, on the banks of the Zuyderzee.

A miracle had saved me. But my voyage had been but a series of imprudencies against which I had been unable to defend myself.

May this terrific recital, while it instructs those who read it, not discourage the explorers of the routes of air!

CONTENT.—The fountain of content must spring up in the mind; and he who has so little knowledge of human nature, as to seek happiness by changing anything but his own disposition, will waste his life in fruitless efforts, and multiply the griefs which he purposes to remove.—*Johnson.*

EXERCISES FOR INGENUITY.

QUESTIONS FOR SOLUTION.

Cold blows the wind, and high, and shrill,
Though scantly clothed I fear no chill.
I labour on from hour to hour,
With all my might—with all my pow'r
Although I'm blind, much work I do,
Though willing, yet I grumble too—
Still am I dumb, but noisy till
I'm bid to stop against my will.
Good food I take, but never think
From whence it comes, and never drink
Reador my age is known to few,
My birthday no one ever knew,
And yet my name denotes 'twas done
One thousand, fifty, and fifty-one.

2. At a certain election 375 persons voted, and the candidate chosen had a majority of 91; how many voted for each?

3. What number is that from which, if 5 be subtracted of the remainder will be 40?

4. Divide the number 36 into three such parts that ⅓ of the first, ¼ of the second, and ⅕ of the third, may be all equal to each other —S. R PALMER.

5 Divide 20s. among four persons, and give to the first ½, the second ⅓, the third ¼, and the fourth ⅕ of it, so as nothing may remain.—W. M. W.

6. How many inches of wire would go round the earth, assuming its diameter to be 7912 miles?

7. Name all the British Colonies of Africa. Sierra Leone, St. Helena, the Cape, and Mauritius Why was St Helena so called?

8 A. has 100 sheep; B. 5,000. In making folds for their sheep, A. purchases 100 hurdles at 3s 6d each, which is sufficient to contain his sheep, but agrees to allow B.'s sheep to be folded along with his, on condition of B. furnishing the requisite number of hurdles for that purpose. What is the outlay of each for hurdles, supposing both to purchase at the same rate?—ROBERT MIDDLETON.

10. I have long maintained a distinguished station in our modern days, but I cannot trace my origin to ancient times, though the learned have attempted it. After the revolution in 1688, I was chief physician to the king; at least, in my absence he ever complained of sickness. Had I lived in ancient days, so friendly was I to crowned heads, that Cleopatra would have got off with a sting; her cold arm would have felt a reviving heat. I am rather a friend to sprightliness than to industry; I have often converted a neutral pronoun into a man of talent. I have often amused myself with reducing the provident to indigence. I never meet a post-horse without giving him a blow. To some animals I am a friend, and many a puppy has yelped for aid when I have deserted him. I am a patron of architecture, and can turn every thing into brick and mortar. I am so honest, that whenever I can find a pair of stockings, I ask for their owner. Not even Lancaster has carried education so far as I have: I always adopt the system of interrogatories. I have already taught my hat to ask questions of fact, and my poultry, questions of chronology. With my trees I share the labours of my laundry. they scour my linen; and when I find a rent, 'tis I who make it entire. In short, such are my merits, that whatever yours may be, you can never be more than half as good as I am.—A solution in verse is requested.

*** In accordance with the wish of numerous subscribers, a longer day is given for answers to the Exercises The solutions, therefore, to the questions proposed in No. 39, will appear with the last Number of the next monthly Part. Several questions still remain unsolved, an opportunity, consequently, is afforded our friends for giving them further consideration. Mr. T. R. Palmer is requested to forward answers to the several questions proposed to him.

THE PIN AND THE NEEDLE A FABLE.

A PIN and a needle being neighbours in a work-basket, and both being idle, began to quarrel, as idle folks are apt to do. I should like to know," said the pin, "what you are good for, and how you expect to get through the world without a head?" "What is the use of your head," replied the needle, rather sharply, "if you have no eye?" "What is the use of an eye," said the pin, "if there is [illegible] can," said the needle "Yes, but you will not live long" Why not?" "Because you have always a stitch in your side," said the pin. "You are a poor crooked creature," said the needle "And you are so proud that you can't bend without breaking your back" "I'll pull your head off, if you insult me again" "I'll put your eye out if you touch me, remember that your life hangs by a single thread," said the pin. While they were thus conversing, a little girl entered, and undertaking to sew, she soon broke off the needle at the eye. Then she tied the thread round the neck of the pin, and, attempting to sew with it, she soon pulled its head off, and threw it into the dirt by the side of the broken needle "Well, here we are," said the needle. "We have nothing to fight about now," said the pin. "It seems misfortune has brought us to our senses." "A pity we had not come to them sooner," said the needle "How much we resemble human beings, who quarrel about their blessings till they lose them, and never find out they are brothers till they lie down in the dust together, as we do!"

LITERARY NOTICES.

THE POPULAR EDUCATOR —AN EXTRA EDITION of this extraordinary work, on fine paper, at 1½d per Number, or in Monthly Parts, in a neat wrapper, at 7d, or when Five Numbers 8½d., is now published, and is issued without the weekly headings. Persons wishing for this edition must be careful to order the "*Extra* Edition." The whole of the Numbers may now be obtained, or the first Three Parts —Part I, 7d, Part II, 8½d, Part III., 7d. The Common Edition, at One Penny per Number, Monthly Parts, 5d., or 6d., is regularly issued

THE ILLUSTRATED EXHIBITOR AND MAGAZINE OF ART.—The First Volume of this splendidly embellished work, handsomely bound, price 6s 6d, or extra cloth gilt edges, 7s 6d, is now ready. It contains upwards of Two Hundred Principal Engravings, and an equal number of Minor Engravings, Diagrams, &c

COMPLETION OF JOHN CASSELL'S LIBRARY.—This invaluable Work is now complete, in 26 Volumes, 7d. each in paper covers, double Volumes, cloth, 1s 6d, or when 3 Vols in 1, 2s. 3d. The entire Series may be had, bound in cloth, 19s 6d, or arranged in a Library Box, 25s.

The EMIGRANT'S HANDBOOK, a Guide to the Various Fields of Emigration in all parts of the Globe, Second Edition, with additions; to which has been appended a "Guide to the Gold Fields of Australia," with copious Instructions, Government Regulations, &c., accompanied by a Map of Australia, in which the Gold Regions are clearly indicated, is now ready, price 9d.

THE PATHWAY, a Monthly Religious Magazine, is published on the 1st of every month, price twopence—32 pages enclosed in a neat wrapper. Vols I and II, neatly bound in cloth and lettered, price 2s 2d each, are now ready.

CASSELL'S SHILLING EDITION OF EUCLID —This work will be ready with the Magazines for August, price 1s. in a neat wrapper, or 1s. 6d. in cloth boards.

MISCELLANEA.

A CONSIDERATE SCOTCHMAN. — Two Englishmen some time ago visited the field of Bannockburn, so celebrated for the defeat of Edward's army. A sensible countryman pointed out to them the positions of the hostile nations—the stone where Bruce's standard was fixed during the battle, &c. Highly pleased with his attention, the gentleman on leaving him pressed his acceptance of a crown piece. "Na, na," said the honest man, returning the money, "keep your crown piece; the English hae paid dear aneugh already for seeing the field of Bannockburn."

A HAPPY PAIR.—There is a happy couple, we learn from an American paper, residing in Canal-street, in Albany, who cannot yet call themselves old, and who in *twenty-four* years of married life, have been blessed with *twenty-two* sons and daughters, all of whom are now living.

THE CURATE *versus* THE BUTLER.—It is related that when Sir R. —— of Bath, was engaging a butler, seventy-five guineas per annum was the salary required. "Why," was the gentleman's remark, "that is the pay of a curate." The butler calmly replied, "It is so, Sir R——, and I am sorry for the gentlemen; but I really cannot do *myself* an injustice on *their* account."

A MODEL HUSBAND.—Here is the picture of one that would satisfy the stoutest advocate of "Woman's Rights" at the late Massachusetts Convention.—He never takes the newspaper and reads it before Mrs. Smith has had a chance to run over the advertisements, deaths and marriages, &c. He always gets into bed first on cold nights, to take off the chill for his wife. If the children in the next room scream in the night, he don't expect his wife to take an air-bath to find out what is the matter. He has been known to wear Mrs. Smith's nightcap, while in bed, to make the baby think it was its mother.

"THERE'S NAE LUCK ABOUT THE HOUSE."—The writer of this popular song, according to Weir's "History of Greenock," was Jean Adams, born about 1710. She became a schoolmistress—gave Shakspearian readings to her pupils, and admired Richardson's "Clarissa Harlowe" so much that she walked to London to see the author. Jean Adams published a small volume of poems, printed at Glasgow in 1734, which met with little encouragement, and a large portion of the edition was exported to Boston, in America. Towards the close of her life she became a wandering beggar, died in the poorhouse of Glasgow, on the 3rd of April, 1765, and was "buried at the house expense."—*Willis's Current Notes.*

THE WAY TO PROLONG LIFE.—It is to live twice when we can enjoy the recollection of our former life.

TIMELY PREPARATION.—"John," said an angry parent to a son who had committed a misdeed, "John, go to the next room, and prepare yourself for a severe flogging." The boy departed, and when the parent had finished the letter he was writing, and sought the offending youth, he was surprised at the swollen appearance of the young rascal's back. "What does this mean?" he asked; "what is on your back?" "A leather apron," replied John, "*three double.* You told me to prepare myself for a hard flogging, and I did the best I could!" The hard set features of the father's countenance relaxed, as also did the muscles of the hand which grasped the whip, and he let John off, "for that once," with a gentle admonition.

"BE CONTENT with what you have," as the rat said to the trap, when he saw that he had left part of his tail in it.

"POVERTY," says Jean Paul, "is the only load which is the heavier the more loved ones there are to assist in supporting it."

DR. JOHNSON'S OPINION OF ACTIONS AT LAW.—The great lexicographer compared the plaintiff and defendant in an action at law to two men ducking their heads in a bucket, and daring each other to remain longest under water.

WORTH REMEMBERING.—No man is always right, just as no man is always wrong. A clock that does not go at all is right twice in the twenty-four hours.

IRISH, BUT TRUE.—If a gentleman breaks a horse's heart, he's only "a bowld rider," while a poor servant is a "careless blackguard," for only taking a sweat out of him. If a gentleman shrinks till he can't see a hole in a ladher, he's only "fresh," but "shrunk" is the word for a poor man. And if a gentleman kicks up a row, he's a "fine-spirited fellow," while a poor man is a "disordherly vagabone" for the same; and the justice axes the one to dinner, and sends the t'other to jail. Oh, faix, the law is a dainty lady, she takes people by the hand who can afford to wear gloves, but people with brown fists must keep their distance.

POWER OF PUBLIC OPINION.—A writer in the *Times* says, "There is but one power on the increase in the country, and that is the power of public opinion, there is but one profession which will certainly be stronger in 1860 than in 1852, and that is the profession of a journalist."

LYING IS A hateful, accursed vice. We are not men, nor have other tie upon one another, but our word. If we did but discover the horror and consequence of it, we should pursue it with fire and sword, and more justly than other crimes.

PRIDE OF ANCESTRY.—In the castles and palaces of the ex-nobility of France, the tapestry frequently represents memorials of their pride of ancestry. On the tapestry of an apartment in the palace of the ex-duke of Choiseul, is a representation of the Deluge, in which a man is seen running after Noah, and calling out, "My good friend, save the archives of the Choiseul family!"

THE CAT AND THE MOUSE. A FABLE.—A mouse, ranging about a brewery, happened to fall into a vat of beer, was in immediate danger of drowning, and appealed to a cat to help him out. The cat replied, "It is a foolish request, for as soon as I get you out I shall eat you." The mouse piteously replied, "That fate would be better than to be drowned in beer." The cat lifted him out, but the fume of the beer caused puss to sneeze, and the mouse took refuge in his hole. The cat called upon the mouse to come out—"You, sir, did you not promise that I should eat you?" "Ah!" replied the mouse, "but you know *I was in liquor at the time!*"

A NEW DEFINITION.—The real is the Sancho Panza of the ideal.

LISTEN, YOUNG LADIES!—Dr. Beeswax, in his "Essay on Woman," remarks with some truth, that "beauties generally die old maids. They set such a value on themselves," he says, "that they don't find a purchaser until the market is closed. Out of a dozen beauties who have come out within the last eighteen years, eleven still occupy single beds. They spend their days in working green dogs on yellow wool—while their evenings are devoted to low spirits and French novels."

NOTICES TO CORRESPONDENTS.

B. U.—"*Chloride of Sodium*" is the chemical name now given to common table-salt. It was formerly believed that common salt was a compound of muriatic acid and soda; but Davy has shown that it is really chloride of sodium.

R. BATES.—Having said and done much in our time to discountenance the use of spirituous liquors, we must decline to answer your questions.

A YOUNG ARTIST.—*Creta Lævis* is the name by which a new kind of drawing pencil, intermediate in character between lead-pencils and crayons is known. They will, we have no doubt, answer your purpose.

MATTHEW.—Your "lines" have been received, but we cannot promise you "an early insertion."

D. M. JENKINS.—Members of Parliament are *not* "paid for their services in that capacity," but they are in the way of obtaining favour of various kinds from the Government—that is, if they support Government measures!

MARTHA says she does not like the receipt for curing rancid butter which we furnished in No. 35. Let her try the following.—Melt the butter by putting it in a pan or jar placed in boiling water, with some coarsely-powdered animal charcoal,—that is, charcoal made from bones,—thoroughly freed from *dust* by sifting, then strain through clean flannel.

UN AMI.—You may obtain a common convex obscura for four or five shillings at almost any optician's, but we question whether you will be able to obtain one small enough to carry in the pocket.

J. C.—You can only legally bind your son apprentice by means of an indenture, the price of which will depend upon the amount of the premium required by the master; if the premium be under £30, the price of the indenture will be twenty shillings. If there be *no* premium, you will still require a 20s. indenture.

INQUIRER.—The eyes are too delicate organs to be tampered with, you had better obtain advice from a skilful medical practitioner.

T. A.—The word "Panacea" is derived from two Greek words, which signify "I cure all." It was applied by the ancients to certain remedies which were supposed to be capable of curing all diseases. We do not believe that any such remedy exists.

J. THORMAY.—The paper commonly used to wrap up paste blacking, and to tie over pots and jars of blacking and other greasy preparations, is made by brushing sheets of paper over with "boiled oil," and hanging them on a line till dry. Such paper is sufficiently waterproof for ordinary purposes.

SEVERAL CORRESPONDENTS, some of whose writ als we cannot decipher, have requested receipts for removing freckles, pimples, moles, &c. We decline to insert such receipts. We profess no skill in cosmetics. Let them apply to a skilful practitioner.

A YOUNG MAN.—We question much whether you will better your situation by emigrating to California. Certainly you have no claim to a free passage.

ELIZA.—There are many fluids with which linen may be marked. The following is said to be the most permanent and beautiful ink known:—Dissolve basic or soluble Prussian blue in pure rain-water. The portion of the linen intended to be marked must be first moistened with alum-water and dried. It may then be written upon with a common pen.

A BIBLE READER.—The *Roman* moneys mentioned in the New Testament, are of the following values when reduced to the English standard:—A *mite*, three farthings; a *farthing*, about three halfpence; a *penny*, or denarius, sevenpence three farthings, a *pound*, or mina, £3 2s. 6d. The Jewish moneys, according to the English standard, as follow:—A *gerah*, a fraction above a penny; a *beka*, about thirteen pence, a *shekel*, about 2s. 8d.; a *maneh*, or mina Hebraica, a small fraction above £5 14s.; a *talent*, £342 3s. 9d. A *gold shekel* was worth £1 16s. 6d.; a *talent of gold* was worth £5,475.

W. K. O.—The general penny postage of letters was established January 7, 1840.

NEW SERIES.—VOL. II., No. 45.] SATURDAY, AUGUST 7, 1852. [PRICE ONE PENNY.

BEARDS AND BARBERS.

BY A YOUNG SHAVER

INTERIOR OF AN ARMENIAN BARBER'S SHOP.

THERE is scarcely any trade or calling which is not connected with a host of old fancies—forgotten haply in the bustle of the world, but recurring again and again in our quiet moments. Every article of dress, every fashion, every custom, every national peculiarity has its own particular history. Beards and barbers are no exception to the rule. In our childish days ere the romance of the nursery had been laid aside for something of a more exciting interest; when the hero of giant-land, the redoubtable Jack, filled us with admiration of his courage and perseverance, and the most intense abhorrence of those huge specimens of manhood who were so cunningly outwitted and so dexterously slain; when we listened with tear-bedewed

eyes to the dear delightful tale of Goody Twoshoes; when we followed in imagination the adventurous Ali Baba in the deeply and intensely mysterious forest cave, and almost trembled at the "Open Sesame;" when every feline animal became suggestive of the white cat and of puss in boots; when we read of Whittington, and wondered whether bell-metal ever had encouragement for poor boys now, then it was that a story about a beard fixed itself in our memory—a dark dismal drama of death and desolation all about Blue Beard and the beautiful Fatima. And when we exchanged romance for history, and read of kings and queens and hard-fought battles, and thrones set up, and empires thrown down, and read the record of our own loved land, we could not fail to remember the Saxon band who held out against the Normans in the marshes of Ely, and wept in the streets of London over William *Longbeard*. Then amid all the glories of the Arabian Nights—the Wonderful Lamp—the adventurous Sinbad—the Genii bottled up, like so much ginger-beer, and the palaces that sprang out of the ground, the turbaned heads, the flowing robes, and the rest of it, the Barber and his Seven Brothers stood out before the others, and the endless clatter of the prattling barber seemed ever in our ears.

Beards and barbers are historical. In the days of old, the Tartars waged a long and bitter war with the Persians about the growth and management of the beard, many a stout hero bit the dust in defence of his beard, and the fearful struggle cost many valuable lives. No doubt the Greeks wore beards till the time of Alexander, who ordered them to be shaved, lest they should afford a handle for their enemies in the tug of war, and the old Greek barbers shaved every chin. The people of Italy did not begin to shave till four centuries after the foundation of Rome, when Ticinius brought over from Sicily a company of barbers who became immediate favourites, and to be among the shaven was a test of respectability. Persons of standing had their children shaved by a person of the same or even greater quality, who, by performing the work of the barber, became the adoptive father of the person so shaved. The hair removed from the face was carefully preserved and consecrated to the gods! In solemn strains blind Homer tells of the white beard of Nestor, and amid all the heroism of the heroic story he does not forget the beard of old King Priam. And Virgil tells us of the beard of Mezentius so thick and long that it covered all his breast. Socrates is called by Persius the bearded sage, Pliny the younger talks of the white beard of Euphrates, a philosopher, and of the awe with which it inspired the people, Plutarch speaks of the long white beard of an old Lacedæmonian, who used to say, "Seeing continually my white beard, I labour to do nothing unworthy of its whiteness;" Strabo relates that the Indian philosophers called Gymnosophists were careful to have long beards to captivate the veneration of the people. The Jews esteemed the beard very highly; thus Hanun, king of the Ammonites, designing to insult David in the person of his ambassadors, cut off half their beards. The Hebrews wore a beard on the chin, but not on the upper lip or cheeks. Mourning was—and still is among the modern Jews—indicated by neglecting the beard; and intense grief, by plucking away the hair of the head and beard. To salute a man by touching his beard was the token of sincere respect. The Druids were accustomed to cultivate their beards, and permit them to grow to a great length; and they were no less celebrated for their white robes and silver knives, than religious services and mystical theology, than for their venerable beards.

In ecclesiastical history we find that priests have fallen to loggerheads on the subject of beards: those of the Greek church adhering to beards, and those of the Roman church inclining to razors. By the statutes of some monasteries, the lay monks were obliged to let their beards grow, while the priests were closely shaven. The old kings of France had their beards plaited and knotted with gold, the kings of Persia did the same; the Chinese were scrupulously careful in attention to their beards, but alas, nature has bestowed upon them no luxuriant crop of the facial ornament. Better be whipped and branded with a red-hot iron than have your beard cut off, in Turkey. One of the buffoons of the bashaw took it into his head one day, for a frolic, to shave his beard, "which," says Belzoni, "is no trifle among the Turks, as some of them, I really believe, would sooner have their head cut off than their beard." In this state he went home to his women, who actually thrust him out of the door; and, such was the disgrace of cutting off his beard, that even his fellow buffoons would not eat with him till it was grown again. Beards are a religious article with the Arabs. Mohammed never cut his beard. The razor is never drawn over the face of the grand signor. Persians who clip their beards are considered downright heretics, only the slaves of the seraglio are shaven.

Whilst the Gauls were under the sway of their native sovereigns, none but nobles and Christian priests were permitted to wear long beards. It was a privilege of the few, not the right of the many. Legislation clipped their beards; but the Franks having made themselves masters of Gaul, bondsmen were commanded to shave their chins. Even the right of wearing a short beard was taken away, and a clean shave was the lot of the serfs so long as servitude continued in France.

Who has not heard of Robert of France, with his long white beard, who on every battle-plain led on his harnessed knights, and in the struggle of the fight was still conspicuous for the beard, which was let down outside his cuirass, and which floated in the breeze like a silver-scarf? or of that celebrated German painter, in the days of Charles V., who long ago would have been forgotten altogether if his beard had not made him remembered:—it was so long that it reached the ground, and was looped to his girdle with a golden chain; or how, in those old times, two or three hairs from the king's beard were the sure and certain pledge of safety? how solemn deeds and acts of government were sealed with melted wax, in which a hair or two from the king's beard made all complete and legal, or how, as tokens of favour, a small portion of the sovereign's beard would be sent to some beloved courtier, who treasured it more than gold, or jewels? how, in the reign of Catherine, queen of Portugal, John de Castro took the castle of Diu, in India, but how he was obliged to ask the people of Goa to lend him one thousand pistoles, and, as a security, sent them one of his whiskers, saying,—"All the gold in the world cannot equal what I now send, but I deposit it with you as a security for the money." So charmed were the people of Goa with this conduct that they sent him back the money and the whisker too? How, in the days of our own King Henry VIII., when the good Sir Thomas More was brought to the block—and really in those troublous times it seemed a very lottery whether one's head was high in favour at Westminster or Windsor, or high in public odium on the Bridge-gate—he lifted up his beard and permitted it to fall on the further side of the block, saying in his quiet way, 'My beard has not committed treason, and it would be an injustice to make it suffer;"—how, when in France, Louis XIII. ascended the throne, and was without a beard, all the courtiers except Sully shaved their chins, and how, when that wise man, with his long beard, appeared at court, the shaven gentry laughed at his grave appearance; which ridicule drew from the minister the remark, "Sire, when your father did me the honour to consult me on his great and important affairs, the first thing he did was to send away all the buffoons and stage-players of the court;"—how, in Spain, when Philip V. succeeded to the throne, and with a shaven chin began to reign, the fashion was imitated by all classes, but with great reluctance and sorrow; for, said they, "Since we have lost our beards we have lost our souls."

Czar Peter in his most successful efforts for the civilisation of his land insisted on his subjects shaving their beards.

Hair and the fashion of wearing it have ever been a matter of dispute. Loudly the church denounced both flowing locks and flowing beards as "burdles of vanity;" but though it sometimes prevailed that a temporary reformation was effected, the curls soon came back again, and the gallants of the age in the lordly Strand or Paul's-walk, the Rialto of Venice, the public walk of Paris, the Grand Square of St. Peter at Rome, or the fashionable resorts of Madrid, still sported their flaunty locks and perfumed beards.

But enough of beards; let us turn to the beard-trimming barber. It is an old trade. We find that out by the fact that it was introduced into Rome so many centuries ago, and even that it had gained high repute in Sicily. In England the barbers formed an ancient and honourable body. The company of Barber-Chirurgeons was incorporated by Edward

the Fourth, "but confirmed," says Howel, "by every king and queen since." It was first instituted by the good offices of one Thomas Morestead, who was one of the sheriffs of London, and barber to the kings Henry IV., V., and VI.; and his efforts to establish a company were continued by Jacques Fries, physician, and William Hobbes, barber to Edward IV., who, as we have seen, graciously granted their request. The barber's shop, in those days was the resort of people above the ordinary level of society, who went to the barber either for the cure of wounds, or to undergo some surgical operation, or, as it was then called, to be "trimmed," a term which signified either shaving the beard or cutting and curling the hair. The shop was usually furnished with a lute, a viol, or some other musical instrument, that the patients or customers might beguile the time they had to wait, before they could engage the services of the barber surgeon. The pole with its painted fillet of blue or red indicated that the professor was a blood-letter, the ribbon representing the bandage which during the operation of bleeding, was twisted round the arm of the patient, and the pole itself a Brobdignagian specimen of the staff which he commonly held.

Time works wonders. A change has indeed come over the trade of the barber surgeon, and a wondrous difference exists between the old blood-letter surgeon of the past, surrounded by court gallants, and holding no small place in public estimation as a man of science and philosophy—and the cheap barber with his pole, his jack towel, his small looking-glass, his windsor chair, his copy of the weekly paper and of Punch, his picture of a bear, his birds.—nearly all barbers have birds,—and his endless flow of intelligence and small talk Talk! all barber's talk. Depend upon it that grave-looking Armenian in our illustration, who is just beginning the operation of shaving upon one of his own countrymen, is telling all the news of the city. not a fashion—not a birth—not a marriage—not a death—not a fortune lost nor fortune won—could possibly escape his penetration. Look at him, as if he felt the full importance of his work—how self-complacent is he, and yet a touch of sternness in him too—one might imagine him doing business in one of our suburbs—or one might almost fancy that he was the veritable Bagdad barber!

A word or two about the philosophy of shaving The consideration of everything is philosophy now—from a star to a stone—and why not the philosophy of the razor. The fabrication of a good razor depends on so many circumstances and conditions,—the material, the art of forging, the hardening, and the temper,—that the artist himself, after he has exercised his utmost skill, can only select such instruments as he knows to be good by actual use. The razor which possesses the best edge should be selected,—such as, upon looking along its edge, has little or no flat part when the action of the hone has taken place; and which, when drawn along the hand, appears keen and smooth. The original keenness of the edge will, of necessity, go off by use. It can only be restored by means of a good strap. The act of stropping produces a smooth edge, but, on account of the elasticity of the strop, this edge becomes round and obtuse in the angle formed by its faces. When this is the case it must be sharpened upon the hone. The principal instructions for whetting a razor are, 1, that it should be drawn lightly along the stone by repeated alternate strokes, with the edge foremost, and by no means backwards and forwards; 2, that the edge should be tried upon the hand after every two or three strokes, in order to ascertain the instant at which the operation is complete; 3, that the final edge be given by a stroke or two upon the strop. The edge of the razor is, in fact, nothing but a very fine saw. When in complete order, the razor should be for a moment or so immersed in hot water before shaving is commenced. There is some difference of opinion as to the application and use of soap. Sir John Chardin asserts that the great excellence of the Persian barbers consists in the practice of using a thick hot lather of soap. Others, on the contrary, declare that the Chinese shave far better with the use of cold water and soap. Soap, they say, acts in a twofold benefit to the shaver: it dissolves and removes perspiration, and lubricates the skin. Some operators place the razor flat on the face, and others raise it to a considerable angle. It is a very bad practice to press the razor at all against the face; and, indeed, this cannot be done with impunity, if a drawing stroke be used. The line of the motion of the razor itself should be very oblique to the line of the edge, and not at right angles to that line, as is commonly pratised; this method is, indeed, so very effectual, as to require great care before it can be adopted, in the extreme, with perfect safety; but the same efficacy which endangers the skin, renders it easy and pleasant with regard to the beard.

SPAIN AND ITS PEOPLE.—VII.

THE ARTS IN SPAIN.

With the reign of Ferdinand and Isabella commenced a grand era in the history of Spain; and in the sixteenth centuries she took high rank among the nations of the earth. But her greatness was short-lived and fleeting. If the growth of her celebrity and power was rapid, the decay of the material sources of them were no less so, and, as we have seen, the sceptre of the first monarchs of "all Spain" became at length a feeble rod in the hands of the successors of Isabella.

The era of her greatness was likewise the great period of literature and art in Spain. Growing up with her political importance, says Mr. Stirling, in his "Annals of the Artists in Spain," they added lustre to her prosperity, and a grace and charm to her decline. During the middle ages her taste and imagination had been imbodied in the unrivalled multitude of ballads, sung by unknown bards, part of which the Castilian Romanceros still preserve, and in the magnificent cathedrals reared by nameless architects in her Christian cities, the songs and the shrines being equally tinged with the colouring of northern piety and oriental fancy. Poetry, the eldest and most docile of the fine arts, was the first of the sisterhood to be affected by the revival of ancient learning. Spanish writers had borrowed somewhat of refinement and correctness from the Latin and Italian, long ere architecture in Spain had yielded submission to Greek and Roman rules, and ere painting and sculpture had produced ought but uncouth caricatures of the human form. Juan de Mena had written his graceful love-songs, Santillana had even wandered from the gay science into the strange field of criticism, and Hernan Castillo was probably preparing the first Cancionero for the press of Valencia, before the pencil of Rincon had obtained for him the cross of Santiago from the hands of Ferdinand and Isabella.

The reign of "the Catholic Sovereigns" is memorable for the discovery not merely of a new continent, but of vast regions of intellectual enterprise History, the drama, and painting, were revived in Spain in the same stirring age that sought and found new empires beyond the great ocean. Pulgar, the father of Castilian history, Cota, the earliest forerunner of Calderon, Rincon, the first native painter in the peninsula who deserved the name, were the contemporaries of Columbus, and, with the great navigator, mingled in the courtly throngs of the presence-chamber of Isabella. The progress of refinement during the first half of the sixteenth century was perhaps more rapid in Spain than in any other country. The iron soldier of Castile, the Roman of his age, became the intellectual vassal of the elegant Italians whom he conquered.

Under the Emperor Charles V., the Iberian Peninsula, the fairest province of ancient Rome, grew into the fairest colony of modern art. The classical Boscan and Garcilasso, and the many-gifted Mendoza, left behind them monuments of literature which might bear comparison with those of Italy, Berruguete and Vigarny, schools of painting and sculpture that Florence might have been proud to own. The odes of Fray Luis de Leon were excelled in strength and grace by none ever recited at the court of Ferrara; and pastoral Estremadura could boast a painter—Morales of Badajoz—not unworthy to cope with Sebastian del Piombo on his own lofty ground.

During the reigns of the three Philips, literature and art kept an even pace in their rapid and triumphant march. When Juan de Toledo laid the foundations of the Escorial, Cervantes was writing his early poems and romances in the schools of Madrid. The versatile Theotocopuli was designing his various churches in and around Toledo, and embellishing them with

paintings and sculptures, whilst Lope de Vega was dashing off his thousand dramas for the diversion of the court Mariana composed in the cloister his great history of Spain, whilst Sanchez Coello, the courtier and man of fashion, was illustrating the story of his own times by his fine portraits of royal and noble personages. In the reign of Philip III, Velasquez and Murillo were born, and the great novel of Cervantes first saw the light. Solis and Villegas, Moreto and the brothers Leonardo de Argensola, famous in history, poetry, and the drama, were contemporaries of Ribera, Cano, and Zurbaran, and with them shared the favour and patronage of the tasteful Philip IV. When Velasquez received the cross of Santiago, Calderon was amongst the knights who greeted the new companion of that ancient order. In the evil days of Charles II., Spain and her literature and her arts drooped and declined together. Painting strove the hardest against fate, and was the last to succumb. Murillo and Valdés, Mazo and Carreno, and their scholars nobly maintained the honour of a long line of painters, till the total eclipse of Spain in the War of the Succession. With the House of Bourbon came in foreign fashions, and foreign standards of taste Henceforth Crebillon and Voltaire became the models of Castilian writing; Vanloo and Mengs, of Spanish painting. From the effects of this disastrous imitation, painting, at least, has never recovered.

If Spain holds a high place in the roll of nations illustrious in art, it owes it to her painters, her sculptors have never obtained, nor indeed have often deserved, much notice beyond the limits of the peninsula. Amongst them, however, were several men of fine genius. Berreguete, the disciple of Michael Angelo, was a great sculptor, Juni and Hernandez modelled with singular feeling and grace; and had Montanes and Cano flourished beneath the shadow of the Vatican, they would have been formidable rivals to Bernini and Algardi. Flanders can show no carvings more delicate and masterly than those which still enrich the venerable choirs of many of the peninsula churches—stalls embowered in foliage—almost as light as that which trembled on the living tree—where fruits cluster, and birds perch in endless variety, or those arabesque panels and pillars, where children rise from the cups of lily blossoms, and strange monsters twine themselves in a network of garlands, or the niches filled with exquisite figures, or the fretted pinnacles crowned with a thousand various finials, and towering above each other in graceful confusion. But of all such religious statuary, the Virgin of the chapel of the Dutch canon of the abbey—the Spanish sculptor was too often unhappy in his choice of materials. Neglecting the pure marble and abiding bronze, the time-honoured and fitting vehicles of his thought, he wrought either in metals too precious to escape the chances of war, and the rapacity of bankrupt power, or in wood and clay, offering little resistance to the tooth of time, and but too much temptation to the foreign trooper, weary and hungry with his march, and seeking wherewithal to kindle his fire and make the camp-kettle boil. The use of colour—universally adopted in the larger statues and groups—was also injurious to Spanish sculpture; bringing the art, so far as it addressed the taste of vulgar monks and country clowns, within the reach of every hewer of wood who possessed a paint pot, and causing the works even of the man of genius, at first sight, rather to startle than to please, by their similitude to real flesh and blood.

The early religious architects of Spain were great masters in art. Their magnificent cathedrals—too often mere portions of giant plans—were worthy of a people who possessed so many noble remains of older times, who inherited from the Roman the bridge of Alcantara, and the aqueduct of Segovia—and who had won from the Saracen the Mosque of Cordova and the Alhambra of Granada. But the architects of the Renaissance were a feebler folk—lovers of the ornate, rather than the grand. Machuca, Toledo, and Herrera, indeed, left examples of a pure and admirable style, but they found few followers. Ecclesiastical buildings, while they increased in numbers, grew likewise in ugliness; and the monastic system bore equally hard on the financial resources and architectural taste of the country. Amongst the churches and convents erected since the end of the sixteenth century, there are few that are not either plain to bareness, or loaded with tawdry decoration; and rare, indeed, it is to meet with that graceful propriety of design, which lends its chief charm to Italian architecture, and is often to be found in the monastery of the Apennine woodlands, as well as in the princely palace on the Corso.

In age, the Spanish school of painting ranks third amongst the national schools of Europe, after the German and before the French; in artistic importance, second only to the Italian. But Spanish painting, like Spanish literature, has a glory proper and peculiar to itself. It is true that no Spaniard can claim to rank with those great Italian painters, whom their most illustrious followers have regarded with a reverence that forbade rivalry. Spain has no Raffaelle—no Correggio—nor has she a Dante nor a Shakspeare; yet her noble Castilian tongue possesses the single book of which the humour—so strictly national, and yet so true and universal—has become native to all Europe. And Spain has produced the painters whose works unite high excellence of conception and execution, with an absolute adherence to nature, and are thus best fitted to please the most critical as well as the most uneducated eyes. If the visible and material efforts of the pencil may be compared with the airy flights of thought, Velasquez and Murillo may be said to appeal, like Cervantes, to the feelings and perceptions of all men, and, like him, they will be understood and enjoyed where the loftiest strains of Shakspeare, and the ideal creations of Raffaelle, would find no sympathy, because addressed to a kindred and responsive imagination belonging only to minds of a higher order. The crazy gentleman of La Mancha and his squire will always be more popular with the many than the wondrous Prince of Denmark And those who turn away, perplexed and disappointed, from the Spasimo or the Transfiguration, would probably gaze with ever fresh delight on the living and moving captains and specimen of Velasquez, or on Murillo's thirsty multitudes flocking to the rock that gushed in Horeb.

The venerable city of Toledo was the cradle of Spanish painting there the school of Castile was founded in the first half of the fifteenth century, and chiefly flourished under the fostering care of munificent prelates and chapters till the close of the reign of Charles V. Viloldo, Blas del Prado, El Greco, Tristan, and others, maintained the reputation of Toledo till the days of Philip IV Under Philip II. Madrid, the seat of government, became the resort of many good Flemish and Italian artists, and of those native painters, such as El Mudo and Sanchez Coello, who enjoyed or hoped for the royal favour Valladolid, a city more famous for its goldsmiths and sculptors than its painters, was the chief residence of Philip III., Madrid, however, continued to prosper as a school of art, and finally became, in the brilliant times of Philip IV. and Velasquez, the metropolis of Castilian painting as well as of the monarchy.

Of the school of Estremadura, if school it can be called, Morales is the sole glory and representative; and if his history were better known, it would probably be found that, although he lived and laboured at Badajoz, he belonged to the school of Castile

The great school of Andalusia was founded by Sanchez de Castro, at Seville, about 1454, and flourished till the troubles of the war of Succession. The beautiful Terra Bætica has ever been prolific of genius. The country of Lucan, and Seneca, and Trajan, of Averroes, and Azzarkal, likewise brought forth Vargas, Velasquez, and Murillo. Seville was always the principal seat of Andalusian painting, but some able masters resided also in other cities, as Cespedes at Cordova, Castillo at Cadiz, and Cano and Moya at Granada.

The Valencian school sprang into eminence under Vicente Joanes about the middle of the sixteenth century, and sank into mediocrity at the death of the younger Espinosa in 1680.

The northern provinces and the Balearic Isles were not prolific, yet not altogether destitute, of artists. Zaragoza possessed a respectable school of painting till the end of the eighteenth century, of which Jusepe Martinez may be considered the chief; and Barcelona is justly proud of Viladomat, who maintained the honour of the Spanish pencil in the corrupt age of Philip V.

Spanish art, like Spanish nature, is in the highest degree national and peculiar. Its three principal schools of painting differ in style from each other, but they all agree in the great features which distinguish them from the other schools of

Europe. The same deeply religious tone is common to all. In Spain alone can painting be said to have drawn all its inspiration from Christian fountains, and, like the architecture of the middle ages, to be an exponent of a people's faith Its first professors, indeed, acquired their skill by the study of Italian models, and by communion with Italian minds. But the skill which at Florence and Venice would have been chiefly employed to adorn palace-halls with the adventures of pious Æneas, or ladies' bowers with passages from the Art of Love, at Toledo, Seville, and Valencia was usually dedicated to the service of God and the Church. Spanish painters are very rarely to be found in the regions of history or classical mythology.* Sion hill delights them more than the Aonian mount, and Siloa's brook, than ancient Tiber or the laurel-shaded Orontes. Their pastoral scenes are laid, not in the vales of Arcady, but in the fields of Judea, where Ruth gleaned after the reapers of Boaz, and where Bethlehem shepherds watched their flocks on the night of the nativity. In their landscapes it is a musing hermit, or, perhaps, a company of monks, that moves through the forest solitude, or reposes by the brink of the torrent. Then fancy loves best to deal with the legendary history of the Virgin, and the life and passion of the Redeemer, with the glorious company of apostles, the goodly fellowship of prophets, and the noble army of martyrs and saints, and they tread this sacred ground with habitual solemnity and decorum.

The great religious painters of Spain rarely descended to secular subjects Not so the Italians Raffaelle could pass from the creation of his heavenly Madonnas to round the youthful contours of a Psyche, or elaborate the charms of a Galatea, Correggio, from the Magdalene repenting in the desert, to Antiope surprised in the forest Joanes of Valencia would have held such transition to be a sin, little short of sacrilege, and worthy of the severest penance Titian's "Last Supper," and his "Assumption of the Virgin," are doubtless amongst the noblest of religious compositions But his fancy ranged more freely over profane than sacred ground, his Maries are fair and comely, but they sometimes want the life and warmth that breathe in his Graces and his Floras, in whom he delighted to reproduce his auburn-haired mistress, who figures in one of his most charming allegories with his name inscribed on her bosom. The Queen of Love herself was his favourite subject, she it was who most fully drew forth all

"The wondrous skill and sweet wit of the man"

Far different were the themes on which Murillo put forth his highest powers. After the "Mystery of the Immaculate Conception," he repeated, probably more frequently than any other subject, the "Charity of St. Thomas of Villanueva," and it was his finest picture of that good prelate, inimitable for simplicity and grandeur, that he was wont to call emphatically "his own."

The sobriety and purity of imagination which distinguished the Spanish painters, is mainly to be attributed to the restraining influence of the Inquisition. Palomino quotes a decree of that tribunal, forbidding the making or exposing of immodest paintings and sculptures, on pain of excommunication, a fine of fifteen hundred ducats and a year's exile The Holy Office also appointed inspectors, whose duty it was to see that no works of that kind were exposed to view in churches and other public places. Pacheco, the painter and historian of art, held this post at Seville, and Palomino himself at Madrid. But the rules of the Inquisition cannot have been observed to the letter, otherwise so many of the Loves and Graces of Italian painting would not have been left hanging almost to our days on the walls of the Escurial.

Another cause of the severity and decency of Spanish art is to be found in the character of the Spanish people. The proverbial gravity—which distinguishes the Spaniard, like his cloak—which appears in his manner of address, and in the common phrases of his speech, is but an index of his earnest and thoughtful nature. The Faith of the Cross, nourished with the blood of Moor and Christian, nowhere struck its roots so deep, or spread them so wide, as in Spain. Pious enthusiasm pervaded all orders of men; the noble and learned as well as the vulgar. The wisdom of antiquity could not sap the creed of Alcala or Salamanca, nor the style of Plato or Cicero seduce their scholars into any leaning to the religion of Greece or Rome. Whilst Alexander Borgia—a Spaniard indeed by birth, but Italianised by education—polluted the Vatican with filthy sensuality, whilst the elegant epicurean Pope Leo banqueted gaily with Infidel wits, or hunted and hawked in the woods and plains around Viterbo—the mitre of Toledo was worn by the Franciscan Ximenes, once a hermit in the caves of the rocks, who had not doffed the hair-shirt in assuming the purple, nor in his high estate feared to peril his life for the Faith In the nineteenth century, of which superstition is not the characteristic, a duchess returning from a ball, and meeting the host at midnight in the streets of Madrid, resigned her coach to the priests attendant on its Majesty, the Wafer, and found her way home on foot. After all the revolutions and convulsions of Spain, where episcopal crosses have been coined into dollars to pay for the bayoneting of friars militant on the hills of Biscay, and the primacy has become a smaller ecclesiastical prize than our Sodor and Man; it is still in Spain—constant, when seeming most false—religious, when seeming careless of all creeds—that the pious Catholic looks hopefully to see the Faith of Rome rise, refreshed, regenerate, and irresistible

Nurtured in so devout a land, it was but natural that Spanish art should show itself devout. The painter was early secured to the service of religion. His first inspiration was drawn from the pictured walls of the churches or cloisters of his native place, where he had knelt a wondering child beside his mother, where he had loitered or begged when a boy: to their embellishment his earliest efforts were dedicated, out of gratitude, perhaps, to the kindly Carmelite or Cordelier, who had taught him to read, or fed him with bread and soup on the days of dole, or who had first noted the impulse of his boyish fancy, and guided "his desperate charcoal round the convent walls." As his skill improved, he would receive orders from neighbouring convents, and some gracious prior would introduce him to the notice of the bishop or the tasteful grandee of the province The fairest creations of his matured genius then went to enrich the cathedral or the royal abbey, or found their way into the gallery of the Sovereign to bloom in the gardens of Flemish and Italian art. Throughout his whole career the Church was his best and surest patron. Nor was he the least important or popular of her ministers His art was not merely decorative and delightful, but it was exercised to instruct the young and the ignorant, that is, the great body of worshippers, in the scenes of the Gospel history, and in the awful or touching legends of the saints, whom they were taught from the cradle to revere. "For the "learned and the lettered," says Don Juan de Butron, a writer on art in the reign of Philip IV, "written knowledge may suffice, but for the ignorant, what master is like painting? They may read their duty in a picture, although they cannot search for it in books" The painter became, therefore, in some sort, a preacher, and his works were standing homilies, more attractive, and perhaps more intelligible, than those usually delivered from the pulpit. The quiet pathos, the expressive silence of the picture, might fix the eye that would drop to sleep beneath the glozing of the Jesuit, and melt hearts that would remain untouched by all the thunders of the Dominican.

It would exceed our limits to attempt more than the merest sketch of Spanish art, patronised by the Church, and carried forward by his own religious enthusiasm, the artists of Spain speedily obtained a high position; and miracle-working pictures became as common in the peninsula as scraps of the Holy Cross. No wonder that, in after times, the religious of the continent prize the works of Velasquez and Murillo, seeing that it is often asserted that the painters were favoured by angelic visitation during the progress of their pictures.

Spanish art was, however, but little known to the rest of Europe till the end of the last, and the beginning of the present century, Ribera—the "Spagnoletto," and favourite of Naples—whose passion for the horrible was little likely to produce a favourable impression of Spanish taste, was long the sole Spaniard whose name and works were familiar to Europe. At Rome, Vargas, Cespedes, and a few others had acquired some distinction in their day; and Velasquez had left a few portraits in the palaces, and enjoyed a traditionary reputation as a member of the academy of St. Luke. Few Spanish pictures travelled northwards, except

the royal portraits sent to imperial kinsfolk at Vienna, and the works now and then carried home from Madrid by tasteful ambassadors. The catalogues of the rich collection of our Charles I. do not contain the name of a single Spanish master. Evelyn indeed tells us, that, at the sale of Lord Melford's effects at Whitehall, in 1693, "Lord Godolphin bought the picture of 'The Boys,' by Morillio, the Spaniard, for eighty guineas," which he remarks was "deare enough." Yet Cumberland, nearly a century later, while he admits Murillo to be better known in England than any Spanish master except Ribera, "very much doubts if any historical group or composition of his be in English hands" The Bourbon accession and increased intercourse with Spain brought a few good Spanish paintings into France to adorn the galleries of Orleans, Praslin, and Presle, most of which at the revolution emigrated, like their possessors, to England. Yet the Abbe Dubos, in his Reflections on Poetry and Painting, first published in 1719, cites Spain as one of those unfortunate countries where the climate is unfavourable to art, and remarks that she had produced no painter of the first class, and scarcely two of the second; thus with one stroke of his goosequill erasing from the book of fame Velasquez and Cano, Zurbaran and Murillo. Nevertheless the Abbé was a man of curious reading and research,—for he made the discovery that the poetry of the Dutch was superior in vigour and fire of fancy to their painting; and his Reflections—which formed the last round of the literary ladder whereby he climbed into the Academy—passed unquestioned through many editions, and were praised by Voltaire as the best and most accurate work of the kind in modern literature Meanwhile the countless treasures of Spanish painting—thus triumphantly libelled—hung neglected in their native convents and palaces, far from the highways of Europe, wasting their beauty on gloomy walls, unstudied, unvisited, forgotten, except by a few tasteful and patient spirits, like Ponz and Bosarte.

But the time of their deliverance drew nigh. The French eagles stooped on the peninsula, and then was the wall of partition broken down that shut out Spanish art from the admiration of Europe. To swell the catalogue of the Louvre was part of the recognised duty of the French armies, to form a gallery for himself, had become the ambition of almost every military noble of the empire. The sale of the Orleans, Calonne, and other great collections, had made the acquisition of works of art fashionable in England and had revived the spirit of the elder Arundels and Oxfords in the Carlisles and the Gowers. With the troops of Moore and Wellesley, British picture-dealers took the field, well armed with guineas. The peninsula was overrun by dilettanti, who invested galleries with consummate skill, and who captured altar-pieces by brilliant manœuvres, that would have covered them with stars had they been employed against batteries and brigades. Convents and cathedrals — venerable shrines of art—were beset by connoisseurs, provided with squadrons of horse or letters of exchange, and demanding the surrender of the Murillos or Canos within; and priest and prebend, prior or abbot, seldom refused to yield to the menaces of death or to the temptation of dollars Soult at Seville, and Sebastiani at Granada, collected with unerring taste and unexampled rapacity, and having thus signalised themselves as robbers in war, became no less eminent as picture-dealers in peace. King Joseph himself showed great judgment and presence of mind in his selection of the gems of art which he snatched at the last moment from the gallery of the Bourbons, as he fled from their palace at Madrid Suchet, Victor, and a few of "the least erected spirits," valued paintings only for the gold and jewels on their frames; but the French captains in general had profited by their morning lounges in the Louvre, and had keen eyes as well for a saleable picture as for a good position.

By the well-directed efforts of steel and gold, Murillo and his brethren have now found their way, with infinite advantage to their reputation, to the banks of the Seine and the Isler, the Thames and the Neva. French violence and rapine, inexcusable in themselves, have had some redeeming consequences. The avarice of Joseph and his robber-marshals, by circulating the works of the great Spanish masters, has conferred a boon on the artists of Europe. Nor is the loss to Spain so serious as it may at first appear. Great as was their booty the plunderers left behind, sorely against their will treasures more precious than those which they carried away, and the rich remainder is now more highly valued than the whole ever was, and more carefully preserved.

Large numbers of Spanish pictures exist in the various galleries of Europe; and, though the National and Dulwich galleries furnish but few specimens, it is certain that the paintings, in the possession of private gentlemen in England, could furnish forth a gallery more extensive perhaps than that of the Louvre, and assuredly more genuine.

The late sale of Marshal Soult's collection at Paris has contributed still further to the distribution of the masterpieces of Murillo and his compeers. It is to be lamented, however, that Spanish art, like Spanish glory and magnificence, belongs entirely to the past.

"WE HEARD A SAGE."

We heard a sage of our England say,
"She is strong by forge and loom;
But where will the soul of the elder day
In these trading times find room—
The soul that hath gotten our land renown
By the patriot's sword and the martyr's crown?

"Banner and battle flag are furl'd,
Glory and valour wane;
We have come to the work-day of the world,
To the times of toil and gain.
The song and the symbol lose their hold;
Our hands are strong, but our hearts are cold,
For faith have come to be bought and sold,—
It is only these that reign.

"Our people's sport and our children's play
They have sounds from shop and school,
And ever the sound of youth grows gray
With the Reckoner and the Rule,
With the husks of knowledge dry and dead,
With the strife for gold and the cry for bread.

"There are wealth and work in our crowded marts,
There is speed in our hurrying ways,
But men must seek the craftsman's arts
For the story of these days.
Pencil and pen and lyre are brought
To the engine's haste and the trader's thought;
For life with the din of wheels is fraught,
And again the iron sways."

So that half-seer spake,—and more
Had said, but one who pass'd
The twilight-stand of his narrow lore
Replied—"Look forth at last,
From thy bounded school and thy trusted page,
On the breadth of thy land's brave heritage!—

"It is rich with glorious victories
O'er the old material powers,—
The Titan gods that from eldest days
Have warred with us and ours.
It hath conquer'd the might of time and space,
It hath broken the bars of clime and race,
It hath won for our human freedom place
From life's dusty wants and dowers

"Great hearts of old by the Druid's tree
In the towers with ivy green
Have pined away in the wish to see
The things that we have seen.
Yet never had England nobler scope
For the martyr's faith or the patriot's hope.

"Her march is swift but the way is far
To the goal where the conflict cease:
For wide is the search and long the war
That must work the world's release.
But strength and cheer to the humblest hand,
To thee feeble step in the van-ward band
Who have won such conquests for our land
In the battle fields of peace!"

FRANCES BROWN.

CHARLOTTE CORDAY.*

AMONGST the women of the French Revolution, there is one who stands essentially apart—a solitary episode of the eventful story. She appears for a moment, performs a deed—heroic as to the intention, criminal as to the means—and disappears for ever, lost in the shadow of time—an unfathomed mystery.

And it is perhaps this very mystery that has invested with so much interest the name of one known by a single deed, which, though intended by her to deliver her country, changed little its destinies. To admire her entirely is impossible, to condemn her is equally difficult. No one can read her history without feeling that, to judge her absolutely lies not in the province of man. Beautiful, pure, gentle, and a murderess, she attracts and repels us in almost equal degrees; like all those beings whose nature is inexplicable and strange, according to the ordinary standard of humanity. Although it is generally acknowledged that she did not exercise over contemporary events that repressing power for which she sacrificed her life, it is felt, nevertheless, that no history of the times in which she lived is complete without her name, and to her brief and tragic history an eloquent modern historian† has devoted some of his most impressive pages.

The 31st of May was the signal of the fall and dispersion of the Girondists. Some, like Barbaroux, Buzot, Louvet, and their friends, retired to the provinces, which they endeavoured to rouse for one last struggle. Others, like Madame Roland and the twenty-two, prepared themselves in their silent prison solitude for death and the scaffold. The name of the Girondists now became a sound as proscribed as that of Royalists had been during their brief sway. No voice gifted with power was raised throughout the republic in favour of the men by whom, in the midst of such enthusiastic acclamations, that republic had been founded. France was rapidly sinking into that state of silent apathy which foreboded the Reign of Terror: discouraged by their experience of the past, men lost their faith in humanity, and selfishly despaired of the future. A maiden's heroic spirit alone conceived the daring project of saving those who had so long and so nobly striven for freedom, or, if this might not be, of avenging their fall, and striking terror into the hearts of their foes, by a deed of solemn immolation, worthy of the stern sacrifices of paganism offered of yore on the blood-stained shrines of the goddess Nemesis.

The maiden was Marie-Anne Charlotte, of Corday and of Armont, one of the last descendants of a noble though impoverished Norman family, which counted amongst its near relatives Fontenelle, the wit and philosopher of the seventeenth and eighteenth centuries, and amongst its ancestors the father of the great tragic poet of France, Pierre Corneille.

Her father, Jacques of Corday and of Armont, was a younger son of this noble line. He was, however, poorer than many of the peasants amongst whom he lived, cultivating with his own hands his narrow inheritance. He married in early life a lady of gentle blood, but as poor as himself. They had five children and a noble name to support, in a vain show of dignity, on their insufficient income. It thus happened that Charlotte, their fourth child and second daughter, was born in a thatched dwelling, in the village of Saint-Saturnin des Lignerets, and that in the register of the parish church where she was baptized, on the 28th of July, 1768, the day after her birth, she is described as "born in lawful wedlock of Jacques François of Corday, esquire, seur of Armont, and of the noble dame Marie Charlotte Jacqueline, of Gauthier des Authieux, his wife." It was under these difficult circumstances, which embittered his temper, and often caused him to inveigh in energetic terms against the injustice of the law of primogeniture, that M. d'Armont reared his family. As soon as they were of age, his sons entered the army; one of his daughters died young, and he became a widower when the other two were emerging from childhood into youth. They remained for some time with their father, but at length entered the Abbaye aux Dames, in the neighbouring town of Caen.

The greatest portion of the youth of Charlotte Corday—to give her the name by which she is generally known—was spent in the calm obscurity of her convent solitude. Many high visions, many burning dreams and lofty aspirations, already haunted her imaginative and enthusiastic mind, as she slowly paced the silent cloisters, or rested, lost in thought, beneath the shadow of the ancient elms. It is said that, like Madame Roland, she contemplated secluding herself for ever from the world in her monastic retreat; but, affected by the scepticism of the age, which penetrated even beyond convent walls, she gave up this project. From these early religious feelings Charlotte derived, however, the calm devotedness which characterised her brief career; for though self-sacrifice may not be the exclusive attribute of Christianity, it cannot be denied that the deep humility by which it is accompanied—a feeling almost unknown to the ancients—is in itself the very spirit of Christ. The peaceful and solemn shadow of the old cloister favoured the mild seriousness of Charlotte's character. Within the precincts of her sacred retreat she grew up in grace and serene loveliness, a being fit for the age of the purest virtues of woman's household life, or for one of [illegible] deeds which lead to those bold and give martyrdom, a holy cause.

The scepticism that prevailed for the last few years preceding the revolution, was not the sensual atheism which had disgraced the eighteenth century so long. The faith in a first and eternal cause, in the sacredness of human rights, and the holiness of duty, was firmly held by many noble spirits, who hailed with enthusiasm the first dawn of democracy. This faith was breathed in the soul of Charlotte Corday, with a passion for admiration of antiquity. All the austerity and republican enthusiasm of her illustrious ancestor, Pierre Corneille, seemed to have come down to his young descendant. Even Rousseau and Raynal, the apostles of democracy, had no pages that could absorb her so deeply as the scenes of ancient history, with its stirring deeds and immortal recollections. Often, like Manon Phlipon in the recess of her father's workshop, might Charlotte Corday be seen in her convent cell thoughtfully bending over an open volume of Plutarch, that powerful and eloquent historian of all heroic sacrifices.

When the Abbaye aux Dames was closed, in consequence of the revolution, Charlotte was in her twentieth year, in the prime of life and of her wonderful beauty, and never perhaps did a vision of more dazzling loveliness step forth from beneath the dark convent portal into the light of the free and open world. She was rather tall, but admirably proportioned, with a figure full of native grace and dignity, her hands, arms, and shoulders were models of pure sculptural beauty. An expression of singular gentleness and serenity characterised her fair, oval countenance and regular features. Her open forehead, dark and well-arched eyebrows and eyes of a gray so deep that it was often mistaken for blue, added to her naturally grave and meditative appearance, her nose was straight and well-formed, her mouth serious but exquisitely beautiful. Like most of the women of the Norman race, she had a complexion of transparent purity, enhanced by the rich brown hair which fell in thick curls around her neck, according to the fashion of the period. A simple severity characterised her dress of sombre hue, and the low and becoming hood which she habitually wore is still known by her name in France. Her whole aspect was fraught with so much modest grace and dignity, that, notwithstanding her youth, the first feeling she invariably inspired was one of respect, blended with involuntary admiration for a being of such pure and touching loveliness.

On leaving the convent in which she had been educated, Charlotte Corday went to reside with her aunt, Madame Conseiller de Bretteville Gauville, an old royalist lady, who inhabited an ancient looking house in one of the principal streets of Caen. There the young girl, who had attained a little property, spent several years chiefly engaged in watching the progress of the revolution. The feelings of her father's [illegible] and he wrote several pamphlets in favour of the revolutionary principles, and one in which he attacked the right of primogeniture. His republican tendencies confirmed Charlotte in her opinions; but of the deep, overpowering strength which those opinions acquired in her soul, during the long hours she daily devoted to meditation, no one ever knew, until a stern and fearful deed—more stern and fearful in one so gentle—had revealed it to all France. A silent reserve characterised this epoch of Charlotte Corday's life: her enthusiasm was not extinct, but inward: she listened to the discussions which were carried on around her without taking a part in them herself. She seemed to feel instinctively that great thoughts are always better nursed in the heart's solitude: that they can only lose their native depth and intensity by being revealed too freely before the indifferent gaze of the world. Those with whom she then occasionally conversed took little heed of the substance of her discourse, and could remember nothing of it when she afterwards became celebrated; but all recollected well her voice, and spoke with strange enthusiasm of its pure, silvery sound. Like Madame Roland, whom she resembled in so many respects, Charlotte possessed this rare and great attraction, and there was something so touching in her youthful and almost childlike utterance of heroic thoughts, that it affected even to tears the few who heard her on her trial calmly defending herself from the infamous accusations of her judges, and glorying with the same low, sweet tones in the deadly deed which had brought her before them.

The fall of the Girondists, on the 31st of May, first suggested to Charlotte Corday the possibility of giving an active shape to her hitherto passive feelings. She watched with intense, though still silent, interest the progress of events, concealing her secret

* From a clever and well written work entitled "Women in France," by Julia Kavanagh.

† Lamartine.

indignation and thoughts of vengeance under her habitually calm aspect. Those feelings were heightened in her soul by the presence of the fugitive Girondists, who had found a refuge in Caen, and were urging the Normans to raise an army to march on Paris. She found a pretence to call upon Barbaroux, then with his friends at the Intendance. She came twice, accompanied by an old servant, and protected by her own modest dignity. Pethion saw her in the hall, where she was waiting for the handsome Girondist, and observed with a smile,—

"So, the beautiful aristocrat is come to see republicans"

"Citizen Pethion," she replied, "you now judge me without knowing me, but a time will come when you shall learn who I am"

With Barbaroux, Charlotte chiefly conversed of the imprisoned Girondists, of Madame Roland, and Marat. The name of this man had long haunted her with a mingled feeling of dread and horror. To Marat she ascribed the proscription of the Girondists, the woes of the republic, and on him she resolved to avenge her ill-fated country. Charlotte was not aware that Marat was but the tool of Danton and Robespierre. "If such actions could be counselled," afterward said Barbaroux, "it is not Marat whom we would have advised her to strike"

Whilst this deadly thought was daily strengthening itself in Charlotte's mind, she received several offers of marriage. She declined them, on the plea of wishing to remain free, but strange indeed must have seemed to her, at that moment, those proposals of earthly love. One of those whom her beauty had enamoured, M. de Franquelin, a young volunteer in the cause of the Girondists, died of grief on learning her fate. His last request was, that her portrait and a few letters he had formerly received from her might be buried with him in his grave.

For several days after her last interview with Barbaroux, Charlotte brooded silently over her great thought, often meditating on the history of Judith. Her aunt subsequently remembered that on entering her room one morning, she found an old Bible open on her bed, the verse in which it is recorded that "the Lord had gifted Judith with a special beauty and fairness," for the deliverance of Israel, was underlined with a pencil.

On another occasion Madame de Bretteville found her niece weeping alone, she inquired into the cause of her tears.

"They flow," replied Charlotte, "for the misfortunes of my country."

Heroic and devoted as she was, she then also wept, perchance, over her own youth and beauty, so soon to be sacrificed for ever. No personal considerations altered her resolve; she procured a passport, provided herself with money, and paid a farewell visit to her father, to inform him that, considering the unsettled condition of France, she thought it best to retire to England. He approved of her intention, and bade her adieu. On returning to Caen, Charlotte told the same tale to Madame de Bretteville, left a secret provision for an old nurse, and distributed the little property she possessed amongst her friends.

It was on the morning of the 9th of July, 1793, that she left the house of her aunt, without trusting herself with a last farewell. Her most earnest wish was, when her deed should have been accomplished, to perish, wholly unknown, by the hands of an infuriated multitude. The woman who could contemplate such a fate, and calmly devote herself to it, without one selfish thought of future renown, had indeed the heroic soul of a martyr.

Her journey to Paris was marked by no other event than the unwelcome attentions of some Jacobins with whom she travelled. One of them, struck by her modest and gentle beauty, made her a very serious proposal of marriage; she playfully evaded his request, but promised that he should learn who and what she was at some future period. On entering Paris she proceeded immediately to the Hotel de la Providence, Rue des Vieux Augustins, not far from Marat's dwelling. Here she rested for two days before calling on her intended victim. Nothing can mark more forcibly the singular calmness of her mind: she felt no hurry to accomplish the deed for which she had journeyed so far, and over which she had meditated so deeply: her soul remained serene and undaunted to the last. The room which she occupied, and which has been often pointed out to inquiring strangers, was a dark and wretched attic, into which light scarcely ever penetrated. There she read again the volume of Plutarch she had brought with her—unwilling to part from her favourite author even in her last hours—and probably composed that energetic address to the people, which was found upon her after her apprehension. One of the first acts of Charlotte was to call on the Girondist, Duperret, for whom she was provided with a letter from Barbaroux, relative to the supposed business she had in Paris: her real motive was to learn how she could see Marat. She had first intended to strike him in the Champ de Mars, on the 14th of July, the anniversary of the fall of the Bastille, when a great and imposing ceremony was to take place. The festival being delayed, she resolved to seek him in the convention, and immolate him on the very summit of the mountain; but Marat was too ill to attend the meetings of the National Assembly: this Charlotte learned from Duperret. She resolved, nevertheless, to go to the convention, in order to fortify herself in her resolve. Mingling with the horde of Jacobins who crowded the galleries, she watched with deep attention the scene below. Saint Just was then urging the convention to proscribe Lanjuinais, the heroic defender of the Girondists. A young foreigner, a friend of Lanjuinais, and who stood at a short distance from Charlotte, noticed the expression of stern indignation which gathered over her features, until, like one overpowered by her feelings, and apprehensive of displaying them too openly, she abruptly left the place. Struck with her whole appearance, he followed her out, a sudden shower of rain, which compelled them to seek shelter under the same archway, afforded him an opportunity of entering into conversation with her. When she learned that he was a friend of Lanjuinais she waived her reserve, and questioned him with much interest concerning Madame Roland and the Girondists. She also asked him about Marat, with whom she said she had some business.

"Marat is ill, it would be better for you to apply to the public accuser, Fouquier Tinville," said the stranger.

"I do not want him now, but I may have to deal with him yet," she significantly replied.

Perceiving that the rain did not cease, she requested her companion to procure her a conveyance. He complied, and before parting from her begged to be favoured with her name. She refused, adding, however, "You will know it before long." With Italian courtesy, he kissed her hand as he assisted her into the fiacre. She smiled, and bade him farewell.

Charlotte perceived that to call on Marat was the only means by which she might accomplish her purpose. She did so on the morning of the 13th of July, having first purchased a knife in the Palais Royal, and written him a note, in which she requested an interview. She was refused admittance. She then wrote him a second note, more pressing than the first, and in which she represented herself as persecuted for the cause of freedom. Without waiting to see what effect this note might produce, she called again at half-past seven the same evening.

Marat then resided in the Rue des Cordeliers, in a gloomy-looking house, which has since been demolished. His constant fears of assassination were shared by those around him, the porter, seeing a strange woman pass by his lodge without pausing to make any inquiry, ran out and called her back. She did not heed his remonstrance, but swiftly ascended the old stone staircase, until she had reached the door of Marat's apartment. It was cautiously opened by Albertine, a woman with whom Marat cohabited, and who passed for his wife. Recognising the same young and handsome girl who had already called on her husband, and animated, perhaps, by a feeling of jealous mistrust, Albertine refused to admit her. Charlotte insisted with great earnestness. The sound of their altercation reached Marat, he immediately ordered his wife to admit the stranger, whom he recognised as the author of the two letters he had received in the course of the day. Albertine obeyed reluctantly, she allowed Charlotte to enter, and, after crossing with her an antechamber, where she had been occupied with a man named Laurent Basse in folding some numbers of the "Ami du Peuple," she ushered her through two other rooms, until they came to a narrow closet, where Marat was then in a bath. He gave a look at Charlotte, and ordered his wife to leave them alone: she complied, but allowed the door of the closet to remain half open, and kept within call.

According to his usual custom, Marat wore a soiled handkerchief bound round his head, increasing his natural hideousness. A coarse covering was thrown across his bath, a board, likewise placed transeversely, supported his papers. Laying down his pen, he asked Charlotte the purport of her visit. The closet was so narrow that she touched the bath near which she stood. She gazed on him with ill disguised horror and disgust, but answered as composedly as she could, that she had come from Caen, in order to give him correct intelligence concerning the proceedings of the Girondists there. He listened, questioned her eagerly, wrote down the names of the Girondists, then added with a smile of triumph—

"Before a week they shall have perished on the guillotine"

"These words," afterward said Charlotte, "sealed his fate." Drawing from beneath the handkerchief which covered her bosom the knife she had kept there all along, she plunged it to the hilt in Marat's heart. He gave one loud expiring cry for help, and sank back dead in the bath. By an instinctive impulse Charlotte had instantly drawn out the knife from the breast of her victim, but she did not strike again; casting it down at his feet, she left the closet and sat down in a neighbouring room, thoughtfully passing her hand across her brow: her task was done.

The wife of Marat had rushed to his aid on hearing his cry for help. Laurent Basse, seeing that all was over, turned round

toward Charlotte, and with a blow of a chair felled her to the floor, whilst the infuriated Albertine trampled her under her feet. The tumult aroused the other tenants of the house, the alarm spread, and a crowd gathered in the apartment, who learned with stupor that Marat, the Friend of the People, had been murdered Deeper still was their wonder when they gazed on the murderess She stood there before them with still disordered garments, and her dishevelled hair, loosely bound by a broad green ribbon, falling around her; but so calm, so serenely lovely, that those who most abhorred her crime gazed on her with involuntary admiration

"Was she then so beautiful?" was the question addressed many years afterward to an old man, one of the few remaining witnesses of this scene.

"Beautiful!" he echoed enthusiastically, adding, with the eternal regrets of old age, "Ay, there are none such now!"

The commissary of police began his interrogatory in the saloon of Marat's apartment. She told him her name, how long she had been in Paris, confessed her crime, and recognised the knife with which it had been perpetrated. The sheath was found in her pocket, with a thimble, some thread, money, and her watch

"What was your motive in assassinating Marat?" asked the commissary

"To prevent a civil war," she answered.

"Who are your accomplices?"

"I have none"

She was ordered to be transferred to the Abbaye, the nearest prison An immense and infuriated crowd had gathered around the door of Marat's house, one of the witnesses perceived that she would have liked to be delivered to this maddened multitude, and thus perish at once. She was not saved from their hands without difficulty, her courage failed her at the sight of the peril she ran, and she fainted away on being conveyed to the fiacre On reaching the Abbaye, she was questioned until midnight by Chabot and Drouet, two Jacobin members of the convention She answered their interrogatories with singular firmness, observing, in conclusion, "I have done my task, let others do theirs" Chabot threatened her with the scaffold, she answered with a smile of disdain. Her behaviour until the 17th, the day of her trial, was marked by the same firmness She wrote to Barbaroux a charming letter, full of graceful wit and heroic feeling. Her playfulness never degenerated into levity like that of the illustrious Thomas Moore, it was the serenity of a mind whom death had no power to daunt Speaking of her action, she observes,—

"I considered that so many brave men need not come to Paris for the head of one man He deserved not so much honour the hand of a woman was enough . I have never hated but one being, and him with what intensity I have sufficiently shown, but there are a thousand whom I love still more than I hated him . . I confess that I employed a perfidious artifice in order that he might receive me. In leaving Caen I thought to sacrifice him on the pinnacle of 'the mountain,' but he no longer went to it. In Paris they cannot understand how a useless woman, whose longest life could have been of no good, could sacrifice herself to save her country . . May peace be as soon established as I desire! A great criminal has been laid low The happiness of my country makes mine A lively imagination and a feeling heart promise but a stormy life, I beseech those who might regret me to consider this they will then rejoice at my fate"

A tenderer tone marks the brief letter she addressed to her father on the eve of her trial and death.

"Forgive me, my dear father," she observed, "for having disposed of my existence without your permission I have avenged many innocent victims. I have warded away many disasters The people undeceived, will one day rejoice at being delivered from a tyrant. If I endeavoured to persuade you that I was going to England, it was because I hoped to remain unknown I recognised that this was impossible. I hope you will not be subjected to annoyance; you have at least defenders at Caen, I have chosen Gustave Doulcet de Pontecoulant for mine, it is a mere matter of form. Such a deed allows of no defence. Farewell, my dear father I beseech of you to forget me; or, rather, to rejoice at my fate I die for a good cause. I embrace my sister, whom I love with my whole heart. Do not forget the line of Corneille

'Le crime faite la honte, et non pas l'echafaud.'

To morrow at eight I am to be tried."

On the morning of the 17th, she was led before her judges. She dressed with care, and had never looked more lovely. Her bearing was so imposing and dignified, that the spectators and the judges seemed to stand arraigned before her. She interrupted the first witness, by declaring that it was she who had killed Marat.

"Who inspired you with so much hatred against him?" asked the president.

"I needed not the hatred of others, I had enough of my own," she energetically replied. "Besides, we do not execute well that that which we have not ourselves conceived.

"What then did you hate in Marat?"

"His crimes."

"Do you think then that you have assassinated all the Marats?"

"No, but now that he is dead, the rest may fear"

She answered other questions with equal firmness and laconism Her project, she declared, had been formed since the 31st of May. "She had killed one man to save a hundred thousand. She was a republican long before the Revolution and had never failed in energy"

"What do you understand by energy?" asked the presiden

"That feeling," she replied, "which induces us to cast aside selfish considerations, and sacrifice ourselves for our country"

Fouquier Tinville here observed, alluding to the sure blow she had given, that she must be well practised in crime.

"The monster takes me for an assassin!" she exclaimed, in a tone thrilling with indignation

This closed the debates, and her defender rose. It was not Doulcet de Pontecoulant—who had not received her letter—but Chauveau de la Garde, chosen by the president Charlotte gave him an anxious look, as though she feared he might seek to save her at the expense of honour He spoke, and she perceived her apprehensions were unfounded. Without excusing her crime or attributing it to insanity, he pleaded for the fervour of her conviction, which he had the courage to call sublime The appeal proved unavailing Charlotte Corday was condemned. Without deigning to answer the president, who asked her if she had aught to object to the penalty of death being carried out against her, she rose, and walking up to her defender, thanked him gracefully

"These gentlemen," said she, pointing to the judges, "have just informed me that the whole of my property is confiscated I owe something in the prison as a proof of my friendship and esteem, I request you to pay this little debt."

On returning to the conciergerie, she found an artist, armed Hauer, waiting for her, to finish her portrait, which he had begun at the tribunal. They conversed freely together, until the executioner, carrying the red chemise destined for assassins, and the scissors with which he was to cut her hair off, made his appearance

"What, so soon?" exclaimed Charlotte Corday, slightly turning pale, but rallying her courage, she resumed her composure, and presented a lock of her hair to M Hauer, as the only reward in her power to offer A priest came to offer her his ministry. She thanked him and the persons by whom he had been sent, but declined his spiritual aid The executioner cut her hair, bound her hands, and threw the red chemise over her. M Hauer was struck with the almost unearthly loveliness which the crimson hue of this garment imparted to the ill-fated maiden "This toilet of death, though performed by rude hands, leads to immortality," said Charlotte, with a smile

A heavy storm broke forth as the car of the condemned left the conciergerie for the Place de la Révolution An immense crowd lined every street through which Charlotte Corday passed Hootings and execrations first rose on her path, but as her pure and serene beauty dawned on the multitude, as the exquisite loveliness of her countenance, and the sculptural beauty of her figure became more fully revealed, pity and admiration superseded every other feeling. Her bearing was so admirably calm and dignified, as to rouse sympathy in the breasts of those who detested not only her crime, but the cause for which it had been committed Many men of every party took off their hats and bowed as the cart passed before them Amongst those who waited its approach, was a young German, named Adam Luz, who stood at the entrance of the Rue Sainte Honore, and followed Charlotte to the scaffold He gazed on the lovely and heroic maiden with all the enthusiasm of his imaginative race. A love, unexampled perhaps in the history of the human heart, took possession of his soul Not one wandering look of "those beautiful eyes, which revealed a soul as intrepid as it was tender," escaped him Every earthly grace so soon to perish in death, every trace of the lofty and immortal spirit, filled him with intoxicating emotions unknown till then "To die for her, to be struck by the same hand, to feel in death the same cold axe which had severed the angelic head of Charlotte; to be united to her in heroism, freedom, love, and death, was now the only hope and desire of his heart"

Unconscious of the passionate love she had awakened, Charlotte now stood near the guillotine She turned pale on first beholding it, but soon resumed her serenity. A deep blush suffused her face when the executioner removed the handkerchief that covered her neck and shoulders, but she calmly laid her head upon the block. The executioner touched a spring, and the axe came down. One of Sams n's assistants immediately stepped forward, and holding up the lifeless head to the gaze of the crowd, struck it on either cheek. The brutal act only excited a feeling of horror; and it is said that though even in death her indignant spirit protested against

this outrage—an angry and crimson flush passed over the features of Charlotte Corday.

A few days after her execution, Adam Luz published a pamphlet, in which he enthusiastically praised her deed, and proposed that a statue with the inscription, "GREATER THAN BRUTUS," should be erected to her memory on the spot where she had perished. He was arrested and thrown into prison. On entering the Abbaye, he passionately exclaimed, "I am going to die for her!" His wish was fulfilled ere long.

Strange feverish times were those which could rouse a gentle and lovely maiden to avenge freedom by such a deadly deed, which could waken in a human heart a love whose thoughts were not of life or earthly bliss, but of the grave and the scaffold. Let the times, then, explain those natures, where so much evil and heroism are blended, that man cannot mark the limits between both. Whatever judgment may be passed upon her, the character of Charlotte Corday was certainly not cast in an ordinary mould. It is a striking and noble trait, that to the last she did not repent never was error more sincere. If she could have repented, she would never have become guilty.

Her deed created an extraordinary impression throughout France. On hearing of it, a beautiful royalist lady fell down on her knees, and invoked "Saint Charlotte Corday." The republican Madame Roland calls her a heroine worthy of a better age. The poet André Chenier who, before a year had elapsed, followed her on the scaffold—sang her heroism in a soul-stirring strain.

The political influence of that deed may be estimated by the exclamation of Vergniaud: "She kills us, but she teaches us how to die!" It was so. The assassination of Marat exasperated all his fanatic partisans against the Girondists. Almost divine honours were paid to his memory, forms of prayers were addressed to him, altars were erected to his honour, and numberless victims sent to the scaffold as a peace-offering to his manes. On the wreck of his popularity rose the far more dangerous power of Robespierre, a new impulse was given to the Reign of Terror. Such was the "peace" which the erring and heroic Charlotte Corday won for France.

THE OPENING AND THE CLOSING SCENE IN THE LIVES OF CELEBRATED MEN.

THE contrast which so frequently exists between the external circumstances that surround us at the time of our birth, and those which distinguish the closing scenes of life, affords in the case of illustrious individuals, a curious and not uninstructive chapter in the history of humanity. It does not, however, fall within our present province to perform the part of monitor, by deducing the various important lessons which might fairly be drawn from so copious a source, but simply to furnish to our readers some of the most eminent instances of this kind which are recorded in the biographies of celebrated persons, and which, we hope, will be found both useful and entertaining.

Columbus, the discoverer of the western world, and the son of a poor wool-carder, was born at Genoa early in the fifteenth century, and, having attained celebrity as a navigator and geographist, came to Valladolid, where he was patronised by the Spanish monarch and his courtiers. Here, too, he subsequently expired in the zenith of his fame as a discoverer. No reward had crowned his splendid success. The king was jealous of his renown, and the last days of the great man were embittered by a sense of royal disfavours. When it was too late, Ferdinand endeavoured to make atonement for his injustice by the erection of a monument to the memory of Columbus, inscribed in the Spanish tongue with the words, "For Castile and Leon, Columbus discovered a new world."

Three centuries later, another voyager, Captain James Cook, was born of parents equally low, his father and mother both earning their subsistence as servants on a village farm near Whitby, in Yorkshire. Receiving high and merited honours during his lifetime, Cook's summons to the better land came whilst he was still engaged in the labours of discovery near the Sandwich Islands. In this distant region, a collision having occurred between a party of the natives and his ship's crew, he was stricken down, and, his body being seized by the natives, nothing but a few charred and broken bones were ever recovered of his remains.

The father of John Bunyan was a tinker; and the humble cottage, with its small garden-plot of crocuses and snowdrops, in which his gifted child first drew breath, is yet shown to visitors; but it was in the heart of London, in its Bunhill-field Cemetery, that the immortal author of the "Pilgrim's Progress" was interred; and a monument since erected to his memory marks the spot.

The vicissitudes of fortune are particularly illustrated in the lives of professional persons, whose eminent talents frequently alone raised them to eminence; and of this truth, Sir Thomas Lawrence, the son of a country innkeeper, is a notable example. Visiting royalty on the footing of a familiar acquaintance, fame and fortune crowning his brilliant and successful artist career, a knight of the French legion of honour, and a member of six foreign academies, he died amidst the most sunny prosperity, and his mortal frame rests in the national mausoleum of St. Paul's Cathedral, whither it was attended by the lord mayor, the sheriffs, and a large body of the members of the Royal Academy. A yet more interesting instance is that of the great painter, Claude, whose poverty-stricken parents were compelled to bind him to a pastry-cook, but whose artist-spirit stirring within him spurred him on to leave France for Italy, where he created for himself a reputation that will last as long as those European nations which proudly exhibit so many hundreds of his paintings. Amiable and illustrious, he breathed his last in the Eternal City, at the venerable age of eighty-two years. The first rural landscape painter of England, as he has been termed, the dissipated George Morland reversed the usual order of advancement, and, though born of parents in good circumstances, expired in a sponging-house, whilst Opie, the portrait painter, who passed his earlier years in a carpenter's shop, near Truro, in Cornwall, after winning a high reputation, finally reposed in St. Paul's Cathedral. Another beautiful and wonderful songstress of the last century, Mrs. Billington, the daughter of a German flautist player, was born in London, and after realising a princely fortune by her extraordinary voice—which sometimes brought her as much as £10,000 in the course of twelve months—died on her own fertile estate of Le Terner, near Venice. Our finest bass singer, Bartleman, first saw the light in a London night chamber, and began life as a chorister boy in Westminster Abbey, in whose cloisters he was buried, after a long illness of terrible suffering, and where his modest grave may yet be seen, with the inscription of the commencing notes of Pergolesi's air, "O Lord have mercy upon me!" The infant quaker of the United States, Benjamin West, who was obliged to rob the cat's tail of hair to make his first brush, was born in Philadelphia, and, winning his way to eminence in Rome and England, died president of the Royal Academy, and was followed to his resting-place, in St. Paul's Cathedral, by a train of noblemen, ambassadors, and artists. A very different ending, at least to the feelings of the party concerned, closed the splendid career of the son of a poor bargeman, early in the sixteenth century, who, too poor to pay for a light by which to study, was obliged to prepare for his classes by the lamps in the street and church porches, and, gradually ascending to successive preferments, finally ascended the papal throne, under the title of Adrian VI. His own words, which he commanded should be inscribed on his tomb, will best relate the sequel of his greatness: "Here lies Adrian VI., who esteemed no misfortune which happened to him in life so great as his being called to govern." The well-known lines of Gray, concerning the Miltons and Hampdens, whose talents he thinks remain buried in their native villages, in the absence of exciting circumstances to call them out, would seem to be almost disproved by the numberless examples of villagers who, unassisted by patronage or interest in taking "*le premier, pas qui conte*," have yet attained to the highest honours. Our celebrated countryman, Sir Isaac Newton, a weakly posthumous child, was born in a Lincolnshire hamlet, on a small ancestral farm, and, commencing his education at the parish school, made himself a world-wide reputation and knighted by Queen Anne. Rich in friends and fortune, he was, at last, interred with great pomp in Westminster Abbey. Moliere, the son of an humble Parisian tradesman, could neither read nor write at the age of fourteen, yet he was destined to change the whole character of the French drama, by producing a series of immortal works. He was attacked by his last illness when performing the part of *Le Malade Imaginaire*; and died so deeply regretted, that Louis XIV., although the comedian had been excommunicated, and was regarded with abhorrence by the clergy whom he had so severely satirised,

prevailed on the archbishop to allow his much-prized remains to be buried in consecrated ground. Of musical notoriety is the instance of Joseph Haydn, whose father was an humble wheelwright, and who first drew breath in an Austrian village, when he had attained the age of threescore-and-ten, he witnessed the performance of his own beautiful oratorio of "The Creation," at Vienna, attended by the Princess Esterhazy. His entrance was welcomed by the rising up of all the most illustrious personages in the land, the triumphant flourishes of the orchestra, and the loud reiterated applauses of the whole august assembly. War was then raging between France and Austria, and the aged composer was terribly alarmed by the firing of Napoleon's cannons, at the very gates of Vienna; and one day, having sung the national anthem, "God save the Emperor," three times with great enthusiasm, but trembling accents, he immediately fell into the stupor which preceded his death. Mozart's requiem was performed in his honour, and he was laid in the same distinguished sepulchre which contained the bones of that master composer.

On the steps of the church of St Jean Le Rond, in Paris, in the last century, a policeman picked up the body of a little foundling, left there to perish. A kind glazier's wife took charge of the infant, who afterwards became, under the name of D'Alembert, one of the most eminent mathematicians of France. He died the peaceful death of a great and amiable savant, at an advanced age. Cædmon, our earliest English poet, and who sang of the creation so finely, that some commentators suppose Milton himself did not disdain to imitate him, was originally a cow-boy; and died in the receipt of royal patronage, the revered member of a religious establishment, and leaving his name recorded lastingly in the annals of his country's literature. But to enumerate more of the long list who have raised themselves to eminence from lowly stations, might become monotonous; so, passing by Arkwright, Brindley, Burns, Telford, La Place, Franklin, Canova, and a host of others, who, born in hovels, finally repose in stately tombs, we will notice another class, who, having commenced their career in prosperity, closed it amidst the bitterest reverses of fortune. Of these Sir Thomas More is a notable example. His father was a judge on the King's Bench, whose promising boy, born in London, and surrounded by every advantageous circumstance which could be bestowed by birth, fortune, and education, won the regard of his king, the love of his country, and the veneration of foreign nations, only to close his life on the scaffold, condemned to death by his most ungrateful monarch, for his conscientious adherence to principle. Every one will remember the deplorable termination of life which awaited that early favourite of fortune, the most lovely and unfortunate Mary Stuart, as well as the untimely end of France's wisest king, Henry IV., who was assassinated in his carriage when in the fifty-seventh year of his age. Sir Walter Raleigh, also, the son of a Devonshire farmer, distinguished himself in a prosperous and most romantic career, until he was forced to languish twelve years of his existence in a prison, and, after being unjustly condemned to death, was sent out of the country to command a warlike expedition of importance, for which services he not only received no remuneration, but on his return, fifteen years after the sentence of condemnation had been pronounced, he was, "out of compliment to Spain," beheaded in the Tower of London. Luttle, too, could the humble Pisan mechanic of the 16th century, who, perceiving that one of his boys possessed uncommon abilities, strained his own narrow means to send him to the University, foresee that the young Galileo would become one of the world's most celebrated scientific men, and then conclude his famous life blind, dead, and crippled, under the application of torture in the dungeons of the Inquisition.

Born of an ancient family in Northamptonshire, the [illegible] celebrated Archbishop Thomas [illegible] from the character of mingled sweetness, power, and weakness, which strongly enlisting our sympathies, first raised him to the highest station in the Church, and afterwards betrayed him into a false profession of his religious sentiments; expiated in some measure by the subsequent nobleness of his recantation, and the heroism with which he met a martyr's fate, and expired amidst the flames at Oxford. Cradled in regal pomp, Charles V., at sixteen years of age, succeeded to the kingdoms of Arragon and Castile, then became king of the Romans, and emperor of Germany, and forty years later gave up the government to his son Phillip, and, retiring to a monastery, died, after two years' practice of most un-kingly austerities, in a state of the deepest melancholy, which appears only the fitting retribution of one who had mowed down his subjects by hundreds of thousands in the diabolical game of war. It would be matter of whimsical speculation could we trace the history of all the great men who were bred in a carpenter's shop. Certainly a very large number have sprung from parents engaged in this humble profession, which must ever be a source of sacred interest to all who profess the faith of the carpenter's son. One notable example is that of Hildebrand, the talented son of a carpenter in Tuscany, who was born early in the 11th century. This clever, energetic boy became an inmate of the monastery of Cluny, near Macon, in France, and in the retirement of its shady gardens, formed, even in boyhood, those vast plans of church reformation which, amidst the most arduous difficulties, were afterwards carried out when the young monk became Pope Gregory VII. He sustained many deep discouragements, mingled with brilliant triumphs over his enemies and the Church's guilty errors. But, though lying on his dying bed that he had sown good seed, whose fruit would appear hereafter, yet, when thus surrounded by his sorrowing bishops, who knew that they should soon see his face no more, he could not help murmuring, "I have loved justice, and hated evil, therefore I die in exile." An aged bishop bent over him, and tried to comfort him by replying, "Not so, holy father; you cannot die in exile, for God has given you all nations for a heritage, and the ends of the earth for a dominion," and while these words were speaking, the carpenter's son expired. His inveterate enemy, Henry IV. of Germany, soon afterwards ended his royal life on a door-step, where he died of cold and hunger,—thus adding another name to the long list of regal persons whose lives have ended tragically. What a peaceful contrast is presented by the closing scene of the sweet-gifted poet Petrarch, whose paternal inheritance, though sanctified, did not prevent his leaving a rich legacy of mental fruits to his country. When seventy-two years of age, wasted as he was by repeated fevers, he still struggled on to acquire knowledge, and to give expression to his own vivid conceptions; and, one July morning, was found dead in his study, seated in his favourite arm-chair, and his head resting on the open pages of a book. Our own peculiar national poet, Cowper, born of aristocratic parentage, and who spent many of his best days in writing for the cottage homes of England, expired in that clouded state of intellect which seems to us so mysterious, and which at the same time proves immortality so clearly, by showing us how independent are the spirit and its perishable earthly tenement of each other.

It would afford us an instructive chapter in the annals of dying moments, were we able to depict the previous inner life (now imperfectly known) of the many sensitive beings who have gone to their last homes, either without waiting their summons from Him who endowed them with existence, or those who died unconscious of the great change which awaited them, or were hurried to another world by the injustice of their fellow-men, from the eccentric, clever author of the "Tale of a Tub," down to our pure-hearted, single-minded statesman Sir Samuel Romilly. Such a *resumé* would be full of deep and melancholy interest, but would occupy too much space to be here entered upon, comprising, as it must do, "the noble army of the martyrs,"—the victims of secret imprisonment in Spelberg, the Bastille, and other fearful dungeons, and the painful instances of gifted individuals who, like Keats, Chatterton, Toussaint L'Ouverture, and many others, died under the effects of the less open, but not the less certain, oppression of their fellow-creatures. A few more examples of those great men who have left their broad signature indelibly inscribed on the roll of time, and we must bring these desultory remarks to a conclusion.

Let us look at the two most popular poets in our own country twenty years since: one, of high birth, pursued a brief meteoric career, dazzling in its occasional brilliancy, but obscured by sin and a fearful display of noble powers misused for evil, and his fitful light expired in a transient gleam of

splendour, when devoting his young but already wasted energies in the cause of Grecian freedom at Missilonghi; the other mighty minstrel of the north, also lame, though of far less aristocratic descent, passed an almost blameless life of untiring industry, and, after blessing our country with an inexhaustible treasury of high-hearted, invigorating romance, died a grayheaded man in the noble abode which he had himself erected on the banks of the Yarrow, and for long ages to come, will pilgrims continue to visit the two famous shrines of Newstead and Abbotsford. Schoolboys, whose imaginations are inflamed by the romantic incidents with which the lives of the ancient Greeks and Romans are filled will wonder that we can pass over so rich a store of suitable illustrations to our subject, but they would require a chapter to themselves, though it is with reluctance we omit all notice of Plutarch's heroes. The very name of this well-known biographer recalls a host of bloody exploits, of Pompey's death—he, beloved by the Romans in his youth, and who embracing his wife, well aware that his end drew near, repeated these lines from Sophocles—

"Whoever to a tyrant bends his way,
Is made a slave, e'en if he goes his freeman"

And then stepping into a smaller boat, in order to land on the Egyptian coast, he was murdered by the conspirators, and his ashes were interred in his Alban villa. Then, who does not remember the assassination of Caius Cæsar, by Brutus and others, within the walls of the Senate, and the expiatory decree, after the deed was done, that he should be honoured as a god? And what young student does not dwell with delight on the history of the stern, upright Cato, who, when he had resolved on self-murder, went to bed, and after reading Plato's beautiful dialogue on the soul, calmly put an end to his existence, but a few years before the advent of Him who would have taught him how inconsistent was such a close to the life which the God who gave it had alone the right to take away? How we used to revel in the account of the Roman infant, born in a fuller's workshop, to whose nurse a vision appeared, telling her that she was nurturing a great blessing for all Romans; but whose nursling, after a mingled course of weakness, crime, and many good deeds, was murdered on the sea-shore, leaving his discourse on old age, and numerous other writings, to instruct posterity and render his name famous. The Romans seem to have looked upon self-destruction with peculiar satisfaction, for they furnish a singularly large list of complacent executioners in this line. Brutus, by some supposed to be of plebeian parentage, was one of those notorieties, and received a fatal wound by falling upon his sword in the presence of friends who had passed the night with him, but the strangest of the self-immolaters were Antonius and Cleopatra, the former of whom, having lost a battle, and, in despair at the supposed death of his inconstant and beautiful wife, pierced himself with a dagger and then, finding that Cleopatra still lived, was drawn up to her by women into an upper apartment, where he soon expired, and his example was imitated by his extraordinary wife, who feasted herself on delicacies, and then, decked in diadem and regal robes, allowed an asp to sting her to death. It is difficult to quit the Eternal City when once author or artist has entered within its precincts; yet, ere we leave them, we would reverently advert to the sacred victim of man's injustice, who was sacrificed within its walls only one century later than the barbarian examples just quoted. Born of no mean lineage, how astonished would the proud young Hebrew have felt, had any one prophesied in his youth that, a few years later, a new faith should have arisen, which would no longer single out the Israelites as a peculiar people to be solely honoured by its adoption; and that, in defence of this new creed, he would abjure friends, country, the time-honoured ritual of his native Jerusalem; and, supporting himself by the work of his own hands, would finally lay down his life in the far-famed Roman city, which his execution, by the monster Nero, was thenceforth to render yet more hallowed in the sight of nations.

Of kingly departures to another world, perhaps the most peacefully interesting is that of Louis the Ninth, who was born when hot werfare was raging with the Albigenses, and who, well brought up by his gentle, pious mother, ended his days in the Holy Land, for whose rescue from the Turks, he believed it to be his sacred duty to fight. On his dying bed he sent messages of affection to other sick persons, wasting under the hot sun of Palestine, and dictated the holiest precepts to his son and successor. He was then, at his own request, laid on a couch of ashes, and the long-expected fleet bringing succour to the plague-stricken crusaders, came in sight as the truly-pious king breathed his last. A few centuries earlier, but in the same eastern land, a little baby, born, it was declared, amidst the strangest portents in heaven and earth, grew up to found a religious empire, which, even now, exceeds that of the whole Christian race; but who, when the closing scene arrived, was compelled, like other mortals, to supplicate the Omnipotent Father of all for support in the hour of death. He gave orders that his slaves should all be set free, and, with his head resting on the lap of his beloved wife, Avesha, he exclaimed, in a faint voice, "O, Allah, be it so!" among the glorious associates in Paradise," and became numbered with the dead. To rightly estimate the sublimity of the death-bed of Ignatius Loyola, would require that his arduous life-time should be well studied; but those who have followed the high-born Spanish page, gallant and warlike, through his eventful existence, will enter with awe his lonely chamber, in the city of Rome, at sunrise, on the 30th of July, 1556, where lay extended the emaciated form of the founder of the great Jesuit sect. His pulse was failing, but his eye retained its vigour, and, as the ministering monks came in and knelt around their dying superior, the single word, "Jesus" escaped his lips, and his spirit passed away. Let us next turn to the naughty little son of a poor watchmaker of Geneva, who afterwards made himself a world-wide reputation as an author and a disinterested socialist, of modern times (no ordinary praise), and the summons having gone forth, he asked his wife to sit beside him, desiring her, at the same time, to open the window, and, looking out at the beautiful green of the fields, he observed, "How pure and beautiful is the sky! There is not a cloud. I trust the Almighty will receive me there above." Dazzled by the brightness of the day, he then fell forward, and, in so doing, expired. Need we say that his name was Jean Jaques Rousseau? He lies buried in an island shaded by poplars, on a small lake in the park of Ermenonville. In the Rue Charles, on the 15th of August, 1760, in the town of Ajaccio, beheld a young and handsome woman, the wife of an acute lawyer of a respectable Ghibelline family, she has been to Mass, and, on her hasty return, is resting on a couch covered with tapestry representing the heroes of the Iliad, on which she gives birth to an infant, whose beauty promises to rival her own, and who, hardly educated, grows up in the same retired island, and prepares to follow the profession of arms.

Fifty-two years after the birth of this child, we must transport ourselves, in imagination, to another island, far, far away from Corsica, and there, in a secluded chamber, guarded like a prison of importance, by military videttes, we beheld the celebrated Corsican whose name has been the watch-word of aggression throughout Europe for at least a score of years. Extreme unction is administered amidst the raging of a tremendous hurricane, which roots up the state-prisoner's favourite willow-tree; and, on the 5th of May, the French hero of a hundred battles, muttering "*tête d'armée*," breathes his last, and, a few days later, is borne to his grave by British grenadiers, his requiem being fitly performed by salvos of artillery over the tomb on the rocky islet, whose far-off seclusion had served to restrain any further outbursts of the fiery spirit which had so long desolated the European world. Twenty four years after this, the dust of the mighty warrior is disinterred, and, amidst unbounded enthusiasm, is deposited in the Hotel d'Invalides, on the banks of the Seine.

XANTHUS.

[The above clever article is extracted from a well-conducted periodical entitled the *Biographical Magazine*. It is published in weekly numbers by Mr. Passmore Edwards, of Horseshoe-court, Ludgate-hill. This gentleman is well known for his advocacy of temperance, free-trade, universal peace, and other well known topics of the day. Under his editorship, the Magazine deserves to succeed.]

MEMOIR OF BENJAMIN WEST, R.A.

THROUGH all the occupations which employ life, the moral principle may be favourably cultivated if mankind be so disposed; this can never be more substantively promoted than when a disposition prevails to give pleasure to others—when an ardent desire to please is the impulse to action, coupled with our own approbation of the means. We all love pleasure; it is the object of our continual search, to obtain it we readily part with a portion of our substance; it is this mutuality of pleasure and profit which forms the basis of the social system. The great question therefore is, what pleasures are most conducive to happiness? or rather, what is pleasure in reality? Whatever has a tendency to lead us astray, everything which either lessens or destroys moral rectitude, is very improperly so designated; it is anything but substantive pleasure—for, although it may beguile us for a time, it will eventually be found surreptitious, to be of a base family, every way calculated to entail misery, then, instead of being cheered by pleasurable remmiscences, we shall feel the gnawings of remorse.

Pleasure can never be legitimate unless it be innocent, everything tending to enlarge the mind, to excite benevolence, to elevate moral courage, or give play to genial feelings, is praiseworthy, and deserves encouragement. Thus viewed, we should say painting decidedly falls within the range of sterling pleasure, because it is an innocent and instructive amusement, well suited to yield delight and unfold generosity; if it be urged that it may be turned to other purposes, we reply, that the abuse of any given principle does not affect its merits, those must remain unimpaired, independent of adventitious circumstances, with this consideration, few men have contributed more rational gratification, or roused liberal feelings into activity, than

BENJAMIN WEST.

BENJAMIN WEST, R.A., who was a native American, descended from a respectable English quaker family, who emigrated with the truly illustrious William Penn, the founder of Pennsylvania, when that real patriot crossed the Atlantic for the purpose of settling in the New World, that he might withdraw himself and his friends from persecution in the Old. His parents resided at Springfield, within ten miles of Philadelphia, where he was born 10th October, 1738. At the early age of seven, his propensity for drawing displayed itself by sketching with pen and ink the likeness of an infant sleeping in a cradle; some Indians taught him how to prepare the red and yellow colours with which they painted themselves, pencils he made by cutting hairs off the cat, subsequently he obtained a piece of indigo, and thus became furnished with three primary colours, in the use of which he employed nearly his whole time, absenting himself from school to work in the garret, until complaint from his master brought his predilection to light. Mr. Pennington, a relative, calling upon his father, was surprised to find so many rude paintings about the house; when he learned by whom they were executed, he expressed himself pleased, and made him a present of a box of paints, camels' hair pencils, some prepared canvass, with a few engravings. From an examination of the latter our youth composed and painted some pictures, one of which was sent him from America by his brother, after the lapse of fifty-seven years, and placed in juxtaposition with his celebrated picture of "Christ Rejected," then exhibiting at the great rooms in Pall Mall with most distinguished eclat. He frequently declared "there were in that juvenile attempt certain inventive touches which, with all his subsequent experience, he had never been able to surpass." Such an opinion was entertained of young West's rising merit, that he was carried by a friend to Philadelphia, and introduced to Richardson the portrait painter, who lent him the works of Fresnoy, and made him acquainted with a number of pictures and drawings. This decided him; he resolved to adopt the profession, and returned home, his mind wholly engrossed by painting. His family, perceiving his bent, wisely gave up their scruples, but not until a consultation of the elders of their faith had been held, who made a report in his favour. Thus sanctioned, he set to work in earnest, painted some boards, which were soon purchased, for which he received two dollars, one of his admirers, a Mr. Henry, urged him to paint "the Death of Socrates," being unacquainted with the subject, he confessed his ignorance, upon which his friend gave him Plutarch to read. Here another difficulty occurred, he had hitherto only represented the human face, or bodies clothed; he therefore felt he could not do justice to the naked figure. His friend, however, hit upon an expedient that removed his fears; a handsome young slave was brought into the room with all those parts uncovered requisite to enable him faithfully to portray the catastrophe of that vile tragedy. West now for the first time had nature full in his view, his conviction was decisive, that it was in her school alone perfect models were to be found. The picture spread his fame, procured him employ, and made him numerous friends. Among these was Dr. William Smith, provost of the college of Philadelphia, who, perceiving that the painter's education was very imperfect, offered to take him under his own tuition. The offer was gladly accepted, and the student quickly did honour to his professor. About this time he purchased out of a Spanish prize a picture of Ignatius Loyola, supposed to be painted by Murillo, which he copied with great success, and was in consequence advised to paint the "History of Susanna, the Elders, and Daniel," this highly-valued picture, into which he introduced forty figures, and executed in a masterly style, was destroyed by fire. He went to New York, and established himself as a portrait painter. The progressive increase in his prices will best speak to the general estimation of his talent. In 1751 he had one guinea for a likeness, in 1755, two; in 1756, three, in 1758, four, which was augmented in 1760 to five, and ten guineas for a half-length. A commercial friend now offered to frank him to Italy, with whom he went to Rome, where his fame had preceded him. He expressed a wish to see the works in the Vatican, a day was appointed, it was so contrived that the first object should be a full view of the Apollo. The moment he beheld it he exclaimed, "How much it resembles a young Mohawk warrior!" Somewhat disappointed, they inquired what a Mohawk was? He then explained that "he had often witnessed the elasticity of their limbs, their dexterity with the bow and arrow, the expression which active life gave to their chest, and the dilation of the nostrils, which their quick breathing while engaged in the chase always produced." This was allowed to be as perfect a criticism as had ever been delivered, and gained him the esteem of all the connoisseurs. His health being affected, he went to Venice and Parma; at the last he copied the "St. Jerome" of Correggio so excellently, that he was chosen a member of the academy of that city; a similar dignity was also conferred upon him by those of Florence and Bologna, which cities he also visited, and where he was equally caressed.

Quitting Italy, he came over through France and Switzerland to England, on which he first set foot in August, 1763. He was well received, his merit acknowledged, and visited by the enlightened Reynolds, who, far from feeling envy, took him by the hand, introduced him everywhere, and advised him to exhibit his two pictures, "Cymon and Iphigenia" and "Angelica and Medora," which he did at Spring Gardens, where they attracted crowds of visitors, recruited his exchequer, and met with general commendation; this success induced him to give up the idea of returning to America, although an attachment he had formed, to which the young lady ardently responded, offered an almost unconquerable incentive. However, determined to locate on our island, he wrote over to his father, his mother being dead, requesting him to escort his destined bride, who was the daughter of a merchant in Philadelphia His sire consented, and they arrived safe in London, where the marriage between himself and Miss Stowell was celebrated The union lasted full fifty years, she died in 1815. He painted Agrippina for Dr. Drummond, the archbishop of York, with which he was so pleased that he caused it to be shown to George III, who, delighted with the performance, became his immediate patron, cultivated his acquaintance, was frequently at his studio in Panton-square, gave him employment, and continued his steady friend for more than half a century. It is rather singular that the monarch and his painter were both born in the same year, and both died within two months of each other.

In 1765 the Society of Artists was incorporated by royal charter; West became both a member and a director, jealousies however crept in; it was dissolved, and the Royal Academy was founded on its ruins His rise was rapid, and his paintings numerous On 23rd February, 1792, that elegant scholar and finished artist, Sir Joshua Reynolds, paid the great debt of nature, when Mr. West was unanimously elected to supply his place in the president's chair

In 1802 he visited Paris, where he was waited on by a deputation from the National Institute, who met him in the Gallery of Arts, and invited him to a sumptuous banquet. In the same year, then sixty-five, he painted Christ healing the sick, for the quakers of Philadelphia, to aid them with funds to erect an hospital in that city It was exhibited in our metropolis, where the rush to see it was so great, and its merit so highly prized, that he was offered three thousand guineas for it by the British Institution; this he accepted, upon condition he should be allowed to make a copy, with alterations, for his American friends, who still derive large profits from its exhibition. In 1817, when verging upon fourscore, he painted "Death on a Pale Horse," which is a masterpiece both in style and imagination. The design is full of grandeur, the contour gracefully majestic, the grouping of the first order. The ideal King of Terrors is terrifically grand, nor less so is the supernatural courser that he bestrides, and which, issuing from the womb of night, seems to paw space, delighted at the desolation that attends its steps The right arm of the spectral monarch is wreathed with a serpent, the other is armed with meteoric plagues, beneath lies a dead female, with her husband and motherless child lamenting their loss, and awaiting their own dissolution. On the right, human desolation is depicted under a variety of sanguinary forms, while behind, in a murky sky, are seen through a dusky veil the ghastly shapes of infernals, that in the "palpable obscure" find out their uncouth way Before this group is the representation of the black horse of the third seal, with its rider and the balances in his hand, approaching the foreground are two figures of Pestilence and Famine vigorously conceived, and most powerfully expressed Hence to the right, the opening of the first and second seals obtains a "local habitation." The white horse, and the Saviour of men with a bow in his hand, going forth conquering and to conquer, is the finest figure in the composition The head of Christ is in profile, and the eye directed to a beatifical vision in the heavens! Behind this is the red horse, bestrode by a helmed warrior, spreading around him, with unfeeling sternness, misery and carnage. In this sublime composition, where less regard is paid to colour than to expression, it must be apparent that the object of the venerable artist was to produce a great moral effect. On the 11th March, 1820, he closed his mortal career, his faculties remained vigorous to the last. He was buried with great funeral honours in St. Paul's cathedral, beside Reynolds, Opie, and Barry, to which sepulchre his remains were accompanied by a numerous train of artists and private friends.

It has been remarked that genius is a gift from nature; this is probably true, but if unaided by industry, we are of opinion it would be little worth. Its power, when so combined, was perhaps never more forcibly evinced than in young West, the child of quaker parents who had fled from Europe the more effectually to carry out and preserve the primitive doctrines of George Fox, whose tenets proscribe music and painting, he had to struggle with long and deep-rooted prejudices, as well as against parental authority; yet so decided was the bent of his inclination, so quiet his demeanour, and so persevering his labour, that he overcame all obstacles, removed their objections, and thus established for them, as well as for himself, an enduring fame. It has been objected to him that his colouring is too glaring, too hard and edgy, and we believe it is allowed that below the knee his figures are deficient in their anatomy.

The following list includes the greater portion of those pictures which occupied the long period of his life:—

Agrippina landing at Brundusium with the Ashes of Germanicus
Alfred and Guthrum's Lodge with the Pilgrim
Apollo Slaying the Rebels and Will of Cæsar to the People
Apotheosis of Princes Alfred and Octavius.
Angelica and Medora—Battle of the Boyne.
Brazen Serpent in the Wilderness—Battle of La Hogue.
Cave of Despair, from Spenser—Cordelia and Lear.
Commence of Snip [illegible] and Iphigenia
Cromwell dissolving the Long Parliament
Christ rejected by the Jewish High Priest, the Elders, and the People—Landing of Charles II at Dover
Daniel interpreting the Handwriting on the Wall
Death on the Pale Horse, as described by St. John in the Apocalypse.
Death of Bayard—Diana and Endymion
Departure of Regulus from Rom—Death of Wolfe.
Death of Nelson—Edward III passing the Soane
Edward III. embracing his Son after the Battle of Cressy
Edward the Black Prince receiving John, King of France, Prisoner after the Battle of Poictiers
Erasistratus discovering the Love of Antiochus
Expulsion of Adam and Eve from Paradise.
Grecian Daughter—Hector and Andromache
Hannibal swearing eternal Hatred to the Romans.
Jupiter and Europa—King Lear
The Lord's Supper—Moses receiving the Tables
Macbeth and the Witches—Moses striking the Rock
Penn's Treaty with the Indians for Pennsylvania
Philippa, Queen of Edward III, at the Battle of Neville's Cross.
Pylades and Orestes—The Presentation in the Temple
Queen Elizabeth going in Procession to St Paul's after the Defeat of the Spanish Armada
Queen Philippa [illegible] Burghers of Calais.
[illegible] and Pisa [illegible] and Ataida
The Raising of [illegible] Daniel [illegible]
St. Peter preaching—The Stoning of Stephen.
The Three Marys at the Sepulchre
Una, from Spenser's Fairy Queen—Venus and Cupid
Venus lamenting the Death of Adonis
William de Albanac and his three Daughters
Our Saviour receiving the Lame and the Blind in the Temple to heal them a Gift to the Pennsylvania Hospital.
The first Installation of the Knights of the Garter, for the Audience Chamber at Windsor Castle.

As Altar Pieces.

Devout Men taking the body of Stephen, for St Stephen's church, Walbrook
St Michael the Archangel, for the Chapel of Trinity College, Cambridge
Raising of Lazarus, for Winchester Cathedral
The Annunciation, also the Nativity, for the new Church at St. Marie-la-bonne.
The Conversion of St. Paul, for a Church at Birmingham.
The Ascension, The curing of the Demoniacs, The descent of the Holy Spirit upon our Saviour, St Paul and Barnabas rejecting the Jews, for the King's Chapel at Windsor.

The pictures enumerated are, most of them, in the possession of English noblemen, or are hung in public galleries.

FIRE! FIRE! FIRE!

The following cautions and advices respecting fires, extracted from an expensive volume, cannot be too widely circulated.

Fires are but too frequently said to arise by accident, which is merely a condensed phrase, equivalent to *carelessness* and *recklessness*. There are few fires that might not have been prevented by the exercise of *common prudence*, and a vast number have been caused by *negligence*, arising from sheer *laziness*. As familiar instances may be mentioned, the permitting of sparks to fall on the ground and remain there, without extinguishing them; carrying a *naked* candle into rooms containing inflammable substances, &c. &c.

The following PREVENTIVES are suggested —

1. Avoid leaving your candle burning at the side of your bed, but place it on a table or the floor, at a good distance from any article of linen, or other equally inflammable substance. *Rush, wax, floating lights, Child's*, or *Albert lights*, are the safest for night-burning. The practice of reading in bed cannot be too much censured, it is a frequent cause of fires

2. Never set aside a bucket or box containing hot ashes or cinders in a closet.

3 Never throw a piece of lighted paper, cigar, or other burning substance on the floor; even in the open street this is dangerous, should such fall by accident, immediately extinguish them by treading upon them

4. Never blow gas lights out, but always extinguish them by turning off the supply.

5. Should the smell of gas be strongly perceived, immediately turn off the cock at the meter, and avoid carrying a lighted candle into the part where the escape has taken place before the gas has been removed by thorough ventilation. Attention to this point will prevent the possibility of an explosion.

6. Have your chimneys kept in a clean state by frequent sweeping

Fires might often be readily extinguished if when first discovered, by the timely application of a few buckets of water Water may be applied with good effect by means of a handbrush. When an apartment is discovered on fire, the door, chimney, and windows should be immediately closed, if possible, and only opened for the purpose of projecting water upon the flames By this means the supply of air will be cut off, and rapid combustion prevented The neglect of this precaution has often caused a mere smouldering fire, that might have been easily put out, to burst into an inextinguishable mass of flame It has been proposed to add common salt or pearlash to the water thrown on fires, as even a weak solution of those substances speedily stops combustion Such a plan is very plausible, and may easily be applied, by adding the same matter to the buckets of water used to feed the engine for the first few minutes of its working; but when a fire has acquired any extent, the action of such substances becomes scarcely perceptible

Escape from apartments on fire may generally be readily effected by creeping on the hands and knees In this way the window or door may be reached It is found that the atmosphere of a room so full of smoke as to produce suffocation to a person standing upright, may generally be safely breathed, on nearly a level with the floor. Should descent by the staircase be found impossible, then the window should be immediately sought. Here, presence of mind is of the utmost importance If a ladder or fire-escape be not provided by persons without, a rope should be made by tying the sheets and blankets of the bed together, one end of which should be firmly secured to a chair, table, or, still better, to one of the bedposts, and with this apparatus descent should be cautiously attempted. Jumping out of the window should be avoided, as most persons in doing this run as much danger as they do by remaining in the burning building Persons have frequently lost their lives by hastily throwing themselves out of window, under the dread of being burnt alive, who would have been rescued by those without, had they waited but a few moments longer When it is impossible to escape from a burning building by the stairs or windows, retreat may sometimes be secured by a trap-door opening on to the roof, or by a skylight, when, [illegible] by itself, the roof of one of the adjoining [illegible] may be gained with safety, provided common caution be observed. *Fire escapes* of various kinds are now placed in conspicuous parts of the metropolis; these some by-stander should run for without delay, as well as the engines, by the working of which the fire is to be extinguished.

The *clothes of females and children*—(for the clothes of *males*, being for the most part composed of wool, do not readily take fire) —when on fire, may be most readily extinguished by rolling the sufferer in the carpet, hearth-rug, table-cover, a great-coat, cloak, or any other woollen article at hand. If this be expertly done, the flames will be rapidly put out. Should assistance not be at hand, the person whose clothes are on fire should throw herself on the ground, and roll the carpet round her as before described; or if such a thing is not in the room, she should endeavour to extinguish the flame with her hands, and by rapidly rolling round and round on the floor. In this way the fire will be stifled, or at least the combustion will proceed so slowly that less personal injury will be experienced before assistance arrives. But if, on the contrary, the person whose clothes are on fire remains in an upright position, the flames will naturally ascend, and scorch the face and other unprotected parts of the body. The advantage of falling flat on the ground is also manifest from the fact, that, nine times out of ten, it is the lower part of the dresses of females that first catch fire A lady's muslin dress taking fire at the skirt would burn from bottom to top, and produce a fatal density of flame in half a minute while she is standing upright; but when lying down, even though she took no pains leisurely to extinguish the flames, ten minutes would probably elapse before it would be consumed, and the flame might at any instant be extinguished by the thumb and fingers Here, again, the exercise of *presence of mind* is of unspeakable importance

The addition of half an ounce or an ounce of alum or sal ammoniac to the last water used to rinse a lady's dress, or a less quantity added to the starch used to stiffen it, would render it uninflammable, or at least so little combustible that it would not *readily* take fire and if it did, would be *slowly* consumed *without flame*.

DILIGENCY OF "THE MEN."—Mrs. Partington says that when she was a gal she used to go to parties, and always had a beau to escort her home But now she says, the gals undergo all such drudgeries, the task of extorting them home revolves on their own selves The old lady drew down her specs, and thanked her stars that she had lived in other days, when men were more palpable in degree rating the worth of the female sex

---

LITERARY NOTICES.

CASSELL'S SHILLING EDITION OF EUCLID.—THE ELEMENTS OF GEOMETRY, containing the First Six, and the Eleventh and Twelfth Books of Euclid, from the text of Robert Simson, M D, Emeritus Professor of Mathematics in the University of Glasgow, with Corrections, Annotations, and Exercises, by Robert Wallace, A M, of the same university, and Collegiate Tutor of the University of London, is now ready, price 1s in stiff covers, or 1s 6d neat cloth, 216 pages, crown 8vo.

THE ILLUSTRATED EXHIBITOR AND MAGAZINE OF ART—The First Volume of this splendidly embellished work, handsomely bound, price 6s 6d, or extra cloth gilt edges, 7s 6d, is now ready, and contains upwards of Two Hundred principal Engravings and an equal number of minor Engravings, Diagrams, &c

HISTORY OF HUNGARY, WITH UPWARDS OF EIGHTY ILLUSTRATIONS —The First Volume of the New Series of THE WORKING MAN'S FRIEND, neatly bound in cloth, price 1s 6d, contains the completest History of Hungary ever published, also a History of China and the Chinese, with Forty-six Illustrations of the Manners, Customs, Public Buildings, Domestic Scenes, &c, of this most remarkable people, together with numerous instructive Tales and Narratives, Biographies, with Portraits, Scientific and Miscellaneous Articles, &c

CASSELL'S EMIGRANTS' HANDBOOK, a Guide to the various Fields of Labour and Wealth of the Globe, Second Edition, with considerable Additions and Map of Australia, with the Gold Regions clearly marked is now ready, price 9d

THE PATHWAY, a Monthly Religious Magazine, is published on the 1st of every month, price twopence—32 pages enclosed in a neat wrapper No 32, for August, is now ready, and Vols I and II, neatly bound in cloth and lettered, price 2s 6d each, may be obtained by order of any Bookseller

SCRIPTURAL LIBRARY FOR THE YOUNG, in Shilling Volumes.—The first two volumes of this instructive series of works, "THE LIFE OF JOSEPH," illustrated with sixteen choice engravings and maps, and "THE TABERNACLE, its PRIESTS, and SERVICES," with twelve engravings, are now ready "THE LIFE OF MOSES" is in the press.

MISCELLANEA.

Tale of a Pin.—In an early month of the year 1778, with a tolerable education, and with many natural qualifications for a financial life, Jacques Laffite was seeking for a situation as a clerk. He had high hopes and a light heart, for he brought with him a letter of introduction to M Perregaux, the Swiss banker. But with all his sanguine anticipations and golden day-dreams, he was bashful and retiring It was with a trembling heart that the young provincial appeared before the Parisian man of bonds and gold; he managed to explain the purpose of his visit, and presented his letter of recommendation. The banker quietly read the note "It is impossible," said he, as he laid it aside, "that I can find room for you at present, all my offices are full; should there be a vacancy at a future time, I will see what can be done, in the meantime, I advise you to seek elsewhere, as it may be a considerable period before I shall be able to admit you" Away went sunshine and prosperous visions! Disappointed and gloomy, poor Jacques left the presence of the polite banker As he crossed, with downcast eyes, the court-yard of the noble mansion, he observed a pin lying on the ground, his habitual habits of frugality, amidst his disappointment, were still upon the watch; he picked up the pin, and carefully stuck it into the lappel of his coat. From that trivial action sprang his future greatness, that one single act of frugal care and regard for little things opened the way to a stupendous fortune. From the window of his cabinet M. Perregaux had observed the action of the rejected clerk, and he wisely thought that the man who would stoop to pick up a pin, under such circumstances, was endowed with the necessary qualities for a good economist; he read in that single act of parsimony an indication of a great financial mind, and he deemed the acquisition of such a one as wealth itself Before the day had closed, Laffite received a note from the banker. "A place," it said, "is made for you at my office, which you may take possession of to-morrow" The banker was not deceived in his estimate of the character of Laffite, and the young clerk s on displayed a talent and aptness for his calling that procured his advancement from the clerk to the cashier, from a cashier to a partner, and from a partner to the head proprietor of the first banking-house in Paris. He became a deputy, and then president, of the council of ministers What a destiny for the man who would stoop to pick up a pin!

Excellent News.—The working classes in Sheffield, if we may judge by the savings-bank returns, are doing exceedingly well, the deposits for 1851 showing an increase of £15,669 over the previous year, and of £23,122 over the year 1849.

How the Taxes on Knowledge Affect the Public—Mr. Alfred Novello, the musician, writing to the *Hull Advertiser*, says, that he would have an advertisement in every country newspaper were it not for the advertisement duty, which may be termed a duty for the prevention of trade.

Absence, like every other pang, weakens by repetition, the friend who has once returned in safety may return so again—we soon draw precedents from the past.

A Proverb for Clever Boys—Positive decision in youth upon things which experience only can teach, is the credential of vain impertinence.

Chinese Theory of Justice.—"Depend upon it," says the author of the "Porcelain Tower," "justice that is given away is not of the best quality—*it goes for nothing*; but if people pay well for it, they may be secure of the prime article." We are on a wrong plan, you may be sure, and do not consult the greatest happiness of the greatest number. The Chinese practice does so. The offender bribes the judge, and is happy to escape punishment; the judge receives the bribe, and is happy to put money in his purse, and the offended party only is dissatisfied. Now, of these three persons, the offender and the judge constitute a greater number than the man offended, in the proportion of two to one; and, therefore, there can be no question as to the propriety of their being made happy, although at his expense But if the offended can bribe higher than the offender—in words; if he can afford to pay for a larger slice of justice—that of course works a radical change in the aspect of affairs; and *he* must have justice then, his due purchase, at the market value

"Quid Pro Quo"—"Take care of your pockets," cried the conductor of one of the more aristocratic "threepenny 'busses," to a gentleman who was in the act of getting into one of the new "penny" ones" "Just what I am doing," was the reply.

A Conundrum from the First Form—Why is a schoolmistress like the letter C?—Because she forms lasses into classes

A Truth—There is always more error in hatred than in love

What would our Ancestors have thought of this?—A despatch was received at Vienna, the other day, from London, *viâ* the submarine telegraph, in three hours and a half!

THE WINDS.

BY MISS ALICE CAREY.

Talk to my heart, O Winds!
Talk to my heart to-night,
My spirit always finds
With you a new delight
Finds always new delight
With your silver talk at night

Give me your soft embrace,
As you used to long ago,
In your shadowy trysting place,
When you seem'd to love me so
When you sweetly kiss'd me so,
On the green hills, long ago

Come up from your cool bed,
In the stilly twilight sea,
For the dearest hope lies dead,
That was ever dear to me
Come up from your cool bed,
And we'll talk about the dead.

Tell me, for oft you go,
Winds—lonely Winds of night—
About the chambers low,
With sheets so dainty white,
If they sleep through all the night
In the beds so chill and white.

Talk to me, Winds, and say
If in the grave be rest?
For oh! Life's little day
Is a weary one at best.
Talk to my heart and say
If death will give me rest.

NOTICES TO CORRESPONDENTS.

Charles R—Cambogia, or Camboge, is the product of the *Stalagmites Cambogioides*, the leaves and young branches of which, being bruised, emit a yellow juice. This is received in cocoa-nut shells or earthen vessels, and is allowed to thicken by evaporation. It is afterwards formed into rolls or cakes. The finest sort is that in rolls, and is called the *Pipe Camboge of Siam*. For your purpose, that of a clear wash, the best plan would be to dissolve a portion in spirits of wine, and then reduce it to the shade you require by adding clear soft water.

A Young Engineer—Robert Fulton, the first to establish steam navigation on the American seas and rivers, was born in 1765, in Pennsylvania. He died in 1815.—In answer to your second inquiry, we are sorry to add that, though his reputation became fully established, and though by his invention his country was enriched to an astonishing extent, lawsuits in reference to certain patents kept him poor, and anxiety and excessive application shortened his days. But do not let this discourage *you*, the world has grown wiser, and henceforth useful inventions will, no doubt, meet their due reward.

W. Kinsman—Shagreen is not, as you suppose, the skin of a fish. It is an artificial production—a sort of leather grained so as to be covered with small circular spots. The skin, which may be that of horses, asses, or mules, is well soaked in water, scraped clean, and stretched on frames While in a soft state, small seeds—such, for instance, as mustard-seeds—are pressed into it, and it is dried with the seeds in it It is then dyed green, and again dried, the seeds are then beaten out, the leather is flattened and highly polished. It may be dyed of various colours

C H (Chelsea)—So many serious accidents have happened in connexion with the manufacture and use of gun-cotton, that we decline furnishing you with a recipe for making it.

W Stephinson.—The brushes called camels' hair pencils are made, for the most part, of the hair of squirrels' tails, for the best and choicest kinds of camels' hair, imported from Persia, is used. The sort called sables will be best for your purpose, these are made from the tails of the sable

R Turnbull—Cases for binding the volumes of "The Working Man's Friend" may be had at our office. You will find it best to have them bound in *single* volumes

S T W—The Australian Emigration Office will be the best place for you to apply to for information, it is at No 21, Parliament-street, City.—Mrs Chisholm's address is, 3, Charlton-terrace, Islington

A Drapers' Assistant—We do not think you can get assistance from any existing company You will have to pay the regular fare, and it is very doubtful whether you will be able to obtain employment in Australia when you arrive there. The Government will render you no aid, as they take only practical farmers and agriculturists The passage to Port Philip will cost you from £20 to £10.

K L M—Do you mean to say that the lines you have sent us, beginning "Droop not on your Way," are your own composition? If so, we request you to look to page 67, vol. II., of "The Working Man," published a year and a half ago, where you will find them verbatim, and ascribed to "John Barnes." Read this and then blush—if you can!

Inquirer—The "Alexandrian Library" is said to have contained about 700,000 volumes. It was divided into two compartments; one was attached to the temple of Jupiter Serapis, and contained 400,000 volumes; the other was appropriated to the use of the academicians, and numbered 300,000 volumes. A great number of the volumes were of papyrus, but many were of parchment, and some of wood and lead A large portion was burnt during the siege by Julius Cæsar, the remainder were preserved to the time of Theodosius the Great, who caused the heathen temples to be destroyed, and also this valuable library, which embraced the whole Greek and Latin literature.

RUSSIA AND THE RUSSIANS.

A GENERAL VIEW OF THE EUROPEAN-RUSSIAN EMPIRE.

THE name of Russia in the present day is one of dread in many parts of Europe and Asia, and of the influence which it possesses in the political affairs of other countries, recent events have afforded sufficient evidence. Scarcely known when other European nations had arrived at a high state of civilisation and refinement, this northern power has managed to attract to itself a more than ordinary share of the consideration and attention of continental governments, and this too, not in virtue of any great or striking qualities possessed by the people—for the Russians are, even now, but a rude, half-civilised race—but solely arising from the ambitious and energetic views of the successors to Peter the Great. In this series of papers we shall endeavour to present our readers with a pictorial and descriptive glimpse of Russia, and, that we may begin at the beginning, we shall in this number of our *Friend* endeavour to make them acquainted with the physical character and resources of European Russia, and in our next we shall attempt a slight epitome of its history.

In the widest sense of the phrase, Russia may be said to consist, not only of that part of Europe which is shown on the map, but also of a considerable portion of Asia, and even part of North America. Taken in this view it is called the Russian empire. Its total area is estimated at not less than 8,552,700 (eight million six hundred thousand, nearly) square miles, and its entire population numbers upwards of 67,000,000 souls. It will assist the imagination, to compare this area and population with that of Great Britain and her colonies; the total area of the latter being about 1,700,000 square miles, and the total population, consisting of certainly not less than 132,000,000 inhabitants. It is of Russia in Europe, however, that we propose to treat, though from [illegible] several of the chief sources of public revenue and importance are derived from the Asiatic part of the empire, it will be necessary occasionally, perhaps, to cross the Ural Mountains.

An examination of the map of Europe will inform the reader of the precise situation of European Russia. On the

RUSSIAN CONSCRIPTS.—A CONVERSAZIONE.

north it is bounded by the Arctic Ocean and the White Sea; on the south by the Caucasian Mountains and the Black Sea; on the east by the Oural or Ural Mountains and river; and on the West by the Baltic Sea and the kingdoms of Prussia, Austria, and European Turkey. Its principal seaports to the north are—Archangel in the White Sea, St. Petersburg on the shores of the Gulf of Finland, Riga in the Gulf of Bothnia; and to the South, several smaller ports in the Black Sea, the only opening in this direction for the naval strength which the emperors of Russia have so long wished to acquire In that respect, as in many others—their style, for instance, which is not yet altered—they are at least "twelve days" behind the rest of Europe.

If Russia has not much sea-room that is not crowded with ice-blocks for at least seven months in the year, it has, on the other hand, many noble rivers and lakes The principal rivers are—the Volga, which takes its rise in the Wolchonsky Forest and after traversing the country through a course of 2 200 miles, empties itself by about seventy outlets into the Caspian Sea; the Dnieper, which has its course in the province of Smolensk, and its outlet in the Black Sea at Odessa it is the Borysthenes of the ancients, and is estimated to be upwards of 1,200 miles long, the Don, the Tanais of antiquity, rises in the Ural Mountains, and reaches the sea, after a course of more than a thousand miles, in the Sea of Azof, the the Dniester has its source in the Carpathian mountains, and after flowing through 500 miles of country, empties itself in the Black Sea several smaller rivers, such a the Kuban—the Hypanis of Herodotus—the Terek, the Petschora, the Mezen, the Dwina, the Onega, the Kemi, the Neva, the Duna, and the Tornea, flow through a country, which, while it is in many parts of a cold, dreary, and desolate character, without trees or shrubs, and but thinly inhabited by a wretched population, may be said to be on the whole well watered considering its extent

The principal lakes in Russia are—the lake Ladoga, east of the Gulf of Finland, in the neighbourhood of St Petersburg, is computed to cover upwards of 6,000 square miles—a larger space than the entire kingdom of Saxony, the lake of Onega, east of Petersburg, which is upwards of 1000 miles in extent; lake Ilmen, in the province Novgorod, which is about 28 miles long by 20 wide, and lake Saima, in Finland, which is considered to be about 40 miles square

Russia in Europe contains about 62,000,000 inhabitants, of whom, fully three-fourths belong to the great Caucasian family; while the Laplanders, the aboriginal race, are not to be confounded with the predominant inhabitants of Finland, who are of Swedish origin.—The Samojedes, Kalmucks, and the greater number of the Bashkirs belong to the Mongolian race

As to their origin, the Russians proper and the Poles belong to the great tribe of Slavonians, whose total number in the Russian empire amounted in 1847 to 48,000,000, including 4,000,000 Lettonians, Bulgarians, &c The number of Germans in Russia (whose chief seat is in the Baltic provinces) is estimated at 800,000, that of the Jews at 1,600,000 (chiefly in the Polish provinces) More than 6,000,000 are of Tartarian origin (not to be confounded with the Mongolian race, as all genuine Tartarian tribes, for instance, the Turks, Magyars, &c., belong decidedly to the Caucasian race), and the remainder consists of Greek, Persian, and other oriental tribes, Gipsies, and the above-mentioned people Laplanders, Samojedes, Kalmucks, &c *

In regard to religion, the established church is the Greek, and generally all Russians are Greek Christians, while nearly all Poles are Roman Catholics, and most of the Germans Lutherans The Tartarian and other kindred tribes in the southern and south eastern provinces of European Russia are for the most part Mohammedans

The Russian people are divided into three classes, the nobility, citizens, and peasantry. About the same distinction is established in Poland, while in the Baltic provinces the social condition of the population bears a strong resemblance to that of Germany. There is an essential distinction between hereditary and personal nobility. The number of nobles by birth (or of those who belong to the hereditary nobility) in the whole Russian empire (thus including the Polish, Bulgarian, Tartarian, and other nobles), was some years ago about 551,000; while the personal nobility (*i. e.* for lifetime only) is conferred upon the higher classes of the clergy and citizens, and upon the civil and military public officers (provided that they are not already nobles by birth). The nobles, as well as the commoners, are exempted from the poll-tax (land-taxes, excises, and other similar taxes they have to pay), and cannot be compelled to enter the army, though a great many of them enter it voluntarily. By the term of citizens is to be understood all free inhabitants of cities and towns, who are engaged in commerce, trade, manufacturing, and other branches of industry They are divided into six classes, styled guilds, and are about 4,500,000 in number. The peasantry comprises freeholders (about 700,000), peasants of the crown (more than 17,500,000), who at present are to be considered as personally free men, and finally, bondsmen, about 21,000,000 in number, and for the most part on the estates of the nobility. Thus two-thirds of the population are freemen, and moreover the emperor, Nicholas, has in recent times provided by the law for the gradual emancipation of the remaining third also. To emancipate them at once, would have been a hard blow to the bondsmen themselves, for it is a fact, that they generally are in a better and more comfortable condition than many free men, at least among the lower classes, who not seldom endure great distress, while the bondsmen, so to say, are never suffered to starve, their masters being compelled by the law to provide for their wants, in cases of necessity (sickness, weakness from age, &c) It has frequently occurred that bondsmen, emancipated by their masters, have spontaneously returned into their former condition of servitude. They not only till the ground (two days in the week for their own account), but are employed in various other ways as mechanics, operatives, servants, coachmen, &c, and have some opportunity to earn sufficient money for their redemption from bondage Hundreds of them are annually levied as recruits, and they are at once free, for themselves and their descendants, as soon as they enter the army

The surface of European Russia is generally level; its chief features being vast plains and large rivers, with numerous lakes in the north-western quarter. In the northern provinces, it is intensely cold in winter, while in the southern, the climate is mild and pleasant

The soil is, in general, highly productive, though in the most northern provinces the cold climate and the short summer prevent the full development of the natural fertility of the soil In the southern and some other parts of the country more or less extensive steppes are to be found, the most remarkable of which are those of the Kirgises, in Bessarabia, near the Don and the Dnieper, the Nogaian, of Azow, &c Nearly 300 millions of acres are appropriated to agriculture, yielding annually about 152,750,000 quarters of wheat, rye, and other descriptions of grain, of which more than 9,600,000 are exported. In 1841 corn was exported to the value of 10,182,509 rubles in silver, in 1842 to the value of 12,191,529 rubles; and in 1843 to the value of 12,899,911 rubles in silver.* Of flax were, in 1843, exported 965,953 quintals, and of hemp 739,324 quintals. In Bessarabia, Tauria, Crimea, and on the banks of the Don even the vine is cultivated, and the annual produce of very good wines is estimated at about 2,200,000 gallons. Vast forests abound in various parts of Russia, and they furnish the seaports with large supplies of timber, pitch, tar, &c., for exportation. Black cattle are reared in immense numbers, the finest breed is to be found in Podolia, Volhynia, and Ukraine, from which provinces thousands of heads are annually exported. Horses are likewise reared in vast numbers, and of various breed, they are in general distinguished for their swiftness and endurance. The total number of sheep in the Russian empire is estimated at 60 000,000, they are of different breed. European Russia numbered 4,000,000 of improved breed in 1843, when 161,491 quintals of their wool was exported. The above-mentioned extensive forests (*i. e.* those in the northern provinces, and

* The Cossacks are probably not a separate tribe, but genuine Russians, with the only difference, that since the 17th century they are endowed with various privileges, and (on the other hand) in lieu of paying taxes, are required to act as soldiers in time of war.

* The Russian ruble is equal to 3s. 4d English.

especially in Siberia) abound in wild animals that are eagerly hunted for their valuable furs, as the sable, ermine, black fox, &c. Yet the bear, wolf, and other beasts of prey are likewise very common. The sturgeon, &c., fisheries of the river Volga, and of the Caspian Sea, are extensive and very productive. Upwards of 10,000 fishing-boats are employed on the Volga alone. Russia is noted for its precious metals, of which gold and platina are found in the Ural Mountains, also in the Siberian province of Jenisi-sk, and silver in Siberia, while copper, iron, and lead are met with in various quarters. In the five years' period of 1812-1816, the Russian gold-mines in the Ural Mountains yielded a total produce of gold, which was, in England, estimated at £12,784,808 In the one year of 1843, they produced 724,640 ounces of gold Of platina were, in the same year, 71,680 ounces produced. The annual produce in silver is, upon an average, estimated at 84,000 marks, of copper, at 86,000 quintals, of lead, at 14,350 quintals, and of iron, at 3,500,000 quintals. The Ural Mountains contain also diamonds, emeralds, and other precious stones.—Salt is extensively made, especially in the southern provinces.

The manufactures, which, during the greater part of the last century was almost restricted to those of the noted Russia leather, have, since the reign of the empress Katharine II., and especially since that of the emperors Alexander and Nicholas, made astonishing [illegible] In 1842 the Russian empire numbered 2,332 manufactories, with 119,093 operatives, in 1835, 6045 manufactories, with 279,673 operatives, in 1839 the former had increased to 6,855, and the latter to 412,961, and since the manufactures have increased to such an extent that they furnish the country with almost sufficient supplies, of which only about one-sixth is imported from foreign countries. The various articles manufactured in 1843 had a value of nearly 107 millions of rubles in silver, while those which were imported in the same year had only the value of 18 millions. The chief manufacturing districts in and around Moscow, where in the just-named year cotton goods were manufactured to the value of 20,163,174, and silks to the value of 1,367,321 rubles in silver. Of other articles are to be noticed cloth, canvass, cutlery and hardware, leather, glassware, &c.

The commerce is very extensive, and increasing almost every year. In 1843 the exports were to the value of 82,755,600, and the imports to the value of 75,028,399 rubles in silver, thus, the former surpassing the latter by 7,537,201 rubles in value. The exports consist chiefly of tallow, corn, hemp, flax, linseed, hemp-seed, timber, wool, canvass, iron, copper, leather, furs (in 1843 exported to the amount of 2,205,000 silver rubles in value), wax, hogs' bristles, candles, soap, &c. Great fairs are held in different places, which attract vast crowds of merchants and traders from all parts. The inland commerce is much facilitated by the numerous rivers, canals, and lakes, and by the snow, in the winter season, over which sleighs travel with great rapidity. The chief internal trade is with China, Independent Tartary, Persia, and Germany. With regard to the canals in European Russia, it is doubtful whether they, in general, do not afford more practical advantages than those in Great Britain. At least, it is a fact, that by these canals the White, Black, Caspian, and Baltic Seas have been brought into [illegible] with each other, and thus a [illegible] of [illegible] length, been established. The [illegible] White Sea with the Baltic, the canals of Kubenski and Katharine unite the Caspian with the White Sea, and the canals of Berezina, Oginski, and Machawez unite the Black Sea with the Baltic, while on the other hand, a direct communication between the canals themselves is established likewise.

With regard to the general diffusion of knowledge, and to common school education, Russia has hitherto been greatly behind other European countries, yet is at present advancing in this particular, as well as in others. Considerable exertions are made by the government to introduce schools and instruct the lower classes of the people. In the period from 1837 to 1845 not less than 4,924 common schools have been founded among the peasantry of the crown. They were in the last-named year frequented by 271,262 children. In the higher branches of knowledge Russia rivals the rest of Europe. Beside several scientific societies, and public and private libraries, each of which contains from 100,000 to 450,000 volumes, the are seven universities (those of Warsaw and Wilna have been abolished in 1832), viz, at Dorpat (founded in 1632, and in 1844 frequented 484 students), at Moscow (founded in 1705, and in 1844 with 836 students), at Kasan (founded in 1803, and in 1844 with 359 students), at Charkow (founded in 1803, and in 1844 with 410 students), at St Petersburg (founded in 1819, and in 1844 with 557 students), at Helsingfors (founded in 1640 by Queen Christiana of Sweden, in Abo, in 1827 transferred to Helsingfors, and in 1843 with 463 students), and at Kiew (founded in 1833, and in 1844 with 320 students). Every governmental or provincial capital contains a gymnasium, in those of Irkutsk and Kiachta the Japan and Chinese languages are taught.

The government is an absolute monarchy All power emanates from the emperor, who is the head of the state and (Greek) church, and styled the Autocrat of all the Russias.

The amount of the revenue, and of the expenditure, for several years has been about £20,000,000. One of the chief sources of the revenue are the customs, or duties, on goods imported from foreign countries. The public debt amounted in 1843 to 290,134,155 rubles in silver, thus being far less than that not only of Great Britain, but also of France or Spain.

The Russian army numbers at present not less than 1,000,000 men in the war department, and is arranged into six main bodies, the general reserve, and the general corps of Cossacks The six main bodies of the army are the following. 1. The great movable European army of operation, consisting of 165,720 men, with 1,200 pieces of ordnance 2. The European army of reserve, numbering 202,480 men, with 472 pieces of artillery 3. The Caucasian army, consisting of 150,167 men, with 302 pieces 4. The main body of the army in Finland, numbering 16,000 men, with 16 cannons 5. That of Orenburg, consisting of 61,000 men, with 16 pieces, and 6. The main body of the army in Siberia, consisting of 16,000 men, with 16 pieces of artillery The several corps of Cossacks amount to 50,000 men Other Cossacks, generally forming irregular troops, have to guard the frontiers of the empire from inroads, &c Thus the disposable forces Russia is entitled to send in the field in time of war, amount to about 800,000 men Of course they consist only of the European armies of operation and reserve, and of the regiments of Cossacks, because the main bodies of army in Caucasian Russia, in the province of Orenburg, &c, must keep their stations for the maintaining of internal peace and order there, and for the safety of the frontiers. As for the garrisons in other parts of the interior, and especially in the Polish provinces, they are solely provided for by the general reserve, whose amount depends on the urgency of the circumstances, and for the most part comprise the troops trained up in the military colonies The latter were established in 1820 with the view partly to save a large amount of the expenses for the army, and partly to alleviate the burden of the recruiting They number about 100,000 soldiers In 1831 they underwent some reforms, and are now styled districts of farmer-soldiers. Since that period the system of recruiting the army by the conscription, or a general levy, prevails again. The sons of tradesmen and peasantry are particularly liable to conscription, and usually two out of one hundred are levied The merchants, professors, artists, physicians, civil officers, lawyers, &c, are not liable to the duty of military service; and that bondsmen become free men as soon as they enter the army, is already noticed above.

The navy consisted in 1840 of 56 ships of the line, carrying from 71 to 120 guns, 48 frigates, carrying from 41 to 60 guns, and an adequate number of sloops of war, brigs, and steamers Of the ships of the line 31, and of the frigates 30, were stationed in the Baltic Sea (where Kronstadt and Reval are the chief stations), and the remainder in the Black Sea, where the chief stations of the navy are Sevastopol, Cherson, and Nicolojew Ships of war of smaller size are stationed in the Caspian and White Seas.

There are the following orders of honour:—1. The order of St. Andrew, in one class, and instituted in 1698 2. The Alexander Newsky order, in one class, and instituted in 1722. 3. The White Eagle order, primitively a Polish order, instituted in 1335, and renewed in 1705, in one class 4. The St Ann order, primitively a Holsteinian order, instituted in 1735,

and in four classes. 5. The St. Stanislaus order, primitively a Polish order, instituted in 1765, and in three classes. 6. The order of St. George, a military order of merit, instituted in 1769, and in four classes. 7. The order of St. Wladimir, in four classes, and instituted in 1782. 8. The St. Katharine order, only for ladies, in two classes, and instituted in 1714.

STRAY THOUGHTS ABOUT HANGING.

HANGING is a remnant of barbarity, one of the last tottering relics of feudalism. In countries boasting of being governed by laws, men have been burnt at the stake, curious tortures have been invented to stimulate the conscience to confession Iron boots with screws, collars with spikes for the neck, heavy weights to be piled on the body; the insufferable agonies of the wheel; the creaking and rattling of bones and chains on gibbets; the quartering of traitors—have been amongst the refined instruments of justice. Of these, the very names of some have entirely perished; and it requires some pains and antiquarian research to find out how ingeniously human limbs were tortured, and with what cunning arts the vexed and harassed spirit has been driven from the bodies of malefactors. Countless inhuman tortures have, happily, passed away and are forgotten; one, among the oldest and the vilest, remains to this day. When a small band of righteous men crossed the ocean to found the American republic, they left behind them many iniquities of legislation and government, that had never hitherto been seen or heard of on that soil they would have added to the bonds of brotherhood by which we are endeared to them, had they, in solemn act, asserted, in a memorable manner, never to be forgotten, the dignity of human life, and renounced the punishment of death

It is one of the chief triumphs of modern civilisation one of the few infallible proofs that we have of the onward progress of society, that the *sanctity of human life is asserted and upheld*. There is hardly a condition of social welfare which does not touch upon this sacred obligation The maintenance of peace instead of war, justice between man and man, the duty of moderation in the rule of the passions, the mutual affections, the love of the husband and wife, the parent and the child; the law which forbids duelling, the fear of the conscience which shudders at suicide, the wisdom of the statesman who shuns war as the curse of the state—all look at the worth of a single man's life. It is no answer to the charge of the violation of life, by the state, to say that it is the penalty of murder The punishment is the very sacrifice we would avoid, two murders are committed,—two victims are sacrificed,—one by the criminal, the other by the state

No one, we presume, can doubt the value of life; the law, by its very sentence, admits it—admits it in the very act of execution, for the murderer is always attended by a clergyman who is there to prepare his soul for eternity But what if his soul be not prepared? The man is cut off all the same, and, if we are to believe that which we are taught on Sundays, as assuredly we are, this impenitent soul must perish eternally And this has the sanction of the law—the law of the nineteenth century! There is no apology for murder, we would not attempt to vindicate it, but common humanity revolts at the punishment of death, teaches us that the murderer has a capacity for improvement He is still a man! He has forfeited his property, his liberty, all secondary privileges to the state. He should not walk abroad, lest he should injure another; he should be imprisoned and condemned to labour, that others might profit by his example, and be deterred by a knowledge of his suffering, but he should not die until the great Disposer of life and death calls him as a sentinel from his post! Discipline, the end of our being on earth, may be obtained as well in a prison as a palace. The soul may grow wiser and better in a jail. *The law should be remedial, not vindictive*

We fear there is yet lurking in the public mind something of the old prejudice upon the subject; the idea that punishment is a satisfaction, an expiation of the law. The law, it is said, must be satisfied, in the same spirit with which the ancient Druids satisfied their gods, by sacrificing their hundreds in a huge wicker basket, made in the figure of a man and filled with victims to his honour The idol was to be satisfied;—what satisfaction can there be for the law? Guilt is not removed from the soul of a man by hanging him. Repentance, a personal spontaneous act of the man himself, assisted by prayer, is the only expiation—and this is denied him by the law. All that the law, expressed in legislative acts, can ask, is, that the offender shall never do the like again; that by his reform he shall set an example to the people of an amended life—the only reparation which it is in his power to make to man and the offended laws of his country—and that his punishment shall act as a warning to the wicked.

Let not this be denounced as impracticable; let it not be said that punishment and improvement cannot proceed together, and that no punishment can so effectually act upon men's fears, as the fear of death. In one sense it is the most certain of all penalties, for it is an act that admits of no recal, however unjustly done In the actual state of the case, however, it is the most uncertain of all punishments, for it is an extremely difficult thing to find twelve men who will condemn even an openly guilty prisoner to so dreadful a fate. Such is the horror with which humane men view the punishment of death and such the public opinion as expressed by the voice of conscientious juries And the time is, we trust, not far distant, when that voice will be responded to in the state. They are right; humanity and justice imperatively demand that this disgusting and degrading punishment shall have an end The gallows is no school of reform, but a theatre for vice, and all the worst and vilest passions which find a home in human breasts Men of the nineteenth century! shall this state of things continue? We say again, the punishment of death is unworthy of the enlightenment of the age in which we live Why then retain so horrible and disgusting a stain upon our national character? The spirits of the victims of a revengeful law call upon us at once and for ever to do away with the instruments of judicial death,—to tear the page from our judicial records Verily, the days of the gallows-tree are numbered! The era of a new state of things is at hand—a law that shall not offend public opinion, nor disgust the enlightened consciences of jurors

With regard to the so-called religious argument, it is yet an obstacle with many, who interpret the oft quoted sentence "Whoso sheddeth man's blood, by man shall his blood be shed," into a command Now this, in our opinion, is quite a mistake—a most fatal mistake, and a little examination will show that it is an unfair interpretation of the text; which as it stands, is consistent with, nay, asserts, the law of sound judgment and enlightened humanity. According to Grotius, this passage is to be held predictive, rather than judicial. It says not to man—slay thy brother who kills his fellow; but it points out the danger to which every shedder of blood is liable at the hands of his fellow-men. Thus a mark was solemnly set upon Cain, the first murderer not that he should be slain, but that all men might be warned *not* to slay him In the side-note to this passage in Ostervald's Bible, is a reference to Matthew xxvi 52,—"They who take the sword shall perish by the sword." Thus it asserts the folly of crime, pronounces murder a great wrong, foretels the danger to the life of the guilty and the evil passions that will be excited. Again, it is urged by Grotius, to whom was the command, if any, given? To man, but assuredly not to *every* man; for this would have violated all law, by making *any* man an executioner. Not to a magistrate, for at that time, when the world numbered only the single family of Noah, there was no magistrate on the earth. Now, mark what goes before and after the text, a solemn assertion of the sacredness of human life under all circumstances. "At the hand of *every* man's brother will I require the life of man, for in the image of God made he man." Here, then, is pronounced upon all, every man, murderer or legislator, a terrible penalty, and the punishment which is to follow the taking of life, so solemnly asserted, is reserved for the Deity alone—"*will I require the life of man.*"

Thus driven from his stronghold in the Noahic dispensation, the advocate for capital punishment will find no relief in the Levitical law, for that was abrogated by the New Testament, which breathes love, mercy, humanity, peace! As it is beautifully expressed in the Scripture of our Faith—"God desireth not the death of the sinner, but rather that he should turn from his wickedness and live." Pure Christianity must, sooner or later, prevail on this important subject.

To conclude: If not by divine laws, certainly not by motives of human policy is this punishment to be enforced; it is cruel to the murderer; it is a bad example to society—the scenes of immorality which are *always* witnessed at a public execution are fearful to contemplate. There is a false excitement thrown around the gallows, which lends something of the glory of the hero to the coarsest villain. The scene, whether witnessed by crowds, or reported in the columns of the press, excites the worst passions of our fallen nature; unfeeling jests or desperation hardens the character of the criminal, and the gibbet is regarded as the one unlucky throw in the game of life. Surely it is high time for us to awake to the glaring inconsistency of trying to teach lessons of morality at the Old Bailey, while, at its very doors, thousands assemble to witness the horrible excitements of a judicial murder. A man of humanity would not hang a dog!

LITERARY QUAKERS.

BERNARD BARTON, AND WILLIAM AND MARY HOWITT

(*By* N. P. WILLIS, *Author of "Pencillings by the Way"*)

FROM the times of George Fox and his contemporaries, down to the present day, many of the members of the Society of Friends have been scribblers of books. Some of them have contributed valuable additions to the list of useful and moral publications, such as Benjamin Franklin;* and a few, like Bernard Barton and the Howitts, have wandered into the flowery realms of Poetry and Romance. In this chapter I purpose more particularly to give sketches of the last-named authors, whose numerous productions are almost as well known in America as in their native land.

Bernard Barton, the quaker poet, was for many years a cashier of a bank in the small country-town of Woodbridge, in Suffolk, a place from which he seldom travelled. He was by no means a "stiff Quaker," although he observed most of the customs of that sect. Indeed, his sociality and love of good company, such as that of Charles Lamb, for instance, was not quite approved of by the more rigid "Friends." He was, however, an amiable man and a pleasing poet, but by no means a powerful writer. I met him once in London, and well remember his person. He was dressed in sober brown; his face was plump and florid, and over a steaming tumbler he was far more jocose than a Quaker usually chooses to be.

On that particular evening, I well remember his telling an anecdote or two of Charles Lamb, and especially a characteristic one of Coleridge, communicated by the author of "Elia." Though somewhat out of place, I will relate it here

"Coleridge was a great talker, and when he fairly got into one of his speculative discourses, it was no easy matter to stop the wordy tide. With eyes closed, the 'old man eloquent' would preach by the hour, and frequently preach his hearers out of all patience. So it happened in the following instance —

"Lamb was clerk at the East-India House, and one morning, as he was hurrying from his cottage at Enfield to the city, he met Coleridge proceeding to pay him a visit. Lamb's time for being at his desk had nearly arrived, but Coleridge cared not a pin about that: he had some wondrous ideas to communicate, and in order to detain Lamb until he had done so, he seized him by a coat-button, drew the good-natured Charles into a narrow passage, and, shutting his eyes, commenced his talk. With one hand holding the button, and with the other waving to and fro in the air, he went on for a full hour, heedless of Lamb's impatience. At length a happy thought struck the victim. Taking out his penknife, he adroitly severed the button from the coat, and quietly slipped off Coleridge did not observe the elopement, but went on with his subject; and Lamb solemnly declared that when, four hours afterwards, he passed by the spot, there stood the rapt Coleridge, with the button between his fingers, just as when he left him in the morning, his hand placidly waving, his eyes closed, and—talking!"

Bernard Barton died about two years ago, his latter days having been made comfortable—for illness had compelled him to quit the bank—by a pension from Queen VICTORIA. His daughter Lucy has written a pleasing memoir of the Quaker Poet, to which I would refer those who may desire to know more of him.

And now for "the HOWITTS."

A very general opinion is entertained in America—and, indeed in England too—that WILLIAM and MARY HOWITT are brother and sister. This may be owing to the fact that few married couples pursue together literature as a vocation. Many persons have an idea that such unions are not productive of connubial felicity indeed, I heard a man of great talent once declare, that a literary man should marry a fool, and *vice versâ*. There are some instances, doubtless, of couples who travel well enough together in literary harness for my own part, I see no reason on earth why they should not.

William and Mary Howitt, then, are husband and wife. The question whether, as such, they follow a certain good example, set by a pair of English sovereigns whose effigies, being stamped in company on their coins, have provoked the simile of

——"cooing and billing,
Like WILLIAM and MARY on a shilling,"

it is not for me to express an opinion upon. I have only to speak of them as author and authoress.

When William Howitt was, a few years ago, compiling his book entitled the "Homes and Haunts of British Poets," he had occasion to consult a biography of Chatterton, which then happened to be out of print. Through a friend he applied to me, as its author, for some information regarding the poet, and this led to my introduction to William and his wife.

At that time they resided in a pleasant suburb of the great metropolis, and one Sunday afternoon I set out for their dwelling. After a long omnibus-ride, my friend and myself were set down in front of a large house called "The Elms," at Lower Clapton. "Here," said P——, enthusiastically, for he was a thick-and-thin-admirer of the literary pair, "here live the Howitts!"

Our rap at the door soon brought to it one of the neatest of "neat-handed Phyllises," who, on our inquiring for Mr Howitt, ushered us up a flight of stairs and into a spacious drawing-room which, at the moment was untenanted, so that I had leisure to look about me.

The furniture and decorations of an apartment, and more especially the books in it, are generally tolerably true indications of the tastes and pursuits of its owners. at least, so I have generally found or fancied them to be. In the present instance I was not out in my judgment. Vases of flowers—who has written more lovingly of flowers than Mrs Howitt?—and pictures of rural scenery, such as her husband has so often described, were to be seen on pedestals, on tables, and on the walls. Busts of celebrated authors were placed on brackets, and at one end of the room was a piano. Books were in plenty, and folios of prints lay here and there. From the windows of the room might be seen a pretty garden; and birds sang cheerfully among the leafy branches which rustled close to the panes.

We sat patiently for a few moments, then the door opened, and a lady entered it was MARY HOWITT.

How seldom it happens that the personal appearance of authors or authoresses, or indeed those of any noticeable people of whom we have heard, or whose works we may have read, correspond to the fancy portraits which we may have in our minds drawn of them! In only one case, in my experience, did the veritable original surpass the imaginary likeness I had drawn that was in the case of Mrs. Hemans. The same almost spiritual beauty which I had recognised in her poetry, and which I had transferred to their author, I found was really to be seen in her charming face. One might have fancied Miss Landon lovely in person, but she was by no means a "beauty." Hundreds have called and thought Mary Howitt a charming creature, and I fancied her something out of the common. I was mistaken. She appeared, at the first glance, mild and matronly, nothing more

The poetess welcomed me very pleasantly, and her mild, unassuming manners at once banished all feeling of constraint. I will endeavour, though, before proceeding farther, to give some definite idea of her personal appearance

If the lady's face was not decidedly handsome, neither was it the reverse. Her forehead was intellectually shaped; and her

* FRANKLIN wore the plain Quaker garb, for convenience' sake but he was not a member of the Society of Friends.

brown hair, a little inclined to gray, was simply parted on its summit. A plain cap, but not of a Quaker cut, covered her head. The most striking features were her eyes, which were large and of a pale blue; the nose seemed rather long. The mouth would have been good had it not been somewhat disfigured by a large, prominent front tooth, which destroyed the symmetry of the upper lip. The complexion was light, and the general expression benevolent, simple, and agreeable.

For the benefit of those of my lady-readers who are curious in such things, I would, if I were able, minutely describe Mary Howitt's dress, but I am unlearned in such matters as bodices and bustles, or crapes and crinolines. All I can say is, that the poetess wore a lavender-coloured gown, neatly made, but not formed like those common to her sect. Indeed, the Howitts have for years abandoned Quaker costume altogether.

Mrs. Howitt's conversation was cheerful and pleasant, but not sparkling. The topic on which she appeared to like to talk was America, which was natural enough, I having just returned from thence. She told me that she had relatives in Ohio, and hinted at an intention of emigrating to that State at some future time. Since then, it will be remembered she has written a work entitled, "Our Cousins in Ohio;" but I believe the emigration-project has been long abandoned.

While we were talking, a gentleman entered the room, and Mrs. Howitt introduced me to him it was her husband.

He was short, stout, and harsh-looking, and struck me as being more like a shrewd city-broker, hard at driving a bargain, than as an author There was a *hauteur* in his manner which to me was anything but prepossessing His head was bullet-shaped, and covered except just at the summit, with short, gray hair. Small, keen, blue eyes told that he was a minute observer. A nose short and stubby such as his would not have been taken as a model by a sculptor—and the mouth hard and firm, was not indicative of amiability of character. His manner, like his style, was hard, and at times conceited, and there was a something in his whole bearing and appearance which repelled instead of attracted

Never mind his dress, reader, it was neat, and suited to a plump personage; that is all that needs be said about it.

He took me, after a time, into his garden, and I soon found that he did not live on good terms with his brother authors His remarks on some of them were short, sharp, and snappish He had plenty of vanity, too, and evidently considered himself "some pumpkins." I have reason *now* to know that he is almost singular in the opinion, for his reputation, to a great degree, rests on that of his wife, without the *prestige* of whose name, and it is said, without the assistance of whose pen, he would be regarded merely as a rather dexterous book-*compiler*.

If, as I have intimated, William Howitt does not live on the best terms with other literary men, other literary folks do not entertain the highest respect for him, for in his displeasure he has shown himself to be bitter, vindictive, and of as persecuting a spirit as Bishop Bonner himself. The meekness of the Quaker does not seem to belong to him. To be sure, he writes pleasantly of birds and trees, but when he speaks of certain authors, he is so savage as to remind one of Mrs Mackenzie's remark to her husband, Henry Mackenzie, the well-known author of "The Man of Feeling" Mackenzie was, in private life, a bear, and, indeed, addicted to cruelty; but from his sentimental works one might imagine him to be the mildest and gentlest of his species. One day, after an outburst of domestic violence, his wife exclaimed, "Ah, Henry, Henry, *you put all your fine feelings on paper*!" In the case of the subjects of this sketch, I leave the application of the story to the reader.

About four years ago, there occurred in England a fine specimen of the "Quarrels of Authors," which D'Israeli the elder ought to have lived to comment on William Howitt was one of the parties concerned in it. In connexion with a Mr. Saunders, William Howitt edited a weekly serial, called the "People's Journal." Some differences occurred, and the partnership ceased. Then both parties commenced one of the most bitter quarrels "which have ever disgraced," as Douglas Jerrold said of it, "literature and literary men." William Howitt got by far the worst of it, and became bankrupt, as also did his partner, John Saunders. The "People's Journal," the subject of the dispute, was sold by public auction to Mr. R. Willoughby, who, after carrying it on successfully for three years, under the editorship of a young but not unknown author, discontinued it from want of capital. It is still sold, however, in volumes, under the name of the "People's and Howitt's Journal." Since my visit, the Howitts have quitted Clapton, and reside at St. John's Wood. A recent novel of William Howitt's has fallen almost still-born from the press; nor has any success (for which I am sorry) attended the beautiful volume of the collected ballads by Mary Howitt. Copies of it may be seen in the old book-shops in London, marked at five shillings; it was published not long ago at one sovereign.

Mrs. Howitt has written very little original matter of late, the fields of Danish and Swedish literature affording her plenty of material for her translating pen. She has rendered into English the principal works of Hans Christian Andersen, and Frederika Bremer, and these translations have been republished in America. Mrs. Howitt once remarked to me, "We are dreadfully hard-working people." This is true, doubtless, for they have a large family dependent on their labours. Their eldest daughter, Anna Savage Howitt, is a very accomplished artist, and occasionally illustrates the works of her parents.

I met at different times at the Howitts', three literary foreigners, Ferdinand Freiligrath, the author of the celebrated "Lion's Ride," who, for political offences, was compelled to leave Prussia, Hans Christian Andersen, of Stockholm, and Frederika Bremer. Freiligrath was a fine-looking fellow, of an impetuous nature, and one very likely to kick against despotism. He subsequently became clerk in a London counting-house. Andersen was of a milder temperament, and of placid appearance and manners Miss Bremer was amiable and gentle, but in society far from brilliant. She has recently visited America, and will doubtless perpetrate a book. I predict that she will give a far more correct view of American manners, institutions, &c, than either the aristocrat Lady Emmeline Stuart Wortley, the speculative Harriet Martineau, or Mrs Trollope, the sarcastic!

[The above *American* sketch is extracted from the "Knickerbocker, New York Magazine."]

WHAT IS A GENTLEMAN?

"When Adam delved and Eve span,
Who was *then* the gentleman?"

THE conventional idea of gentility is so intimately connected with birth and riches that we find it difficult to think of mere virtue, honour, education, and good breeding, without wealth, as the proper attributes of a gentleman.

It is easier to say what is *not* gentlemanly than to discover what is, and we commonly find the vulgar acceptation of the word *gentleman* admitted by the world in preference to a higher standard of honesty and honour, and into this error we have been led unconsciously by what Theodore Hook calls the six-and-eightpenny feeling of society—though his own notions of a gentleman were vague and loose enough, in all conscience. With the author of "Sayings and Doings" it was "genteel" to express horror and disgust at trade and traders of all kinds; and to dine before six, or live eastward of Temple-bar, was vulgar in the extreme. Fortunately, the Hook school is going fast out of fashion.

For merely genteel people—folks who live beyond their means, and boast of their acquaintance with Sir "Harry" and Lord "Thingum"—we have the greatest possible horror; and would rather clasp the horny fist of an honest man in friendship than take the cool, white-kidded fingers of your very "genteel" people from a carriage in Rotten-row or a box at the Opera. Genteel people do and say things every day at which they would "blush interestingly" if they were called by their right names. For instance, if you were to tell Mrs. Matchmaker and her fair daughters that they were acting a lie when they said "not at home" to their servant, they would be quite astonished; and if you ventured to hint to young Fastman that ordering clothes without intending to pay the tailor was a dishonest swindle, he would most likely "cut your acquaintance" immediately. In fact, there is a great deal of humbug in the world, and the "genteel" humbug is the most unbearable—at least, to all right-minded people.

The idea that money makes the gentleman may be seen exemplified every day of our lives, and in all manner of ways. Try it by a cheap experiment: give a halfpenny to the beggar who waylays you in the streets with a professional drawl about hunger and

cold, and you are overwhelmed with a torrent of thanks; refuse it, and you go home with a curse upon your head: assist an infirm old lady into an omnibus—"You are a gentleman, sir," says she, in a grateful whisper; offer the legal fare to the conductor when you get out, and you are told by that individual "you are *no* gentleman to dispute about threepence:" give up your seat in the front box at a pantomime to a couple of noisy children—"Sir you are a gentleman," says the gratified father; refuse the customary extortion of a penny to the waiter at a cheap dining-room, and you are told by that hitherto obsequious person that he "is sure you are *no* gentleman," and if you ever go to that establishment again, make up your mind to an inferior cut of the beef or mutton, and a cold potato left from somebody else's dinner

Somebody has cleverly said that in every block of marble is concealed an unhewn statue; and so we earnestly believe that in every true and noble nature lies the germ and spirit of nobility, no matter what the merely wordly condition of that nature be—mark, in every block of *marble*, but for one specimen of the true mineral there are half-a-dozen counterfeit imitations in mere chalk and rubble. Your true gentleman is not a thing of purchase and sale, and can no more be manufactured than the diamond, it is a hard thing to say, but half your gentlemanly jewels—bright, and polished, and well-set in gold and silver though they be—are paste, sir, mere paste! "A king can make a belted knight," sang Burns, a "marshal, duke, and all that;"—what a poor notion of manufactured nobility the unpensioned exciseman must have had when he wrote that song! But there's no bitterness in it, not a morsel, he merely felt, as all true natures feel whether clothed in velvet or fustian, that "a man's a man for a' that."

As we said, it is easy to say what a gentleman is *not* though my friend Heavytop thinks that the essence of nobility lies in a good round income, first-rate dinners, and a handsome balance at your banker's. Heavytop is a highly respectable man, has a stake in the country—a pretty large one, too—and has some very fun notions on the subject, especially with regard to the "balance," but these are, if anything, the mere *addenda*, and not the *essence* of gentility they don't constitute the "real thing," as Sam Slick says but when Heavytop backs his pretensions by an oath over his cups, and *his* friends (not *my* friends) applaud vociferously—of course he is a gentleman Not a bit of it. It won't do, Heavytop, that last dinner betrayed you—gentlemen *very* seldom swear, and *never* drink to excess.

Then, again, there's little Jack Holiday, he is a gentleman entirely in his own opinion He is a member of a good family, well-looking, easy-tempered, high spirited, liberal, kind to his sisters, and knows how to conciliate those below him without making them feel as if they compromised their independence. He rides the best horses, keeps a good table, is quite up to the mark in the literature and politics of the day, esteems himself a tolerable judge of pictures, always makes a point of visiting the Academy on the first of May, is something of a musician, and is altogether the neatest dresser you ever saw. Jack Holiday is what is called, in certain circles "a devilish gentlemanly fellow," but he is not altogether a gentleman, I'm sorry to say; for he is so devoted to play that he would cheat his own mother at hazard, if he could get that dear old sixteen stone of good nature and dress to sit down with him

No man need despair, if he be in the mind, of being thought a gentleman, for, if a high standard of morality, an unflinching love and practice of truth, honesty unimpeachable, and virtue and justice untainted, constitute, as we believe they do, the true signs by which a gentleman may be known, then is there hope for every one of us, and if we possess not these attributes, we must strive to gain them "Princes have but their titles for their glories," Shakspeare tells us, and without the innate nobility of soul which distinguishes the true nobleman from the churl,

> —"Between their titles and low name
> There's nothing differs but the outward fame"

There is erected in society an invisible standard of gentility, and if we possess it not ourselves, we have within us a secret talisman by which to try the true from the false, every body knows a gentleman when he is encountered—though a black coat and kid gloves go but short way in making one, and many a "Paris nap" covers a snob.

> "For best in good breeding and highest in rank,
> Though lowly or poor in the land,
> Is Nature's own nobleman, friendly, and frank,
> The man with his heart in his hand"

But, lest any should be in doubt as to the true gentlemanly metal, it may be as well to say, that though a gentleman *may be* a rake, he is neither a liar, a cheat, a scoffer at other men's religion, a loud talker, a showy dresser, a boaster, a drunkard, a swindler, a hanger on at taverns, a frequenter of gambling-houses, a maker of accommodation-bills, a pimp, a bully, or a discounting attorney. Whenever you are in doubt, ascertain if your acquaintance is any of these, and if he be, then you may conclude he is NOT A GENTLEMAN. G. F. P.

VISIT TO THE STATE PRISON, CHARLESTOWN, UNITED STATES

It was a huge building of grey stone, of no particular order of architecture After passing through a court-yard, and ascending a flight of stone steps, we entered a large low square apartment, the walls of which were ornamented with guns, horse pistols, and swords of monstrous size, all, however, giving dusty evidence of "piping times of peace."

A turnkey sat in this apartment, in a chair close to a window which overlooked the prison yard, reading a newspaper, from which every now and then he raised his eyes, and gazed through the panes, as if some great and urgent necessity required his attention in that direction. A list of officers' turns on duty, a few chairs, and a desk, constituted the furniture of the place, which was called "the guard room."

Having exhibited our passports, the officer, thrusting his head into a recess near the window, caused, by means of some complicated machinery, a distinct rattling of bars, and the opening of a door outside. Through an inner, and then through an outer gate, we passed, and found ourselves at the head of some stone steps, down which we went into the yard of the prison It was a dismal sloppy locality. Two or three men, clad in motley coloured dresses and grotesque caps, eyed us as asha it as we walked along, and then turned sullenly to their occupation of moving some loose stones. There was that afternoon to be delivered an address to the prisoners on Temperance, and we inquired of a tall, burly keeper our way to the chapel, he directed us, and we were soon seated in the prison sanctuary.

This place of worship had no Gothic arches, nor clustered pillars, nor fretted roof, nor luxurious pews, nor magnificent altar-piece, nor stately monuments. The walls were whitewashed, the roof was plain The benches were of plain timber, the pulpit unornamental, and nothing but extreme cleanliness was very conspicuous. Near the pulpit were one or two raised seats for the warden and visitors, and to one of them we were shown. The congregation came in, every forty or fifty men being attended by a keeper. Tramp, tramp went their shoes as they proceeded down the aisle to their respective seats. At length the place was filled with men of all ages—a congregation of crime!

At the far end of the room a dozen or more prisoners sat somewhat apart, they had a violin, a clarionet, and a few flutes this was the prison choir, and their services were soon put in requisition.

A solemn congregation was that, and one which of itself preached a touching sermon from the text—"*The way of transgressors is hard*" "Be sure your sins will find you out," was as plainly written on the walls as if a shadowy hand had inscribed it there in luminous characters. The prisoners were clad in uniforms of grey and dingy-red coarse cloth. Their persons were clean, their hair well brushed, and amongst them I observed many whose countenances bespoke no mean powers of mind. There were old grey-headed sinners, over whose faces time and crime had gone hand in hand, ploughing deep furrows—and young men beside them who wore reckless smiles, which were fast changing into looks of perfect hardihood. Some scowled others leered at their companions—many sat with subdued, saddened countenances—and many appeared intelligent, and would, but for the prison dress, have looked even manly. But that garb of disgrace half suppressed the beatings of many a heart, chafed the spirit, and forced its wearer to bear about with him a visible degradation, perhaps—terrible idea—through life!

The lecturer then delivered his address, at the termination of which a prayer was offered up, in which the supplicant in-

treated that God in his mercy would bless the prisoners, their mothers, wives, and children; and at the mention of these dear familiar names, many an eye grew dim with tears. Then followed a piece of music, loudly and lustily sung, and the service was concluded.

Tramp, tramp, tramp, again, as in long files, and separate detachments, the prisoners left the chapel. As they passed through the court-yard they drew up in ranks for a minute or two, underwent a slight drill, and then each one taking with him a small vessel of water, was conducted to his cell—some to ponder over the past, some to contemplate the future, and a few to wish that the dreary life which was, and always would be, bounded by the dim cells of a prison, were ended.

Passing through the prison yard in company with the warden, I entered an immense shed, where a number of men were engaged in shaping huge blocks of granite and mill stones. As they laboured there was an evident difference between them and those who wrought in freedom. There was nothing of that cheerfulness which appears on the countenances of those who rise with the lark and go to their daily avocations, which are cheered by the prospect of repose in a happy home. Not a man or boy of them all whistled a little tune, or amid the brief intervals of labour, burst forth into a joyous stave. There was only the dull click of the hammer, or the sharp sound of the chisel. Labour in this place ruled with a rod of iron, and his slaves looked dogged and discontented, for there was not that hope of reward to sweeten the daily toil which urges on the freeman, as he guides the plough, or drives the wheel.

We entered a place where a number of prisoners were engaged in making brushes, and other articles. At the upper end of the apartment was a boiler, by which were standing some men engaged in felting. Pointing to one of them, my companion said, "There's a murderer!" I looked in the direction he indicated, and saw a coloured man of a stature below the middle size, and of a light, active-looking frame. There was nothing ferocious, but something very determined in his countenance. This was "Peter York," who had killed a man at the entrance of a house of bad repute in Boston. He was condemned to be hanged, but his sentence was commuted to imprisonment for life.

"Look at that man a little behind him," said the guide, "there is another murderer, he killed two men, and almost massacred another." I observed a man who might have numbered some sixty years; he was grey-headed, of an athletic form, not at all bowed by age; he was making kegs for white lead. Seeing that he was an object of attention, he paused amid his work, and, turning round, looked me full in the face, and so repulsive a countenance I have rarely seen. His eyes were very large, of a light colour, and impudently diabolical in their expression; he had a small nose, a large mouth, and a pointed chin. Altogether he looked the very incarnation of evil. The name of this murderer of almost three fellow creatures, was "Seth Perry." He had been a liquor seller, and in a drunken frenzy, had shot down three of his customers, victims to intemperance! Here was a terrible example to those who "tarry long at the wine, till wine inflame them!"—There stood the murderer unabashed, unconfounded, and apparently as unconcerned, as if the blood of his brethren had not gone up to God, with a cry of vengeance. By some means he had only been convicted of manslaughter, and so was condemned to imprisonment for a long term of years, after that, perhaps he will, on leaving his prison, resume his trade of death.

I turned, with shuddering repugnance, from the wretched man, and when I had gone some distance from him I looked round, and there he was, his head resting on a stone, his grey eyes steadfastly on me, his lips compressed, and his brow knit up, as if in deep rage. He looked perfectly frightful. If ever there was heart which could not, or would not repent, it must, I think, have been the one in the breast of that hardened-looking old man.

"There is another murderer," said the warden, "that stout-looking man yonder, perfectly harmless when sober, but when drunk there is no controlling him. He got intoxicated, and murdered a woman with a scythe, he actually *mowed her down*. That rather good-looking prisoner," he continued, "murdered a man, under circumstances of great provocation, he has been here many years, and will probably get pardoned at last. He behaves very well, as indeed all those convicted of murder do." The warden seemed unable to assign a reason for this; but as nearly all the prisoners who had committed murder, did so *while under the influence of liquor*, it may fairly be assumed, that the withdrawal of the maddening potations was the cause of their altered conduct.

After visiting the hospital, the kitchen, bakery, washhouses, &c., we entered a shop where two engravers were at work. One of them was a pale, worn, anxious-looking man, engaged in cutting a plate for one of the Lowell factories. He was evidently skilful in his occupation. As he spoke to me there was something inexpressibly sad in his countenance. He was confined there for some petty offence committed while he was in liquor—another fearful warning to the intemperate. He had written some verses in his imprisonment. In the first five verses, he recalls the circumstances of his early life, when he was "free and happy," with a wife and children, and a circle of friends. After lamenting the loss of these, he says:—

"And if these erring feet should tread,
Once more upon this world's broad stage,
I'll strive to earn my daily bread,
From precepts in the sacred page,
I'll strive to do by other men,
As I would they should do by me;
And God will make me happy then,
And from a prison keep me free."

I and my companion were sick at heart, and felt glad when the prison door closed behind us.

SONGS FOR THE PEOPLE.

ORIGINAL AND SELECTED

No I.

THE ENGLISHWOMAN'S PLEA FOR THE SLAVE.

On the western breezes swelling hear ye not a piercing cry,
Mingled with the clank of fetters? 'Tis the slave's wild agony
Not alone across the ocean comes that loud, appealing prayer,
It has risen up to Heaven, and it stands recorded there
Why should *England* pause and listen? she has set her captives free—
Oh! my Sisters, hear the answer from the bondman o'er the sea.

"HALF COLUMBIA'S SLAVE-GROWN COTTON FINDS ITS WAY TO ENGLAND'S SHORE"

We have worn the blood-stained fabric, Sisters! let us wear no more
All unconsciously we aided in America's disgrace,
Help'd to bind the galling fetters upon millions of our race
Let the time gone by suffice us, we are not in darkness now,—
Never more at Slavery's altar let an *English* woman bow

Nobly have earth's choicest spirits toil'd in Freedom's holy cause,
Battled with the proud oppressor, fought against his cruel laws,
Yet, despite the stern devotion of these heroes bold and brave,
Still the chain is on the bondman, still our brother is a slave,
And, it may be, that for Woman is reserved the high renown,
To achieve the mighty conquest—hurl the fierce usurper down.

Not as smote the wife of Heber, when the warrior's steps were bent,
Lying from his swift pursuers to the shadow of her tent,
Tongue and Pen *our* only weapons, LOVE shall point the feather'd dart,
From the bow of TRUTH outspringing, it shall pierce the monster's heart;
As Philistia's vaunted champion fell before a stripling's might,
Woman's hand *may* speed the arrow for the cause of Truth and Right.

But, if she would win a blessing, her own hand must spotless be,
Free from Slavery's pollution, from her brother's anguish free;
She must stand erect in Freedom, on her brow the light of love,
Wise as is the wary serpent, harmless as the gentle dove,
Then with firm, unfaltering courage she the tyrant's wrath may brave,
Strong in purity of purpose she may battle for the slave

Let Britannia's daughters rally, "England to the rescue!" cry—
Of the free-grown Cotton woven, lift our stainless banner high.
In God's blessed sunshine waving on the glad winds floating free
It may prove the rallying standard of the friends of Liberty
"Up and onward," is our motto—shrink not from fearful odds,
Not our own the might and power, nor the battle ours, but God's

A TRIAD OF PAINTERS.

In our last Number we gave a portrait and memoir of Benjamin West, the American painter. We now present to our readers the presentments, and some brief notes of the lives of three celebrated artists, one of whom is still living amongst us. What was then said of the importance of art, and the good influence exercised by the artist need not be further enforced; but we may at once proceed to notice a few of the incidents which have contributed to make the names of these three painters worthy of remembrance. We have placed them on the page in the order of their respective births;—of their merits as artists their works are the best evidence

FUSELI

Henry Fusely, the first on the page, was born at Zurich, in Switzerland about the year 1741 Of the exact date of his birth, and of the precise manner of spelling his name, there are some slight differences. The artist himself altered the first from that of his father's, and the last from the register in the parish church where he was christened His father, John Gaspard Fuessli, was a portrait painter of some celebrity, and one of his ancestors, Matthias Fuessli had, a century before, made himself a name in Switzerland, as a painter of battles, pillages, storms, conflagrations, &c It was no wonder then, that with an artist for a father, and the name of a clever man in the family, that the youthful painter grew enthusiastic about pictures, and took to painting as naturally as a duckling does to water. When he grew old, he loved to get a willing listener to whom he could impart the struggles of his youth how, with purloined candles and pencils purchased from his school pocket-money, he would slink away in the night time to make copies of the prints of Michael Angelo and Raphael; how his schoolfellows perceiving his talent for drawing, were anxious to procure specimens of his pencil's vagaries, even though purchased at the expense of toys and sweetmeats; and how, finally, his father becoming acquainted with the fact that his son *would* be a painter, took the very best possible means to bring about such a consummation, by giving him a regular artistic education.

Fuseli's instructor in the arts was Salzer, of Berlin, the author of "A Lexicon of the Fine Arts." At Berlin, whither he had been accompanied by his friend and companion, the then youthful, but afterwards celebrated Lavater, our young artist speedily attracted attention, for, besides being a painter, he was a poet of no mean talent. Among the admirers of his genius was Sir Andrew Mitchell, the British ambassador to the Court of Russia. From this gentleman Fuseli received much kindness, and it was principally by his advice and assistance that he was enabled at the early age of twenty-two to visit England—then, as now, the home of genius. On parting, the physiognomist presented his friend with this piece of advice, inscribed on a card, in the German language:—"Do but a tenth of what you can do, and fame and fortune will be the result."

SIR DAVID WILKIE.

GEORGE CRUIKSHANK

Behold the painter in London. His first sensations, he says, were more of overwhelming astonishment and solitude; but these soon gave way to others of a more temperate character,

and in a short time we find our artist in the capacity of tutor, translator, essayist, and critic. In fact, the letters of recommendation with which he was provided by his friends in Berlin, served no other purpose than to make him acquainted with the booksellers, and, through them, with the miseries of a literary man's life in the last century.

In this way he passed several years, alternately in debt and in high spirits, just according to his success or otherwise with the booksellers and the public. But while he pursued literature he did not neglect art. One day, he was introduced by a friend to the studio of Sir Joshua Reynolds, the then president of the royal academy, and arbiter of taste and excellence in all that concerned the fine arts. To him Fusch ventured to submit a few of his drawings. Reynolds examined them attentively and kindly, as his manner was, and inquired of the youth how long he had studied in Italy. Being informed that he had never been in Italy, but was a native of Switzerland, and hardly thought it necessary to go to Rome for inspiration —"Young man," said the President, "were *I* the author of these sketches, and were offered a thousand a year *not* to practise as an artist, I would reject the proposal with contempt." So flattering a judgment decided Fusch, and from that day the *trade* of an author was abandoned for the profession of a painter.

To paint was with Fusch to attract a fashionable and admiring audience; and but few years passed ere he was considered as amongst the first of his profession. The characteristics of his peculiar style are well portrayed in the following verse:—

> "All dark and monstrous shapes
> He brings before our eyes
> And crowds his canvass page
> With hideous phantasies."*

In 1798 he opened his Milton Gallery, and crowds assembled daily to gaze on and wonder at the genius and extravagance of the painter. All the [illegible] in the pages of the poet were made [illegible] and grotesque on the canvass of the painter, and few, who came for merely pleasure's sake, went away from the gallery without a feeling of sadness and gloom,—perhaps as much impressed with the peculiar character of the artist's mind, as informed by his pencil of the attributes of the poet's story.

To attempt anything like a catalogue of the pictures which Fusch painted—pictures which are esteemed of little value now—would exceed our limits. As a scholar and an artist he was equally esteemed in his day, and for twenty years he held the offices of Professor of Painting and Keeper of the Royal Academy. He is known to the present generation rather by his literary than his artistic productions. Of his singularly eccentric style of conversation—a kind of broken English and French intermixed—there are many anecdotes, but for these we have no particular taste, as they one and all exhibit the artist in a severe, disagreeable, sarcastic, almost Voltairean mood; but that he had warmth of character enough to obtain himself friends, and strength enough to secure them, and genius enough to place his name on the record of the "world's great men," is sufficient praise and sufficient reward. He died on the 16th of April, 1825, in the 84th year of his age."

DAVID WILKIE was born in a country house, in the parish of Cults, in Fifeshire, N. B., on the 18th of November, 1785. His father was the minister of the parish, and appears to have been a quiet studious man. As soon as David was old enough he was sent to school, but, instead of making progress with his books, he used, as Dr. Stoneham, the preceptor of Kettle grammar school, and now bishop of Toronto —would persist in thinking, "waste his time in drawing pictures." Our youth was determined to be a painter, and although his father did not like the profession and would rather David had been a preacher, his mother encouraged his inclinations, and provided him with the means of studying in the arts.

He was sent in 1799, we are told, to "the Trustee of the Academy in Edinburgh for the Encouragement of Manufactures, with some specimen drawings, and a letter of introduction from the Earl of Leven to Mr. Thompson, the secretary. The drawings were not considered satisfactory, and it was only at the earnest request of the Earl of Leven that he was admitted. But he soon made wonderful progress. Everything he attempted he executed with the greatest precision and faithfulness to leading principles. He showed himself a keen observer of nature, and gave early indications of the after excellence of his *tableaux de genre*. He was a constant frequenter of scenes likely to furnish subjects for paintings of this sort—trysts, fairs, and market-places. In that species of drawing in which taste and knowledge are combined, he was far behind many in the same class who had not a tithe of his talent; but though behind them in skill, he surpassed all his companions in comprehending the character of whatever he was set to draw. He was always one of the first to enter the academy when opened in the morning, and invariably one of the last to depart, and his intense application during the hours of study drew upon him the ridicule of the other students, who frequently bantered him on the subject. When the drawing hours were over he returned to his lodgings, and there laboured during the remainder of the day to carry out what he had begun in the forenoon, by sitting before a looking-glass and copying his own face and hands, and thus endeavouring to blend his impressions drawn from the antique with those derived from a diligent study of nature. He had already begun to perceive the importance of the action of the hands in telling a story, and who never he was unable to obtain a model which pleased him, he invariably introduced his own. In his picture of the "Blind Fiddler," which is now in the National Gallery, the hands of every one of the figures are drawn from his own, and also the expression of the heads. The girl leaning on the back of the chair is said to be very like what he was at the time.

In 1803 he won the ten guinea prize which had been offered for the best painting of "Callisto in the Bath of Diana." At the sale of his effects after his death this was sold for £48 6s. In the same year he made his first sketch of the "Village Politicians." He also about this time painted a "Scene from Macbeth," where the murderers sent by Macbeth to the house of Macduff meet his wife and child. The expression of the boy who boldly answers their questions was so excellent, that Mr. Graham, the teacher of the academy, immediately on seeing it, predicted that he would one day arrive at eminence from his strong delineation of nature. In 1804, in his nineteenth year, he left the academy and returned home. While there he painted "Pitlessie Fair," in which he inserted one hundred and forty portraits of rustics of the neighbourhood, most of whom he sketched in church for want of a better opportunity. For this he only received £25 from Kinnear, a Scotch laird."

But the time was coming soon when he was to make himself famous in the world. In 1805 he came to London, and became a student of the Royal Academy. He soon secured the patronage of the rich and noble, and was not allowed to waste his energies in ignoble pursuits. The "Village Politician," exhibited at the academy, proved the stepping-stone to Wilkie's fortune, and from that time he earned "golden opinions from all sorts of people." Soon afterwards, he produced that exquisitely natural and well known picture, the "Blind Fiddler," which was painted to order for Sir George Beaumont. Its success was immediate and immense, and Wilkie was everywhere considered as the first of British artists for domestic subjects.

> "That genius might depict
> The household feelings well,
> Let the 'Blind Fiddler' teach,
> Or Wilkie's 'Rent Day' tell."

The public were impatient for other specimens of his happy pencil, and various well-known subjects followed in rapid succession,—all of them distinguished by a most intimate acquaintance with the habits of "the people," a free touch and good eye for grouping and colour, and in fact by the genius of the man. "Alfred in the Neatherd's Cottage," for Mr. Davidson; "The Card Players," for the Duke of Gloucester; and "The Rent-day," for the Earl of Mansfield; "The Sick Lady," "The Jew's Harp," &c. The "Village Festival" was painted

* Pen and Ink Sketches of Authors and Authoresses London Partridge and Oakey

for Mr. Angerstein, for eight hundred guineas. In 1809 he was elected an associate of the Royal Academy, and a member in 1811. His own health was now beginning to decline rapidly from the closeness of his application. He therefore determined upon paying a visit to Scotland, where he remained from August until October. Upon his return to town he took apartments in Kensington. In May, 1812, he opened an exhibition of his pictures, twenty-nine in number, in Pall-mall. The undertaking extended his reputation, but caused him a loss of £414. His father died in December, and he then invited his mother and sister to come and live with him in London, in a house which he took in Kensington. In 1813 he painted "Blindman's Buff" for the Prince Regent. For the "Letter of Introduction" and the "Refusal," both small pictures, painted during this year, he received two hundred and fifty and three hundred guineas respectively.

In 1814 he visited Paris with his friend Mr. Haydon—and "the rest of the fashionable world,"—and during the following year he painted and exhibited "Distraining for Rent," "The Rabbit on the Wall," and 'The Pedlar,' and in 1817 he produced that wonderful work called, "The Chelsea Pensioners." It was painted for the Duke of Wellington, at a cost of 1,200 guineas, and is by many considered as the masterpiece of the artist.

In 1824 he travelled in Italy for the benefit of his health, in 1830 he was appointed painter in ordinary to his Majesty, a post vacant by the death of Sir Thomas Lawrence, in 1831 he exhibited his "John Knox," and his "Columbus," in 1836 he was knighted by king William the Fourth; and in the next year the world was gratified by the appearance of his "Cotter's Saturday Night," and his "Mary Queen of Scots." In fact, so indefatigable was he in his profession, that every year the Academy Exhibition was graced by two or more of his paintings. In the autumn of the year 1840, he went to the east in company with Mr. Woodburn, and travelled over various parts of that classic region till the spring of 1832. On the 21st of May of that year he embarked at Constantinople on board the *Oriental* for England. On the 26th he arrived off Malta, where he imprudently eat a large quantity of fruit and iced lemonade, and on the first of June, whilst off Gibraltar, he died, and on the same evening his body was committed to the deep, the burial service being read over him by the Rev. James Vaughan, Rector of Wroxall. And there he sleeps

"A calm and peaceful sleep
With the wild waves dashing o'er him."

We have but little to say of George Cruikshank. As every one knows,

"With his instructive lines
He gladdens fair or sage,
And well may be declared
The Hogarth of his age"

We do not even know the year of his birth,—though he is apparently about sixty years old,—nor the names of his father or mother—though the great probability is, that he had both. But after all, these are of little consequence—the man and the artist is with us still, and may his memoir remain long unwritten.

In place, therefore, of any laboured or lengthened notice of George Cruikshank and his immitably humorous productions, we take the following sketchy "bit" from the before-quoted work—merely premising that the writer was at a morning party at the mansion of Samuel Rogers the poet —

"Ainsworth and George Cruikshank, appropriately enough, entered the apartment together. I say appropriately enough, because they were so intimately connected with each other, as author and artist, that they had, to the public eye, been for some time *Siamesed*. Ainsworth looked much like the portrait of him, prefixed to one of his recent volumes. He is strikingly handsome, his profile is well cut, and his upper lip has much of that regular curve which we see in some of the Byron portraits. His eye is very dark, and piercing rather than brilliant. It is evident that he takes great pains with his hair, which is of jet black, and falls in little ringlets, not altogether natural, I guess, down his neck. His dress was in the very height of fashion—so much so, as to appear somewhat foppish, and he sported an abundance of trinkets. Ainsworth's manners were by no means easy, and formed quite a contrast to those of Hook, which were marked with peculiar grace.

"Who has not heard of George Cruikshank? The humorous, ever-toiling, indefatigable George? Some years since, a sketch of this immitable caricaturist appeared in 'Frazer's Magazine,' where he was represented seated on a cask, and sketching on a piece of paper, placed on the crown of his hat. It was much like him, but as many of my readers may neither have seen that drawing nor the original, I will try to describe him, as he appeared that morning at Rogers's.

"Cruikshank is tall, and rather lanky in person, his head is well shaped, and his face very expressive, but pale and thin. His gray eyes are piercing, and ever moving, or when they do rest on any object, seem at once to look *through* it. He has lightish-coloured hair (which he wears carefully combed back, so as to leave his right temple, which is high and well developed, exposed), and also enormous whiskers. He sports moustachios of a very peculiar cut, which gives to his visage a half-martial appearance. At first sight, most persons would take him for a foreigner, many suppose that he whose comic sketches had so often moved their risible muscles, has something of the humorous in his physiognomical aspect. Such is not the case—he looks more like a Cynic than a comic illustrator. There is a sort of severe expression in his countenance, which at times is almost forbidding.

"I did not get any opportunity of being near him, so that I could not listen to his conversation, but I have heard that he is usually taciturn, and almost morose. I was told that he is seldom to be seen in society, and when we consider the vast amount of work which he gets through, this may easily be credited. For years past he has illustrated the best comic works which have appeared, and not only has he surpassed all others in his own peculiar line, but he has shown that in serious, and even tragic subjects, he is a master of his art. In proof of this, I need only to refer the reader to some of his illustrations in 'Oliver Twist,' especially that striking one of Fagin, in the condemned cell."

The Bamboo.—Scarcely any native product in any part of the world, is turned to more valuable or more various uses than the bamboo. Besides being employed in the construction of the implements of weaving, it is used for almost every purpose to which wood is applied in other countries. It forms the posts and frames of the roofs of huts, scaffoldings for building houses, portable stages used in the various processions of the natives, raised floors, for storing rice and various kinds of agricultural produce, in order to preserve them from damp, platforms for merchandise in warehouses and shops, stakes for nets in rivers, bars over which nets and clothes are spread to dry, rafts, the masts, yards, oars, spars, and decks of boats. It is used in the construction of bridges across creeks, for fences around houses and gardens, as a level for raising water for irrigation, and as flag-poles in bazaars, police stations, akharas, &c. It is the material of which several agricultural implements are made, as the harrow, and handles of hoes, clod breakers, &c. Hackeries or carts, doolees or litters, and biers are all made of it. The common mode of carrying light goods is to suspend them from a piece of split bamboo laid across the shoulder. The shafts of javelins or spears, and bows and arrows, cubs, fishing rods, &c., are formed of it. It is employed in the manufacture of fireworks, as rockets, &c. A joint of it serves as a holder for many articles, as pens, small instruments, and tools, and a case in which things of little bulk are sent to a distance. The eggs of the silkworm were thus brought from China to Constantinople, in the time of Justinian. A joint of it also answers the purpose of a bottle, and is used for holding milk, oil, and various fluids, and a section of it constitutes the measure for liquids in bazaars. A piece of it, of small diameter, is used as a blowpipe, to kindle the fire, and by gold and silversmiths in melting metals. It also supplies the place of a tube in a distilling apparatus. A cleft bamboo is employed as a conduit for conveying water from the roofs of huts. Split into small pieces, it is used in making baskets, coops for poultry, birdcages, and various traps for fishing. A small bit of it, split at one end, serves as tongs to take up burning charcoal, and a thin slip of it is sharp enough to be used as a knife in shelling betel-nuts, &c. Its surface is so hard, that it answers the purpose of a whetstone, upon which the ryots sharpen their billhooks, sickles, &c.

THE DEATH OF THE STAG; OR, THE TALBOTS IN TEVIOTDALE.

BY FRANK FORESTER.

"The stag at eve had drunk his fill,
Where danced the moon on Monan's rill,
And deep his midnight lair had made
In lone Glenartney's hazel shade,
But when the sun his beacon red
Had kindled on Benvorlich's head,
The blood-hound's deep resounding bay
Came swelling up the rocky way."—LADY OF THE LAKE

"TAYHO! Tayho!"*

And straightway to the cry responded the long-drawn, mellow notes of the huge French horns which were in those days used by every yeoman pricker, as the peculiar and time-honoured instrument of the stag-hunt, the *mots* of which were as familiar to every hunter's ear as so many spoken words of his vernacular

It was the gray dawn of a lovely summer morning in the latter part of July, and although the moor-cocks were crowing sharp and shrill from every rocky knoll or purple eminence of the wild moors, now waving far and wide with the redolent luxuriance of their amethyst garniture, for the heather was in its full flush of bloom, although the thrush and blackbird were carolling in emulous joy, at the very top of their voices, from every brake and thicket which feathered the wild banks of the hill-burns, the sun had not lifted a portion of his disc above the huge, round-topped fells which formed the horizon to the north and westward of my scene. That scene was the slope of a long hill—

"A gentle hill,
Green and of mo[illegible]
As 'twere the cape of a long ridge that
Save that there was no sea to lave its base
But a most living land cap[illegible]th wave
Of woods and corn-fields, and the ab[illegible]des of men
Scattered at intervals, and wreathing smoke
Arising from such rustic roofs."

The hills above and somewhat farther off to the southward and eastward are clothed and crowned with oak woods of magnificence and size so unusual, and kept with such marked evidences of care and culture, that no one could doubt, even if it were not proved by the gray turrets of an old baronial manor and the spire of a tall clock-house shooting up high over the tops of the forest giants, that they were the appendages and ornaments of some one of those ancient homes of England which, full of the elegances and graces of the present, remind us so pleasantly of the ruder, though not less homely, hospitalities of the past

The immediate summit of the slope I have mentioned is bare, yet conspicuous for a single tree, the only one of its kind existing for many miles in that district—a single white pine, tall enough for the mast of some huge admiral, and as such visible, it is said, from points in the four northern provinces of England, and the two southernmost of Scotland—whence it is known far and wide, in many a border lay and legend, as the one-tree hill on Reedswood † Below the bare brow of this inland promontory—for such indeed it is—which is covered with beautiful, short, mossy grass, as firm and soft as the greensward of a modern race course, and used as one vast pasture of two hundred acres, lies a vast track of copper, principally of oak and birch, but interspersed with expanses of waving heather, where the soil is too shallow to support a larger growth, and dotted here and there with bold, gray crags, which have cropped out above the surface, and amongst these, few and far between, some glorious old gnarled hawthorns, which may well have furnished May-wreaths to the yellow-haired daughters of the Saxon before the mailed-foot of the imperious Norman had dinted the green turf of England This copper overspread the whole declivity and base of the hill, until it melted into the broad, rich meadows, which, with a few scattered woods of small size, and here and there a patch of yellow wheat, or a fragrant bean field, filled all the bottom of the great strath or valley, down to the banks of a large stream, beyond which the land rose steeply, first in rough moorland pastures, divided by dry stone walls, then in round heathery swells, then in great, broad-backed purple fells, and beyond all, faintly traceable in the blue haze of distance, in the vast ridges of the Cheviots and the hills of Tevydale. Along the base of the hill-side, parting it from the meadows, ran a tall, oak park-paling, made of rudely-split planks, not anywhere less than five feet in height, through which access was given to the valley by heavy gates of the same material, from two or three winding woo[illegible] roads into the shadowy lanes of the lovely lower country.

Such was the scene, o'er which there arose before the su[illegible] startling the hill echoes far and near, and silencing the grous[illegible] cocks on the moors, and the song-birds in the brake and thick[illegible] by their tumultuous din, the shouts and fanfares that told the hu[illegible] was up

"Tayho! Tayho!"

Tarà tarà-tara tantara rà-tarantantara-tantara-rà-rà-ràh. Whic[illegible] being interpreted into verbal dog-talk, is conceived to say—"Go[illegible] away! gone away! gone away! away! away! away!" and immediately understood as such, not by the well-mounted sport men only, but by what Scott calls—himself no unskilled woodsm[illegible] —"the dauntless trackers of the deer, who rush full-mouthed the cheery clangour, filling all earth and ether with the music discords of their sweet chidings.

The spot whence the first loud, manly shout, "Tayho" r[illegible] sounded, was almost within the shadow of the one tree, where, from a station commanding the whole view of the covert, which powerful pack of the famous Talbot blood-hounds, numbering n[illegible] less than forty couple, were in the act of drawing, a gay group w[illegible] collected, gallantly apparelled, gallantly mounted, and all inten[illegible] like the noble steeds they bestrode, eyes, ears, and souls erect [illegible] the gallant sport of the day

Those were the days of broad-leaved hats and floating plume of velvet justaucorps, rich on the seams with embroideries of go[illegible] and silver, of the martial jack-boot and the knightly spur on th[illegible] heel, and the knightly sword on the thigh, and thus were our bo[illegible] foresters accoutred for such a chase as is never heard tell of these times of racing hounds and flying thoroughbreds, when th[illegible] life of a fox is counted by the minutes he can live with a breas[illegible] high scent before the flyers, and the value of a hunter by th[illegible] seconds he can go in the first flight with a dozen horseman's stor[illegible] upon its back.

Things then were otherwise, the fox was unkenneled, or the str[illegible] unharboured at daybreak, and killed, if the scent lay well, sooner [illegible] later, before sunset, runs were reckoned by hours, hounds picke[illegible] for their stanchness, not their fleetness, horses bought not fo[illegible] their speed, but for their soundness, and the longest, steadiest, la[illegible] rider, not the most daring or the foremost, won the palm of th[illegible] chase, were it brush or antler, when the game fox was run into, [illegible] the gallant stag turned to bay

The gentlemen, who were gathered on the broad, bare brow [illegible] the one-tree hill, were, in all, twelve or thirteen in number, all, [illegible] first sight, men of gentle blood and generous education, although [illegible] as there ever is, ever must be, in every company, whether of me[illegible] or of inferior animals, there was one to whom every eye, even [illegible] the unknown stranger or the ignorant peasant, would have natural [illegible]rded as evidently at least undoubtedly the superior of the party, bot[illegible] [illegible]rkable and [illegible] he mingled nevertheless with the rest o[illegible] [illegible] of equality only, but of intimate familiar intercourse and friendship No terms of ceremonial, no titles [illegible] rank or territorial influence, but simple Christian names passe[illegible] between those gay and joyous youths, nor was there anything i[illegible] the habit of the wearers, or the mounting of the riders, to indica[illegible] the slightest difference in their positions of social well-being an[illegible] well-being One youth, however, who answered to the name [illegible] Gerald, and sometimes to the patrimonial Howard, was so far th[illegible] handsomer, both in form and feature, the statelier in stature, th[illegible] gracefuller in gesture, the manlier in bearing, the firmer and easie[illegible] of seat and hand on his hunter, that any one would have been prompt to say, at a glance there is the man of all this gentle an[illegible] generous [illegible], when, in war wakes its clangour in the land, external perils threaten its coasts, or internal troubles shake it state, foreign war or domestic strife will alike find the foremos[illegible] whether in his seat with the senate, or in his saddle on the fiel[illegible] wielding with equal force and skill the statesman's, scholar' soldier's eye, tongue, sword—all honoured him, indeed, and h[illegible] deserved that all should honour him

I have omitted, not forgotten or neglected, to mention, as fir[illegible] and fairest of that fair company, a bevy of half-a-dozen fair an[illegible] graceful girls—not like the gentlemen, all of one caste, but, a was evident, not so much from the difference of their grace an[illegible] beauty—though in these also there was a difference—as from th[illegible] relative difference of position which they maintained, four remaining somewhat in the rear of the other two, and not mingling unless firs[illegible] addressed in the conversation, and from some distinction in th[illegible] costliness and material of their attire.

A mounted chamberlain, with four or five grooms, who stoo[illegible] still farther aloof, in the rear of the ladies in waiting, and two o[illegible] three glittering pages standing a-foot among the latter, in full tid[illegible] of gallantry and flirtation, their coursers held by the grooms i[illegible] attendance, made up the party, from which must always be excepte[illegible] the huntsman, the verdurer, and eight or ten yeoman prickers, i[illegible] laced green jerkins, with round velvet caps, like those worn by th[illegible]

* "Tayho!" is the technical hunting [illegible] when the stag has broken cover, as is "Tallho!" the [illegible] "Tallho!" Both words are corruptions from the French "*Taut[illegible] Hors!*" "Out of the thicket." French being used to a very late day as the especial language of the chase.

† In Northumberland, a few miles from the Scottish border

whippers-in of the present day, and huge French-horns over their left shoulders, who were seen from time to time appearing, disappearing, and reappearing in the glades and dingles of the hill-side covert, and heard now rating the untimely and fallacious challenge of some wayward and wilful puppy, now cheering the earnest and trusty whimper of some redoubted veteran of the pack, as he half-opened on a scent of yesterr-even.

The hounds had been in the coppice above an hour, and two-thirds of its length had already been drawn blank—the gentlemen were beginning to exchange anxious and wistful glances, and two or three had already consulted more than once or twice their ponderous, old-fashioned repeaters—and now the elder, shorter and fairer of the two damsels, giving the whip lightly to her chestnut palfrey, cantered up to the side of Gerald Howard, followed by her companion, whose dark redundance of half disheveled nut-brown tresses fell down from beneath a velvet cap, with a long drooping plume, on each side of a face of the most exquisite oval, with a high brow, long, jet-black eyelashes, showing in cold relief against her pure, colourless cheeks, for her eyes were downcast, and an expression of the highest intellect, which is ever found in woman mingled with all a woman's tenderness and softness She was something above the middle height, with a figure of rare slenderness and symmetry, exquisitely rounded, and sat her horse at once most femininely and most firmly, without the least indication of manliness in her seat or demeanour, yet with a certain of-at-homeness in her position and posture that showed she could ride as well, perhaps as boldly, as the best man among them.

"Ah! Gerald, Gerald," said the elder girl, laughing, as she tapped him on the arm with the silver butt of her riding-whip, "is this your faith to fair ladies, and especially to this fairest Kate, that you deluded us from our soft beds at this untimely hour, with promise to unharbour us a stag of ten within so many minutes, all for the pleasure of our eyes and the delectation of our hearts, and here have we been sitting on this lone hill-side two hours and upwards, to the great craving of our appetites, and the faintness of our hearts, yearning, as the queen's good puritans would have it, after creature comforts Out on you! but on you, for a false knight, as I believe not, for my part, that there is one horn or hoof from the east to the west on the hill-side—no, not from the 'throstle's nest' to the 'thorny brae'!"

"Ah! sister-mine, art so incredulous, but I will wager you or ere the Talbots reach that great gray stone, with the birch boughs waving over it like the plumes, as our bright Kate would say, of a dead warrior's helmet over his cold brow We *will* have a stag a-foot—ay, and a stag of ten" And instantly rousing his voice to a quicker and clearer note—"See now!" he cried, "see now!" as a superb, dark coloured animal, not lower than a yearling colt at the forehand, leaped with a bound as agile as if he was aided by wings, on the cope-stone of the dry stone wall which bounded the hither side of the hill coppice, with vast, branching antlers tossed as if in defiance, and a swan-like neck swollen with pride and anger He stood there an instant, self-poised, self-balanced, like the herald Mercury new lighted on a heaven-kissing hill"—uttered a hoarse, belling cry, peculiar to the animal in his season, and then sprung forth in a long, easy curve, alighted on the springy turf, without apparent effort or sensation, and then swept up the gentle slope almost toward the admiring group on the brow, but in a diagonally curved line, that would carry him, in the long run, to the south-west of them, at the distance of perhaps a hundred yards

"Tally-ho!" burst in a clear and cheery shout from the excited lips of Gerald Howard

And instantly from every part of the hill-side, from east to west, from the throstle's nest to the "thorny brae," from ten well blown French-horns burst the wild call Tara-tara—tara-tantara-ra—tara-tantara-tantara—rā—rā—rāh—"Gone away gone away—gone away—away—away!" and the fierce rally of the mighty Talbots broke into tongue at once through the whole breadth and length of the oak coppice, as they came pouring up the hills, making the heather bend and the coppice crash before them like those famed Spartan hounds of Hercules and Cadmus,

> "When in the woods of Crete they bay'd the bear—
> So flew'd, so ranged, and then heads were hung
> With ears that sweep away the morning dew,
> Crook-kneed and dew-lapped, like Thessalian bulls,
> Slow in pursuit, but match'd in mouth like bells,
> Each under each."

As fifty separate spots they leaped the wall nearly abreast, but four were, it may be, a spear's length the leaders, and they, laying their head right at the noble quarry, which was still in view, came straining up the hill, making all ring around them with their deep-mouthed thunder. The rest topped the wall one by one, in view too, and on a breast-high scent at once came streaming up the rich grass slope on converging lines, so that as they passed the attentive group to the westward, within a hundred yards, the pack had got altogether within, perhaps, another hundred yards of his haunches, running so that a large carpet might have covered the whole forty couple, and raving with such a din of harmonious discords, such shrill and savage trebles of the fierce fleet bitch-hounds, such a deep diapason of the old veteran dogs, such sweet and attuned chidings of the whole, that not an ear but must have listened with delight, not a heart but must have bounded with rapture at the exulting sounds

And ever and anon there rang up from the wild-wood the deep, mellow blasts of the French-horns, blent with the jangled cries of the Talbots into a strange and indescribable clangour and crepitation, at once most peculiar and most entrancing.

At the same moment the sun burst into full view above the eastern hills, and, pouring down a great flood of golden lustre over the whole glowing scene, kindled up everything into light and life, tinging with ruddy light the dappled sides of the noble beast as he swept by them now within fifty yards, for he had circled round them, wantoning and bounding to and fro, perfectly unconcerned by the nearer presence of his pursuers, and seemingly desirous to display the miracles of his speed and beauty to the fair eyes that admired him, enlivening the dappled hides of the many-coloured glossy pack, burnishing the sleek and satin coats of the noble coursers, till they glowed with almost metallic splendour, flashing upon the rich laces, the bright buckles, and the polished sword-hilts of the hunters, and gilding the bridle-bits and brazen horns of the verdurers and yeomen prickers, until the whole hill-side was glittering with a thousand gay hues and salient lights, filling the mind with memories of fairy-land and magic marvels.

Hitherto the little group on the brow of the one-tree hill had stood motionless, while the gay, animating scene, revolved around them, a glittering circle wheeling around the stationary centre; but now, when the servants of the chase, huntsman and verdurer, prickers, all streamed up the long hill at their best pace, all wheeled around the tree and its gay company, swelling the din with the flute and braying of their horns, the gallant stag appeared to comprehend that a fresh band of enemies were added to his first pursuers, for he half turned his head to gaze on them, half paused for a moment to snuff the air, with nostrils pridefully dilated, and flanks heaving, not with weariness as yet, but with contempt and scorn, then with a toss of his antlers, and a loud snort of indignation, set his head fair to the north-west, full for the hills of Scotland, and went away at long sweeping bounds, that seemed to divide the green slope, by leaps of eight yards each, cleared back again over the rough stone wall, and went crashing through the [illegible] the tall oak palings and the river, as if he were [illegible] straight for the well-known point, on a right line, as the crow flies it.

And now for the gentlemen the chase was begun, and Gerald Howard led it like their leader, as he was in all things, and the rest followed him like men, as they were, and brave ones—but to the ladies it was ended so soon as they had breathed their palfreys down the slope to the stone-wall and the wood-side at an easy canter, and they returned to the hill top, where they found viands and refreshments spread on the grass, and long they lingered there, watching the hunt recede, and the sounds of the chase die away in the far distance But it was long ere the eager hounds were lost all and wholly to their eyes and ears, for the gay band drove on, as straight as the crow flies, due north-ward—due north-ward the chase followed

They saw the gallant stag swoop over the oak-pales, as if they were no obstacle, they saw the yelping pack crash and climb after him, then they saw Gerald Howard, on his tall, coal-black barb, soar over it unhindered, but till the rest turned right and left to gate or gap, or ere they might follow him The valley was crossed as by a whirlwind, the river swam by hunt, hound, and hunters, unhesitating and unheeding, and far [illegible] up [illegible] green meadow-land pastures, over the stone-walls, now [illegible] their gaze [illegible] tops into the misty hollows, now glimpses [illegible] some yet more distant stretch of purple heath, and still the chiding of the hounds, and still the wild bursts of the French-horns, fell faintly on the ears as the wind freshened from the westward, but at length sound and sight failed them, and when silence had sunk [illegible] and solitude reigned almost perfect over the late peopled slope [illegible] the one-tree hill, the gay bevy of dames and damsels returned homeward, something more serious, if not the sadder, for the parting, to await the gathering of their partners to the gay evening meal

Long they awaited—late it grew—the evening meal was over—the close of night had come—the lights in bower and hall were kindled—the gates were locked and barred—long ere the first of the belated foresters returned, soiled and splashed, way-worn and weary, with the jaded and harassed hounds, and horses almost dead from the exertion and exhaustion of the day. At midnight, of the field of all the men save one were collected, though two or three came in on foot, and yet more on borrowed horses—their

own good steeds left in the morass or on the moorlands, to feed the kites and the hill-foxes Of the pack, all save two mustered at the kennel-gates in such plight as the toil they had borne permitted.

The man missing was Sir Gerald Howard, the master of the pack—the two hounds were its two leaders, Hercules and Hardheart, of whom no rider had ever yet seen the speed slacken or the heart fail

The old verdurer, who gave out the last, reported Gerald Howard going well when he saw him last, with the stag and two Talbots of all in full view, and this many miles into Scotland, within the pleasant vale of Teviotdale, with the great Scottish hills, grim and gray, towering up before him, and the night closing fast on those dim solitudes.

It was late on the next day when Sir Gerald Howard was seen riding up the road on the same steed he had backed so gallantly, still weary and worn, though recruited, with the huge antlers at his saddle-bow, but no brave Talbots at his heel

He had ridden far in the darkness, still guided by the baying of the stanch hounds, and when he could see to ride no longer, had obtained timely succour and refreshment from a stout borderer of Teviotside At daylight remounted a fresh horse, a guide of the country, to renew the chase, but it was now soon ended Scarce had he gone a mile on the straight line they led run throughout, ere he found Hardheart stiff and cold on the mountain breast and not a hundred yards yet onward, ere the great stag lay before him, not a hair of his hide injured, and Hercules beside him with his head upon his haunches, where he had breathed his last, powerless to blood the brave quarry he had so nobly conquered

Sixty miles had they run on that summer's day from point, they had died together, and in their graves they were not confounded, for a double tomb was scooped in the centre or hollow of the mountain-side, wherein they were found and above it was piled a rough, gray column, whereon may be seen, rudely sculptured, this true epitaph —

"Hercules hic a Hart O'Grese,
And Hart O'Grese hic Hercules."

For reader mine, this is a true and true tale, and I, who tell it you, have sat upon the stone and tempered mine cup of Lent beside the little rill beside it, with the wreck of the old mansion far before me, the dark Cheviots at my right, the blue hills of the Great Moor looming away almost unreasonably to the westward, and no companions near me save the red grouse of the heather and the curlew of the moors — neither of which were in time that my weary setters slept in the noonday sun, save this ever-time tradition

---

COLONEL EASY

AN AMERICAN SKETCH

Every one knew Colonel Easy He was invariably called Easy Colonel Parson Quiet knew him, Esquire Short knew him, Judge Bluff, of the adjoining county, knew him, and the Honourable Mr Stiff knew him It was, "How are you Colonel, and what news have you-" He lived in a gabled red house, just on the corner near the hotel, an old house, owned to him because his father's father built it, and he was very sure when time crumbled away an old pillar that supported the porch, and obliged him to replace it with modern wood The interior was plenished with old family portraits looked down from the walls, and a spread-eagle projected an antique mirror by being placed above, and gazed below with open beak The kitchen, too, looked south, and its old cornices were cozy, and the fireplace, oven, and painted beams above, claimed near relationship by its cooth poles stretched from one to the other, supporters for sausages, seed-corn, &c. The Colonel loved this place, and of an evening he smoked a pipe here, and laughed out of his eyes, and chatted with a negro-boy and the parson And told many funny stories This old kitchen *was* cozy. And then the lawn, with elms, and maples, and oaks His father played here, he had played here, his sons had played here; every blade of grass was dear to him—why not?

Every one knew the Colonel The boys in the parish, as he passed, took off their caps and whispered one to the other, "There is Colonel Easy, a good man I wish he could hear from his son; how long he has been gone! Papa says *he* owes Colonel Easy a great deal, for he got his contract for him, and I know Esquire Short never would have gone to the legislature if it hadn't been for the Colonel; and Judge Bluff never would have had the say about hanging 'poor Tom,' if the Colonel had'n't got him his judgeship." And so it was. Colonel Easy had inherited an easy property, and, when young, *dashed* some; had always been the poor man's friend; had benefited others and not himself; had placed his parson in a lucrative position, and sent Senator Stiff to Washington, and helped Judge Bluff to the bench, and endorsed for Esquire Short, and a great many farmers; had educated an expensive family, and at the age of sixty found his property dwindled to a small amount; enough, though, he hoped, to bury himself and companion, but he was forgetful of contingencies. If any one found himself in trouble, Colonel Easy was the man, if advice or calculation, why, Colonel Easy could do it, if pecuniary assistance, Colonel Easy, and so it had been until it was a common saying, "Colonel Easy cares for every body and not for himself" Yes! he was a '*clever*" man, and did many *clever* things, hoping, by so doing, to carry out the Scripture admonition, "Love thy neighbour as thyself" He had always granted favours and never asked a return, that his many kind actions might prove bread cast upon the waters in time of need if such a season should ever come upon him Human nature smiled in the creation of Colonel Easy, a God-send to many, a blessing to all Why should he have burdens of sorrow, heavy trials, and sore afflictions? Alas! he was of the earth, earthy, for "the rain falleth alike upon the just and the unjust" The poor Colonel had shed bitter tears over the loss of two noble sons, and he mourned in bitterness for his first-born Three scions clustered about him and opened a bright future for his old age, but two faded from his sight, and the other strayed from his call He was childless, and yet his eye spoke kindness, his heart went forth to other's relief, and he was the same good, easy Colonel Easy Perhaps the uncertain fate of his son Paul aroused him more than the death of his other sons, and sometimes in the gloaming, when the day had passed, a tear could be detected stealing from its covert upon his old wrinkles, yet the sight of his fine portrait would cheer it up, and the pleasant smile stood over the wreck On a Sabbath at church, too, when Esquire Short's boy was sometimes the nucleus for all eyes by the return of his son from sea, the lips of Colonel Easy *would* tremble, and his hand shade his eyes, he could not help it, but his devotional air seemed more deep, and himself more contrite No one inquired of him for Paul for he had never heard from him since his departure He had grown up with dissipated habits, and in a wild frolic had wounded a companion and, before the result of his rashness was known, fled his home and country This was the history of the Colonel's agony, which he had endured for twenty long years But for his son's wild passion the Colonel had made full amends the wounded boy he had educated and cared for as for his own It was no less a personage than the honourable Mr Senator Stiff, in fact, he looked upon him as a substitute for his lost Paul Had it not been proven before the unfortunate family trouble that Colonel Easy was proverbially a kind man, his great considerateness might have been attributed to domestic sorrows, but no one, to look upon his face, could discover a *callous* feature, it was innate. Not a needy dwelling in the county but felt the generous hand of this philanthropist

But the shadow of life began to lengthen and thicken upon the Colonel's pathway It would appear, that, like unto Job, the Almighty had permitted Satan to harass him for His own wise purposes, and with the swift feet of evil had visited his friends, to steel their hearts against his misfortunes as also to bring troubles in frequent reputation Senator Stiff, for whom the Colonel had largely endorsed, ever open to the memory of the many he had sustained, as it were, from his own hand, died suddenly at Washington with larger liabilities than his assets could cancel. The village merchant, a debtor for heavy cash sums lent, had failed and put an end to his existence Farmer Worth's buildings were destroyed by fire, and his delinquencies were fearful, all which riveted the Colonel still more fast in close and awkward circumstances. He began to feel and fear People said the Colonel had grown old very fast Poor man! I hope he will find a quick return for his life-long services of devotion to others Surely Judge Bluff and Esquire Short could easily advance all necessary aid, for the Colonel taught them how to do well in the world The Colonel lamented that he could assist no more, but must *seek* assistance A very quiet letter was sent to Judge Bluff and a note to Esquire Short, couched in manly language of distress He spoke of no previous business; he touched no chord of memory; it was merely for present assistance, and they

could do it. He was sanguine that all was right. Return of post brought the following reply from the Judge:—

"——ville, *September*, 18—.

"PAUL EASY, ESQ.

"SIR,—Your letter of the 12th, requesting a loan, is received. I regret, Sir, to say, I have made such a disposition of my ready cash that it would materially inconvenience me to favour you at this time. Hoping your many friends will appreciate your necessities,

"I remain
"Your obedient servant,
"R. BUFF."

The Colonel read it, wiped his spectacles, and read it again. It was from a person to whom he had rendered numerous pecuniary favours, and who owed his political position to him. Esquire Short's answer was also before him—

"*Tuesday morning, Sept.* 18—

"P. EASY, ESQ.

"SIR,—I was surprised to receive your note this morning, considering the sum total of liabilities, present or prospective, to me, as security for the sum you desire. I had supposed that your handsome home and large income, and it was a sufficient guarantee against me such equivocal exposure of character. Of course, sir, my experience will prevent me from indulging in such a struggle with [illegible] GEORGE SHORT."

The Colonel had not recovered from this unkind and ungentlemanly reply when the Judge's letter arrived. He could hardly believe, and yet the truth was before him. He had played the benefactor, and was reaping the usual reward. Other sources failed, and he gave up the game, retiring into a state of feeling, unexpressible beyond measure. There was but one more step, he strove to avoid it. He resorted to all his female to office, yet the [illegible] before him—a mental relinquishment of his all, the old gabled house, the kitchen, the lawn, the trees. His heart-strings were breaking, but the same pleasant face covered all.

On October day, the inhabitants of the quiet village of ——— read with sorrow the following notice in the county paper:—

"PUBLIC SALE OF REAL ESTATE. Being about to [illegible] from some of its vicinity, the subscriber will offer [illegible] on the 1st day of December, all those lots in the town of [illegible] known as Paul Easy, and also all other lots to such in said town [illegible]. This land is one of the most delightful situations in the county. On it is a large and commodious [illegible] and two barns.

"For particulars, inquire of O. [illegible] or the subscriber on the premises.
"October 10, 18—." "P. G. PEARMAN."

But the wind was tempered to the shorn lamb. Before the "ides" of December had come, the thick darkness which had enveloped, and the Colonel's eyes were moist with pity and happiness. His lost son Paul had returned rich from a long residence in South America, and the old gabled house, the kitchen, the lawn, and the trees, were still his.

Reader, you have read tales without a moral, but the one now attended here. I need not demonstrate but do you know any Colonel Easys? Are you the protector of such a one? Have you received kindness and returned it not? Have you rendered good even a stone? Have you felt the kindness of others, and repaid them in selfishness? Is there any truth in this tale?

A LITERARY TASTE PROMOTIVE OF WORKING MAN'S HAPPINESS.

A MECHANIC with a literary taste says Mr. Alexander Wallace, in the "Bible and the Working Classes," has a constant source of delightful companionship, and can pursue bodily and mental labour at the same time. He can talk back upon the books that he has read, he can repeat select passages from his favourite poets, and thus provide himself with cheerful fellowship on all times. He can hold converse with the departed great the poets sing for him—the orators declaim. By his book he can walk in all centuries, and at all places, and never for a moment be lacking in company for an honourable subsistence. His fellow workmen who have no such taste for reading, who is illiterate and ruthless has no such resource to fall back upon—he has no proper companionship within himself, for, if his mind is not an utter blank it is filled with a crowd of trifling and debasing thoughts—gloating over past scenes of sensual enjoyment, a looking forward with impatience for similar pleasures. A man, disciplined like the former—accustomed to think, and to read, and to hold intercourse with pure and lofty minds—never [illegible] little for more rational pleasures than [illegible] cannot help to occupy a better vantage ground for the sure possession of all the social decencies of life.

"The small but well-selected collection of books in the dwelling of the artisan, is a pledge of domestic comfort of happy fireside influences, and a security for their continuance. The ancient Romans were in the habit of cherishing feelings of great veneration towards certain deities which presided over home, the protectors of household virtues. The images of those divinities were kept sacred in the innermost part of the house. A house without such protection, in the eye of an ancient Roman, would be comfortless and unsafe, but the poorest artisan in the land may now have a far nobler protection for his home—a security for domestic comfort and peace, in a few well selected standard works in the different departments of literature and religion. These are your household deities, and, in the light and beaming intelligence which they will shed around you—in the feelings of kindly interest which they will beget within you, to man and every living thing—in the elevating views which they will give you of the works of God in the work held of contemplation which they will open up for you in this world and in the bright world above—you are protected against the downward tendencies of your nature, your affections are purified, ennobled, and enlarged, and instead of ignorance and superstition being the shield of household virtues and the protection of home (such as the Penates were to the imagination of the ancient Romans), the holy affections cherished by the companionship of good books, by an elevated literature and a lofty divine—the light of truth pointing you to another and a better world—will be the best protection of every social virtue and the best security to domestic comfort and peace."

SWEET POTATOES.—Some years ago a gentleman visiting a farm in Tolland, Connecticut, took from his pocket a small root, which by some means had come in the east home. It was brought with us, and I cannot tell my farm hand what it was. "Oh nothing but a potato, you take and plant it, and you'll have all you can eat for all you are free." The lad went, and the farm thought no more about it at that time. The boy however, no doubt cut the potatoes, carefully divided into eyes, spread the seed leaves, and put them into the ground. The ground was carefully put aside in the fall, and [illegible] the spring and second year, the yield began to [illegible] and the second product was four hundred bushels. The farmer seeing the prospect that the potato-seed would by [illegible] very cheap, which [illegible] asked to be treated from [illegible] for [illegible] not to be despised even though [illegible] the [illegible] child. Everything little helps as [illegible] the [illegible] is once a small spring bubbling up from [illegible] and [illegible] that costs its cost, refreshing [illegible] on [illegible], we only ask all about, that perhaps, a [illegible] not [illegible] be sold. Never despise trifles.

LITERARY NOTICES

CASSELL'S SHILLING EDITION OF EUCLID.—THE ELEMENTS OF GEOMETRY containing the First, Second, Third, and Eleventh and Twelfth Books of Euclid from the Text of Robert Simson, M.D., Late Professor of Mathematics in the University of Glasgow, with Corrections, Annotations, and Exercises, by Robert Wallace, A.M., of the same University, and Charles Tutor, of the University of London, is now ready price 1s. 6d. cloth or 1s. 6d. neat cloth.

THE POPULAR EDUCATOR.—AN EARLY EDITION of this extraordinary work on fine paper, at 1½d. per Number or in Monthly Parts, is now at press at 7d., or when Five Numbers sold, is now published and issued without the weekly binding. Persons wishing to possess it must be careful to order the *Early Edition*. The whole of the Numbers may now be obtained, or the first Part. Part I. 7d. Part II. 7d. Part III. 7d. The Common Edition of One Penny per Number, Monthly Part, 4d. or 6d. is now on sale.

THE FAMILY INSTRUCTOR AND MAGAZINE OF ART.—The first Volume of this splendidly published work, is now ready and may be had in Monthly Parts at 8d., bound uniformly, price 6d., or extra cloth gilt edges, 7s. 6d. It contains upwards of Two Hundred pictorial Engravings, and an equal number of minor Engravings, Diagrams, &c.

COMPLETION OF JOHN CASSELL'S LIBRARY.—The invaluable Work is now complete, in 26 Volumes 7d. each in paper covers, double Volumes cloth, 1s. 6d., or when 4 Vols. in 1, 2s. 3d. The entire Series may be had, bound in cloth, 19s. 6d., or arranged in a Library Box 25s.

THE EMIGRANT'S HANDBOOK & GUIDE to the Various Fields of Emigration in all parts of the Globe. Second Edition, with additions, to which has been appended a "Guide to the Gold Fields of Australia," with copious Instructions Government Regulations &c., accompanied by a Map of Australia, in which the Gold Regions are clearly indicated, is now ready, price 9d.

THE PLEASANT WAY, a Monthly Religious Magazine, is published on the 1st of every month, price twopence. 32 pages enclosed in a neat wrapper. Vols. I. and II., neatly bound in cloth and lettered, price 2s. 6d. each, are now ready.

WORK AWAY! WORK AWAY!

Work away!
For the MASTER'S eye is on us,
Never off us, still upon us,
Night and day,
Work away!
Keep the busy fingers plying,
Keep the ceaseless shuttle flying,
See that never thread be wrong,
Let not clash nor clatter round us,
Sound of whirling wheels confound us,
Steady hand, let woof be strong
And firm that has to last so long!
Work away!

Work away!
Keep upon the anvil ringing
Stroke of hammer on the gloom—
Set twixt cradle and twixt tomb
Shower of fiery sparkles flinging;
Keep the mighty furnace glowing,
Keep the red ore hissing, flowing,
Swift within the ready mould,
See that each one than the old
Still be fitter, still be fairer
For the servant's use, and rarer
For the master to behold—
Work away!

Work away!
For the LEADER'S eye is on us,
Never off us, still upon us,
Night and day!
With the treckless prairie round us,
Dark and unsunn'd woods surround us,
Deep and savage mountains bound us
Far away
Smile there of Savannah's grove,
Rivers sweep and roll below
Work away!

Work away!
Bring your axes, woodmen true
Smite the forest till the blue
Of heaven's sunny eye looks through
Every wide and tangled glade,
Jungle, swamp, and thicket shade
Give to day!
O'er the torrents fling your bridges,
Pioneers! on the ridges
Widen, smooth the rocky stair—
They that follow far behind
Coming after us, will find
Surer, easier footing there,
Heart to heart, and hand with hand
From the dawn to dusk of day
Work away!
Scouts upon the mountain peak,
Ye that spy the promised land,
Hearten us, for you can speak
Of the country you have seann'd
Far away!

Work away!
For the FATHER'S eye is on us
Never off us, still upon us,
Night and day!
Work and pray!
Pray, and work will be complete—
Work, and prayer will be the sweeter
Love, and prayer, and work the better,
Will ascend upon their way,
Fear not lest the busy finger
Weave a net the soul to slay,
Give her wing—she will not linger—
Soaring to the source of day,
Cleaving clouds that still divide us
From the azure depth of rest,
She will come again! beside us,
With the sunshine on her breast,
Sit and sing to us while quickest
On and on the fingers move!
While the outward din is thickest,
Songs that she hath learn'd above.

Live in Future as in Present—
Work for *both* while yet the day
Is our own! for lord and peasant,
Long and bright as summer's day,
Cometh, yet more sure, more pleasant,
Cometh soon our holiday;
WORK AWAY!

OLD WOMEN.—If a whymsical or ridiculous story is told of any one, it is sure to relate to an old woman. If a man lacks wit, or is in any way eccentric in his ideas of neatness and propriety, he is called an old woman A deficiency of firmness of purpose, or timidity in intercourse with the world, subjects one to a similar epithet, and yet what does the common sense of this saying amount to? Simply this, that a man is like his mother! And who, pray, is a real mother? A being filled with devoted and disinterested love for her offspring. Did any one ever hear of a selfish mother?—of one who would not practise self denial that she might minister to her children? Here, then, is a trait which is, in reality, old womanish, and the only one, in our mind, that distinguishes the peculiarities of the venerable females from those of selfish, bombastic man!

TO COAT IRON WITH COPPER.—A process has recently been invented, by M. Reinsch, by means of which a firm and durable coating of copper may be deposited on iron. This method is as follows.—Polish the iron by rubbing it well with cream of tartar, and afterwards with charcoal powder. Place it then in hydrochloric acid (or muriatic acid), diluted with three or four times its volume of water, in which a few drops of a solution of sulphate of copper have been poured. After a few minutes have expired, withdraw the iron, and rub it with a piece of cloth, [illegible] and [illegible] by [illegible] and [illegible] with [illegible] and polish with chalk. The coating thus attached will be as firm and durable as that deposited by the electrotype process.

NEW APPLICATION OF THE WATER GAS.—Mr. Samuel Cunliffe Lister, of Bradford, has made use of [illegible] Mr. Wright's patent water gas [illegible] water on incandescent charcoal or coke—to the heating of his machines for preparing and combing wool, in place of using fire from charcoal, as is the general practice in Yorkshire. These [illegible] present no troublesome from the use of charcoal, and avoiding the very deleterious influence of generating such a mass of carbonic acid, so perilous to the workpeople, and from which so many of them suffer severely. It is stated to be very easily and very rapidly made—one retort of six feet long making 200 to 300 feet an hour, and at a small expense, while the intensity of the heat given off is certainly that of ordinary gas. A piece of iron or copper wire held to the jet is almost instantly ignited, while the gas is so pure as in no way to injure the finest machinery with which it comes in contact. We cannot doubt but an improvement so decided must make rapid way in Yorkshire. The same gas for all purposes of singeing is far superior to coal or cannel gas, and never fills up the small apertures of the singeing machines. Messrs. Gardner and Bazley, of Dean Mills, Bolton, are using it extensively for singeing their yarns.

NOTICES TO CORRESPONDENTS.

J. L. (Newport, Mon.)—You must state for what purpose you need "black and yellow composition" before we can furnish you with a receipe.

MARY SIMSON.—The author of "Reflections on the Works of God" was C. C. Sturm, a German divine, who was born in 1740, and died in 1786. There are several translations of his "Reflections" in other languages besides English.

YOUNG THOMAS.—You have misspelt one of the words in your Latin motto, it should be, *Tempus rerum imperator*, in English, "Time is the ruler of all things." The *Gymnosophistæ* were a sect of philosophers in India who despised bodily pain, and inured themselves to suffer the greatest tortures. "The *Modern Speaker*, by Leman T. Rede," contains selections in prose and verse, and will probably suit you as well as any book we could name.

C. D.—The expense of an application to the Court of Chancery we'll be at no end, we fear, in your [illegible] we'd excuse Latin.

THOMAS.—It was on the last day of March, 1814, that the allied Sovereigns entered Paris. The battle of Waterloo was fought June 18, 1815.

MARY ANN.—If you put a *small* pinch of carbonate of soda into the water in which you place your cut flowers, they will keep fresh eight or ten days, so one of our female acquaintances assures us.

SCORBUTICUS.—We do not profess "skill in surgery," you should apply to some respectable medical practitioner.

ROVER.—You will be most likely to get the information you need by addressing your inquiries to the Secretary of the Admiralty.

A YOUTH.—Belisarius was one of the greatest generals of R[illegible] He died in the year [illegible] deprivation of sight, and begging in the streets of Constantinople, crying, *Data obolum Belisario*, is a fiction of later times, altogether unsupported.

ANOTHER "YOUTH" (Burslem).—You have strangely confounded Epoch and Epact! An *Epoch* is the time at which a new computation is [illegible] an *Epact* is the [illegible] excess of the common solar year above the lunar, and thereby may [illegible] every year.

"Those [illegible] you have sent (*Fontes vos attendendos*), may be translated thus,—"Mark the end."

A COUNTRY SUBSCRIBER.—The term "*O Yes*" used by public criers, is a corruption of the French word *Oyez*, hear ye! It is used to enjoin silence, and attention to what is about to be proclaimed.

W. KING (Kensington).—Lithographic crayons,—that is, crayons for drawing upon lithographic stone,—may be made thus.—Like hard tallow-soap 7 parts, white wax 6 parts, melt them together by a gentle heat, then add lampblack 1 part, and mould into suitable shape when sufficiently cool.

T. W. (Birmingham).—If you have good reason to believe that your master is drawing from you more time and labour than he ought, you had better apply to a magistrate, especially as you say, your master compels you to work at your ordinary calling on Sundays. Consult your indenture carefully, and see whether it be stamped.

CHARLES S.—If you wish to see the House of Lords, you must obtain an order from the Lord Chamberlain.

A YOUNG SURGEON.—We think Sydney or Melbourne are, either of them, places in which you may get a good living.

JUVENIS.—Many of the shawls and dresses [illegible] be made of "Cashmere" [illegible] Cashmere articles are made bears a high price, the quantity produced by each goat does not average more than three ounces, and it requires the produce of at least ten goats, male and female, to supply sufficient materials for one shawl measuring fifty-four inches square.

R. W. (Chelmsford).—We cannot undertake to search for the extracts you wish to see published in the "Working Man's Friend." If you will send them to us we will endeavour to find room for them.

All Communications to be addressed to the Editor, at the Office, Belle Sauvage Yard, London.

RUSSIA AND THE RUSSIANS. -II.

AN EPITOME OF RUSSIAN HISTORY

CHURCH OF THE ASSUMPTION, MOSCOW.

HISTORY and tradition concur in showing that Europe was peopled by three great families of the human race, who emigrated westward, at distinct periods; the last of these migrations was that of the Sclavonians, who established themselves on the Don, about 100 years before Christ. Herodotus calls them the Sauromatæ, and they were, until the fourth century of the Christian era, known in Europe by the appellation of Sclaves, or Sclavonians. In the days of the Greek historian

their mode of life was exceedingly rude and barbarous; they had no houses, and lived, very much like the Malo or Lattle Russian of the present day, a nomade and pastoral life, journeying from one verdant spot to another in a long waggon, which contained all their worldly belongings, and stopping at each only so long as they found there was sufficient pasture for their flocks and herds. In time of peace their principal occupations were the rearing of cattle, the chase, and the management of bees, while their chief characteristics seem to have been in a degree analogous to those of their descendants, the modern Russians; they were hospitable, courageous, good-humoured, contented, and immoderately fond of spirituous liquors, like most barbarous nations, however, the courage of the Sclaves frequently degenerated into cruelty, and murder was no uncommon crime amongst them. Their religion was idolatrous, and their mode of worship resembled the gross and degraded form of the ancient Druids, they not only offered up their prisoners as a holocaust to their chief deity, Perune, the Zeus of the Greeks and the Jupiter of the Romans, but would sometimes even immolate their own children to his honour.*

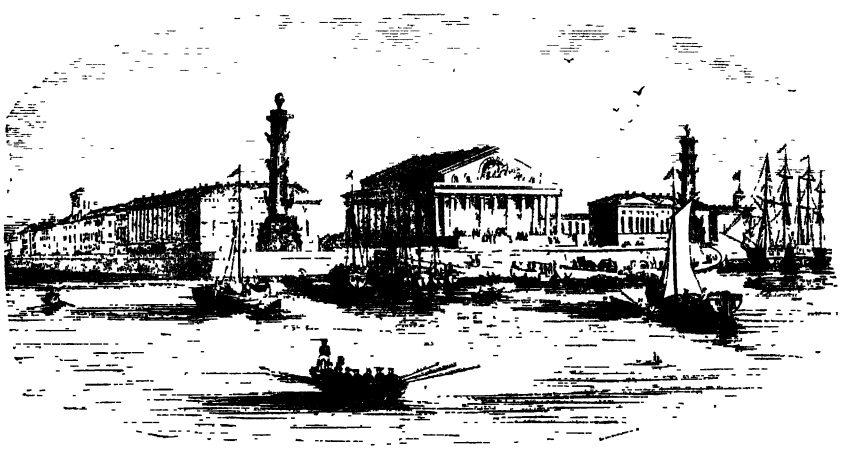
It was not till the fifth century, that the wild Sclavonians, who had overrun a large portion of European Russia, founded any remarkable settlements, these were Novogorod, on the Ilmen, and Kief, or Kiow, on the Dnieper, where they afterwards became distinguished for their commerce, their arts, and their incipient civilization. Singularly enough, democracy was at this period then established form of government, but in the ninth century, the inhabitants of Novogorod became divided into several political factions, which weakened their power, and exposed them to the incursions of the surrounding states. In this condition they were induced by Gostomsle, the first magistrate whose name is recorded in the history of the republic, to invite Rurik, a Varago-Russian prince, to come to their assistance, and, accordingly, in the year 864, that prince acceded to their request, took up his residence at Novgorod, and there founded the Russian monarchy, the sceptre of which continued to be held by his descendants for upwards of 700 years. Two of Rurik's followers subsequently left him to seek their fortunes in the south, and on their journey to Constantinople they attacked the town of Kief, gained possession of it, and it thus became the capital of a second Sclavonian kingdom.

Six sovereigns succeeded Rurik, and their congenial occupation seems to have been to make war upon the Greeks and the countries bordering their own. These princes all followed the pagan worship of their father, but Vladimir, the seventh in descent, who possessed himself of the throne in 981, was converted to Christianity, a conversion, however, which was accompanied by several acts of capricious cruelty. Christianity was indeed fearfully sullied at its introduction by the conduct of this monarch, and its profession softened but little the coarse pagan temperament of the Russian people, though Vladimir's own conduct was afterwards in a great degree effected by its precepts. His nature became changed, the cruelty of his disposition gave way to clemency and humility, and when awarding punishments for crime, he is said to have exclaimed, "What am I, that I should condemn a fellow-creature to death?" He also endeavoured to overcome the violent prejudices and superstitions of his subjects, by founding seminaries for the education of the nobles, in these he placed professors obtained from Greece, and from that classic land he likewise procured architects, and other ingenious persons, to instruct his people in their several crafts. Such was the conduct of Vladimir, who lived 700 years before Peter the Great. But, as we have already remarked, his example does not seem to have produced any great amelioration in the condition of his subjects, or to have raised their tone of moral feeling; in common with almost all early and barbarous histories, superstition, breach of faith, and cruelty in all their worst forms, continued to be but too prominently displayed. Vladimir, however, deserved well of his country, and the Russian church has enrolled him in the number of her saints. History, also, to distinguish him from other princes of the same name, has considered him worthy of the surname of Great. His son Yaroslaf, who reigned thirty-five years, and died in 1054, at the age of seventy-seven years, was a prince of considerable attainments, and a great patron of the arts; the church of St. Sophia, at Novogorod, was by his order decorated with pictures and mosaics, portions of which are said to remain to the present time. His expedition against Constantine XI, who then held the sceptre of the Eastern Empire, though unsuccessful as well as his acquirements, and the splendour in which he lived, made his name known and respected throughout Europe. Three of his daughters were married to the kings of France, Norway, and Hungary; and his eldest son, Vladimir, who died before him, had for a wife a daughter of the unfortunate Harold, the last of our Saxon kings. Yaroslaf died in 1054, and divided the empire, as was usually the case, among his sons. Vladimir Monomachus, his grandson, who died in the early part of the next century, did the same, and as the Russian monarchs were blessed, generally speaking, with a numerous offspring (the last-mentioned sovereign had eight children), the country was continually a prey to internal dissensions and strife, and these family feuds were not settled until an appeal had been made to the sword, which, being congenial to the disposition of the people and the temper of the time, was frequently prolonged for years. In the year preceding the death of Monomachus, Kief was nearly destroyed by fire, and from the great number of churches and houses that fell a prey to the flame, that city must then have been of great opulence and extent. This calamity was followed in the succeeding reign by a still greater one, when the sister capital, Novogorod, was desolated by a famine so awful that the survivors were not sufficiently numerous to bury the dead, and the streets were blocked up by the putrid corpses of the inhabitants.

The reigns which followed this period of Russian history, and they extend to little else than continual wars with the Polovetzes, Polovetzes and Petchenegues, with the exception, that the town of Vladimir, built by Yury I, in 1158, became in that year the capital instead of Kief. But a more formidable enemy than the inhabitants of the countries and tribes already mentioned drew near the Muscovite territory, in the person of Tuschki, the son of Zenghis Khan, who, emigrating with his Tartars westward, led them, about the year 1223, from the shores of the Sea of Aral and the Caspian, to those of the Dnieper. The Circassians and Polovetzes having endeavoured in vain to arrest the progress of the horde were at length constrained to apply to their hitherto inveterate foes for assistance, and, the cause being now equally dear to all parties, the Russians made an intrepid stand on the banks of the Kulka. The impetuous attack, however, of the invaders was not to be withstood, and, the prince of Kief treacherously abstaining from taking part in the battle, the Russians were completely routed, and scarcely a tenth part of an army, composed of 100,000 men, escaped. The enemy then pursued his way unmolested to the capital, which he took, and put 50,000 of the inhabitants of the principality of Kief to the sword. The further progress of the Tartars northward was marked by fire and sword, but, having reached Novogorod Severski, they faced about and retreated to the camp of Zenghis Khan, who was at this time in Bukharia. Thirteen years after, Boatz Khan, his grandson, desolated Russia afresh, committing every species of cruelty, and aggravated breaches of faith with the towns who submitted to his arms. In this manner, the provinces of Ruzan, Periaslavl, Rostof, and several others fell into his hands; for with incredible apathy, and contrary to their usually warlike inclinations, the Russian princes neglected to raise any troops to dispute the progress, and Yury II, prince of Vladimir, was at this critical juncture occupied in celebrating the marriage of one of his boyards. At length, suddenly roused to a sense of his desperate position, he placed himself at the head of some troops hastily called together, and left his family under the protection of one of his nobles, trusting that his capital would be able to sustain a long siege. He was mistaken. The Tartars soon made themselves masters of Vladimir, and the grand princesses, as well as other persons of distinction, were burnt alive in the church in which they had taken shelter. On hearing of this tragical event, Yury marched with his adherents to meet the foe, the conquest was sanguinary and short, but after performing prodigies of valour they were borne down by overpowering numbers, and the prince was left

* Murray's Handbook for Northern Europe.

among the slain. There was now nothing to dispute the march of the ruthless Tartars, and they pushed forward to within sixty miles of Novogorod, when they again turned round without any ostensible motive and evacuated the Russian territory. The wretched condition into which the southern and central parts of the empire was thrown by these invasions afforded a most advantageous opportunity for other enemies to attack it; and, accordingly, in 1242, and during the reign of Yaroslaf II, the Swedes, Danes, and Livonians, sent a numerous and well-disciplined army to demand the submission of Novogorod, this Alexander, the son of the reigning sovereign, refused, and leaving his capital, he advanced, unaided by any allies, to meet his opponents, and fought the celebrated battle of the Neva, which gained him the surname of Nefski, and a place in the Russian Calendar. The personal courage of Alexander in this battle was of the highest order, and mainly contributed to secure the victory. His memory is still cherished by the Russians, and the order instituted in honour of him is much valued.



A cruel and constantly fluctuating war with the Tartars, varied by incursions by the Livonians, Lithuanians, Swedes, and Poles, and the most frightful civil discord amongst the several, almost regal, provinces of Russia consumed fourteen successive reigns, between Yury II. who died in 1237, and Ivan I., who succeeded his father in the Principality of Vladimir in 1328. At times, during this period, the Tartars, seeing insult to injury, arrogated to themselves the power of sovereigns of this or that district, and, in the case of Ivan I., Uzbeck Khan secured to him the possession of Novogorod, as well as of Vladimir and Moscow. Ivan's father had greatly beautified and improved the latter town, and Ivan followed his example and made it his residence. Here also resided the Metropolitan, and it therefore rapidly advanced in importance. Ivan's reign of thirteen years was remarkable as improving and peaceful, and he exercised a sound discretion by building a wall of wood round the city, which supported a rampart of earth and stone. At the close of his life he took monastic vows, and died in 1341. In the reign of Ivan II., second son of the previous Tzar of that name, Moscow established its pre-eminence as a city, and became the capital of the empire; Ivan died in 1358.

Towards the close of this century the Russians, under Dmitri IV., raised an army of 100,000 men, and met the Tartars near the Don, who were defeated with great loss; the victors, however, suffered greatly, and when Dmitri reviewed his army after the battle he found it reduced to 40,000 men, this success obtained for him the surname of Donski. Subsequent, however, to this victory, the Tartars again advanced, and Dmitri, betrayed by his allies, the princes of the neighbouring states, deserted Moscow, which fell by capitulation into the hands of the Tartars, who devastated it with fire and sword until it was utterly destroyed, no building being permitted to remain except those which happened to have been constructed of stone by the Grand Prince. The character of Dmitri is thus given by the Metropolitan Cyprian —"He knew," says that ecclesiastic, "how to soften the kingly office by condescension, he was impartial in the administration of justice, and delighted to promote the peace and happiness of his subjects; his learning was small, but the rectitude of his disposition, and the kindness of his heart, supplied the defects of education, and entitle him to a distinguished place amongst Russian sovereigns." It was this prince who caused the Kremlin to be erected of stone, and closed by a wall flanked with towers, which were defended by ditches surmounted with stone. His son, Basil II., who succeeded him in 1389, was also destined to see his country invaded by the Tartars under Tamerlane; but they never reached the capital, for he prepared to give them battle on the river Okha, when they suddenly turned round and retired, as their countrymen had previously done on two other occasions. The Russians attributed this to a miracle performed by a picture of the Virgin Mary, painted by St. Luke. The horde, however, joined by the Lithuanians, afterwards laid siege to Moscow, but were repulsed by the inhabitants, the Grand Prince having retired with his family to Kostroma; exasperated at this defeat, the Tartars in their retreat harassed the surrounding country, and slaughtered the defenceless peasantry. Money was first coined in Novogorod during this reign, hitherto its place had been supplied with skins and pieces of leather; twenty skins of the marten were considered as equivalent to a *grivna*, the value of which was a real pound of gold or silver, of nine and a quarter ounces in Kief, and thirteen in Novogorod.

During the reign of Basil, Kazan was taken from the Tartars, and Russia was thrice visited with the plague and famine, while the ancient city of Novogorod was shaken by an earthquake after the greater part of its buildings had been consumed by fire. Internal dissensions broke out on the death of Basil, a dispute having arisen respecting the succession to the throne between the son of that monarch and his uncle George, this was by the consent of both parties left to the decision of the Khan of Tartary, who determined in favour of the former, nevertheless a civil war followed, and George was for a short time in possession of the throne, when, finding himself abandoned by his party and his family, he restored it to his nephew, and returned to his principality of Galitch. Complicated wars, Russia, and Tartar, followed, the principal incident of which was that Ivan, the Prince of Mojesk, in the interest of the mare Chomaika, induced Basil to stop at the monastery of the Trottzkoi to return thanks on his arrival from the horde, and, having seized him there, he took him to Moscow and put out his eyes. A few years after the Prince of Mojesk had committed this savage act, Basil was restored to the throne, and died in 1462. The Tartars under Mahmet again possessed themselves of Kazan on the reign.

The first exploit which Basil's successor, Ivan III., attempted was the reduction of that province, in which he succeeded after two severe campaigns, the next was the subjection of Novogorod, in which he also succeeded, incorporating that city and province with his own dominions, and, having received the oaths of the inhabitant, he carried off with him to Moscow their celebrated town clock, which he suspended in a tower before the Kremlin, to be used only to call the people to their devotions. The next and most arduous undertaking was the destruction of the Golden Horde, under Achmet, which he effected in revenge for the insult offered him by that Khan in demanding the homage which he had received from his predecessors. Ivan spat on the edict and Achmet's seal, and put his ambassadors to death, sparing one only to convey the intelligence to his master, who prepared in the following year to take his revenge, but, awed by the preparations made to receive him on the Okha, he retired for a time, and subsequently took the more circuitous route through Lithuania, from which country he expected support, the Russians, however, met and defeated a part of his horde, and were returning home, when the Khan was met on a different route by the Nogay Tartars, who routed his army and slew him in the battle. His ally, Casimir IV., also brought himself under Ivan's indignation, not only for this war, but because he attempted to poison him, and a raid that he made into the territories of the Polish king was eminently successful. This powerful and ambitious prince also made treaties of alliance with, and received ambassadors from, the Pope, the Sultan, the King of Denmark and Poland, and the Republic of Venice, it was he who assumed the title of Grand Prince of Novogorod, Vladimir, Moscow, and all Russia, and changed the arms of St. George on horseback for the Black Eagle with two heads, after his marriage with Sophia, a princess of the imperial blood of Constantinople. In fact, Ivan III. may be called the true founder of the modern Russian Empire. The Russian historian, Karamsin, thus describes him —"Without being a tyrant like his grandson, he had received from nature a certain harshness of character which he knew how to moderate by the strength of his reason. It is, however, said that a single glance of Ivan, when he was excited with anger, would make a timid woman swoon—that petitioners dreaded to approach his throne, and that even at his table, the boyards, his grandees, trembled before him;" which portrait does not belie his own declaration when the same boyards demanded that he should give the crown to his grandson Ivan, whom he had dispossessed in favour of a son by his second wife, "I will give to Russia whomsoever I please." He died, very infirm, in 1505, having reigned forty-three years. Wars between the Russians, the Poles, the Tartars, and the Novogorodians again rose on the death of Ivan, and it was not till the death of Basil IV., his successor, and a minority of twelve years had elapsed in the reign of Ivan IV., that internal cabals and intrigues were for

a time suppressed. This monarch, the first to take the title of *Tzar*, married Anastasia, the daughter of Roman Yuryvitch, who in the early part of his reign had the happiest ascendancy over a character naturally violent and cruel. Ivan was at this period affable and condescending, accessible to both rich and poor, and his mental powers under her guidance were employed in advancing the interests and happiness of his subjects. Ivan soon perceived that to preserve his own power he must annihilate the Tartar dominion, to this he felt his unistructed army was unequal: he therefore established, in 1545, the militia of the Strelitzes, and armed them with muskets instead of bows, hitherto their arms, as their name imports, from *Strelai*, an arrow. He then laid siege to and captured Kazan, taking the Khan prisoner. He likewise defeated Gustavus Wasa in a pitched battle near Viborg, ravaged Livonia, taking Dorpat, Narva, and thirty fortified town, and made war on the king of Poland because he had refused him his daughter in marriage. An unsuccessful campaign against this potentate, attributed by the boyards to the unskilful arrangements of the foreign generals, as well as the death of his wife Anastasia, whose controlling influence was no longer felt, led to the [illegible] of his naturally ferocious disposition, and the remaining acts of his life, which this short sketch will not permit us to dilate upon, gained for him, in the history of his country, the surname of "The Terrible." Independently of the many and dreadful acts of barbarity of which he was guilty, he killed his own son in a paroxysm of rage, but died a prey to the grief and remorse which this fearful crime occasioned him, after having endeavoured to atone for it by giving large sums of money to different monasteries, he received the tonsure in his last moments. As a legislator he was superior to his predecessors, having, with the assistance of his nobles, compiled a code of laws called *Soudebnik*. In his reign an English ship, commanded by Richard Chancellor, on a voyage of discovery in the Arctic Sea, anchored in the mouth of the Dwina, and, when the information of this circumstance was forwarded to Ivan, he invited Chancellor to Moscow, where, on his arrival, he was received with marked attention, and presented with a letter to carry back to his sovereign, expressing a desire to enter into commercial relations with England, and to have English artificers and workmen sent to him; it is curious that even at this early period the fair which he established at Narva was so glutted with English, Dutch, and French goods, that some of them were sold for less than the prime cost in their respective countries. Ivan controlled his religious prejudices, and tolerated the Lutheran churches of the German merchants at Moscow, but he never shook hands with a foreign ambassador without washing his own immediately after his visitor had taken his leave. With a character so strongly marked by cruelty, superstition, and caprice, it is remarkable to find not only that he was enterprising and intelligent, but that he should ever have entertained the idea of placing the Scriptures in the hands of his subjects in the mother tongue. he did, however, order a translation to be made of the Acts and Epistles, and had it disseminated over his dominions. "*In the memory of the people*," observes Karamsin, "the brilliant renown of Ivan survived the recollection of his bad qualities. The groans had ceased, the victims were reduced to dust, new events caused *ancient traditions* to be forgotten, and the memory of this prince reminded people only of the conquest of three Mogul kingdoms. The proofs of his atrocious actions were buried in the public archives, whilst Kazan, Astrakan, and Siberia remained in the eyes of the nation as imperishable monuments of his glory. The Russians, who saw in him the illustrious author of their power and civilisation, rejected or forgot the surname of tyrant given him by his contemporaries. Under the influence of some confused recollections of his cruelty, they still call him Ivan "The Terrible," without distinguishing him from his grandfather Ivan III., to whom Russia had given the same epithet rather in praise than in reproach. History does not pardon wicked princes so easily as do people." Ivan IV died in 1584, having governed the Russian nation for a longer period than any other sovereign,—namely, fifty-one years.

ST. PETERSBURG.

Fedor I., who ascended the throne after his death, and was a feeble and vacillating prince, died in 1598. His successor was Boris Godunof, the brother of Anastasia, the Tzar Ivan's first wife, who, like our own Richard, compassed the death of his nephew, Dmitri, Fedor's younger brother, during that Tzar's lifetime, and therefore in Fedor ended the dynastry of Rurik, which during eight centuries had wielded the Russian sceptre. Consequent upon this deed came all kinds of civil calamities, and in 1604 there arose a pretender to the throne in the person of a Russian monk. This man assumed the character of the murdered Dmitri, and, after having drawn to his standard the Poles and the Cossacks of the Don, met Boris in the field, remained master of it, and in the space of one year seated himself on the throne. Nor was this civil war the only calamity which befell the Russians during the reign of Boris; Moscow was, in 1600, decimated by the most appalling famine that ever devastated the capital of a country, it is

related that, driven by the pangs of hunger, instances occurred of mothers having first slain and then eaten their own children; and it is recorded that a woman, in her extremity, seized with her teeth the flesh of her son, whom she carried in her arms Others confessed that they had entrapped into their dwellings, and subsequently killed and eaten, three men successively. One hundred and twenty-seven thousand corpses remained for some days in the streets unburied, and were afterwards interred in the fields, exclusive of those which had been previously buried in the four hundred churches of the city. An eyewitness relates that this awful visitation carried off 500,000 persons from this densely-peopled capital, the population of which was, at the time, augmented by the influx of strangers. During this dreadful calamity, Boris, with justifiable violence, broke open the granaries which avarice had closed, and had the corn sold at half its value.

Interminable and inexplicable troubles, a second false Dmitri, and other impostors, led to the occupation of Moscow by the Poles in 1610, who entered the city with Vladislaus, son of Sigismund, king of Poland, elected to the throne by the boyards, on condition that he should embrace the Greek religion. This gave great offence to the national feeling, and Minin, a citizen of Nishni Novogorod, called his countrymen to arms, and entreated the General Pojarski to take the command, this he did without reluctance, and his army was quickly increased by the arrival of troops and money from various towns, and by the Cossacks and Strehltzes who flocked to his banner Thus strengthened, they marched to Yaroslaf, and afterwards to Moscow, to which they laid siege, carried the Kitai Gorod by assault, and made a fearful slaughter of the Poles—when the inhabitants, driven to the last extremity by famine, surrendered, and Vladislaus abandoned the country A fine monument was erected in the open space, under the Kremlin walls, in 1818, to the memory of Minin and Pojarski, it represents the high-spirited citizen of Nishni calling on his countrymen to rid Russia of the foreign enemy, while Pojarski listens attentively to the stirring exhortation.

With a vacant throne, and unembarrassed by republican feelings, the boyards, after the flight of Vladislaus, proceeded to elect as their Tzar Michael Romanoff, the son of the Metropolitan of Rostof, who was, at the time, only sixteen years of age, and from him is descended the present imperial family The usual routine of civil strife and foreign wars continued after the accession of Romanoff, and that in which the Tzar was involved with Gustavus Adolphus was terminated, much to the advantage of Russia, through the mediation of England, France, and Holland A treaty was signed by the belligerent parties on the 26th of January, 1616, which gave to Sweden Ingria, Careha, Lavonia, and Esthonia, the Russians retaining Novogorod, and these terms seem to have been dictated by the Tzar's love of peace. The Poles were, at this time, masters of Smolensk, and ravaged the country up to the walls of Moscow, against which they made a night attack, but were repulsed, they remained, however, in possession of Smolensk, after sustaining a siege of two years Dragoons are mentioned, for the first time in this reign, as forming part of a Russian army, and the Tzar was assisted in his wars by both German and French troops, these regiments served him as models for the organisation of the Russian army, which was further improved by the discipline introduced by the foreign officers in Romanoff's pay After a reign distinguished by an enlightened policy and virtuous habits, the Tzar died in July 1645, at the age of only forty-nine years. His son Alexis, who was a prince of a mild and benevolent disposition, succeeded him, the chief events of his reign were the marauding expeditions of the Cossacks of the Don led by Ruzan, a rebellion in the city of Astrakan, and the appearance of another false Dmitri, who was brought captive to Moscow and put to a violent and cruel death In this reign shipwrights came over from Holland and England, and a Dutchman named Butler built a vessel called the Eagle, at Didiloff, the first ship that the Russians had seen built on scientific principles. Alexis died in 1676, and was succeeded by his son Fedor III., who died young, in 1682 During the brief period allotted him for the exercise of power he evinced every disposition to carry out his father's plans, he directed his attention to the improvement of the laws, and rendered justice accessible to all, and, in the words of a Russian historian, "lived the joy and delight of his people, and died amidst their sighs and tears. On the day of his death Moscow was in the same distress that Rome was on the death of Titus." The sovereignty of the Cossacks was secured to Russia in this reign Fedor left no children, and named no successor, expecting, no doubt, that his own brother Ivan would succeed him, that prince, however, was both mentally and physically incapable of holding the reins of government, and, in consequence, his sister Sophia was intrusted with the affairs of state by the Strehltzes, who had arrogated to themselves the power of the Pretorian bands, and decided that the Tzar's half-brother Peter Alexiewitz, the Great, the son of Natalia, Alexis's second wife, should share the throne with him in consequence, the two boys were crowned together by the Patriarch on the 15th of June, 1682, but Sophia actually reigned. Subsequently to this the Prince Khovanski, leader of the Strehltzes, not only neglecting to cultivate the princess's friendship, but allowing her to perceive that he and his men watched her proceedings, she determined upon his ruin, which was further hastened by the intrigue of his known enemy, Miloslavski. This boyard accused him, in a public placard, of having, with his son and his Strehltzes, conspired to effect the death of the two Tzars and the family of Romanoff, and, under this accusation, Khovanski and his son were seized and beheaded Their followers, at first furious at his death, afterwards becoming disheartened at the preparations made to resist and punish them, proceeded to the monastery of the Troitzkoi, and made their submission to Natalia and the Tzars, who had fled there for refuge Subsequently Sophia still contrived, with the assistance of her minister, Galitzin, to govern Russia, until she affronted Peter, who retired to the town of Kolomna, to which place he was followed by a large party, and soon after this, being informed that the Strehltzes were again in revolt, under Sophia's influence, Natalia once more removed him to the fortified walls of the Troitzkoi It was in vain that Sophia disclaimed this accusation. Peter neither believed her nor forgave her, and, failing in her attempt to reach Poland, she was incarcerated in a monastery for the rest of her life. This princess was, considering the times in which she lived, a woman of extraordinary taste and literary acquirements. A tragedy, written by her when she was involved in state intrigues, and apparently absorbed in political turmoil, is still preserved On Peter's return from the Troitzkoi to Moscow, his brother resigned to him his share in the government, and in 1689 he became sole Tzar, being, at this time, only seventeen years of age Ivan survived till 1696.

SONG OF THE SCHOOL

Come now and let us work all the time that we are here,
And learn something new every day of the year,
'Tis for this we come to school, and we wont be lazy knaves,
For none gets praise but he who is busy and behaves
Then let us read and spell,
And write and cipher well
Always be busy—
Boys and girls, busy
And then we shall be honoured all, wherever we dwell

We'll not come late to school, as the lazy children do,
We'll keep our hands and faces clean, our frocks and jackets too,
Nor will we be disheartened though we get a puzzling sum,
But try again—and try again—until we make it come
Then let us read and spell, &c

And should a word be hard to spell, we will not let it pass,
But every day we'll strive to be the highest in the class,
No noise we'll make, nor play in school, for that would not be right,
But wait until the school is out, then play with all our might
Then let us read and spell, &c

Then busy, busy, busy, as the busiest bee you'll see,
And quiet, quiet, quiet too, as puss herself can be,
We'll gather, gather knowledge, till our little heads are full,
So happy, happy, happy, that we ever came to school
Then let us read and spell,
And write and cipher well
Always be busy—
Boys and girls, busy
And then we shall be honoured all, wherever we dwell.

THE GENIUS AND CHARACTERISTICS OF CHARLES DICKENS.

At the very heyday of the renown of this great master, some remarks on his general characteristics cannot be out of place Having, before he reached the age of thirty-five, attained to an unexampled popularity, when at last we might expect that he would become exhausted, or repose on the laurels already won, we find him to possess a fresh alacrity, which belongs to the beginning of a career. He has outstripped those who started before him, and has not been overtaken by any who followed after.

In this respect he stands in marked contrast with many popular writers of his generation. A few, who happen suddenly on some vein of surpassing richness, are only able afterwards to reproduce themselves. Then there is an imitative set, who can create nothing, but so slavishly copy originals as to deceive almost "the very elect." Their race is also short. Again, there are many of decided talent who, from degrading the *Ars Poetica* to a mere trade, seem fairly to have written themselves out; while the early, spontaneous leafing of their genius has become changed to a deplorable seediness of aspect. But of the great writers of fiction who hold their own, there is not one whose reputation is more deeply or solidly established than that of Charles Dickens.

In the ability to illustrate principles of widest application by types or language most universally understood, there is early genius; and thus considered Dickens is destined to stand in the first rank of authors. A genuine sympathy is at the core of his works, and imparts a glowing warmth and vitality to all. That they are universally read is because they are imbued with this universal principle. It is not with fine lords and fine ladies that they have to do, but in depicting life and characters in the humbler classes, they bespeak in advance the most extensive interest. For poverty, which is hardly an accident, but the common lot and natural birthright of the masses, is itself a bond of communion with the many. In the depths of this poverty the author of the Pickwick Papers has discovered his wealth. Hence he has gathered the accessories best fitted to adorn a heart-felt tale; and his illustrations return to common life, from which they came, with a signal stamp and attestation of their verity. Nor does he separate from him any class of readers by such a choice, because for all there is interest in

"The short and simple annals of the poor."

It is true that some mercenary scribblers have mistaken the ground of our author's popularity; and, because he has depicted the humble, they have chosen to grovel with the bad. Because he has unveiled sufferings to deprecate the oppressor, or with a tender solicitude to heal, they have exhibited the leprosy, and sickness, and convulsions of degraded nature for a disgusting show. The romance of such history will occasionally bring its lovers to the prison or the scaffold, while, in a literary point of view, it is worthless, being relieved by no intervening lights and shadows. Dickens's works are favourably distinguished by their universality from any other class of novels. The sentimental romance is neglected now, not so much from changing forms, as from want of substance It borrowed its old success partly from actual merit, partly from rarity of works, and the listening age of literary childhood The long-drawn story was followed with fixed attention to the end. It is true that love was the groundwork and staple of the story, as it is to this day but your sentimental lover is no more the representative of the true lover, than Tyrtæus of the genuine swain. If the common reader were interested, it was not by arousing his best sympathies, albeit some "good moral" might be professed or conveyed It might be because it conducted him into the charmed circle of high life, into the disturbed and shallow vortex of mere fashion, where its votaries were on the surface a little while, from whom he returned shortly to the common world, and sought in vain for any counterpart.

This highest humanity of letters endears us to Dickens almost beyond Scott, although this is saying a great deal because the works of the latter are also honest, cordial, right-minded, and with the best tendency The writers write "not for an age but for all time" Shakspeare holds possession of the stage, and is more read and better understood than ever, because he fulfils the definition with which we set out. The unlearned are capable of understanding his knowledge, because he holds the mirror up to common nature. The secret of our entertainment is, not that he depicts men as kings, but kings as men; not men as peasants, but again peasants as men. The student of history does not read his plays because they appertain to periods, but to that which is the same in all ages.

If we examine a few prominent characters depicted in the writings of Dickens, they serve to illustrate the foregoing remarks. Pickwick, the greater and lesser Weller, are endeared to the reader and claimed for immortality by the same breadth of delineation. The adventitious part of the elder Weller is his destiny as a coachman. But M'Adam roads belong to a modern era. Time was when a "pike" was not known; and, *proculdubio*, we are afraid time will be when a pike will no more be known, and the explosion of the whip-lash and rumbling of chariot-wheels be never heard. Our affection is not for the temporality. We are pleased, not because the Weller is a coachman, but because the coachman is a Weller. And what is a Weller? He is a philosopher older than Plato or Aristotle. There is an element in his character worthy of universal imitation His eye twinkles with a loving humour on the very vicissitudes of life. He may be deceived by a Trotter; he may be a witness to the melancholy defection of widows, to the atrocities of a Jingle, but neither Trotters, nor widows, nor Jingles, can imbue his wisdom with a melancholy tinge. We like him not because he is a figure *sui generis, sed humani generis* Ever since the world began, a Weller has escorted a Pickwick. In other words, humour and benevolence are apt to be conjoined. This has raised up a dubious boundary-question betwixt smiles and tears Weller is the articulate voice of a Pickwick. They are, in fact, one; separated only by the artificial distinction of master and man. The same plausible view of the world as it is, brought them into coalition Mr Pickwick's humour is of the quiet kind Mr. Pickwick's heart often reveals itself in a variety of smiles, from the first warmth and faint sunshine of appreciation, to the broadest light of expansive benevolence. In general, he looks with a recognising smile on the lights and shadows of human life. But he wanted some one to drive him safely through the vicissitudes of the world, and to give a running commentary on things by the wayside. Now Mr. Weller was gifted with the keenest observation, and with a style of expressing himself fluent and altogether original From the days of Solomon down to those of Tupper, it is doubtful whether Weller has ever been exceeded for the profuseness or aptness of his similitudes; and a *cheerful* philosophy is apparent in all he says. He can allude to the dry arches of Waterloo Bridge, where he was forced to sleep in times when he wanted a better shelter, as "unfurnished lodgings," and his progenitor regards perplexities from widows as a capital remedy for the gout This kind of philosophy runs in the family. Thus, when mother-in-law blows up the governor, he "whistles." When she flew into a passion and broke his pipe, he stepped out and got another When she screamed "very loud" and fell into "strickes," he "spoke very comfortable till she come to again." A golden vein of benevolence lay under the homely wit of Sam Weller which will be evident on a scanty examination of the pages of the Pickwick Club

Other characters in Pickwick possess the like universal appreciation, whether they bring you to the verge of tears, or of the most inflammatory laughter Thus we find the whole book has been translated into Russian, and is extremely relished. It has met with a reception in the palaces of the Czar, in the saloons of St Petersburg, and Moscow, "that great city," and has been perused, it may be, by the Cossacks and Nomad tribes. It would be difficult to find a work more wedded to our mother-tongue with peculiar idioms, which seem to defy the very thought of transfer. What is Samivel in Russian, or how shall Samivel manage his *w's* (v's)? Though Mr. Pickwick also may speak indifferently in a foreign language, and Sam's loquacity be at a comparative stand, there is still enough about these distinguished personages, by virtue of their partnership, to work their independent way in all parts of Christendom where there are any highways, and where any civilised "human natur" is to be found. John Bull and Brother Jonathan alike claim them; Monsieur delights in them; sunny South cries Bravo; cold and frigid North, where there is no daylight, is warmed into a sunny glow.

Squeers differs altogether from Mr. Pickwick But does he inhabit Yorkshire only? So thought sundry persons who knew him, and could swear to his personal identity, and besought the Rector of Dotheboys Hall to bring an action for slander. Yet ever since birch flourished, the system of pedagoguism has been associated with it in its application to the tenderer parts. Boyer used to cry

out, "I have a good mind to flog you, sirrah." In fifteen minutes he would leap furiously from his seat on the unsuspecting offender, saying, "and I will, too!" This is the testimony of Coleridge. Yet this was not so much like Boyer, as Boyer was like his whole class. Did Squeers alone discover "richness" in a pot of milk infinitely diluted? Other professors have shown the same keen detection of luxury, when little boys were to be frugally fed. As to the nibbing of a pen, when the artist has illustrated in one of the pages of Nicholas Nickleby, that picture will find its original far beyond the date of Rogers's patent, and is coeval with the goose. The "school spoon" which Mistress Squeers was in vain searching, when Smike's wits were quickened by having his ears boxed, to suggest that probably it might be found in the lady's pocket, where, indeed, it was—the school-spoon, wherein treacle and sulphur were administered to correct the too exuberant blood of youth, is older than molasses, and contemporaneous with ringworms. The creation of Squeers is one of the most faithful and enjoyable which ever came from the author's pen. The very name is given with a most subtle accuracy and philosophy of nomenclature. As Gazelle is suggestive of the graceful darling, and Lion of a royal look, and Fox is a shrewd word, and Elephant declares the grandeur of the beast, so nobody could be mistaken as to what a Squeers should be. You would recognise him among a variety of animals, though accident had removed him from his birch. Little children would instinctively stand in the attitude of self-defence, and every one who had been blessed with the first rudiments of education would instinctively cry out, "Surely that must be a Squeers!" But even had the author been less fortunate in his christening, never was a picture better drawn. It would be recognised in the back-woods of America, in the wilds of Oregon, wherever youth are indoctrinated, "boarded, clothed, booked, furnished with pocket money, and provided with all necessaries." Not "Young England," not "Young America," but the whole young world of doggable age, ought to have grateful loans for this picturesque description. Thanks be to Dickens for what he has done for poor *men*, and many thanks for what he has done for poor *boys*, a new and hitherto neglected department of Humanity. He has brought to light the evils which lurked beneath the systems of cruelty. Boy, whether fortified by toughness or shrinking in his delicacy, never tells of the disgraces of the schoolroom, or the stinging, cutting severity of the rod. His highest hoppings, his most agonised wrigglings, the pang of the classic birch, so exquisite as to be almost pleasure, are concealed from *men*. Many desirable reforms are on the hither side of that point to which legislators have addressed themselves; in short, before the treble and the bass fight for supremacy in the boy's throat, as early as that year which the shepherd Damon calls *alta ab ulmicamo*. How much is required to be done, let the form of the dejected Smike answer; the pathetic voice of "Oliver asking for more."

We are willing to appeal to one of the Christmas Stories of Mr Dickens for the distinctive excellence of the writer, although it is a scanty production, dismissed with a few lines and touches of the pencil, yet full of grace and truth. The sublimity of self-sacrifice is the lesson taught in the "Battle of Life," and because the proceeding of Marian is thought questionable, and the author has transferred an attribute usually given to uncommon junctures to *common life*, he is thought to have detracted from the consistence of the tale. Yet we cannot see that the crowning act savours less of probability than the other incidents. Noble deeds are often heralded by noble circumstances, but in the valley where the corn grows, or tendrils of the vine clasp the domestic bowers, there is many a more glorious struggle which is never known. Wherever a mother presses a child to her heart, there lives a resolution gigantic enough to drown with it in the water, or perish with it in the flames. The still conquest of any selfishness is better than victory with the clangour of arms.

It is not true that the resolve of Marian is beyond the limits of probability, or that there is any conflict except of one love with another in order to make the nobler triumph. At any rate, is not the lesson Christian? We are willing to acknowledge heroic deeds which belong to some great exigence, or are mingled with the dim fables of history. Rather, we should say, let *every day* witness something which is sublime. Scarce an hour passes when it does not become a duty to undergo some sacrifice, to withhold some glance which might cause destruction, to withdraw some footstep which might fall crushingly, to deny yourself in order that the hungry might be satisfied, or to take up some burden in order that the weary may have rest.

There are certain characteristics of style, a cunning and unprecedented use of words and figures, in which Mr. Dickens excels, which give a stalking animation to objects destitute of life. Herein is a great art, to translate the abstruse idea into the material figure appreciated by the common sense of common men. Thus a *single wind* may be pictorial, and successive words become successive pictures. But if all who write for all to read knew this, they would not be able to avail themselves of the knowledge. If they did, they would be using an inverse process, since Shakspeare, and every true genius, had it by intuition. Rules of rhetoric are drawn from pre existing models, and not the reverse. Personification is used with great effect. How remarkable, for instance, this description of the night-wind. "Wandering round and round a building, and moaning as it goes, trying, with its unseen hand, the windows and the doors and seeking out some crevices at which to enter, and when it has got in, as one not finding what it seeks, whatever that may be, it wails and howls to issue forth again, and, not content with stalking through the aisles, and gliding round and round the pillars, and tempting the deep organ, soars up to the roof, and strives to rend the rafters, *then flings itself despairingly on the stones below, and passes moaning into the vaults.*" Was ever an airy spirit made more visible by witchcraft, and gifted with a "local habitation" and a bodily shape?

Again, the author speaks of "fruiterers shops," where there were "great, round, potbellied baskets of chestnuts, shaped like the waistcoats of jolly old gentlemen, lolling at the doors, and tumbling out into the street in their apoplectic opulence. And ruddy, brown-faced, broad-girthed Spanish onions, shining in the fatness of their growth like Spanish friars, and winking from their sleeves in wanton slyness at the girls as they went by, and glancing demurely at the hung-up mistletoe. Norfolk biffins, squab and swarthy in the great compactness of their juicy persons, urgently entreating and beseeching to be carried home in paper-bags, and eaten after dinner!" Mark his description of the kettle, in the first chapter of "Cricket on the Hearth." "The kettle was aggravating and obstinate. It wouldn't allow itself to be adjusted on the top-bar, it wouldn't hear of accommodating itself kindly to the knobs of coal. It would lean forward with a drunken air, and *dribble, every now and then a little*, on the hearth." But presently the kettle began to spend the evening, and we should quote more largely than would be consistent with our space to describe the whole moral conduct of the said kettle, how it grew musical and convivial. Can anything exceed it, except when the writer exceeds himself by going on to describe the contest between kettle and cricket, applying thereto the technicalities of the prize-ring? From first to last we notice the like art of successful personification. Miss Blimber was "dry and sandy with working in the graves of deceased languages. They must be dead, stone-dead, and then she dug them up, like a Ghoule. Doctor Blimber's young gentlemen knew no rest from the pursuit of stony-hearted verbs, savage noun substantives, and inflexible syntactic passages." The author has a reverse method, no less successfully employed. "Doctor Blimber's establishment was a great hothouse. All the boys blew before their time. *Mental green-peas* were produced at Christmas, and intellectual asparagus all the year round. But there was not the right taste about the premature productions." All figures are used, or others hitherto unknown are invented, as the occasion demands. Sometimes a part is put for the whole, and the man denominated by the cravat he wears, and we pause to admire the happy coincidence of thought and expression, in which a sympathetic reader eagerly yields up the proper word. Such was that "complete neck, the last of a series which invested the person of Mr Stiggins, which, duly analysed, we may suppose to have consisted of motive force, energy, and the application of civil engineering incompatible with passion, yet requisite to make the aim sure. No man falls more happily on the identical phrase, (shining gumea that it is!) like one "born to good luck," or from intuitive erudition, or from deliberate choice. Poets* often gratulate themselves when they

* A disposition is observable in some of the author's late productions to run occasionally into blank verse. Of this, a more curious exemplification than any we have seen, it is to be found in the "Christmas Carol."

"Then up rose Mrs. Cratchit, Cratchit's wife,
Dress'd out but poorly in a twice-turn'd gown,

have had the like fortune, as Keats clapped his hands for joy when he had invented that

"Lucent syrop tinct with cinnamon."

Our author can use a refined Attic, or, when the scenes of the comedy shift and introduce less polished characters, he puts words into their mouths which neither a Weller, a Swiveller, nor a Mantilini, could wish to repudiate. A few sentences from him are often more suggestive than a whole page of description. How happily does he call up, though merely in passing, the whole mirth and jollity attendant upon a snow-storm! But when he paints, his picture is almost more crowded with quaint minutiæ than any of the immortal Hogarth. No man knows better how to describe those little nestling-places and retired nooks where the river of domestic life flows calm and beautiful and as you read, the bosom heaves, the tear trembles. It is like being in some delightful garden, where every influence is seductive to the soul, and the birds sing, the bees murmur, and the humming-bird darts down to identify itself with the flowers, "to paint the lily, to adorn the rose." In short, the works of this author will live, not only for the sake of their genius, but because they appeal to our best sympathies, and sustain the cause of the suffering poor. For when the arm of legislation hung down inactive, their powerful earnest pleadings, like those of poor Hood, have not sued for redress in vain. They shall be admired at some later day, not on account of antiquity, but in spite of it; because they have set forth nothing less general than the truth of nature, and appeal to all men by a common bond They have exhibited, for the most part, neither ghosts vanishing into thin air, nor beings surrounded by conventional graces, nor hateful vice carved into an heroic attitude, but creatures of flesh and blood, bone and sinew, human heart and human affections. They have depicted characters, though good not perfect, though bad, not altogether hopeless; not angels, for then they were too high for our sympathy; not devils, for then they had been beyond the sphere of our regret.

ANOTHER VOICE FROM THE "DIGGINGS."

Adelaide, South Australia
March 30, 1852.

DEAR COUSINS,—I take this opportunity of writing to you, hoping to find you all in good health, as it leaves me at present This country affords a fine scope for industrious, healthy young men of any capacity. Here a man with £100 may, by frugality and industry, secure an independence for life Say he buys 40 acres of land, £10, gets his crop in, with the fencing, will cost him £40 more, by the second year, he clears his £100, and has the land to the good to proceed on in after years, the profits of which will add to his 40 acres, or buy some stock such as cows, pigs, fowls, &c., or a good compositor will get good wages and permanent situations just now A good boot or shoe maker will get his £2 per week without rations The aspect of the country generally is very beautiful, more like our parks at home—such as Greenwich or Richmond—it abounds in copper, there is no end of it, and very likely gold, although it is not found yet, there has been a little found, but to no great extent, they are searching now for it, and I have no doubt by the time you get this we shall have a gold-field here I will tell you the latest news from the gold diggings in the neighbouring colony —The water is so scarce and bad, that the people are dying in hundreds with dysentery, little is doing except gambling and drunkenness, numbers get shot accidentally by means of others discharging their fire-arms when they come to the tent in the evening, the number of robberies is out of the question; in fact, it is all a lottery, some are fortunate, others are ruined. This colony is almost deserted, but numbers have returned for want of water to wash the quartz wherein the gold is contained. I shall not go till next December, if I go at all. At present I am shepherding. I have the charge of 1,300 breeding ewes; 300 are to be added in a week's time from this. It is an easy, pleasant life, and through the scarcity of men just now, the wages are very high. I have been on the point of marriage twice, but broke off once on account of the fair one whistling, and would not stop when I told her I did not like to hear a female whistle; and the other, because she said she could drink as much as me without being drunk,—rather a bad sign, thought I, and dropt that speculation. When I find one that suits me, I intend to be spliced at once. I have one in my eye now I read that one man, a tradesman of Adelaide, sold off his stock at half price, and took his wife and family with him to the diggings; he dug 14 holes, each of which you have to pay 30s for licence, he had been at work for the last seven months, and found nothing, but himself ruined and starving, so made one more hole (in his head) with a pistol-ball, which made 15 holes This is but one instance out of hundreds. I know the party well. Do not believe the papers, I have every opportunity of knowing the truth. The people pass (to and from the diggings) the station that I am at; besides, I have conversed with numbers of my acquaintance, who have been and come back, and persuade me not to go till next year, when there will be more order restored, better regulations, and plenty of water. They are making creeks—damming up other creeks; so that, by the time the winter is over, there will be plenty of water, and the gold digging is but in its infancy yet I must have either a golden chain or a wooden-head.

(*The other half of the letter is marked strictly private*)

But brave in rags with ale are cheap, and make
A goodly show for a time, and she had
The cloth, as stole by Bessie Gratchit,
Second of her daughters, also brave in rags—
While Master Peter (Cratchit's pride) took
Into the saucepan of potatoes, and
Getting the corners of his monstrous shirt-
Collar (Bob's private property, conferred
Upon his son and heir in honour of
The day) into his mouth, rejoiced to find
Himself so gallantly attired, and yearn'd
To show his linen in the fashionable parks."

Thus far the measure is unimpeachable, and would be to the end of the paragraph, with slight liberties, until the slow

"Potatoes, bubbling up, knock'd loudly at
The saucepan-lid to be let out and peel'd."

All this, however, is a mere accident, the natural tendency to his own element, by a poet who writes in prose.

SONGS FOR THE PEOPLE.

No. II.—THE EMIGRANT'S FAREWELL.

BY GEO. F. PARDON.

CAN I say farewell, O England,
As I sadly leave thy shore?
And thy white cliffs dim receding,
I may never see them more!
Though no tears are on my eyelids,
There's a sorrow at my heart,
Joined to a silent pleasure,
Now I know that we must part;
But there's not a taint of anger
In my mute and sad regret—
Though you've cast me out your bosom,
Hope is smiling for me yet.

Though ten thousand miles divide us,
There may come across the sea,
Kindly words, to make my heart beat,
When I think of thine and thee.
Though no want or sorrow ever-
More may weigh my head with care,—
Though no cold conventionality
May dim my spirits there,—
Yet ever in my memory
Thy fame shall have a place;
And though *they* spurn'd my poverty,
I will not blame my race!

Then, old England, still I'll love thee,
And, in my new-found home,
I'll think of thee with reverence
In all the time to come,—
The happy time in opulence,
When o'er the heaving main,
Pleasant homes and children's faces
May welcome me again.
Yes! I'll love thee for the memory
Of my gone youth's happy time,
And I'll pray for thy prosperity,
Though in another clime!

BOTANY BAY THEATRICALS.—Some years ago, one of the male convicts in Botany Bay wrote a farce, which was acted with great applause in the theatre, Port Jackson. Barrington the noted pickpocket, furnished the prologue, which ended with these two well-known lines:—

"True patriots we, for be it understood,
We *left* our country for our *country's good*."

A CUP OF COFFEE.

THE first cup of coffee drank in England was brewed by the servant of Mr. Edwardes, a Turkey merchant, in 1652, during the protectorate of Oliver Cromwell. But so little was the flavour relished by the friends of the merchant, that coffee did not become the drink of the people for more than half a century afterwards. Its introduction into France is said to have been made as early as 1658, by some Marseilles merchants, but fashion made its use common. Thevenot, on his return from his travels in the east, regaled his friends with coffee to visit him at his house. The manner in which he received them not only inspired a wish to renew the visit, but induced others to follow their example. He caused coffee to be served to his guests according to the custom of his country; for since fashion had introduced the custom of serving this beverage among the Turks, civility demanded that it should be offered to visitors, as well as that those should not decline partaking of it. If a Frenchman, in a similar case, to please the ladies, had presented to them his black and bitter liquor, he would be rendered for ever ridiculous. But the beverage was served by a Turk—a gallant Turk—and this was sufficient to give it

COFFEE-HOUSE ON THE BOSPHORUS

after dinner, "but this," says Le Grand, "was but the eccentricity of a traveller, which would not come into fashion among such a people as the Parisians. To bring coffee into credit, some extraordinary and striking circumstance was necessary. This circumstance occurred on the arrival, in 1669, of an embassy from the Grand Seigneur Mahomet IV. to Louis XIV. Soliman Aga, chief of the mission, having passed six months in the capital, and during his stay having acquired the friendship of the Parisians by some traits of wit and gallantry, several persons of distinction, chiefly women, had the curiosity [illegible] Besides, before the palate could judge, the eyes were seduced by the display of elegance and neatness which accompanied it,—by those brilliant porcelain cups into which it was poured,—by napkins with gold fringes on which it was served to the ladies; add to this the furniture, the dresses, and the foreign customs, the strangeness of addressing the host through an interpreter,—being seated on the ground on tiles, &c., and you will allow that there was more than enough to turn the heads of Frenchwomen. Leaving the hotel of the ambassador with an enthusiasm easily

imagined, they hastened to their acquaintances to speak of the coffee of which they had partaken; and heaven only knows to what a degree they were excited (exalté)." Of course so long as coffee was considered as a luxury by the rich, its price, both in England and on the continent, was proportionably high, and we hear of enormous prices being paid for small quantities of the fragrant berry. In 1672 an American, of the name of Pascal, opened the first public coffee-house in Paris. It was arranged on the plan of those at Constantinople, and so much was it patronised by the public, and so numerous were the imitators of the American, that coffee became a common beverage among them, and the sellers of it were erected into a regular society, with special regulations for its government. About the same time that Pascal set up his coffee-house in Paris, the Greek servant of Mr. Edwardes opened a place of entertainment in the city of London, "where gentlemen might indulge in the eastern luxury with little trouble or expense."

"Coffee, the *Coffea arabica* of botanists," says Mr. Crawford, in a paper read before the Statistical Society, "belongs to the same natural order of plants as the different species of Peruvian bark, viz., the Rubiaceæ. Its ordinary appearance much resembles that of a Portugal laurel; its flowers, both as to shape and fragrance, the jasmine, and its fruit, small wild cherries. The trees in a plantation, in order to afford nourishment, light, and air, must be planted not nearer to each other than nine feet. The plant yields fruit at two years old, is in full bearing at four, and its cultivation is worth continuing until it reaches the age of twenty. When it comes into full bearing, its height is about eight or ten feet, but it will live to attain that of twenty. A coffee-plantation in full flower has much the appearance of a grove of evergreens in a temperate climate, on which has fallen a pretty heavy snow shower, superadding heat and fragrance.

There are about a dozen species of the genus to which coffee belongs, some African, some Indian, some American, and some Polynesian, but all of them inhabitants of countries within and immediately about the Tropics. One species alone, the *Coffea arabica*, is cultivated, or at least largely so, and yields the important commercial article. Within the limits described, coffee is a very hardy plant, and seems readily to yield fruit in any tolerably rich soil, over every part of a zone of at least forty degrees around the globe. Its favourite locality, however, is hill-sides, at an elevation of from 1,000 to 3,000 feet above the level of the sea, and hence its wide diffusion, its extensive cultivation, and large consumption. As an object of cultivation, it takes the place, within the Tropics, in relation to other objects of culture, that the vine does in the South of Europe, or tea in China.

In comparison with the production of sugar and spirits from the cane, which partakes at least as much of the character of manufacture as of agriculture, that of coffee is a simple process, which may be carried on by small capitalists, and in some localities, from the temperance of the climate, even by European capitalists. The tea of China, of which the production is so immense, is certainly all so produced. Even coffee itself is so produced by the small negro proprietors of Hayti, by the inhabitants of several parts of Sumatra, and by those of Celebes.

Coffee, although taking its name from Arabia, is not a native plant of that country, but of Abyssinia, where it is found both in the wild and cultivated state. From that country it was brought to Arabia, in comparatively very recent times. Mr. Lane states that it was first used there about the year 1450. It was not known to the Arabs, therefore, for more than eight hundred years after the time of Mahomed, and was introduced only between forty and fifty years before the discovery of America. The Arabians called coffee kâhwâh, which is an old word in their language for wine. The unlucky word gave rise to a dispute about the legality of its use among the Mahomedan doctors, who, mistaking the word for the thing it represented, denounced as a narcotic that which was anti-narcotic. They were beaten, and coffee has ever since become a legitimate and favourite potable of the Arabs. In a century, its use spread to Egypt and other parts of the Turkish empire.

For two centuries from its introduction into Arabia, the use of coffee seems to have been confined to the Mahomedan nations of Western Asia; and, considering its rapid spread and popularity among the European nations, it is remarkable that it has not, like tobacco, extended to the Hindus, the Hindu-Chinese, the Chinese, the Japanese, or the tribes of the Indian Archipelago, who no more use it than Europeans do the betel preparation. The high price of coffee, and the low cost of tobacco, most likely afford the true solution of the difference. One striking result of the use of coffee first, and then of tobacco among the Mahomedan nations, is well deserving of notice. These commodities have been, in a great measure, substituted for wine and spirits, which had been largely, although clandestinely used before, and hence a great improvement in the sobriety of Arabs, Persians, and Turks.

From Arabia, which for nearly a century supplied the whole of Europe with the delicious berry, the cultivation of the plant was spread over various parts of the world. The old Dutch East India Company carried on some traffic with the Arabian ports on the Red Sea; and about the year 1690, the Dutch governor-general of India, Van Hoorne, caused some ripe coffee-seeds to be brought to Java: they were planted, grew, and produced fruit. He sent a single plant home from Batavia to Nicholas Witsen, the governor of the East India Company, which arrived safe, and was planted in the Botanic Garden of Amsterdam where it prospered, produced fruit, and the fruit young plants. From the Amsterdam garden, plants were sent to the Dutch colony of Surinam, and the planters entered on the cultivation of coffee in 1718, or 133 years ago. The authority for this is the celebrated physician and botanist Boerhaave, in his Index of the Leyden Garden. In ten years after its cultivation in Surinam, it was introduced from that colony by the English into Jamaica, and by the French into Martinique. The first coffee-plant cultivated in Brazil, now the greatest producing country in the world, was reared by a Franciscan monk, of the name of Vellosa, in the garden of the convent of St. Antonio, near Rio Janeiro; it throve, and the monk presented its ripe fruit to the Viceroy Lavradio. He, judiciously, distributed it to the planters, who commenced the cultivation in 1774, only 77 years ago.

It was about 1690, as already stated, that the coffee-plant was first introduced into Java. From thence it was conveyed to Sumatra, to Celebes, to the Philippines, and, in our own time, to Malabar, Mysore, and Ceylon. The few coffee-berries brought from Mocha to Batavia are the parents of the vast quantity now produced; and all the coffee that is consumed, save the trifle yielded by Arabia, has the same origin. The success of the cultivation of coffee in the colonies of European nations is a striking contrast to the substantial failure which has taken place in the culture of the vine and the tea plant.

The consumption of coffee in England has varied with the high or low rate of duty imposed by the state. In 1850, 31,226,840 lb. paid duty. The population of Great Britain and Ireland being 27,452,261, the consumption per head was 1·1138 lb. It had rapidly risen down to 1847 but has since been declining, from causes not very obvious. The heavy duties imposed down to 1825, were the cause, no doubt, of the low consumption down to that year. They had, before then, been, on colonial coffee, 1s., on British Indian, 1s. 6d., and on foreign, 2s. 6d., the last virtually prohibitory. With such duties, the consumption in 1824 was 8,202,913 lb. Next year the three different kinds of duty were respectively reduced to 6d., 9d., and 1s. 3d. and the consumption rose at once 11,082,970 lb., and continued to rise until 1847. In 1846 the duty was reduced to 4d a pound on all British, and to 6d. on all foreign. Next year the consumption attained its maximum, viz., 37,441,373 lb., from which, down to 1850, there had been a fall, 6,214,503 lb. Last year, however, the duty on all coffee having been reduced to 3d. a pound, there has been an increase over the consumption of 1850 of 1,337,324 lb.

The defalcation in the consumption since 1847 has been charged to what has been called the substitution of chicoree for coffee. Chicoree, however, is not a substitute for coffee, for it cannot be used alone, and, indeed, in no way, without coffee. It seems to be only a cheap diluent, and the effect of its use ought to be, not to displace, but to extend the consumption of coffee, by rendering it more accessible to the poorer classes of consumers.

In other countries the use of coffee appears to have been greater or less precisely as it has borne a heavy or light revenue tax. In Denmark the average consumption is about five pounds per head; in the German Union about three-and-a-half pounds; and in Belgium not less than eight pounds. The relative consumption of tea and coffee in the United States of America, and in the United Kingdom, will assist us in understanding what the proportions of the two commodities would be, if England and America, in point of general taxation, were placed under the same circumstances. Neither of these commodities pays a duty in America, and generally the population of the two countries has the same tastes. We must take the consumption of America to be the same as the importation, after deducting re-exportation. The importation of coffee in 1850 was 115,272,687 lb., and the re-exportation having been 15,381,758 lb., there remained for consumption 129,890,929 lb. The population in the same year being 23,000,000, the rate of consumption per head was 5·57 lb. It follows from this, that the proportion of coffee consumed in America is as five to one of that consumed in the United Kingdom.

The tea imported into the American Union in 1850 was 29,872,654 lb, and the re-exportation being 1,673,053 lb, there remained for consumption 28,199,601 lb. The quantity of coffee, therefore, consumed in America, is about four times that of tea, while with us the consumption of coffee is only as 60 to 100.

It can hardly be denied, says our authority, but that the consumption of tea and coffee, and I will add another stimulant, tobacco, of which the effects are to a considerable extent of the same nature, have contributed materially to the sobriety, decency, and even morality of the inhabitants of this country.

They all stimulate the nervous system, without producing intoxication, and it is difficult to commit an excess in them. The change in manners effected by them, whatever its extent, has been the work of about two centuries and a half, for before that time every stimulant of popular use had been intoxicating. The actual price paid by the consumer for the three articles in question cannot, I think, be estimated at less than £25,000,000 a year; viz., £12,000,000 for tea, £3,000,000 for coffee, and £10,000,000 for tobacco. Had this enormous sum, chiefly contributed by the middle and working classes, not been expended in these commodities, it must have been so in the intoxicating potables used by our ancestors. It is true that tea, coffee, and tobacco, have not displaced ale and spirits, but it is certain, also, that they have, to a large extent, been substituted for them.

THE PROVERB REVERSED.

"Two of a trade can never agree"—*Old Proverb*

MARIA WALKER was usually allowed to be the beauty of one of the small towns round London in the direction of Greenwich, of which ancient place she was a native. Her father had originally practised as a physician in that place, but circumstances had caused his removal to another locality, which promised more profitable returns. The house they occupied was an ancient red brick mansion in the centre of the town, with a large bow window, always celebrated for its geraniums, myrtles, and roses, that with a couple of small orange-trees were the admiration of the whole neighbourhood.

Maria was twenty, and I was not sixteen at the time of which I speak, but we were the best friends in the world. In front of the house of the Walkers had been, a few years before, an open space, which now, thanks to the rapid march of improvement, was being changed into a row of very good houses. There were a dozen of them, and they were dignified with the name of Beauchamp-terrace. They were, about the time I speak of, all to let, the last finishing touch had been put to them, the railings had been painted, the rubbish all removed, and they wanted nothing, save furniture and human beings, to make them assume a civilised and respectable appearance. I called one morning on Maria Walker, her father was out, she had been playing the piano until she was tired, so we sat down in the bow-window and talked.

"So the houses are letting?" said I, who took an interest in the terrace which I had seen grow under my eyes.

"Two are let," she replied, "and both to private families; papa is pleased, he looks upon these twelve houses as twelve new patients."

"But," said I, laughing, "have you read the advertisement—'Healthy and airy situation, rising neighbourhood, and yet only one medical man.'"

"Oh! yes," smiled Maria, "but sickness, I am sorry to say, is very apt to run about at some time or other, even in airy situations."

"But Maria, you are mistaken, there are three houses let," said I suddenly, "the bill is taken down opposite, it has been let since yesterday."

"Oh, yes, I recollect a very nice young man driving up there yesterday, and looking over the house for an hour, I suppose he has taken it."

"A nice young man," said I, "that is very interesting—I suppose a young couple just married."

"Very likely," replied Maria Walker, laughing, but whether at the fact of my making up my mind to its being an interesting case of matrimony, or what else, I know not.

It was a week before I saw Maria again, and when I did she caught me by the hand, drew me rapidly to the window, and, with a semi-tragic expression pointed to the house over the way. I looked. What was my astonishment when on the door, in large letters I read these words, "Mr Edward Radstock, M.D."

"Arrival," cried I, clapping my hands, thoughtless girl that I was, "another feud of Montague and Capulet. Maria, could not a Romeo and Juliet be found to terminate it?"

"Don't laugh," replied Maria, gravely, "papa is quite ill with vexation. Imagine, in a small town like this, two doctors! it's all the fault of that advertisement. Some scheming young man has seen it, and finding no hope of practice elsewhere, has come here. I suppose he is as poor as a rat."

At this instant the sound of horses' footsteps was heard, and then three vans full of furniture appeared in sight. They were coming our way. As I expected, the van stopped before the young doctor's house, and in a few minutes the men began to unload. My friend turned pale as she saw that the vehicles were full of elegant furniture.

"The wretch has got a young wife too!" she exclaimed, as a piano and harp came to view, and then she added rising, "This will never do, they must be put down at once, *they* are strangers in the neighbourhood, *we* are well known. Sit down at that desk, my dear girl, and help me to make out a list of all the persons *we* can invite to a ball and evening party. I look upon them as impertinent interlopers, and they must be crushed." I laughingly acquiesced, and, aided by her, soon wrote out a list of invitations to be given.

"But now," said Miss Walker, after a few moments of deep reflection, "one name more must be added, *they* must be invited."

"Who?" exclaimed I, in a tone of genuine surprise.

"Mr. and Mrs Edward Radstock," replied Maria, triumphantly, while I could scarcely speak from astonishment. The rest of my narrative I collected from the lips of my friend, a little more than a year later.

The ball took place to the admiration of all C——. It was a splendid affair. Mr and Miss Radstock came, and were received with cold politeness by both father and daughter. The young man was good-looking, with an intelligent eye, a pleasing address, and none of that pertness of manner which usually belongs to those who have just thrown off the medical student to become the doctor. Miss Radstock, his sister, who kept house for him until he found a wife, was a charming girl of about twenty. She smiled at the manner of both Mr and Miss Walker, but said nothing. Young Radstock's only revenge for the lady of the house's coldness and stateliness of tone, was asking her to dance at the first opportunity—which certainly was vexatious, for his tone was so pleasing, his manner so courteous, that my friend Maria could not but feel pleased,—when she wanted to be irate, distant, and haughty. They danced together several times, and, to the astonishment of many friends of the young lady, of myself in particular, they went down to supper the best friends in the world, laughing and joking like old acquaintances.

Next day, however, she resumed her original coldness of manner when the brother and sister called to pay their respects. She was simply polite, and no more, and after two or three words they retired, Emily Radstock becoming as stiff and formal as her new acquaintance. From that day Maria became very miserable. She was not avaricious, and did not fear her father losing his practice from any pecuniary motives, but it was pride that influenced her. Her father had for some years monopolised the parish, as his predecessor had for forty years before him; and now to behold a young unfledged physician setting up exactly opposite, and threatening to divide in time the business of the town, was dreadful. *The* physician of the town, sounded better too, than one of the doctors, and altogether it was a most unpleasant affair.

Maria's place was now always at the bow-window, to see if patients came, or if Edward Radstock made any attempt to call about and introduce himself. But for some time she had the satis-

faction of remarking that not a soul called at the house, save the butcher, the baker, and other contributors to the interior comforts of man, and Maria began to feel the hope that Edward Radstock would totally fail in his endeavours to introduce himself She remarked, however, that the young man took it very quietly; he sat by his sister's side while she played the piano, or drove in his gig, always, when he remarked Maria at the open window, bowing with provoking courtesy, nothing daunted by her coldness of manner, or her pretence of not noticing his politeness

One day Mr. Walker was out (he had been called to a distance to see a patient who was very seriously ill, when Maria sat at the bow-window looking up the street Suddenly she saw a boy come running down on their side of the way, she knew him by his bright buttons, light jacket, and gold lace It was the page of the Perkinses, a family with a host of little children, who, from constant colds, indigestions, and fits of illness, caused by too great a liking for the pleasures of the table, which a fond mother had not the heart to restrain, were continually on Mr. Walker's books The boy rang violently at the bell, and Maria opened the parlour door and listened

"Is Mr Walker at home?" said the boy, scarcely able to speak from want of breath.

"No," replied the maid who had opened the door

"He will be home directly," said Maria, advancing

"Oh! but missus can't wait, there's little Peter been and swallowed a marble, and the baby's took with fits," and away rushed the boy across the road to the hated rival's house

Maria retreated into her room and sank down upon a sofa The enemy had gained an entrance into the camp, it was quite clear In a moment more she arose, just in time to see Mr E. Radstock hurrying down the street beside the little page, without waiting to order his gig. This was a severe blow to the doctor's daughter The Perkinses were a leading family in the town, and one to whom her father was called almost every day in the year They had a large circle of acquaintances, and if young Radstock became their medical adviser, others would surely follow. In about an hour the young man returned and joined his sister in his drawingroom, as if nothing had happened This was more provoking than his success If he had assumed an air of importance and bustle, and had hurried up to inform his sister with an air of joy and triumph of what had happened, she might have been tempted to pity him, but he did everything in such a quiet, gentlemanly way, that she felt considerable alarm for the future.

Maria was in the habit of spending most of her evenings from home, her father being generally out, and that large house in consequence lonely The town of C——— was famous for its tea and whist parties, and though Maria was not of an age to play cards, except to please others, she sometimes condescended to do so One evening she was invited to the house of a Mrs Brunton, who announced her intention of receiving company every Thursday She went, and found the circle very pleasant and agreeable, but horror of horrors—there were Mr Edward Radstock and his sister Emily; and worse than that, when a lady present volunteered to play a quadrille, and the ladies accepted eagerly, up he came, of all others, to invite her to dance! Mrs Brunton the instant before had asked her to play at whist, to oblige three regular players, who could not find a fourth.

"I am afraid," she said, quietly, but in rather distant tones, "I am engaged"—the young man looked surprised, even hurt, for no gentleman had spoken to her since she had entered the room—"to make a fourth at the whist table, but—"

"Oh, go and dance, Miss Walker!" exclaimed Mrs Brunton, "I did not know dancing was going to begin when I asked you to make up a rubber."

Maria offered her hand to the young man, and walked away to the dancing-room Despite herself, that evening she was very much pleased with him He was well-informed, had travelled, was full of taste and feeling, and conversed with animation and originality; he sought every opportunity of addressing himself to her, and found these opportunities without much difficulty For several Thursdays the same thing occurred The young man began to find a little practice. He was popular wherever he went, and whenever he was called in was sure of keeping up the connexion He was asked out to all the principal parties in the town, and had Mr. Walker not been very much liked, would have proved a very serious rival

One morning the father and daughter were at breakfast Maria, who began to like her bow-window better than ever, sat near it to scent the fragrance of her flowers, and always returned the young doctor's bow when he came out Mr Walker had been called out at an early hour, and returned late. He was not in the best of humours, having waited four hours beyond his time for his tea.

"I shall die in the workhouse," said he, as he buttered his toast, with an irritability of manner quite alarming "This Radstock is getting all the practice. I heard of two new patients yesterday"

"Oh, papa," replied Maria, gently; "I don't think he has got a dozen altogether"

"A dozen—but that's a dozen lost to me, miss. It's a proof that people think me old—worn-out—useless"

"Nonsense, papa, C——— is increasing in population every day, and for every one he gets, you get two."

"My dear," replied Mr Walker, with considerable animation, "I think you are beginning to side with my rival."

A loud knocking came this instant to the door, and the manservant immediately after announced "Dr. Radstock."

Mr. Walker had no time to make any remark ere the young man entered the room, bowing most politely to the old gentleman and his daughter, both looked confused, and the father much surprised He was in elegant morning costume, and looked both handsome and happy—the old doctor thought triumphant

"Pardon me, sir," said he, "for disturbing you at this early hour, but your numerous calls take you so much out, that one must take you when one can find you. My errand will doubtless surprise you, but I am very frank and open, my object in visiting you is to ask permission to pay my addresses to your daughter."

"To do what, sir?" thundered the old doctor in a towering passion "Are you not satisfied with trying to take from me my practice, but you must ask me for my child? I tell you, sir, nothing on earth would make me consent to your marriage with my daughter"

"But, sir," said Edward Radstock, turning to Maria, "I have your daughter's permission to make this request I told her of my intentions last night, and she authorised me to say that she approved of them"

"Maria," exclaimed the father, almost choking with rage, "is this true?"

"My dear papa, I am in no hurry to get married, but, if I did, I must say that I should never think of marrying any one but Edward Radstock. I will not get married against your will, but I will never marry any one else, nothing will make me"

"Ungrateful girl," muttered Mr. Thomas Walker, and the next minute he sank back in his chair in a fit of apoplexy.

"Open the window, raise the blinds," said the young man, preparing with promptitude and earnestness to take the necessary remedies, "be not alarmed. It is not a dangerous attack"

Maria quietly obeyed her lover, quite aware of the necessity of self-possession and presence of mind in a case like the present In half an hour Mr Walker was lying in a large, airy bedroom, and the young man had left, at the request of Maria, to attend a patient of her father's It was late at night before Edward was able to take a moment's rest What with his own patients and those of his rival he was overwhelmed with business, but at eleven o'clock he approached the bedside of the father of Maria who, with her dear Emily now by her side sat watching.

"He sleeps soundly," said Maria, in a low tone, as Edward entered.

"Yes, and is doing well," replied Radstock. "I answer for his being up and stirring to-morrow, if he desires it."

"But it will be better for him to rest some days," said Maria

"But my dear Miss Walker," continued the young doctor "what will his patients do?"

"You can attend to them as you have done to-day," replied Maria.

"My dear Miss Walker, you, who know me, could trust me with your father's patients, you know that when he was able to go about I would hand them all back to him without hesitation But you must be aware that for your father to discover me attending to his patients would retard his recovery If I do as you ask me, I must retire from C——— immediately on his convalescence"

"No, sir," said Dr Walker, in a faint voice, "I shall not be about for a month, after making me take to my bed, the least you can do is to attend to my patients"

"If you wish it, sir—?"

"I insist upon it, and to prevent opposition, you can say we are going into partnership"

"But—" said Edward.

"If you want my daughter," continued Mr. Walker, gruffly, "you must do as I tell you If you wish to be my son-in-law, you must be my partner, work like a horse, slave day and night, while I smoke my pipe and drink my grog"

"My dear sir," exclaimed the young man, "you overwhelm me"

"Dear papa!" said Maria.

"Yes, dear papa!" muttered old Walker; "pretty girl you are, give a party to crush the interloper, faint when he gets his first patient, watch him from your bow-window like a cat watches a mouse, and then—marry him"

"But my dear papa, is this not the surest way to destroy the opposition?" said happy Maria

"Yes, because we cannot crush him, we take him as a partner," grumbled old Walker; "never heard of such a thing, nice thing it is to have children who take part with your enemies."

Nobody made any reply, and after a few more faint attempts at fault finding, the old doctor fell asleep.

About six months later, after a journey to Scotland, which made me lose sight of Maria, I drove up the street of B——, and eager to see the dear girl, never stopped until I was in her arms.

"How you are grown!" said she with a sweet and happy smile

"Grown, indeed; do you take me for a child," cried I, laughing "And you, how well and pleased you look! always at the bow-window, too, I saw you as I came up."

"I am very seldom there now," said she, with a strange smile

"Why?"

"Because I live over the way?" replied she, still smiling.

"Over the way?" said I.

"Yes, my dear girl, alas for the mutability of human things—Maria Walker is now Mrs. Radstock."

I could not help it; I laughed heartily I was very glad I had been interested in the young man, and the *denouement* was delightful.

The firm of Walker and Radstock prospered remarkably without rivalry, despite a great increase in the neighbourhood, for the experience of the old, and the perseverance of the young man, frightened away all opposition They proved satisfactorily that union is indeed strength Young Radstock was a very good husband He told me privately that he had fallen in love with Maria the very first day he saw her, and every time I hear from them I am told of a fresh accession to the number of faces that stare across for grandpapa, who generally, when about to pay them a visit, shows himself first at the bow-window And thus was the old proverb reversed—for two of a trade *did* agree after all.

IGNATIUS LOYOLA, THE FOUNDER OF THE SOCIETY OF THE JESUITS.

"Who hath not heard of Loyola's sainted name,
Before whom king's and nations bow'd the knee?"—*Southey.*

THIS celebrated founder of a still more celebrated and very dangerous fraternity, was a Spaniard, he was born (according to some authors) in the year 1491, at the castle of Loyola in Guipuscoa, which is a part of Biscay, adjoining the Pyrenean mountains: but others place the date of his birth in 1495 In early youth he was distinguished by a pregnancy of wit and discreetness far above his years, with an obliging and affable, but very irritable disposition, combined with an eager desire of renown. His relative, the Duke of Najara, superintended his education, and very early introduced him to the court of Ferdinand V., King of Spain, to whom he soon became a page, and by whom he was afterwards appointed an officer in the Spanish army. In this capacity he signalised himself equally by his valour, and by an eager pursuit of licentious pleasures and vices: he had also a poetic taste, and even composed a poem in honour of his tutelar saint, Peter.

In the year 1521, when he was about thirty years of age, or, as some will have it, in his twenty-sixth year, he was one of the garrison of the city of Pampeluna* when it was besieged by the French. The assailants having made a breach in the wall, Loyola mounted the breach, sword in hand, to resist the attack, when a piece of stone, which was broken off from the ramparts by a cannon-ball, bruised his left leg, and, at the same time, the ball rebounded, and broke his right. This accident was the cause of his quitting the army, and the original means of raising him to that eminence which he afterwards enjoyed as the patron of *the Society of Jesus*, a society which speedily eclipsed the existing institutions dependent on the church of Rome.

Ignatius suffered much from his broken leg, which was unskilfully treated, and consequently long under the surgeon's hands. It is related that, after the wound was cured, the end of a bone stuck out under his knee, and disfigured his leg. Ignatius having been a spruce young gallant, and being desirous to appear again in the most comely fashion, caused it to be cut off, so that his boot might sit more handsomely; nor would he suffer himself to be bound during the performance of the operation.

"When long care
Restored his shatter'd leg, and set him free,
He would not brook a slight deformity,
As one who being gay and debonair,
In courts conspicuous, as in camps must be,
So he forsooth, a shapely boot must wear;
And the vain man, with peril of his life,
Laid the recover'd limb again beneath the knife."
Southey's "Tale of Paraguay."

It is also asserted that, the wound having caused one of his thighs to shrink, Ignatius, fearful that lameness would ensue, put himself for many days together upon a kind of rack,* and, with an instrument of iron, violently stretched and drew out his leg, in order to render it equal with the other. But all these ridiculous effects of his inordinate vanity were as vain in their execution as their intent, as he could never extend the shrunken limb, which ever after remained shorter than the other; and that lameness which he so much dreaded, was permanently settled upon him.

In the course of his confinement with the broken limb, he was obliged to have recourse to books to beguile the tedium of inactivity.

"Long time upon the bed of pain he lay,
Whiling with books the weary hours away,
And from that circumstance, and this vain man,
A train of long events their course began,
Whose term it is not given us yet to see."—*Southey*

Among others, he met with a romantically written volume of *The Lives of the Saints*. This book made a powerful impression on his mind, and strongly incited him to obtain distinction as an adventurer and a religious devotee. Immediately, therefore, on the re-establishment of his health, he forsook the military for the ecclesiastical profession, and commenced his endeavours to obtain disciples. He first devoutly dedicated himself to the Blessed Virgin Mary, as her knight, after which he performed a pilgrimage to the Holy Land, during which he voluntarily suffered many hardships and privations; his object being to become eminent in afflicting his body. It is recorded that, throughout this pilgrimage, he wore a cassock of coarse canvass, girded with a cord, instead of a coat, and would have gone barefooted, but that he was obliged to wear a buskin† on the foot of the broken leg. Thus habited, and having a bottle and a pilgrim's staff, he performed the weary journey, having first given his horse to the monastery of Montserrat,‡ suspended his sword and dagger at the altar, and spent the night of Lady-day (1522), before the same altar, in watching and prayer.

During this pilgrimage he so mortified and tormented his body, that, from a lusty and strong man, he became exceedingly weak and infirm. It was his custom to live throughout his journey by begging from the poor: he suffered his beard, nails, and hair to grow, without cutting or combing; he slept, if in a house, on the bare ground, or on a board; and, if travelling, he laid himself down wherever he might chance to be when night arrived; but he generally passed great part of the night in watching, weeping, and prayers; scourged himself three times a day, and often spent seven hours together on his

* The capital of the kingdom of Navarre, in Spain. It is a rich bishopric, has a strong citadel, is handsome and populous, and a place of very considerable trade.

* The rack is an instrument of torture, by which the limbs of a criminal are violently stretched till the joints are dislocated. It has long been disused in England, but is still employed in foreign countries. A specimen of the ancient rack is preserved in the Tower of London.

† A kind of rough boot, covering the foot and mid-leg, and tied with thongs underneath the knee. It is generally made with a thick and clumsy sole, and is adapted to either leg.

‡ A mountain of Catalonia, in Spain, on which stands a celebrated monastery of Benedictine monks, and a splendid church dedicated to the Virgin Mary, containing a famous statue of the Virgin. Montserrat is also thickly studded with hermitages on its various romantic heights. This mountain is one of the most singular in the world for its situation, shape, and composition. It stands alone in a very hilly country, towering majestically above all the surrounding eminences. It is composed of numerous steep rocks, which, at a distance, seem indented like the teeth of a saw. From this appearance the mountain derives its name, from the Latin word *serra*, a saw. The beauty, richness, and variety of the landscapes discoverable from the elevated points of Montserrat, are indescribable, but some idea of their extent may be formed, when we say, that the islands of Majorca and Minorca, in the Mediterranean sea, at a distance of sixty leagues, or 180 miles, may be seen from its highest station.

knees. These austerities so debilitated his body, that in 1523 he had become so weak and feeble as scarcely to be able to put one foot before the other. At length, after excessive suffering, often failing in his attempts to drag himself along, he contrived to reach Rome, where he remained fifteen days; after which he journeyed in the same manner to Venice, whence he embarked for Cyprus,* and finally arrived at Jerusalem,† on the 4th of September, 1524.

On his return from Palestine, Ignatius continued his theological studies in the Spanish universities; from whence he went to Paris, where he perfected himself in the Latin language, and in other studies, philosophical and theological. Whilst he resided in France, he composed the institutes of his new order, which he denominated the *Society of Jesus*, and the members of which have therefrom been known by the name of *Jesuits*. These institutes, together with his proposals for the establishment of the fraternity, he submitted to the consideration of the Pope, Paul III., who made many objections to them, but referred them to the examination of three cardinals. This committee violently opposed the measure, and represented it as unnecessary and dangerous. Ignatius, being enthusiastic in his designs, and determined to accomplish his object, immediately made such offers as no pontiff could easily resist. He proposed that, besides the usual vows of poverty, chastity, and monastic obedience, which are taken by all orders of regulars, the members of his society should take a vow of implicit obedience to the Pope, and should bind themselves to go whithersoever he should at any time command for the service of religion, without requiring anything from him for their support.

These proffers were irresistible. The papal see‡ had been, and still was, suffering under the repeatedly successful attacks on its tenets and superstitions, which were violently directed against them by the reformers and their disciples, and several nations had revolted from the papal authority; therefore, at so critical a juncture, the acquisition of a set of men so peculiarly devoted to the see of Rome as the Jesuits would undoubtedly prove, and who would be arrayed in opposition to its foes, was an object of the highest consequence. Consequently, the proposals of the crafty and aspiring Ignatius were instantly acceded to, and, on the 27th of September, 1541, the society received a bull of confirmation from Paul III., and the grant of many very extensive privileges.

Thus was established a fraternity which has, through succeeding ages, proved the bane and terror of the peace and liberties of mankind. Under the specious mask of religious zeal, the Jesuits have constantly concealed the vilest passions. Bigoted intolerance, complete devotedness to the interests of the papacy and their own order; active and general espionage§ into, and interference with, the most secret and important affairs, as well of states and governments as of individuals; the direction, according to their own will, of the education of youth, so as to train them up to their own ends, and to enlist them, when of proper age, in their own interest; consummate duplicity and cunning; passive obedience to their own superiors, and despotic influence over the rest of mankind; these and all such views, motives, and rules of conduct as would tend to their own interest and to the increase of their power and wealth, formed the profound and artful policy of the Jesuits.

Unhappily for mankind, the vast influence which they acquired by these different means, has been often exerted with the most pernicious effect.

Upon the establishment of this dangerous association, Loyola was naturally appointed its general. In this office, by the institutions of the order, he became possessed of the most despotic power. By his sole authority he could at pleasure appoint or remove every officer employed in the government of the society: in him was vested the sovereign administration of the revenues and funds of the order; every member belonging to it was at his disposal; and, by his uncontrollable mandate, he could impose on them any task, or employ them in whatever service he pleased. His commands were revered as if from a Deity; and, under his direction, the members of the society were mere passive instruments to effect his will. His influence became thus so extended over, not only the secluded brethren of the order, but over the minds of its agents and the people with whom they associated in different parts of the world, that the annals of mankind do not present such another example of perfect despotism.

The zeal of Ignatius and his coadjutors soon advanced the fortunes of the fraternity with an astonishing rapidity, and raised it to a height from which it looked with proud superiority on every other institution that papal authority had incorporated. It was thus eminently qualified for its subsequent attacks on the repose and liberties of mankind.

Ignatius enjoyed this exalted station of power and authority about fifteen years, and at length died on the 31st of July, 1556, in the sixty-fifth year of his age.

After his death he was canonised by the pope, and is now revered as a saint, by the Roman Catholics, who observe the festival in commemoration of him on the anniversary of his decease. Their legends contain many ridiculous and blasphemous fables concerning him; and they foolishly believe that he in his life-time performed, and that his relics still have the power to perform, miracles.

The society of the Jesuits flourished undisturbed in many countries till different periods, but was finally abolished by Pope Clement XIV. in 1773. To the eternal disgrace, however, of the late pope, it was revived in 1816, and still exercises its infamous powers and dangerous interference in secular affairs, though to a less extent than formerly, owing to the increase of knowledge among mankind in general.

* An island in the Mediterranean sea.
† The capital of Judea, or Palestine. It was the scene of our Saviour's sufferings, and is often emphatically called *the Holy City*.
‡ The dominion of the pope.
§ Secret inquiry, and procurement of intelligence.

THE STAR AND THE LILY:

A LEGEND OF THE OJIBBEWAY INDIANS.

AN old chieftain sat in his wigwam, quietly smoking his favourite pipe, when a crowd of Indian boys and girls suddenly entered and with numerous offerings of tobacco, begged him to tell them a story. Then the old man began,—

"There was once a time when this world was filled with happy people, when all nations were as one, and the crimson tide of war had not begun to roll. Plenty of game was in the forest and on the plains. None were in want, for a supply was at hand. Sickness was unknown. The beasts of the field were tame, and they came and went at the bidding of man. One unending spring gave no place for winter—for its cold blasts or its unhealthy chills every tree and bush yielded fruit.

Flowers carpeted the earth, the air was laden with their fragrance and redolent with the songs of married warblers, that flew from branch to branch, fearing none, for there was none to harm them. There were birds then of more beautiful song and plumage than now.

It was at such a time, when earth was a paradise, and man worthily its possessor, that the Indians were the lone inhabitants of the American wilderness.

They numbered millions, and, living as Nature designed them to live, enjoyed its many blessings. Instead of amusements in close rooms, the sports of the fields were theirs. At night they met on the wide green fields. They watched the stars; they loved to gaze on them, for they believed them to be the residences of the good who had been taken home by the Great Spirit.

One night they saw one star that shone brighter than all others. Its location was far away in the south near a mountain peak. For many nights it was seen, till at length it was doubted by many that the star was as far distant in the southern skies as it seemed to be. This doubt led to an examination, which proved the star to be only a short distance, and near the tops of some trees.

A number of warriors were deputed to go and see what it was. They went, and on their return said it appeared strange and somewhat like a bird. A committee of the wise men were called to inquire into it, and, if possible, ascertain the meaning of the strange phenomenon.

They feared that it might be the omen of some disaster.—Some thought it the precursor of good, others of evil, and some supposed it to be the star spoken of by their forefathers as the forerunner of a dreadful war.

* *Canonised*—declared to be a saint. The act of declaring a deceased person to be a saint, is called *canonisation*, because the day on which the new saint's memory is to be celebrated, is accordingly noted by the pope in the Roman Catholic *canon*, or ritual for the observance of festivals.

One moon had nearly gone by, and yet the mystery remained unsolved.

One night a young warrior had a dream, in which a beautiful maiden came and stood at his side, and thus addressed him

'Young brave! charmed with the lands of thy forefathers, its flowers, its birds, its rivers, its beautiful lakes and mountains covered with green, I have left my sisters in yonder world to dwell among you. Young brave! ask your wise and great men where I can live and see the happy race continually ask them what form I shall assume in order to be loved'

Thus discoursed the bright stranger The young man awoke. On stepping out of his lodge, he saw the star yet blazing in its accustomed place.

At early dawn the chief's crier was sent round the camp to call every warrior to the council lodge. When they had met the young warrior related his dream They concluded that the star that had been seen in the south had fallen in love with mankind, and that it was desirous to dwell with them

The next night five tall, noble-looking, adventurous braves were sent to welcome the stranger to earth,

They went and presented to it a pipe of peace, filled with sweet-scented herbs, and were rejoiced to find it took it from them As they returned to the village the star with expanded wing followed and hovered over their homes all day long

Again it came to the young man in a dream, and desired to know where it should live, and what form it should take

Places were named On the top of giant trees, or in flowers At length it was told to choose itself a place, and it did so

At first it dwelt in the white rose of the mountains, but there it was so buried it could not be seen. It went to the prairie, but it feared the hoof of the buffalo. It next sought the rocky cliff, but there it was so high that the children who it loved most could not see it

'I know where I shall live,' said the bright fugitive, "where I can see the gliding canoe of the race I most admire Children, yes, they shall be my playmates, and I will kiss their brows when they slumber by the side of cool lakes The nations shall love me wherever I am.'

These words having been said, she alighted on the waters where she saw herself reflected. The next morning thousands of white flowers were seen on the surface of the lakes, and the Indians gave them this name, *Wah-be-gwan-nee* (White Lily)

Now (continued the old man) this star lived in the southern skies. Its brethren can be seen far off in the cold north, hunting the great bear, whilst her sisters watch her in the east and west

Children! when you see the lily on the waters, take it in your hands and hold it to the skies, that it may be happy on earth as its two sisters, the morning and evening stars, are happy in heaven"

WATER GAS.

CAN gas be produced from water? This question has at length been answered in the affirmative, and the question of supremacy between coal gas and water gas, has, it appears, received a practical solution in Paris. An apparatus, described some years ago a Mr. Jobard, of Brussels, has been erected by Mr Chillard in the workshops of Mr. Christofle, the well known silver-plater Gas produces flame by its combination with oxygen, this combination develops heat, and if there are in the gas particles of solid substances, it heats them so much that they give light, but if there be no such particles, the molecules of gas are so far apart, and so small, that the flame is hardly visible, like that of alcohol Coal gas is a mixture, of which the largest part is carburet of hydrogen, and in burning the hydrogen furnishes the heat which makes the carbon give light until the latter is consumed Water gas is pure hydrogen obtained by separating the two elements of water, hydrogen and oxygen, and in burning, it develops much more heat than any other substance, but gives no light. The new apparatus consists of a furnace and two retorts of cast iron, into which an iron tube is introduced, intended to let in steam, and whose extremity pierced by a number of small holes, is of platinum, in order to obviate oxydation and obstruction The retorts being heated red-hot, a layer of powdered charcoal is placed in them, and as soon as they are closed, the jet of steam follows by the opening of a faucet, the steam pipe being in communication with the boilers of the establishment. Oxygen having more affinity for heated carbon than for hydrogen, leaves the latter, and with the carbon, produces carbonic acid, which gas, mixed with hydrogen, now freed, is pushed out of the retort to the purifier through a large pipe The purifier, much like those now used for coal gas, contains dried lime, which absorbs the carboric acid, and produces carbonate of lime The hydrogen gas, thus rendered completely pure, is conducted to a gasometer, and is ready for use.

The particles here introduced in the flame form a solid body, a resisting and durable substance, consisting simply of a wick of fine platinum wire suspended over the gas-burner; when heated by the flame, it dazzles by its brilliancy. This is made on the principle of the Drummond light

The lime used in the purifier being transformed into carbonate of lime, a single calcination restores it again, so that the same may be indefinitely used, which is not the case when used for coal gas, since in that gas it absorbs not only carbonic, but sulphydric acid also The price of coal gas in Paris is ten cents a cubic *metre* (about thirty-eight cubic feet), the cost of fabrication of water gas is 2½ cents If these results have been carefully observed and proved, they will attract much attention The importance of the interest engaged in gas-making may be understood by knowing that in the city of Paris alone 100,000 tons of bituminous coal are yearly used in that manufacture, producing twenty-five millions of cubic *metres* of gas, sufficient for eighty-five thousand gas-burners Coal gas has disadvantages which water gas has not. It is unhealthy and destructive, unhealthy, because in burning it produces not only water but carbonic acid, and often contains sulphydric acid, it is destructive, because sulphydric acid turns all lead paints black, though it has not that effect on the new zinc paints, and it attacks metals It is true that the acid ought not to be in the gas always, and when it has spoiled the stock of a cutler spoiled by it in the course of a week The manufacture of water gas, however imperfect, will not leave this acid, since there is none in water or charcoal

CASSELL'S EDITION OF EUCLID.

FOR the first time in the history of literature has the work of the famous Greek Geometrician been brought within the reach of the sons of labour We have here the Elements of Geometry, as comprised in the first six and the eleventh and twelfth books of Euclid, neatly bound in a paper cover, for a shilling, or in cloth for eighteen pence Of course anything like criticism on such a work would be misplaced, but we may mention, that the text of Robert Simson the standard editor of Euclid, has been carefully revised and annotated by Professor Wallace, the editor of the *Popular Educator* The style has been much simplified and modernised, and its technicalities in great part removed Many new demonstrations of propositions have been given, in addition to those of the original [illegible] and there have also been [illegible] explanations and comments [illegible] short sentences point and many colored [illegible] Advantages are thus laid open to the teachers of Geometry in Euclid, which the readers of the most expensive editions never before possessed To enlarge on the usefulness of geometry as a science, or to advise working men to pursue it, would be mere commonplaces, but, in the words of the preface, we may conclude by saying, that Euclid is now placed within the reach of all who are desirous of making themselves acquainted with this masterpiece of reasoning, with the foundation of all the sciences, with the basis of all the arts of design and machinery, and with the origin of all the processes relating to the measurement and calculation of surfaces and solids, required both in the arts of life and the arts of production.

LITERARY NOTICES.

THE ILLUSTRATED EXHIBITOR AND MAGAZINE OF ART—The First Volume of this splendidly embellished work, is now ready, and may be had in stiff covers, at 4s 8d handsomely bound, price 6s 6d., or extra cloth gilt edges, 7s 6d It contains upwards of Two Hundred principal Engravings and an equal number of minor Engravings, Diagrams, &c

HISTORY OF HUNGARY, WITH UPWARDS OF EIGHTY ILLUSTRATIONS—The First Volume of the New Series of THE WORKING MAN'S FRIEND, neatly bound in cloth, price 3s 6d, contains the completest History of Hungary ever published, also a History of China and the Chinese, with Forty-six Illustrations of the Manners, Customs, Public Buildings, Domestic Scenes, &c, of this most remarkable people, together with numerous instructive Tales and Narratives, Biographies, with Portraits, Scientific and Miscellaneous Articles, &c

CASSELL'S EMIGRANTS' HANDBOOK, a Guide to the various Fields of Emigration in all Parts of the Globe, Second Edition, with considerable Additions, and a Map of Australia, with the Gold Regions clearly marked, is now ready, price 9d

THE PATHWAY, a Monthly Religious Magazine, is published on the 1st of every month, price twopence—32 pages enclosed in a neat wrapper No 32, for August, is now ready, and Vols I and II, neatly bound in cloth and lettered, price 2s 3d. each, may be obtained by order of any Bookseller

SCRIPTURE LIBRARY FOR THE YOUNG, in Shilling Volumes—The first two volumes of this instructive series of works, "The LIFE OF JOSEPH," illustrated with sixteen choice engravings and maps, and "The TABERNACLE, its PRIESTS, and SERVICES," with twelve engravings, are now ready. "The LIFE OF MOSES" is in the press.

MISCELLANEA.

PEOPLE often wonder why men of great genius often have married very commonplace, unlearned women. It seems to me perfectly natural. No woman however accomplished in the ordinary sense can come within many degrees of a man of great talent. What difference then can it make to such a man whether he be ten miles or only nine miles and three-quarters before his partner? This is one of the miseries of genius, that it can have no companion

GOOD READING ought not to be confused with what players call "reading." The reading of players is acting, only the acting is in a plain coat and standing behind a table; but this is not what is meant by reading in the ordinary sense.

IN literature be sure you never suffer the "simple" to degenerate into the "silly."

CLEVER SCHOLARS.—"The boy at the head of the class will state what were the *dark ages* of the world." Boy hesitates. "Next—Master Smith, can't you tell what the dark ages were?" "I guess they were ages just before the invention of *spectacles*" "Go to your seats."

IT has always seemed to me to be one of the best proofs of a healthy mind when the spirits rise and are buoyant in the country and by the sea-shore, amidst the scenes of nature. The mind that feels keenly the beauties of creation and is affected by a lively joy and admiration when amongst them must, I think, be much as it was intended by its divine Creator

CREATOR.—Souls who cannot live out of the smoke of cities, the stink of the lamp, the fumes of the tavern, or the meretricious delights of what is miscalled "life" and "gaiety" are either diseased souls or degraded souls, or probably both To such people I have a decided misliking, and between them and me a "gulf is fixed" One of the best lines Cowper ever wrote is,

"God made the country, and man made the town."

I am for God's work

THE porpoise is good eating, though now not used a steak from it, broiled, eats like a beef steak, not from the finest part of the beef, but short, rich, tender, and well flavoured. Our ancestors gave high prices for this fish.

IT never could be driven into me that the fashionable greenhouse exotic plants, &c, are comparable to our native flowers and shrubs. They are splendid sometimes such as the "camelia japonica" and the different "cacti;" but they want picturesque leaf and want (the best of all) fragrance. What "cactus" or "japonica" is equal to the moss-rose? To me the fine *old Paynisk white rose*, which in good soil grows to eight feet high and bears scores of rich flowers, steeping the air in fragrance, is the queen of all flowering shrubs! In horticulture I am a "Lancastrian," determined to honour the old "Temple-garden," where they grew when "the Wars of the Roses" commenced.

THE COST OF WAR.—The cost for powder alone of a single discharge of the armament of a line of battle ship of 120 guns is upwards of £20. The cost for powder alone of the firing of a morning and evening gun exceeds £100 a year.

LIBERTY.—Brasidas, the famous Lacedemonian General, caught a mouse! it bit him, and by that means made its escape. "There is no creature exclaimed he that is so contemptible, but that it may have its liberty, if it will but contend for it?"

FRENCH NOTIONS OF JOHN BULL.—Notwithstanding the constant communication between England and France—notwithstanding the vast number of Frenchmen who have visited London, and the immense number of English always residing at Paris—the French seem to be as much convinced as ever that *milord* John Bull is utterly unlike all the rest of humanity in his way of thinking, acting, dressing, eating, and in every other respect whatsoever. There is not a week in which their newspapers do not make one of his sons the hero of some absurd adventure The other day, for example, it was gravely stated that one English *milord*, on passing a provision shop, was seen to burst into tears at the sight of a haunch of venison, he having recognised, by a peculiar mark, that it was that of a deer named Billy, which he had tenderly loved, and he immediately rushed into the shop, "with a handful of bank notes," to purchase the haunch and preserve it from the profanation of being cooked. A *feuilletoniste*, hard-up for matter, always brings forward some extravagant *excentricite*, perpetrated by a *milord* or a *milady* On the stage, our countrymen are almost invariably represented as carrying with them a huge bottle of prussic acid, that they may be able to commit suicide whenever the whim takes them At the Palais Royal there was lately in performance a piece which the Parisians consider a faithful picture of English manners A French artist, on his last legs, makes his fortune by buying at Smithfield-market the wife of his landlord, and selling her immediately after to a Peer for thirty-fold the cost price. The said Peer (he wears a red Turkish cap as a mark of his dignity) afterwards sells her back to her husband in order that he may marry the daughter of his own brother, who is a policeman!

SHAKSPEARE A PLAGIARIST.—Capel, the commentator, once quoting two lines from a speech in Henry VI, declared that "he who could not discern the pen that wrote them ought never to pretend to discernment hereafter." Unfortunately for Capel, in 1811 there was sold a play by Marlowe, from which it appeared that the whole speech of which he had quoted the opening was Marlowe's, but that it had been appropriated with slight alterations by Shakspeare. Here are the openings of the two speeches —

MARLOWE

Glo'st What! will the aspiring blood of Lancaster
Sinke *into* the ground? I *had* thought it would have mounted.
See, how my sword weepes for the poore King's death!
Now maie such purple teares be alwaies shed,
For such as seeke the downefall of our house!
If anie sparke of life remaine in thee, (*Stabs him againe*)
Downe, downe to Hell, and saie I sent thee thither.

SHAKSPEARE.

Glo'st. What! will the aspiring blood of Lancaster
Sink in the ground? I thought it would have mounted.
See, how my sword weeps for the poor King's death!
Oh may such purple tears be always shed
From those who wish the downfall of our house!
If any spark of life be yet remaining,
Downe, downe to Hell, and say I sent thee thither. (*Stabs him again.*)

NOTICES TO CORRESPONDENTS

N.—It is only under very peculiar circumstances that you could obtain ordination as minister of the Church of England without regular college education. To enter either of the Universities, you must have a tolerable knowledge of the classics and of mathematics; you must reside there four years, which, with strict economy, will cost you from £70 to £100 a year. The degree of attainment required in a candidate for ordination depends much upon the character and views of the person, the bishop, or his chaplain, by whom you may be examined.

YOUNG THOMAS.—Yes, you may expect to see a good biography of your "favourite Franklin in an early number of the "Popular Educator."

MARIANNE.—Mrs. L. H. Sigourney is a native of America. She was born at Norwich, Connecticut, and is, if we mistake not, about 50 years of age. The "long poems" you inquire about, must be her "Oniska and Pocanontas," stories founded on the ancient lore of her own country.

J. P. TATE.—You should direct your inquiries to the Secretary of the East India Company, Leadenhall-street.

AN ENQUIRER.—"Bear's Grease" is usually recommended for the purpose you name—that of promoting the growth and thickness of the hair. But the fact is, first, that this, in reality, possesses no superiority over any other animal fat, and, secondly, that the mass of that which is sold for "bear's grease" is really hog's lard! The following is an approved recipe.—Hog's lard 16 ounces, flowers of benzoin and palm-oil, of each 4 ounces; melt together until combined, and stir until cold. This will keep for some time and may be scented at pleasure.

TURO.—The *Aborigines* were the original inhabitants of Italy, said to have been polished by Saturn, and [illegible] by him from Egypt and placed in Italy. The word is now used to describe the first inhabitants of any country.

MARY.—The sentence you have sent us—*Aiutato, e Dio l' aiutera*—is an Italian proverb and may be translated thus:—"Help yourself, and God will help you."

A COTTAGER.—The Papers on "Cottage Economy" appeared in the fifth volume of the "Working Man's Friend." They relate to the modes of rearing bees, poultry, rabbits, chickens, and the preservation of eggs.

ELIZABETH.—Descriptions of Niagara abound, you will find a beautiful and original one, written expressly for the "Working Man's Friend," by an eye-witness, in No. 53 of the First Series, or Volume 5, page 11.—Your friend will not be able to obtain any assistance from Government, it assists none but practical agriculturists and farmers

T. T. T.—We cannot recommend you to apply to the office you mention. The majority of those advertisers who promise to obtain situations for persons sending them certain sums of money, are mere adventurers, who have no power to fulfil their promises. Instances of heartless robberies of this kind are occurring every day

A WORKING CARPENTER.—There are various modes of protecting timber from the *dry-rot*, but they are not very easy of application by an individual, as expensive apparatus is required. The most successful modes have been those on the principle of impregnating the timber, or filling the pores, with some antiseptic substance—as creasote, pyrolignite of iron, &c. The process called *Payniszing*, from the name of the inventor, has recently been much used. This process consists in filling the pores of the wood with a solution of chloride of lime, and next forcing in a solution of sulphate of iron, by which an insoluble sulphate of iron is formed in the body of the wood, rendering the latter extremely hard.

W. F. H.—The office of the "Truss Society" is in Hatton-garden, Holborn. Address your letter to the secretary at that place.

CHARLES.—"*Pompey's Pillar*" was a column erected on the shore of Alexandria, to commemorate certain splendid victories obtained by "Pompey the Great," or "Cneius Pompeius Magnus," a celebrated Roman statesman and warrior, the contemporary and rival of Julius Cæsar.

All Communications to be addressed to the Editor, at the Office, Belle Sauvage Yard, London.

RUSSIA AND THE RUSSIANS.—III.

AN EPITOME OF RUSSIAN HISTORY.

THE ruling passion of Peter the Great was a desire to extend his empire and consolidate his power; and accordingly his first act was to make war on the Turks, an undertaking which was at the outset imprudently conducted and, consequently, unsuccessful; he lost 30,000 men before Azoff, and did not obtain permanent possession of the town till the year 1699, and then by an armistice. In the following year he was defeated at Narva by an inferior force under Charles XII., and, having led them into a very disadvantageous position near the Pruth, he was reduced to propose a peace, one of the conditions of which was that the king of Sweden should be permitted to return to his own country. From this period to 1718 he was constantly occupied in pursuing with vigour the plans which he had originated for extending the frontiers of his kingdom towards the west, and in 1718 he drove the

A WINTER SCENE IN RUSSIA.

then only a boy of seventeen; and on many other occasions the Russians suffered severe checks and reverses. But at length the indomitable perseverance of Peter prevailed. In 1705 he carried Narva, the scene of his former defeat, by assault; and two years after, by the crowning victory of Pultava, where he showed the qualities of an able general, he sealed the fate of his gallant and eccentric adversary and the

Swedes out of Finland, made several descents upon the coast near Stockholm, destroyed whole towns, obliged her navy to fly, and, finally, in 1721, by the peace of Nystadt, retained Esthonia, Livonia, Ingria, a part of Carelia and Finland, as well as the islands of Dago, Moen, Oesel, &c. Having now no enemy on this side, he turned his arms eastward, and took Derbend, on the Caspian, in 1724—an inglorious conquest, for

sides Cossacks and Kalmucks. This was his last military achievement, for he died in 1725 in the fifty-second year of his age.

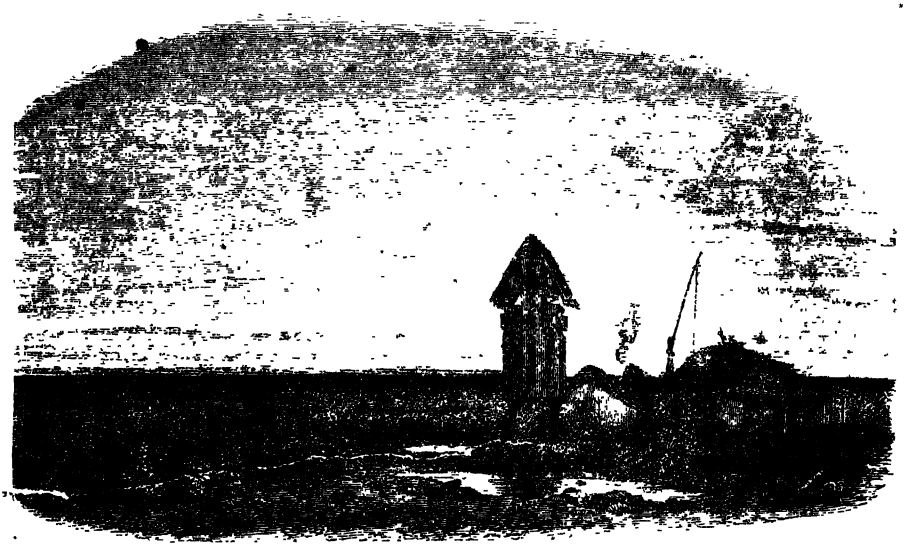
We have said the Tzar's ruling passion was to extend his empire and consolidate his power, but he likewise possessed in an eminent degree the national characteristics—a persevering mind and a resolute will, which bid defiance to all difficulties. By the assistance of his foreign officers he succeeded in forming and bringing into a high state of discipline a large army; he found Russia without a fishing-smack, and bequeathed to her a navy to which that of Sweden, long established and highly efficient, lowered her flag; he built Petersburg, which may be said to float upon the waters of the Neva; he caused canals and other works of public utility to be constructed in various parts of his empire, endowed colleges and universities, and established commercial relations with China and almost every other nation on the globe. The Tzar likewise possessed the capability of enduring privation and bodily fatigue to an almost incredible extent, and seemed to act upon the idea that by his own personal exertions and the versatility of his genius he could accomplish for Russia that which it had taken centuries to effect in other countries, and fancied he could infuse into her citizens an immediate appreciation of the mechanical and polite arts, as well as a taste for those things which are seen only in an advanced state of civilisation. Peter devoted his whole attention and energies to this theory, and, though he could not compass impossibilities, he was enabled, by the uncontrolled exercise of the imperial will and inexhaustible resources, to effect a most extraordinary and rapid change in the political and physical condition of his country

His manual dexterity and mechanical knowledge were great Against the express wish of his boyards and the clergy, who thought it an irreligious act, he left Russia to make himself acquainted with the arts and inventions of other European nations, and worked with an adze in their principal dockyards —he not only built, but sailed his own boat, which is still to be seen in St. Petersburg, as are specimens of his engraving, turning, and carpenter's work. He rose at four, at six he was either in the senate or the admiralty, and his subjects must have believed that he had the gift of ubiquity, so many and various were his occupations. He had also the virtue of economy, a quality rarely seen in a sovereign. He even found time to dabble in literature, and translated several works into Russian; among these was the "Architecture" of Leclerc, and the "Art of Constructing Dams and Mills" by Sturm; these MSS. are preserved. During the Tzar's visit to London he was much gazed at by the populace, and on one occasion was upset by a porter who pushed against him with his load, when lord Carmarthen, fearing there would be a pugilistic encounter, turned angrily to the man, and said, "Don't you know that this is the Tzar?" "Tzar!" replied the man, with his tongue in his cheek, "we are all Tzars here" Sauntering one day into Westminster Hall with the same nobleman, when it was as usual alive with wigs and gowns, Peter asked who these people might be, and, when informed that they were lawyers, nothing could exceed his astonishment. "Lawyers!" he said, "why I have but two in all my dominions, and I believe I shall hang one of them the moment I get home." His vices were such as to have been expected in a man of his violent temperament, despotic in a barbarous country, and who in early life had been surrounded by flatterers and dissolute associates. But it would be foreign to the purpose of this work to enter into a discussion of this nature. The Russians date their civilisation from his reign; but a slight glance at the history of some of the early Tzars will show that, in many of the points on which the greatness of his reputation rests, he was anticipated by his predecessors. Dark and savage as the history of the country is, an attempt at public education had been made, religious toleration and an anxiety to promote commerce existed, and the institution of a code of laws had already occupied their attention. The untimely deaths of some of these princes deprived Russia of monarchs far more benevolent than Peter, men of finer and more generous minds, and, though not so ambitious, quite as anxious for her welfare. Under their sway no such rush at improvement would have been made; no such influx of foreigners would have taken place; but, if not so rapidly, at least as surely these sovereigns would have effected quite as much real good. Peter left no code of laws established on the broad principles of justice; he travelled in England and Holland, but thought, only of their navies, and wholly overlooked the great principles of their government, by which he might have ameliorated the condition of his own. Trial by jury never appears to have attracted his attention. The Tzar, it is true, reigned over a nation of serfs—so did Alfred, and in the 9th instead of the 18th century. The empress Catherine survived him only two years, dying at the age of thirty-nine. The reduction of the capitation tax was the most popular act of her short reign, and Delille, Baer, and the Bernouillis were the most distinguished members of the Academy of Sciences she established. Peter, the son of Alexis, and grandson of Peter the Great (by his first wife Eudoxia, who survived Catherine), died of the small-pox at the age of fifteen; in him the male line of the Romanoffs became extinct. His intellect was good, and, though so young, he gave great promise of being an honour and a blessing to his country. Anne, duchess of Courland, who followed this youthful sovereign, was daughter of Ivan, half-brother of Peter the Great; she died in 1740, after reigning ten years. Her chief merit was in advancing the commerce of the country and establishing silk and woollen manufactories —her chief folly, the building a palace of ice, to which she sent a prince Galitzin, one of her buffoons, and his wife, to pass the night of their wedding-day, the nuptial couch was also constructed of this cold material, as well as all the furniture, and four cannons which fired several rounds. A war which was prosecuted against the Turks in this reign, ended to the disadvantage of Russia, and, as the price of peace, Azoff, Otchakof, and Moldavia were given up to the Porte. Intrigues drove Ivan VI, the infant son of the princess of Brunswick, neice of the empress Anne, from the throne, and in 1741, Elizabeth, daughter of Peter the Great, took possession of it.

Her reign was one series of wars and intrigues, and wholly unfavourable to the intellectual improvement and progress of [illegible] The Swedes thought this a favourable moment to [illegible] possessions, but were obliged to [illegible] peace on the basis of that of Nystad. Detesting Frederic [illegible] coarse remark levelled at her mother, Elizabeth made war with Prussia, which lasted from 1753 to 1762, the year of her death. The taste of this empress for architecture greatly contributed to embellish St. Petersburg, and the Academy of Painting and Sculpture in that capital was instituted by her; but she was a model of hypocrisy, and, while from feelings of pretended humanity she abolished capital punishments and deplored the miseries her troops suffered in the war with Prussia, she established a kind of star chamber in which justice and mercy were unknown. Peter III., son of the princess Anne, eldest daughter of Peter the Great, succeeded Elizabeth, and, being a great friend of Frederic, he immediately made peace with Prussia; he also suppressed the secret council established for the examination of political offenders, softened the rigour of military discipline, permitted his nobles to travel, lowered the duties in the Livonian ports, reduced the price of salt, and abated the pressure of usury by the establishment of a loan bank, and instituted other salutary and wise measures. He was, however, of a weak and vacillating disposition, and his tastes were entirely German, which amounted to a crime in the eyes of the nobility; this, and the intrigues of his wife, afterwards the empress Catherine II., whom he grossly neglected, led to his downfall, and he terminated his days in the prison of Ropscha in 1762.

The reign of this extraordinary woman is one of the most remarkable in the Russian history. In the early part of it she interfered in the affairs of Poland, which produced a civil war, and ended in the conquest of that country. In 1769 the Turks declared war, which was at first favourable to their arms; they were afterwards defeated with great slaughter on the Dniester, and abandoned Choczim. At this period was fought the celebrated action before Tchesme, in which the Turkish fleet was completely destroyed; an achievement that was mainly owing to the gallant conduct of admirals Elphinstone and Greig, and Lieutenant Dugdale, Englishmen in the Russian service. In another campaign the Russians carried the lines of Perecop, defended by 57,000 Turks and Tartars, and thus obtained possession of the Crimea and Romanzoff gained several victories in the Danubian provinces. These conquests were, however, dearly purchased; the plague

passed from the Turks into the Russian armies, and the frightful malady was carried by the troops into the very heart of the country; 800 persons died daily at Moscow, and the disease subsided only with the severity of the winter. It was in this year that the Kalmuck Tartars, who had been upwards of half a century settled near the steppes of the Volga, north of Astrakan, suddenly, and to the number of 350,000 souls, left the Russian territory for their old haunts on the Chinese border—an affront offered to them by the empress is said to have been the cause of this extraordinay flight. Every attempt at negotiation having failed, the contest with the Turks was renewed in 1773, and though the Russians again suffered severe losses, Romanzoff brought the war to a successful termination, and, by the treaty of peace concluded in 1774, his country obtained the free navigation of the Euxine, the cession of Kilburn, Yenikalé, with a tract between the Bug, the Dnieper, and the Taganrog. Russia restored her other conquests, and the Turks paid into the Russian Treasury 4,000,000 of rubles towards the expenses of the war; also, they asknowledged the independence of the Crimea, which in the year 1784 fell altogether into the hands of Russia, as well as the Island of Taman and part of the Kuban. Shortly after this, Catherine and the northern courts, with France, jealous of the British maritime power, brought about a combination against England, which was hastened by the following singular incident.—The British minister, fearing that this intrigue was going on, desired Potemkin to lay before the empress a memorial that he had drawn up, which the prince promised to do. Of this memorial the French governess of his nieces contrived to possess herself, and, after allowing the French minister to make his notes in refutation of it in the margin, replaced it in Potemkin's pocket, who, ignorant of the circumstance, laid it before Catherine; when the empress, conceiving the notes to have been made by her favourite, formed a league with Sweden and Denmark, and announced her intention of supporting it with her navy. In 1787 she made, in company with Potemkin and an immense suite, her famous progress to the Crimea, and the following year found her once more at war with the Turks, soon after, Finland was invaded by Gustavus III. This contest was settled by pacification in 1790. In the close of that year Constantinople trembled at the forward movement of the Russians, and the fall of Ismail under Suwaroff, after the ninth assault, closed the war on the 22nd of December. In this extremity Europe combined to save the Porte from destruction, and in 1791 Russia relinquished all the territory she had acquired, excepting that guaranteed by the treaty of 1784. In these wars with the Ottoman Empire there were destroyed 130,000 Austrians, 200,000 Russians, and 370,000 Turks, in all 660,000 men. About this time the intrigues of Russia, Austria, and Prussia, for the partition of Poland, commenced, and, carried on for several years, were brought to a conclusion by two sieges of Warsaw in the first, Kosciusko was made prisoner, and in the second the Poles, unassisted by his genius, gave way in that fearful assault which, on the 9th of November, 1794, consummated the ruin of Poland as a nation. Catherine's subsequent plans of aggrandizement in Daghestan and the shores of the Caspian were cut short by her death, on the 9th of November, 1796. The great talents for governing which the empress possessed are universally admitted; and, though her energies were principally displayed in carrying out her schemes of foreign conquest, she by no means neglected the interior economy of her empire. Her views on all subjects were far more enlarged than those of her predecessors, and upwards of 6,800 children were educated at St. Petersburg at the public expense. Catherine invited Pallas, Euler, and Gmelin to survey her territories and describe their characteristics, and requested D'Alembert to undertake the education of her grandson, the grand duke Alexander, which he declined. The empress also confirmed the abolition of the secret state inquisition, and, by dividing the college of the empire into separate departments, facilitated the despatch of business, and rendered the administration in each more efficient. With a view to check corruption, she raised the salaries of the government officers, put down many monopolies of the crown, and issued an ukase, which prevented any proprietor from sending his serfs to the mines, or any distant part of the empire, except for agricultural purposes. Catherine purchased the praises of the French philosophers, corresponded with Voltaire and D'Alembert, and complimented Fox by asking him for his bust, which she placed between those of Cicero and Demosthenes.



Catherine, possessed of great beauty in her youth, preserved the traces of it to the end of her life, in matters of religion she was tolerant from political motives, extravagant in an extraordinary degree, and, with a woman's liberality, paid well those who served her; and, though there are many acts in her reign which cannot be defended, she did more for the civilisation of Russia than any of her predecessors. She was succeeded by her son Paul, whose short reign, to 1801, was not of any great historical importance. At his coronation he decreed a law of hereditary succession to the crown in the male line, and afterwards in the female, instead of leaving it to the caprice of the reigning Tzar The emperor declared war against the French in 1799, sent an army into Italy to oppose the republican generals, and through the intervention of England, Suwaroff, who had been banished from the capital by Paul, was recalled, and placed at the head of it. But the campaign in Italy, successful at first, ended unfavourably to the Russian arms—when the emperor suddenly became a great admirer of Bonaparte, and, with the same inconsistency that he exiled Suwaroff, he liberated Kosciusko, subsequently the eccentricity of his actions led to the conclusion that he was of unsound mind. Amongst his ukases was one against the use of shoe-strings and round hats, and in the number of queer whims which infected his brain was a rage for painting with the most glaring colours the watch-boxes, bridges, and gates throughout the empire. The career of Paul was closed in March, 1801, at the castle in St. Petersburg, where he then resided—it is now used as a School for Engineers

Alexander, the eldest son of the late emperor, succeeded to the throne, being then twenty-four years of age. In the same year he recalled the Siberian exiles, suppressed the secret inquisition, re-established the power of the senate, founded in 1804 the University of Kharkoff, and emancipated the Jews In 1805 the emperor joined the Northern Powers against France, and on the 2nd of December the Austro-Russian army was defeated at Austerlitz. In 1806, Mr. Fox having failed in negotiating a peace between France and Russia, Napoleon overran Prussia, and, Benningsen having evacuated Warsaw, Murat entered that city on the 28th of November On the 26th of December the French were beaten at Pultowsk, and in February, 1807, the severely contested battle of Eylau was fought, each side having three times lost and won; the deciding move being made by Benningsen, who took Konigsberg by assault. On the 28th May, Dantzig capitulated to the French, and on the 14th of June they won the battle of Friedland, ten days after, Napoleon and Alexander met on a raft moored in the middle of the Niemen, and concluded an armistice, which was a prelude to the treaty of Tilsit, concluded on the 27th of July of the same year. Alexander by this act became the ally of France, which enabled the French to carry on their aggressive policy in Spain. But the injury inflicted on Russian commerce by Napoleon's continental system against England, and his interference with Alexander's conquest in Finland in 1809, roused that sovereign to a sense of his true interests. He broke with France, and the invasion of Russia by the French was the consequence. To prepare for and carry on his defence against this, the emperor made peace with the Porte, and re-established his alliance with Great Britain. The operations which took place during this memorable struggle are so well known, that they will only be briefly adverted to here.

On the 23rd of June, 1812, the French crossed the Niemen and pushed on to Wilna, the Russians carefully retreating, and leaving Napoleon to pass that river on the 28th, and enter the town unopposed. Here the French emperor remained eighteen days, and then, after considerable manœuvring, marched on Vitepsk, where he fully expected to bring the Russians, under Barclay de Tolly, to action. The Russian general, however, declined; and Napoleon, instead of following the advice of his marshals, and wintering on the Dwina, crossed the Dnieper and marched on Smolensk. On the 16th of August he was once more in front of the Russian grand army near that town, but the wary and intelligent De Tolly

had occupied it only to cover the flight of its inhabitants, and carry off or destroy its magazines; and on the following morning Napoleon, to his great mortification, learnt that the enemy, in pursuance of his Fabian tactics, was again off. Smolensk was now taken by assault, the last inhabitants that remained having set fire to it before they left. Up to this time the Russian commander-in-chief had been able to adhere to his plan of drawing the French into the country without risking a general engagement until a favourable opportunity should occur—tactics which were not liked by his army, and Alexander, yielding to the clamour, appointed Kutusoff to the command. The battle of Borodino, sometimes called that of Moskowa, fought on the borders of the government of that name, on the 1st of September, was the result of this change of leaders. The combatants amounted on either side to about 120,000, and the killed and wounded in both to about 80,000. On the 12th Bonaparte again moved forward, his troops by this time nearly famished, and heartily tired of the war, for the day of Borodino had given them a clear idea that the enemy would yield only after a desperate struggle. On

which had at first given but little cause for alarm, could not be restrained—fanned by the wind, it spread rapidly, and consumed the best portion of the city. "The churches," says Labaume, "though covered with iron and lead were destroyed and with them those graceful steeples which we had seen the night before resplendent in the setting sun; the hospitals, too which contained more than 20,000 wounded, soon began to burn—a harrowing and dreadful spectacle—and almost all these poor wretches perished! A few who still survived were seen crawling, half-burnt, amongst the smoking ruins, while others were groaning under heaps of dead bodies, endeavouring in vain to extricate themselves. The confusion and tumult which ensued when the work of pillage commenced cannot be conceived. Soldiers, sutlers, galley-slaves, and prostitutes, were seen running through the streets, penetrating into the deserted palaces, and carrying away everything that could gratify their avarice. Some clothed themselves in rich stuffs, silks, and costly furs; others dressed themselves in women's pelisses, and even the galley-slaves concealed their rags under the most splendid court dresses; the rest crowded

VIEW OF THE STEPPES OF RUSSIA.

Sunday, the 13th, the Russian army marched out of the old capital with silent drums and colours furled, by the Kolomna Gate, and left the city to its fate. In the afternoon of Monday the advanced guard of the French army caught the first view of her golden minarets, and starry domes, and the Kremlin burst upon their sight. "All this is yours," cried Napoleon, when he first gazed upon the goal of his ambition, and a shout of "Moscow! Moscow!" was taken up by the foremost ranks, and carried to the rear of his army. In Moscow they bivouacked the same evening. Ere the night had closed in, their selfish marauding leader arrived at the Smolensko Gate, and then learnt to his astonishment that 300,000 inhabitants had fled, and that the only Russians who remained in the city were the convicts who had been liberated from the gaols, a few of the rabble, and those who were unable to leave it. On Tuesday, the 15th of September, the mortified victor entered Moscow, and took up his residence in the Kremlin; but here his stay was destined to be short indeed, or on the morning of the 16th it was discovered that a fire,

to the cellars, and forcing open the doors, drank the wine and carried off an immense booty. This horrible pillage was not confined to the deserted houses alone, but extended to the few which were inhabited, and soon the eagerness and wantonness of the plunderers caused devastations which almost equalled those occasioned by the conflagration. "Palaces and temples," writes Karamsin, "monuments of art and miracles of luxury, the remains of past ages and those which had been the creation of yesterday, the tombs of ancestors and the nursery cradles of the present generation were indiscriminately destroyed, nothing was left to Moscow save the remembrance of the city, and the deep resolution to avenge its fate." And how the cause of all these horrors conducted himself let his own countryman tell.

"Towards evening," writes Labaume, "when Napoleon no longer thought himself safe in a city the ruin of which seemed inevitable, he left the Kremlin, and established himself, with his suite, in the Castle of Peterskoi When I saw him pass by, I could not, without abhorrence, behold the chief of this

barbarous expedition, who evidently endeavoured to escape the decided testimony of public indignation by seeking the darkest road; he sought it, however, in vain; on every side the flames seemed to pursue him, and their horrible glare, flashing on his guilty head, reminded me of the torches of the Eumenides pursuing their victims." On the 20th Napoleon returned to the Kremlin, and soon tried to negotiate with Kutusoff, who replied that no treaty could be entered into so long as a foreigner remained within the frontier. The emperor then requested that he would forward a letter to Alexander. "I will do that," said the Russian general, "provided the word *peace* is not in the letter." To a third proposition Kutusoff replied that it was not the time to treat or enter into an armistice, as the Russians were just about to open the campaign. At length, on the 19th of October, after a stay of thirty four days, Napoleon left Moscow with his army, consisting of 120,000 men, and 550 pieces of cannon, a vast amount of plunder, and a countless host of camp followers, And now the picture of the advance was to be reversed. Murat was defeated at Malo-Yarowslavitz on the 24th, and an unsuccessful stand was made at Viasma on the 3rd of November. On the 6th, a winter peculiarly early and severe, even for Russia, set in—the thermometer sank 18°—the wind blew furiously—and the soldiers, vainly struggling with the eddying snow, which drove against them with the violence of a whirlwind, could no longer distinguish their road, and, falling into the ditches by the side, there found a grave Others crawled on badly clothed, with nothing to eat or drink, frost-bitten, and groaning with pain. What scenes did not the retreat then present!—discipline was gone—the soldier no longer obeyed his officer, disbanded, they spread themselves right and left in search of food, and, as the horses fell, fought for their mangled carcasses, and devoured them raw like dogs—many remained by the dying embers of the bivouac fire, and as these expired, an insensibility crept over them which soon became the sleep of death—thus thousands perished On the 9th of November Napoleon reached Smolensk, and remained till the 15th, when he set out for Krasnoe. From this time to the 26th and 27th, when the French crossed the Beresina, all was utter and hopeless confusion; and in the passage of that river the wretched remnant of their once-powerful army were nearly annihilated—the exact extent of their loss was never known, but a Russian account states that 36,000 bodies were found in the river alone, and burnt after the thaw. On the 5th of December Napoleon deserted the survivors On the 10th he reached Warsaw, and, on the night of the 18th, his capital and the Tuileries, by the back-door The army that had too well and enthusiastically served him was disposed of as follows:—

Slain in fight	125,000
Died from fatigue, hunger, and the severity of the climate	132,000
Prisoners	193,000
	450,000

The remains of the grand army which escaped the general wreck (independent of the two auxiliary armies of Austria and Prussia, which knew little of the horrors of the retreat) was about 40,000 men, of whom it is said scarcely 10,000 were Frenchmen. Thus ended the greatest military catastrophe that ever befel an army in either ancient or modern times, and which, though on a much smaller scale, was, alas! realised to Englishmen in the gorges and ravines of the Khoord Cabul. To return to Napoleon. Europe was now exasperated, and combined against him; and though in the following spring he gained the battles of Lutzen and Bautzen, and on the 27th of August that of Dresden, the wings of his eagles were pinioned on the 18th of October of the same year on the field of Leipsic. On the Rhine the Allies offered him peace and the empire of France, which he was fool enough to refuse, and on the 31st of March, 1814, Alexander had the satisfaction of marching into Paris at the head of his troops. After the general peace in 1815 the emperor devoted himself to the internal improvement of his country, making many judicious alterations in the government, in which he evinced much liberality of feeling. He had good abilities, but not brilliant talent, and his greatness of mind was not fully developed till the invasion of his country by the French; this aroused all his energies, and exhibited him to the world conducting himself with consummate discretion and unflinching steadiness of purpose in that alarming crisis. His disposition was kind and generous, his manners mild and amiable, and his moderation prevented him from ever abusing his unlimited power. Under the influence of his mother, and the empress, the levity and extravagance of the court were materially repressed. Alexander, attended to the last by his wife, died of erysipelas, in a small and humble dwelling near Taganrog, when on a tour of inspection through the southern provinces of his empire. He left a noble example, not only to his country, but to his class, when the news of his death spread over his vast dominions, he was universally deplored, and the murmur of regret in other countries responded to the grief of Russia. He was succeeded by Nicholas I, the present emperor, on the 25th of December, 1825, Constantine, his elder brother, having resigned the crown in his favour.

RICHARD ARKWRIGHT.

To a commercial nation, the progress of her manufactures must always be of paramount interest, its direct tendency is to increase the polish of society, improve its union, advance liberal opinions, and add stability to the social compact; because it enables her to exchange workmanship against raw material, as well as for the food and luxuries of other countries, and by thus extending the range of her operations, to become less dependant. This causes an influx of wealth and growing comforts, which spread themselves advantageously throughout the whole community. That man, therefore, be whom he may, who devotes his genius and his ingenuity to discover modes by which they may be rendered more perfect, not only deserves to be well rewarded, but is also entitled to the lasting gratitude of his fellow-citizens, who are by this means essentially benefited; public honours would be most deservedly bestowed upon such individuals, both the monarch and the nation would derive dignity from disposing of them so meritoriously.

A century back, to supply the demand, immense quantities of muslin, calico, and long cloths were annually brought home by the East India Company. Our cotton manufactures were then comparatively of but trifling amount. The magnitude to which they have since swelled, their still increasing value as articles of trade, with their consequence in the employment of labour, has given them an importance in commercial transactions almost unknown to any other branch, while the enormous fortunes which have resulted from their activity has completely astounded the mercantile world.

Time was when those beautiful thin dresses worn by our still more beautiful women, could not have found purchasers unless imported from Asia; these have at length yielded to the improved fabric of Scotland, and have ceased to be in request, an English belle no longer feels ashamed to appear in a costume fashioned in home-made muslin. The superior tact of our workmen, especially in the finer qualities, has given to British cotton goods a decided preference in the European markets, America, North and South, take off large cargoes; our own colonies are by no means unimportant customers; even India itself now consents to receive and to use the products of our industry and ingenuity.

When we call to mind that this flourishing state of things has resulted from the indefatigable industry and perseverance of an almost uneducated man, it would be to clothe ourselves with the besetting sin of ingratitude, not to class him among those eminent characters whose transcendent talents have adorned our island; who rank not merely as the benefactors of their own country, but of the world at large.

Richard Arkwright, so famous for his inventions, was born at Preston, in Lancashire, in 1732. His parents were in humble circumstances, with a family of thirteen children, of which he was the youngest. His education was but indifferent. He was bred up a barber, and in 1760 established himself at Bolton-le-Moor; while there he acquired a little property by the discovery of a chemical process for dyeing hair, and travelling as a hair merchant, in pursuing which it is supposed he became intimate with the cotton manufactory;

little, however, is now known of what caused him to turn his mind to those inventions which raised him to distinction, and immortalised his name.

The people in Lancashire were not always in good humour with the introduction of machinery among them; riots ensued in consequence, and Hargraves, the inventor of the spinning-jenny in 1767, was obliged to quit the county. This machine afforded means to spin twenty or thirty threads at one and the same time, with no more labour than had previously been required in drawing a single thread; this, however, could only be used as weft, not possessing sufficient strength and hardness for the longitudinal threads or warp It was this deficiency which Arkwright supplied by his invention of the spinning-frame; by this, a vast number of threads of any degree of fineness and sufficient hardness could be spun, requiring no other attendance than to join them when they broke, and to feed the machine with cotton. by the adaptation of the spindle and fly of the common flax wheel to this machinery, a twist is given to the thread, which fits it for the designed purpose, and which could not be effected by Hargraves's jenny. Spinning by cylinders was an original idea, and it would be difficult to say which is most worthy of admiration, the genius which led to so important a discovery, or the consummate skill and address by which it was so speedily perfected and brought into practice. Arkwright's own version of it was, that he derived the first hint from seeing a red-hot iron bar lengthened by being made to pass between rollers, the time at which this occurred is not accurately known, but is supposed to be at the period when Hargraves was engaged in contriving the jenny. Arkwright was not himself a practical mechanic; he, therefore, applied to a watchmaker living at Warrington, by name John Kay, for assistance in preparing parts of his machine, in which he was also aided by a Mr Atherton, of Liverpool. To avoid the turbulence which had obliged Hargraves to leave Lancashire, he removed to Nottingham, carrying with him his partner, Mr. Smalley, of Preston, and Kay, the watchmaker. Want of capital, however, retarded their progress, and they made but little way. In this situation it was his good fortune to attract the notice of Mr. Strutt, of Derby, who was largely engaged with Mr. Need in the stocking manufacture, and was a gentleman of considerable mechanical skill; he no sooner examined Arkwright's machines than he felt convinced of their extraordinary skill and utility. In consequence of this, a partnership was immediately projected, and a firm established, consisting of Arkwright, Strutt, and his partner Need. The means thus furnished, Arkwright lost no time, took out a patent for spinning by cylinders in 1769, and erected his first mill at Nottingham, which was driven by horses; horse-power, however, was found much too expensive; he therefore built a second factory in 1771 at Cromford in Derbyshire, the machinery of which was set in motion by a water-wheel. Having made several additional discoveries and improvements in the processes of carding, roving, and spinning, he applied for, and obtained, a fresh patent for the whole in 1775, and thus completed a series of machinery so various and complicated, yet so admirably combined, and so well adapted to produce the intended effect, in its most perfect form, that it excited the astonishment, and called forth the plaudits, not only of men of science, but of every one capable of appreciating the ingenuity displayed, and the difficulties overcome. When the importance of these machines became generally known, it induced many to enter the field as competitors, to trespass on his rights by building machines upon his own plan and working them, while some even disputed his claim to the merit of the invention. Thus circumstanced, he commenced an action, in July, 1781, in the Court of King's Bench, against Colonel Mordant, for invading his patent; the defence to which was, that Arkwright had not fully communicated his inventions in the specifications lodged in the patent office as required by law, that, therefore, the patent was invalid; Arkwright admitted that such was partly the fact, but added that the obscurity charged against the specifications had been intended only to prevent foreigners from pirating his inventions; the verdict of the jury, however, went against him, notwithstanding the eloquent exertions of his counsel. A second action, nearly four years after, in 1785, met with a different fate; a decision was obtained in his favour, because he brought a number of talented artists to prove that they could construct machines from his specifications. In consequence of this, an acknowledgment of so much per spindle was demanded from all those who had erected machines for cotton spinning upon his plan; this caused great alarm among the manufacturers, who had by this time embarked extensive capitals, and incurred heavy expenses in erecting machinery. Therefore, to set the question finally at rest, a process was instituted the same year against Arkwright in the Court of King's Bench, in which the whole question, not only on the point of the unintelligibility of the specifications, but on the less technical, but more important ground of his not being himself the inventor of the machines for which he had obtained a patent. After a long and ably conducted trial, a verdict was given against him, and in November, 1785, the patent was cancelled. In despite of all this, neither his most intimate friends, nor those who were best acquainted with his character, ever entertained a doubt with respect to the originality of his invention. Some of them, indeed, could speak to the business from their own personal knowledge, and their testimony was uniform and consistent. This would appear now to be the prevailing opinion among the Manchester manufacturers. He continued his concern with such success, that he was generally supposed to have accumulated half a million of money. The year after, in 1786, he served the distinguished office of high-sheriff for Derbyshire, and was during that time made one of those who have been termed Peg Nicholson's knights. In his capacity of sheriff, he was deputed to present a congratulatory address, from the Wapentake of Wirksworth to George III, on his escape from the attempt made on his life by a maniac named Margaret Nicholson, on which occasion he received the honour of knighthood.

Sir Richard twice entered the temple of Hymen; by his first wife he had a son, the present Richard Arkwright, Esq., of Willersley Castle, near Cromford. His second lady presented him with a daughter, who married Mr. Charles Hurst, of Wirksworth, Derbyshire. His grandchildren are numerous.

He is said to have displayed great personal prowess in his youth at the riots which generally occurred at Preston during the elections, but his health was never good; during the whole of his splendid and ever-memorable career of invention and discovery, he was suffering under a severe and incurable asthmatic affection. At length a complication of disorders terminated a life of great utility. He died at his cotton-works, Cromford, in 1792, in the sixtieth year of his age, universally beloved and respected.

FALSE CONCLUSIONS.

Nothing is sooner arrived at—nothing takes so long to disabuse the mind of—nothing is so common, as a false conclusion; and having once made it, how tenacious we are of its safe keeping, and how offended we are, if any bold people, glorying in their strong-mindedness, dare to hint that what we esteem to be truth is nothing but a flam! What prejudice was ever nursed by the philosophers with half the fondness they exhibited for the false conclusion that the world was a flat plane instead of a sphere? We laugh at these errors now, and esteem ourselves wise in our superior knowledge and freedom of childish notions—and yet we every day, every one of us, give ourselves up, unhesitatingly and unquestionably, to a belief in any species of falsehood that assumes the garb of truth; and this, not because we are deficient in discernment or good sense, but because there is in all of us a natural love of the mysterious and the romantic.

The prevalence of false conclusions is to be attributed to nothing but idleness and love of mental ease; and we accept a dogma without examination, just as a near-sighted traveller might an umbrella at an inn; never discovering its poverty and "looped and windowed wretchedness" till we come to bring it into use. No man, says Hooker, ever attained belief from the mere contemplation of the heavens and earth, for they are insufficient to give us the least spark of light concerning the mysteries of our faith; and so no man can be said to be mentally honest and independent who takes the coin of other men's experiences in the place of his own studied and painfully-arrived-at conclusions.

There is an old story—almost too old to bear repeating—but, like many other old things, it is improved by years rather than otherwise—about two knights meeting in a field where there was a tablet, or scutcheon, or something of that sort, set up in the midst. One maintained that the shield was white, while the other as stoutly argued that it was black. Words ran high—and, as is common in these cases, from words of course they came to blows; and then, when they had sufficiently abused and injured each other, they discovered, to their mutual regret, that they were both right and both wrong—for the tablet had two sides, and neither had taken the trouble to examine his neighbour's. Now, from this old story—we have read it, no doubt, every one of us, when we were children—there is a deep and important moral to be drawn; as there is, indeed, from almost every old tale that is told, and it is this—whenever we would discover the truth of a question, no matter whether it be great or small, we must be sure to remember to *look on both sides!*

Half the wars that have desolated the earth—half the misunderstandings that have arisen in families—half the popular errors we are prone to cherish, and the weaknesses that we nurse like schoolgirls do their dolls, have arisen in the first place, probably, from some mistaken authority, who should have known better, and were, likely enough, paid for knowing better, arriving at False Conclusions.

Seeing, therefore,—for it is as well to put the matter in regular argumentative shape—that much mischief has arisen, and constantly arises, from the indulgence of that species of mental idleness which is content to take all it hears for granted without inquiring into its truth or falsehood, it will be well in future, if he who would possess a mind of his own—not a dictatorial, positive, disagreeable, contradictory sort of way, but a firm and independent manliness—to study well before he gives entire assent to a seeming fact, and, at the same time, never to take that for falsehood which may by possibility be sterling truth.

C. F. P.

THE CELT AND THE SAXON.

(To the Editor of the "Working Man's Friend")

WOULD you allow me, a Scotch Celt, to correct an impression, likely to be formed in the minds of our Saxon friends across the Tweed, by perusing an extract in No. II, p. 235, of your excellent WORKING MAN'S FRIEND from a lecture of Mr Mackintosh at the Birmingham Polytechnic Institution, as follows above

In that paragraph, at p. 236, commencing thus—"In speaking of the religion of the Celts, &c.," he asserts that the Roman Catholic Religion is that of the Highlands of Scotland, from conclusions of his own he assures us that the Celtic mind is fitted for none other, while he allows the Welsh to be Calvinists, if he has ascertained what the religion of the Saxons is, he is silent on that point, or we may judge for ourselves.

The fact of the matter is, the thought of papacy is intolerant to our Gaelic minds, and I consider a person to be ignorant, very ignorant of us, indeed, who for a moment could harbour the supposition. The Highlands is a stronghold of Protestantism, as stanch as the Bible; England, in ratio to the population, having more Roman Catholics than the Highlands, and the few among us here are in the fastnesses of the rocks, where the light of the Reformation never shone; and it is likely enough that previously to the reformation, were alike naturally inclined to the Roman Catholic, both readily giving assent to that system, whereas formerly both were pagans

Are the English like the Highlanders and Welsh—Calvinistic? The articles of the Church of England are so. Bunyan and the Puritans answer, yes; and see the two parties into which England is divided—the Calvinistic Presbyterians, and Calvinistic Puritans, and the latter ascendant in the person of Cromwell, and are the English more Saxon now than in Cromwell's days? Of course, Mr. Mackintosh knows best

To compare the Highlanders with the Irish is absurd. It may be said that the Celtic Irish are Roman Catholic, and noted for rebellion and bloodshed, the Teuton being the reverse, and as sure as the Teuton can be marked for the reverse, so sure may the Celtic Highlander be ranked by his side. You may retort, look at the rebellions of 1715 and 1745. I say that is merely a continuation of the English parliamentary wars, and, being settled, is lost sight of for ever. Does not her Majesty cast herself into our arms, and yet both Irish and Highlanders are Gaelic Celts.

In their savage and uncultivated state, Mr. M. (who, by the by, wears a Celtic name: query, has he an antipathy to his brethren?) enumerates the Celtic vices (and what nation has them not) as classed by their Roman enemies, the truth of which is doubtful, but he has told us none of the vices of the Saxon—are they akin? I wonder whether the Cambrian Celt, who works the mines of Cornwall, is less virtuous or intelligent than the Saxon who works in the [illegible]

As to the physical [illegible] Mr. M. gives, the falsity of them may be seen, in general, by perusing "Grant's Origin and Descent of the Gauls"

As to mental capacity, every Saxon is not a Milton, a Locke, nor a Shakspeare, nor every Celt a Campbell, a Sir James M'Intosh, nor a Stewart

And as to commerce, every Saxon town is not a Manchester; nor every Celtic one a Glasgow, nor can Scots spread the circumference of their country to equal England, nor cultivate their barren rocks. When Mr M.'s [illegible] one cannot but wish that he [illegible] Who [illegible] cause an [illegible] are good, [illegible] Catholics are bad, not because they are Celts, but because they are Papists and Celtic France, why a Saxon not Protestant? Let the revocation of the Edict of Nantes reply. By acting on Mr M.'s theory, a missionary might well exclaim, "The heathens are idolaters, because their minds are so inclined, it is useless to try to convert them any other way than by inculcating Saxon blood!" This would be a palpable delusion. It shows, also, that Mr M.'s theory is as bad as that of the "Vestiges of Creation," as it would tend to destroy the common origin of mankind, and the responsibility of man, and it has other statements he is correct as that regarding the Highlanders, and the theory so untenable, good-by to him who would destroy the harmony of a man and his brother, the Saxon and the Celt.

FOUR-CRUX.

SONGS FOR THE PEOPLE.

No III.—LABOUR.

BY FRANCES S. OSGOOD.

PAUSE not to dream of the future before us,
Pause not to weep the wild cares that come o'er us,
Hark, how creation's deep, musical chorus,
Unintermitting, goes up into heaven!
Never the ocean-wave falters in flowing;
Never the little seed stayeth its growing,
More and more richly the rose-leaf keeps glowing,
Till from its nourishing stem it is riven.

"Labour is worship!"—the robin is singing,
"Labour is worship!"—the wild bee is ringing;
Lo! [illegible] whisper upsringing,
[illegible] our Nature's great heart.
From the dark cloud flows the life-giving shower;
From the rough sod blows the soft-breathing flower;
From the small insect the rich coral bower;
Only man, in the plan, shrinks from his part.

Labour is life! 'Tis the still water faileth,
Idleness ever despaireth, bewaileth,
Keep the watch wound, for the dark rust assaileth,
Flowers droop and die in the stillness of noon
Labour is glory!—The flying cloud lightens;
Only the waving wing changes and brightens,
Idle hearts only feel fetters around them.
Play the sweet lyre, we would have it in tune!

Labour is rest from the sorrows that greet us,
Rest from all petty vexations that meet us,
Rest from sin promptings that ever entreat us,
Rest from world-snares, that lure us to ill
Work—and pure slumbers shall wait on thy pillow;
Work—thou shalt ride over Care's coming billow,
Lie not down wearied 'neath Woe's weeping willow!
Work with a stout heart and resolute will!

Droop not, though shame, sin, and anguish are round thee!
Bravely fling off the cold chain that hath bound thee!
Look to yon pure heaven smiling beyond thee!
Rest not content in thy darkness—a clod!
Work!—for some good—be it ever so slowly!
Cherish some flower—be it ever so lowly!
Labour! All labour is noble and holy,
Let thy great deeds be thy prayer to thy God!

STEAM NAVIGATION.

The Americans boast that the steamboat of Robert Fulton was the first that ever ploughed the waters. It appears, however, that "Fulton's Folly," as it was ironically called by the very clever folk of that day, was not the first vessel propelled by steam—for many years previously, Jonathan Hulls, an Englishman, had obtained a patent for an invention for carrying vessels or ships by steam "out of or into any harbour, port, or river, against wind or tide, or in a calm." This invention of Jonathan Hulls was, in fact, the forerunner of all that has since been accomplished in the way of steam navigation. The vessel which he patented was not, to be sure, a very elegant one, for it had but one paddle-wheel, which was placed at the stern, an ill-constructed steam-engine, a wretched funnel, and no masts, sails, or other assisting apparatus. Nevertheless, by it the fact was asserted that steam could be made to do the duty of oars and sails—a fact which has since become patent to all the world. By this experiment of Jonathan Hulls, a new era was opened in navigation, and though fifty years have scarcely elapsed since the first rude steamboat went doubtfully and unsteadily on its way, the idea then initiated has so rapidly progressed, that the sixteen thousand miles between Old England and Australia are considered no immense achievement for a well-appointed steamer.

Not to be too diffuse, we may briefly trace the progress of this fact. Symington, a Scotch engineer, having heard of Jonathan Hull's experiments, fitted a small vessel with engines and paddle-wheels, and experimented with it on a small lake Having attained a speed of five miles an hour, there could be no reasonable doubt that much more might be accomplished, and shortly afterwards, a vessel on the Clyde was propelled at a regular and sustained rate of seven miles an hour. The attention of scientific men, thus called to the subject, was speedily engaged in making experiments with the new power, or rather with the new application of the already serviceable vapour, steam; and the news of these achievements, travelling over the Atlantic, found in Fulton a man who was ready to risk his reputation by carrying them forward. He came to England to test the truth of the reports which had reached him in America; he witnessed what the English engineers had done; and returning to the United States, he, in 1817, launched, on the River Hudson, the first steamboat which had ever appeared in the new world. Its success, however, was by no means immediate or decisive; and it was not till after repeated trials, that the *Clermont*, which was the name of Fulton's steamboat, was allowed by the public to possess any claims above those of an ordinary ship with sails For a time, however, it ran at regular intervals, between the cities of New York and Albany.

In less than five years the *Comet* was plying on the waters of the Clyde, and, in 1814, no fewer than five steamers made regular passages on the Scottish rivers, neither England nor Ireland possessing one. But the idea progressed—as it could not fail to do—and in 1819-1820, we find that in England there were seventeen steam-packets making regular trips to and from various places; in Scotland fourteen; and in Ireland three. Less than twenty years afterwards—in 1840—the number of steam-vessels in constant use in the three countries respectively were—987, 244, and 79. Many of us can remember when steamboats first became regular means of passenger conveyance on the Thames; and as lately as 1821, it was that the mail service between England and France by way of Dover and Calais, was first performed by steamboats. In the autumn of the same year, the mails between Holyhead and Dublin were also carried by steam. Now, we need scarcely say, steam is brought into requisition, wherever speed is requisite, alike in vessels of war, commerce, and pleasure!

As steamers had crossed the English Channel, the question was naturally asked—Could they not also cross the broad Atlantic? The enterprising men of 1836 speedily answered the question. Of course, as is usual in such cases, the project was considered illusive and dreamy, a very midsummer madness. Scientific men—even Dr. Dionysius Lardner, who has himself since crossed the Atlantic in a steam-vessel—did not disdain to pooh-pooh the project, and array against it all the force of philosophy, backed by figures, notwithstanding that there were steamboats employed on the Mediterranean and other home stations, from which data might have been supplied to show the practicability of the project. The Atlantic had actually been already crossed by a steamer, showing that what man had done that man might do; but as she had used sails as well as steam, and was a week longer on the voyage than the time occupied by the regular traders, the achievement was held to be worthless either as a precedent or guide. "This vessel was named the "Savannah," and in "Marwood's Commercial Report" for the week, July 21, 1819, is the following note of her arrival at Liverpool.—"Among the arrivals yesterday at this port we were particularly gratified and astonished by the novel sight of a line steam-ship, which came round at 7½ P.M., without the assistance of a single sheet, in a style which displayed the power and advantage of the application of steam to vessels of the largest size, being 350 tons burden. She is called the "Savannah," Captain Rogers, and sailed from Savannah (Georgia, United States), the 26th of May, and arrived in the Channel five days since. During her passage she worked the engine eighteen days. Her model is beautiful, and the accommodations for passengers elegant and complete. This is the first ship on this construction that has undertaken a voyage across the Atlantic." The "Savannah" visited Copenhagen, Stockholm, St. Petersburg, and Constantinople, and her captain received several magnificent royal presents in recognition of his daring. She was built by Francis Ficket, for Daniel Dodd, and her engines were supplied by Stephen Vail

The opinion of the philosophers was still adverse to the plan when it was resolved that it should be put to the test of a trial. Accordingly the lines of the "Great Western" were laid down at Bristol, and on the 8th of April, 1838, she was announced to start on her voyage. Her appearance, rather that of strength than of beauty, inspired confidence that she would successfully achieve the passage. She had one thick funnel, and four masts; her deck was 236 feet long, her width between the paddle-boxes nearly 60 feet; the power of her engines was equal to that of 450 horses; her wheels were 28 feet in diameter, with paddles 10 feet long; the whole weight of her boilers and machinery was 300 tons, her burden being 1,340. On the appointed day she sailed from Bristol, having on board 660 tons of coal and seven passengers, to set the question of steam navigation of the Atlantic at rest for ever. She was not alone, however; a smaller vessel, the "Sirius," had started three days before her; and never was such a race known before as now took place over the broad bosom of the Atlantic. Both vessels encountered heavy seas and adverse winds on their voyage, but they bore bravely on. The "Sirius" had a start of about 500 miles; the "Great Western's" average of speed was ten miles an hour, and it was thought she would quickly overtake her competitor. The "Sirius," however, had too great a start, and reached New York the winner, on the morning of the 23rd of April, the "Great Western," coming in the same afternoon. The excitement prevailing at New York was intense in respect of these steamers from the old world; and cheer upon cheer greeted the "Sirius" as she dropped her anchor in the Hudson. The "Great Western" was also received with the most enthusiastic expressions of welcome—shout rose upon shout, the Battery fired a salute of 26 guns, church-bells were set ringing, and it seemed as though the vast multitude collected were quite distraught with the excitement.

Between 1838 and 1843 the Atlantic was navigated by several steamers—many of them larger than the "Great Western"—viz., the "Royal William," the "British Queen," the ill-fated "President," and the "Liverpool." The "Great Western" was built of wood, and when her proprietors became assured of her success, they determined to construct a larger ship of iron, to be propelled by the screw instead of the paddle-wheel. The keel of this intended mammoth vessel was accordingly laid down at Bristol in 1839; and when she was launched, in 1843, she was christened the "Great Britain," by Prince Albert. The total length of this magnificent ship was 322 feet, her breadth 51 feet, and depth 32 feet; she could stow 1,200 tons of coal; her engines were of 1,000 horse-power, and 340 tons weight; and the screw, which worked in a space immediately in front of the helm, weighed four tons: she carried at first six masts, on which she could spread 5,000

THE "OREGON," MISSISSIPPI STEAMER.

yards of canvass; and from kelson to topmast was beautifully proportioned. Her fitting was elegant, though not so expensive as the "Great Western's," and her cost altogether £100,000. Every one knows that she made a few successful voyages in 1845-6, and was unfortunately thrown ashore on her last outward voyage in Dundrum-bay, and that she was thence conveyed a melancholy spectacle to the Liverpool docks.

Shortly after the successful experiments of 1838 had demonstrated that a regular steam communication could be maintained between Europe and America, the English government called for tenders to carry the mails in steamers across the Atlantic. Both the companies to which the "Sirius" and "Great Western" belonged tendered for the service, but the offer of neither was accepted. Subsequently Mr. Samuel Cunard, who had for fifteen years held a contract for the mail service between Halifax and Bermuda, proposed to take the Atlantic contract. The government did not accept his offer at first, but subsequently agreed to give the annual sum of £65,000 for carrying the mails twice a month between Liverpool, Halifax, Quebec and Boston, and on the 4th of July, 1840, the "Britannia," a vessel of nearly the same tonnage as the "Great Western," sailed from Liverpool in commencement of the contract. Thus was formed the nucleus of the now famous Cunard line. The Americans had not hitherto taken any part in conducting the steam navigation of the Atlantic, but the speedy formation of several companies with this object made it evident that they would not continue to allow all the traffic to rest with the British and North American company. Mr. Cunard therefore applied for an extension of his contract, so as to carry the mails once a week, and thereby enable him to meet the expected competition. The proposal was felt to be reasonable; and the British and North American company at length obtained a yearly grant of £145,000 for a service thus regulated.—two departures a month from Liverpool for New York or Boston during the months of December, January, February, and March, and one departure a week during the other eight months of the year. When the harbour works at Holyhead are completed, it is proposed that these steamers shall sail from Liverpool regularly once a week throughout the year without intermission, calling, as at present, at Halifax, *en route*, each alternate voyage.

In conclusion we may remark that out of a budget which, after deducting the interest of the national debt, pensions, &c., does not exceed twenty millions, England annually devotes nearly £800,000 (in the last estimates it is £809,496) towards the maintenance of those lines of mail steam-ships which, extending from Liverpool to New York, from Southampton to Hong-Kong, the Cape of Good Hope, the Brazils, and Chili, concentrate the whole sea-borne correspondence of the globe in the hands of British agents. A portion of this sum is divided among companies working short lines from London to Ostend, Rotterdam, and Hamburg; from Hull to Petersburg, and Russia; from Liverpool to Dublin, from Southampton to the Channel Islands, &c.; but nearly seven-eighths of the entire amount is shared between six great companies, viz., the British and North American Company (Cunard's line), which receives, as we have stated, £145,000, the West India Company £210,000, the Pacific Steam Navigation Company, £40,000, the Screw Steam Shipping Company (which has recently taken the mail contract to the Cape of Good Hope), £30,000, the Peninsular and Oriental Company, £220,000; and the East India Company, for performing the mail service between Suez and Bombay, £50,000.

The steamer shown in the engraving is a good representation of the hundreds of vessels afloat on the Mississippi and other great rivers of America. The cabins, as will be seen, are built above instead of below the deck; and no kind of contrivance is spared to render the vessel extremely fast. Indeed they are made to draw so little water, that it is a standing joke in New York that some of their crack steam-ships will go across the country after a heavy dew! It need scarcely be said that, with wood fires, light timbers, and low pressure engines the "point of safety," is more than passed and that life is but too frequently sacrificed to speed. Scarcely an American paper but contains an account of "Another Steamboat Explosion." There is such a thing as going rather too FAST.

THE ATTACHMENTS OF POETS.

DANTE, PETRARCH, TASSO, &c.

No records are more interesting than those which tell of the attachments of men of genius—attachments often suddenly formed, and yet as remarkable for their constancy as for their fervency. Years may still speed on, but imagination supplies every charm of which they may have robbed the beloved one; the grave may have withdrawn her from other eyes, but still her pure spirit lingers by her lover's side, in the haunts where they so often met.

Love at first sight was exemplified in Raphael. His window overlooked the garden of the adjoining house, and there he saw the lovely girl who amused herself among her flowers; he saw her lave her beautiful feet in the lake; he fell passionately in love. He soon made his feelings known, his love was not rejected, and she became his wife. He is said to have been so passionately enamoured of her beauty, that he never could paint if she were not by his side. The lineaments of that fair face still live in some of his sublime productions, and thus while she gave inspiration, he conferred immortality.

Though among poets the most remarkable instances of ardent and enduring attachment may be found, their marriages have not, generally speaking, been happy. Milton failed in securing the felicity of wedded love, which he has so beautifully apostrophised. Neither the name of Dante, nor that of Shakespeare, was one of domestic happiness. Racine's tender sensibility met with no responsive sympathy in his partner, and Molière experienced all the bitterness of the jealous doubts and misgivings which he has so admirably depicted. Yet the poet is of all, perhaps, the most capable of strong attachments. His warm imagination throws its glow over all that he loves; home, with all its fond associations, "the mother who looked on his childhood; and the bosom friend dearer than all,"—are sanctified upon his feelings that they mingle with every mood of his fancy. True, some critics, of more acuteness than judgment, have doubted the real existence of the romantic attachments by which some of the finest poets have been inspired, and endeavour to explain as ingenious allegories the impassioned and pathetic effusions which find their way to every heart. Beattie—of whom we might have expected better things—sees, in the ardent expressions of Petrarch's devotion to Laura, the aspirings of an ambitious spirit for the laureate-crown; and Dante has been said to have allegorised his energy in the study of theology under the guise of a passion for Beatrice. But the great charm of Dante's poetry is its deep earnestness and truthfulness, and those touches of tenderness which are scattered throughout his sublime work, like the wild flowers of home unexpectedly met with in dreary and remote recesses: the facts of an imperishable attachment can be traced through their immortal poetry. It is the custom in Florence for friends, accompanied by their children, to assemble together on the first of May, to celebrate the delightful season. A number of his neighbours had been invited by Folco Portinari to do honour to the day. Dante Alighieri, then a boy of nine years, was among them; young as he was, he was instantly attracted by the loveliness of one amidst the group of children. She was about his own age, the daughter of the host. Through all the vicissitudes of a long and eventful life, that early impression was never effaced—he loved her ever after with an intenseness of passion and unshaken constancy that gave a colour to his whole existence—in the various paths of life which he was destined to tread, her image was ever present, inspiring the desire for distinction; their early intercourse, like the sweet May morning on which they had first met, was bright and happy; the purity and artlessness of youth made it so. The young companions of Beatrice rallied her on the devotion of the youthful poet, and the gay sallies with which she herself treated the ardour of his love, only served to make her the more engaging in his eyes. She was induced to bestow her hand elsewhere; more, it has been said, in accordance with duty than inclination; for it is supposed her heart was not insensible to the love of the gifted youth, whose devotion, purity, and intellectuality might have found their way to one harder than hers. Dante fell sick and slowly recovered; whether her marriage was a subject of which he could not bear to think, it is certain that it is not once alluded to in his poetry. Beatrice did not long survive her marriage; within the year she was borne to her grave. The anguish of Dante was so intense, that it brought on a fearful illness, in which his life was long despaired of. Boccacio mentions that he was so altered by grief

that he could scarcely be known. Beatrice occupied all his thoughts; on the anniversary of her death, he sat alone thinking of her, and portraying "an angel on his tablets." The influence which she had over him was as powerful in death as it had been in life—still to be worthy of loving, and of joining one so good and pure beyond the grave was his constant aim, all that he desired in renown, all that he wished for in fame, was to prove himself not undeserving of having devoted himself to her; in the camp—in the highest diplomatic positions, this was his great object in all his trials, and they were many and severe; this inspired him with a lofty dignity, and supported him under insults and injuries which would have broken many a proud spirit, but sublimed above the concerns of earth, his affection was such as might be felt for one translated to a celestial abode. By continually dwelling on but one subject, his mind became utterly estranged from passing events, and he often fell into such fits of abstraction and despondency that his friends, fearing that his reason would be completely upset, anxiously sought to give him some new interest in life, and at length prevailed on him to marry. This made him still more wretched, he could not if he would, detach his mind from dwelling on her who had been his early and his only love, and to all his other misfortunes that of an unhappy marriage was added.

Like the attachment of Dante for Beatrice, that of Petrarch for Laura was the result of a sudden impression, he had hitherto ridiculed the notion of the power of love, but he was yet to experience it in its most extreme intensity. He was twenty-three when he first saw Laura de Sade, then in her twentieth year, he has himself recorded over and over again the exact hour, day and year; it was at six in the morning on the 6th of April, 1327, that he was at the church of Santa Claire at Avignon. Everything connected with that memorable meeting has been dwelt on with fond minuteness by the poet, the dress which she wore, the green robe sprigged with violets; every movement, every look was for ever treasured in his memory; the celestial beauty of her countenance bespoke the purity for which she was so remarkable in that age of licentiousness, and in contemplating her loveliness, reverence for virtue mingled with admiration. Petrarch and Laura often met in society, and became intimately acquainted, he was charmed with her conversation; she appears to have been in every way capable of appreciating Petrarch, and deserving of the influence which she possessed over him, which was exerted only to exalt his sentiments and strengthen his principles; though unhappy in her marriage, true to her vows, she preserved all that purity of thought which gave such an unspeakable charm to her beauty. The chivalrous spirit of the age encouraged a devotion to the fair sex, and platonic attachments were the fashion of the day, so that the dignity of Laura was not compromised when Petrarch made her the object of his poetical devotions, and the celebrity which he gained by this homage to her charms may have gratified much better feelings than those of vanity; the faith which she had pledged, though to an unworthy object, she held most sacred; she repressed the feelings of the enthusiastic poet whenever they appeared to transgress the bounds of friendship. Once, when in an [illegible] he ventured to allude to his passion, she took [illegible] with which she regarded him, and the tone in which she said, 'I am not the person you take me for," overwhelmed him with shame and sorrow. The hopeless passion, of which he only dared to speak in song—and even the allowed indulgence of thus giving it expression, had a fatal effect: his health gradually declined, he grew pale and thin, and the charming vivacity which had been the delight of his friends utterly forsook him; he estranged himself from the society of his former companions, and was no longer met with in the circles of which he had been the darling. At length he made an effort to conquer feelings that were too powerful to yield, and sought in foreign travel and the pursuit of literature to dissipate the inquietude which was consuming him, but still the image of Laura haunted him through all his wanderings, and inspired that poetry whose purity, fire, and tenderness, have been the admiration of the world. He returned to Avignon, but soon fled from the presence which was so dear to him, and sought in the solitudes of Vaucluse, to regain the peace which he was never to find. Shut in from the whole world by the rocks and hills, he found that solitude was "no cure for love;" through that sweet valley, among its shades and by its fountains, he sung the praises of Laura. And thus years passed on. It was during this seclusion that he got Simon Memoni, a pupil of Giotti, to take Laura's likeness. So delighted was the artist with the beautiful subject that the same lovely face was recognised in several of his pictures of saints and angels. On the 24th of August, 1340, Petrarch received two letters, each with an offer of the laurel crown; one from the University of Paris, the other from the Roman Senate; he decided on accepting it from the latter. He valued the honour as the meed of his celebration of Laura; all selfish considerations were lost in the one desire that the lover of Laura should be renowned and distinguished. The feelings with which Laura must have heard of the honours paid to the one so long and so devotedly attached to her have not been described, but they may be conceived. Thirteen years had now passed since they had first seen each other. When Petrarch and Laura met, time and care had wrought their changes in both. Petrarch's locks were already sprinkled with gray, and the animation of his countenance was saddened by sorrow, the bloom of girlhood had passed from Laura, and the traces of melancholy which an unhappy lot had left were, but too visible, but all the tenderness and sympathy of other days remained. The jealous disposition of M. de Sade prevented Petrarch's being received at his house, but they often met and conversed together, and Laura would sing for him those songs to which he had so often delighted to listen; there was a tender sympathy in this intercourse, soothing to both. Petrarch's allusion to their last meeting is very affecting; he found her, as he describes in the midst of a circle of ladies, her whole air betokened dejection, and the sorrowful look with which she regarded him, and which seemed to him to say, "Who takes my faithful friend from me?" made an indelible impression on him—his heart sank within him, and they seemed to feel at that sad moment that they were to meet no more. In the following year the plague broke out, Petrarch, who was at Parma, heard that it had reached Avignon; he was haunted by the recollection of the last moments that he had passed with Laura; it seemed to him as if the hand of death had been on her already. The most cruel forebodings tortured him by day and by night; his dreams represented her as dying or dead. The dreaded news reached him—Laura *was* dead! An attack of the plague had carried her off in three days; she had died on the anniversary of that day on which they had first met. In all the bitterness of his grief, he recalled all that had passed at their last meeting, the melancholy solemnity of her adieu seemed to his memory as that of one on the confines of eternity; every kind word she had ever spoken, every kind look she had ever given, was dwelt on with passionate fondness; and the hope, the belief, that he had been dear to her was the only thing which could soothe. His dreams previously to her death appeared to his imagination mysteriously linked with that event; he has most touchingly described one of these visions, when he believed her pure spirit was permitted to visit and comfort him. His pathetic lamentations were heard throughout the world with the deepest sympathy, and wrung the heart of many a one who had in happier days shared "sweet counsel" with him.

The misfortunes of Torquato Tasso commenced in his early childhood, he was but eleven years old when political events obliged his father to quit Naples, and seek refuge in Rome. It had been settled that Torquato should follow him. The banishment from home, and from a mother on whom he doted, were sad trials. Some lines of touching tenderness commemorate the parting, and show how bitterly it was felt. They were never to meet again, in eighteen months after they parted she died. He was indeed a child that must have been regarded with the fondest tenderness and pride. To wonderful acquirements for his age, were added what can never be acquired—a feeling heart, and poetical genius of the highest order, which in all his wanderings, in all his trials, had magic influence to charm a world which had nothing but misfortune for him. His mother best knew how much his sensitive nature required the tranquility of a home, and the sympathy and endearments of those who loved him. But his lot was to be cast among strangers, and some among them proved implacable enemies. A life of stranger vicissitudes is scarcely to be met with, sometimes courted and caressed, the companion of princes, at others [illegible] and extremity of want, inspired by a sacred love of liberty, yet condemned to long years of the saddest captivity, [illegible] moderate to a little love of the fairest and the best, yet devoted [illegible] to the pangs of a hopeless passion! A being more to be admired and more to be pitied than Tasso surely never existed. He was but twenty, when he received the most flattering office of employment from Cardinal Luigi d'Este, brother

to the duke of Ferrara, who was anxious to secure the services of one possessed of such genius. Though a connexion with the d'Este family opened a brilliant prospect for a young man, yet the friends of Tasso, dreading for him the dangers of a court, endeavoured to persuade him to decline the proposal; but it was too flattering to be refused, and he hastened to Ferrara, in compliance with the Cardinal's wish, who received him with every mark of distinction, and on occasion of his being appointed legate to France, introduced him at the French court, where he was received in the most flattering manner by Charles the Ninth, who was a warm admirer of his poetry. At Ferrara, Tasso became acquainted with the sisters of the duke, who, intellectual and accomplished, could appreciate the gifted poet. His hours passed delightfully in their society. He has described the effect of his first interview with these fascinating ladies, in a rhapsody given to Tirsi, the character meant to represent himself in his "Aminta," in which the terms of goddesses, sirens, nymphs, minstrels, and luminaries are liberally bestowed, and show at least that the young poet was intoxicated with delight in their presence. On their parts they enthusiastically admired him and his poetry. But there was one among them eminently attractive, whom he soon loved with all the passionate earnestness of which his ardent feelings were susceptible. Many of Tasso's biographers say that she was not insensible to the varied graces of the youth; in truth, his personal advantages, his rare accomplishments, and, above all, the enthusiasm of genius, so captivating and so winning, made him a dangerous companion for the young princesses.

Leonora was the youngest of the three sisters, and just nineteen when she and Tasso met. The princesses interested the Duke of Ferrara in his favour, and he appointed him to a situation in which he was exempt from duty, that he might devote himself exclusively to poetry. There was a handsome salary annexed, and apartments in the ducal palace. An inmate under the same roof with Leonora, the predilection which the young people felt for each other could not but increase. Confessions and vows may have passed between them, or Leonora's heart may have kept its own secret; the delicacy of Tasso's affection is clearly proved by the mystery which rests on those passages of his life in which she was concerned, for while allusions expressed with infinite tenderness, found throughout his poetry, discover the state of his own feelings, there is not one word which can furnish a suggestion relative to hers. He had ventured, in accordance with the custom of the times, to celebrate her praises in verse; this, or some other circumstance, awakened the suspicions of the duke, the intercourse of Tasso with the princesses was abruptly terminated, and they were not suffered to meet. The duke, to put an end to any vague hopes which he might entertain, pressed Tasso to marry, and suitable matches were proposed and declined He withdrew for some time to Rome, on his return he felt that he was incessantly watched, and his sensitive nature could ill brook the want of confidence which this betrayed, and he left Ferrara again and again, wandering, while absent, reckless and restless, from place to place; and then, impelled by his passion for Leonora, he would return, notwithstanding all his resolutions to the contrary, and regardless of the suspicions and machinations of the duke. His melancholy increased, and his imagination continually represented that plots and designs against him were in agitation; he became irritable, and one day, in a fit of excitement, drew his dagger on one of the attendants; but he was instantly disarmed, and was confined, by order of the duke, within the precincts of the palace—he was, in fact, a prisoner; but on expressing the regret which he felt for the intemperate act, the restraint was removed, and the duke affected to treat him with his former kindness; but Tasso's feelings were too quick to be deceived; he felt that he was the object of the duke's dislike and displeasure. Unhappy and irresolute, he sometimes wished to retire to a convent for the remainder of his life; but thoughts of his early home and happy days would often recur to his mind, and he longed to see his sister, the companion of his childhood, whom he had not met for years; and he resolved to leave Ferrara secretly, and find his way to her. His sister was a widow, living at Torrento with her two children. One evening in the summer, as she sat alone, having sent the children out to amuse themselves, a shepherd brought a letter, which he had been directed to put into her hand—it was from Tasso, and told that he was in the midst of enemies and dangers at Ferrara, and that, unless she could devise some means to save him, his death was inevitable. She questioned the messenger; his recital confirmed the intelligence, and represented the misery to which her brother was reduced in such terms, that overcome with anguish, the lady fainted away. When she revived, Tasso discovered himself, and in those moments of affectionate recognition, he told her that he would never leave her for a world of which he had had too much; but his resolves were of short duration; Ferrara and its attraction could not be withstood. It was on the occasion of one of his returns from his restless wandering that he saw Leonora; the surprise and delight of being again in her presence were so great that he uttered an impassioned exclamation; this gave the duke the pretext for consigning him to St. Anne's Asylum for lunatics. "None but a madman would dare to act so!" was repeated over again. So hardly was poor Tasso dealt with for having indulged a hopeless, and it may have been an unrequited passion. At that time, and for very long after, the insane were treated as if they were not human beings, and the receptacles for them were under no regulations but those of caprice and cruelty. Tasso gives a most appalling account of his sufferings to his friend Gonzago; it ends with these affecting words: "Above all, I am afflicted by solitude, my cruel and natural enemy, which even in my best state was sometimes so distressing that often, at the most unseasonable hours, I have gone in search of company Sure I am, that if she who so little has corresponded to my attachment, if she saw me in such a condition, and in such misery, she would have some compassion on me!"

Even this abode of wretchedness could not extinguish his poetic fire, and from his solitary cell poems of surpassing beauty found their way to the world from which he was utterly shut out, they were read in every circle, and the genius of the author extolled, but his misfortunes found no helping hand for seven long years: at length, through the intervention of his friend Gonzago, he was released During his confinement Leonora had died sorrow and sympathy may have had their share in bringing her to an untimely grave Cruelty had done its part; the young and beautiful sank beneath its weight, and the gifted mind had received a shock from which it never after thoroughly recovered Tasso left Ferrara never to return, like the troubled spirit, he could find rest nowhere; but at length he took up his abode at Naples, his mother's property, which had long been unjustly withheld from him, was restored. The beauties of nature please when nothing else can, and they may not have been without their gentle influence on the stricken heart, but the haunts of childhood must have been mournfully contrasted with the dark scenes of after days. Tasso received an intimation from the pope, that a decree had passed the senate, awarding the laurel crown to "the greatest poet of the age," "the honour," added the pope, "is to the laurel, and not to Tasso." Tasso accepted the honour with deep melancholy, and left Naples with a foreboding that he should see it no more. Though affliction had not extinguished a spark of poetic fire, it had not left a vestige of ambition; those that would most have delighted in his fame, and taken pride in his triumph were in their graves, and he longed to be with them. The most gorgeous preparations were in progress, not only in the palace and capital, but in every street through which the procession was to pass. Tasso, with a prophetic spirit, declared the preparations were vain. Affliction, and his long confinement, had anticipated the work of years—the infirmities and languor of old age had overtaken him before their time; he fell ill—medical aid was unavailing—he was apprised of the approach of his last moments; he received the intimation with perfect calmness—all earthly concerns were lost in heavenly contemplations, and the only crown to which he aspired was that unfading crown which awaits the blessed in heaven.

The crowds were still collecting—fresh flowers were gathered to weave into the garlands that were to deck his triumph; but ere they had faded away the poet was dead!

GOLDSMITH was once introduced into a club by Samuel Derrick, an Irishman of some humour. On entering, Goldsmith was struck with the self-importance of the chairman, seated in a large gilt chair "This," said he, "must be the Lord Chancellor at least." "No," replied Derrick, "he's only master of the *rolls*." The chairman was a baker.

TOO TRUE TO BE PLEASANT, PERHAPS.—"What's the matter, my dear?" said a kind wife to her husband, who had sat for half an hour with his face buried in his hands and apparently in great tribulation." "Oh! I don't know, I've felt like a fool all day" "Well," returned the wife consolingly, "I'm afraid you'll never feel any better; you look the picture of what you feel."

AUTOBIOGRAPHY OF A "SCRAP" OF PAPER.

I AM a foundling. At any rate, I have never so much as heard who either of my parents were · I cannot ascribe my being to chance, but am content to leave my pedigree involved in obscurity.

My existence, like that of the butterfly, has known so many vicissitudes, and, like the moon, presented so many phases, that it is with great difficulty I call to mind any incident connected with my younger days. Taking a retrospective view of my transit through this sublunary world, I look back through a vista of no ordinary length or irregularity; in fact I become lost and bewildered when I endeavour to unravel the mystery of what I was, and what I am.

As well as I can remember, I first saw light in the open air—on British soil—I'm proud of that. It was the sun and rain of heaven which first took me, a *flaxen*-haired urchin, in hand, and "taught the young idea how to shoot." Under their care and assistance I progressed wonderfully, and, by the time I was fully grown, I was left to the protection of my first guardian, the other having left the country for a while. I was a very dutiful ward, and obeyed my superior to the letter,—but then he was such a jolly-faced old gentleman, I could not help liking him; besides he used to tell me what a good *son* he had always been, so I tried to follow his example. He was not disappointed · in due time he saw the fruits of his fostering care; but, alas! those fruits were my downfall—I suppose I must have worked too hard, or grown too fast, at any rate, I was cut down suddenly in my prime, and left no issue But I was not doomed to end my existence here, ah, no! would I had! I had merely passed from the caterpillar to the chrysalis. As returning consciousness dawned upon me, it was only to show me I had been robbed of my *understanding*, and ere I was aware of the *shock* I had sustained, I was thrown neck and *crop* into a pond. How long I remained there I cannot say, but I was suddenly awakened to a sense of my position by being *yerked* out of the water, and soundly beaten—why, I could not then conceive. Having now not a particle of skin left, and having been pulled about enough to separate, limb from limb, any man of ordinary *fibre*, I was left for a time to shift for myself

After a time I changed hands—but not, I am sorry to say, for the better, my new master was as cruel as the last, and the very day he took charge of me, I heard him signify his intention of having me well *mulled*. He kept his word. I was pummelled soundly, and tied on more knots than a mountebank. However, I was not solitary, others shared the same fate, and we kept each other company. Our society was a regular patchwork, made up of all classes, and, I am proud to say, I was equal to any of my *cloth*

My next-door neighbour was a worthless fellow, and being unfit for the *wear* and *tear* which his duty imposed on him, he broke down, and "Fate's scissors cut his thread."

"The world's a stage," says Shakspeare, "and all the men and women merely players," and having now come to the *end of the piece*, played my part well, and so gained my end, I left that stage for another sphere.

I came up to town "in the raw," as most young fellows do, and had to be "licked into shape" before I was presentable. I was accordingly cut off (not with a shilling, but a pair of scissors) and packed off to an humble abode, where I was to be fitted for my future rank in society. I now suffered from a complaint formerly unknown to me—I mean that generally described as "pins and needles." I had no rest—it was incessant—from morning to night, and from night to morning; but, ah! had I known then, as I do now, what a small proportion my sufferings bore to those of my tormentor, I should, I think, have borne it in silence, or wept for her who wept such bitter tears over me.

Having added but little, I fear, to the support of my benefactress, I left her, and passing through the hands of a highly-respectable hosier, made my *début* in tip-top society. I was now in my zenith, and showed as good a front as most people. I had entered the service of a very fashionable young man; we suited each other admirably, and cut a pretty figure at the west end. My companions of the wardrobe envied me, one and all, for I was always the favoured one on great occasions. When my Lady Jinks gave a hop—my studs! didn't I come out strong!

One by one, my comrades wore away, for now our master was in less flourishing circumstances, and would repeatedly "dash our buttons," without repairing the insult. Such behaviour who could stand? The others declined, pined, and were completely laid on the shelf; I held out longest, but felt my time was come—and at last I went the way of all shirts—to the flunkey!

My studs of coral and torquoise were changed for mother-of-pearl; I was roughly handled and worse washed; besides I did not like the smell of the kitchen, and soon began to feel seedy. One day my owner, being in a great hurry, seized me by the tail, and plucking me hastily from my narrow home, split me from arm to arm. He stamped, he swore at me, and threatening things unutterable, threw me into a corner, whence I was snatched the very next morning, only to be exchanged for filthy lucre, and handed over to the tender mercies of a rag-and-bone boy. Oh! the agonies I endured in that wretched bag, during a walk from Cavendish-street to Seven Dials, no tongue can describe. I would now have gladly exchanged it for the offensive odour of the scullery. The day after my arrival in the house of refuge for destitute shirts, I was sent to adorn the black doll, and to be wafted by such of the airs of heaven as chanced to favour St. Giles's alleys. But it was soon evident that, low as I had been brought, my star was still on the decline. They considered me even too shabby for the *Belle noire*, and rudely snatched me from her bosom. My next change is but indistinctly recalled. The chrysalis was approaching its liberation: a dreamy torpor came over me, disturbed only by divers sensations of warmth and pressure; and, at last, being cleaned of all my impurities and worthlessness, I emanated from my state of probation, and, spreading my snowy wings, found myself at liberty to roam where fate might direct. I might now revisit the drawingrooms from which I had been ignominiously ejected—I might again be courted by the fashionables who had discarded me—I might be gently handled and scented by fair fingers,—but such a fate was not reserved for me No, I was packed off one fine day to the printing-office, that awful and mysterious establishment, where the merits of human creatures, from the throne to the prison, are criticised, and if they have no compunction in hauling royalty, or some half-dozen peers, before the public every week, to be used instead of tennis-balls,—if, I say, they do this with impunity, what mercy could I hope for? Then what was my indignation? How did I, British-born, feel myself insulted, when I was branded on the face with the form and figure of Pio Nono, triple crown, great toe, and all? To be sure I was on the right side of his holiness, to use a common term as I kept under him, and brought him into subjection, but he, nevertheless, made an impression on me which I have never lost, and which I shall most likely carry with me to my latest moment I was next sent off, post-haste, with his holiness on my back, to Canton by the overland mail, but, much to my disgust, being well fastened up in a strong box, I saw nothing of the wonderful countries and seas we passed through. On again being blessed with the light of the sun, my old protector, I found myself in the dominions of his majesty Ti-chu, emperor of the Celestial Regions. I was left at the abode of a distinguished mandarin, by name Sing-ho, who is a great favourite at court He perused me last evening with the assistance of an interpreter, and is to present me at the palace to-night.

The time is fast approaching—how confused I am—to think that I should ever behold the face of so august a personage as Ti-chu Well, at the hour when the Celestial Empire is steeped in the fumes of the fragrant leaf, I was placed in the venerable pocket of Sing-ho, who, taking the arm of his brother Sing-hi, marched off to the Royal Pavilion. I now began to feel proud, but I said to myself—"don't"—for pride goes before destruction. His majesty was sipping his Pekoe as we entered the audience-chamber, and was pleased to look on our approach, and bid us welcome. The celestial beverage was good, and so was his highness's temper.

I must here pause; I feel my last change advancing; I shall not long waft my wings over the painted fields of the Land of the Sun Tea was gone, and with stentorian voice the emperor calls for his hookah—it is at his feet in a moment, but it won't light, there is nothing combustible at hand · the royal eyes are fixed on me, and the royal voice exclaims—"*A scrap of paper, look sharp*" I am in a nightmare or a trance, or there is a spell upon me—I can't move—I begin to feel the force of instinct, like the silly moth (which I have always resembled) I have flown too near the fire—oh! there, he's got me: I am squeezed, twisted, torn, lost—the flames close upon me, and I fall on the mouth of the royal bowl—a heap of ashes, and the victim to adventure! Thus ends my life, and, of course, MY BIOGRAPHY

EXERCISES FOR INGENUITY.

Solutions to Questions in No. 39, June 26.

1. The Canadas were acquired by General Wolfe in the reign of George II —year 1759—English possession confirmed in 1763. —W. T Truscott.—Canada derives its name from the Iroquois word *Kanata*, signifying a collection of huts, and which the early European discoverers mistook for the name of the country. Sebastian Cabot, the son of John Cabot, a Venetian, is said to have been the first discoverer, in 1497, but the first settlement made by Europeans was in 1541, at St. Croix's harbour, by Jacques Cartier, a French navigator, who sailed up the St Lawrence, to which he gave its present name. In 1608 a permanent settlement was made by the French upon the present site of Quebec—Canada being then called New France. From this period, till 1759, the French continued to occupy the country, though much harassed by various tribes of Indians, particularly the Mohawks, but in the year just named, an English army, under General Wolfe, captured Quebec; and by September 8th, 1760, all other places within the government of Canada were surrendered to the British, and the French power in that quarter of the world entirely annihilated In 1791 Canada was divided into two separate provinces, to be called the provinces of Upper and Lower Canada In 1840 these provinces changed their names to Canada East and Canada West.—Bennet Lowe.

2. Jamaica was discovered by Columbus in 1494, and was acquired by the English in 1655, in the time of the Commonwealth —W. T Truscott

3. Helgoland is the small island in the German Ocean belonging to Great Britain - H. R.—Helgoland or Helgoland is the name of the island, belonging to the British government, in the German Ocean. It is a long and narrow rock, nine miles in circuit, rising in the centre to a round elevation It was taken by the English in 1807 —Bennet Lowe

4. In travelling from Washington to the north of the island of Borneo, thence to New Zealand, thence to Chinchina, and lastly to India, a vessel would have to cross the equator four times [illegible]

5. Rosemary. By several correspondents, some of whom sent poetical answers.

6. When he went into the house he had 5½d This general answer is arrived at by a variety of methods by more than 10 correspondents All the workings are more or less correct in the details. The following by our old friend M. Bennet Lowe is perhaps the most exact.

Let x=the number of pence he had at first

Then $2x$=what he had on coming out of the 1st house

$4x-18=$	,,	,,	2nd do
$8x-42=$	,,	,,	3rd do.
$8x-42=0$			
$8x=42$			
$x=5\frac{1}{4}$ pence.			

7. At 9 o'clock the hands of the clock [illegible] angle whose hypotenuse is =26 inches [illegible] hypotenuse, which is also the square of the other two sides The hands being in the proportion of 2 to 3, then $2^2=4$ and $3^2=9+4=13$ and $676\div13=52\times9=21{\cdot}633$ inches length of minute hand Then $21{\cdot}633\times2\times3\cdot1416=135{\cdot}925$ inches or 11·327 feet distance gone over by the minute hand per hour. The snail performed the journey in 9 hours; therefore $11{\cdot}327\times9=101{\cdot}943$ feet, height of steeple; 21·633 inches, length of minute finger, 11·327 feet, pace of snail per hour.—Robert Middleton

When loudly strikes the church clock nine
An angle right its hands contain,
And inches twenty-six shall line
'Tis said their points extreme would join
Because their ratio is named
Inversely being as three to two,
A pure quadratic may be form'd
The length of minute-hand to show.
But if some readers still should think
These data are not very clear;
One inch to twenty they may link,*
Its length they'll know then very near.
Its point extreme once passing round
A circle, marks of which I state;
Circumference is nearly found,
To be eleven and one-fourth feet†

* 21·633 inches. † 11·3273 feet.

And if the thing I clearly see,
Each hour his snailship ran those feet;
A pace wherewith one thinks that he,
Profusely, rather, must have sweat.
We too are told one third his race
He in three hours exactly run;
Then, if throughout he kept his pace,
He in six more his task had done.
Then nine times what he ran one hour,
Must surely be the steeple's height,
Which is in yards near thirty-four,*
So now that wondrous tale's complete.

Joseph Timms.

8. The letters S P Q R, on the ancient Roman ensigns, signifies *Senatus populusque Romanus*—"The Roman Senate and the Roman People."

9 — 58 1193 = 3·1416 = 18½ inches diameter.

18½ × 18½ × 1·5 × 5·362 = 3315·23885 cubic inches content.

$\frac{1}{10}$ = 0·5, and ·025 × ·025 × 7854 = ·000490875 in superficies of end of wire

3315·23885 ÷ ·000490875 = 6757433·33 inches, length of wire.

6757433·33 ÷ 63360 = 106·593 length in miles

165·705 × 17·6 = 1870·867 yds. at 2d. = £195 8s. 4½d.

106·593 miles in length

Answer, £195 8s. 4½d. cost

10 — 18×3·1416 = 56·5488 circumference of tower.

56·5488 = 3197·796 square of circumference.

10×10 = 100 square of height of one apartment

32·7766 = 57·43 length of pipe for one apartment

57·43×5 = 287·15 feet Whole length of pipe.

1·95 × 1·95 × ·7854 = 1·2271·75 superficies of end of pipe

1×1×·7854 = ·7854 superficies of end of bore, and 1·2271875 − ·7854 = ·4417875 Superficies of end of lead.

344·75 [illegible] = 4134·96 inches 4134·96×·4417875 = 1826·4 [illegible] cubic inches

1826·4 × 11×7—10 = 799·21347 lb. at 3½d. = £10 16s. 5¼d.

Answer, £10 16s 5¼d.

11.— 6272640 inches in one acre.

6272640 = 2501·524×1 = 10018·096 inches, perimeter of acre.

£20 = 400 shillings 10018·096 − 100 = 25·04524 = 627·264 ac. area of square and 627·264×·7854 = 492·653 ,,

area of circle 121·611 ,,

excess of square.

PROOF.

Perimeter of 627·264 acres = 250905·6 inches.

Add 627·264 acres at £20 = 250905·6 shillings.

Circumference of circle = 197061·25 inches.

492·653 acres at £20 = 197061·25 shillings

Robert Middleton

12. $\frac{1}{10}$ = 3·14159 × √(5·362 − 3864) 10000 (0·026 √ = 1612.

16·4123 × 32·2 = 528·47606 = feet, or nearly 177 yards.

13. The number of pears the maid had left was 12, then $12-1=11\times2=22-2=20\times3=60\div2=30-3=27\times4=108\div3=36-1=32\times5=160\div4=40$ answer.—George Walker, W. L, and 19 others.

14 The first land-tax in England appears to have been levied by Ethelred II. All persons holding or owning land above the yearly value of 40s., were subject to pay a certain propor-

* 33·9816 yards.

tion of their incomes to the state. This tax was called a Danegelt.

The first land-tax of which we have any record is that mentioned in 2 Kings xviii. 35—"And Jehoiakim gave the silver and gold to Pharaoh, but he *taxed* the *land* to give the money, and for which tax I find no particular name; but the first land-tax of which we have record in England was in the tenth century, and produced £82,000, in 1018. The original name of it was Danegelt, and was formerly paid to the Danes, arising out of their exactions to stop their ravages in this country The Danegelt was thus raised. Every hide of land, i.e. as much as one plough could plough, -or, as Bede says, maintain a family one day,—was taxed one shilling.—J. Sowden.

15. 12 and 36. By several correspondents

16 Any article weighing from 1 to 19 lb may be weighed with the four following weights, 1, 3, 9, and 27 lb —W C

17. A figure being wrongly inserted in this question readers the answer sent by the proposer also incorrect As the question stands the answer is 26 lb 10 ounces, and nearly 3½ drachms, which is the weight of a body, at 100 miles above the surface of the earth, which weighed 28 lb on it —G F.—"For as attraction of gravitation proceeds from a centre the diameter of the earth must be halved for the centre, which will be at 3962 miles from the surface (I've leaving out fractions) As an attraction or gravitation like all forces proceeding from a centre, decreases as the squares of the distances increase. Then at the 3962 miles, the semi-diameter of the earth, be added to 100 miles, the distance above the surface, the sum will be 4062 miles Then, as 4062 : 3962 :: 28 lb : 27 lb 10 oz. 3½ drams nearly, which is the weight at 100 miles from the surface of the earth, which weighed 28 lb out."—J H P.

Questions for Solution.

1 A May-pole, who's top was broken off by a blast of wind, struck the ground at 15 feet distant from the foot of the pole; what was the height of the whole May-pole, supposing the broken piece to measure 39 feet in length?

2 How many square yards of paving are in a room whose length is 65 feet, and the two breadths 21 and 18 feet?

3 Required, the solidity of a square pyramid, each side of its base being 30, and its perpendicular height 20?

4 Place the numerals 1, 2, 3, 4, 5, 6, 7, 8, 9 in such order that, without any of the figures being repeated, the sum of them shall equal one hundred.

5 Who was the inventor of the writing letters now in use?

6 Why does a sudden fright cause the hair to stand erect?

7 What is the reason that an article weighing a pound at the top of a high mountain

8. An applewoman being asked how many apples she had, replied, "When I count them by twos I have 1 over; by threes, I have 2 over, by fours, I have 3 over, by fives, I have 4 over, by sixes, I have 5 over, by sevens, I have none over How many apples had she?

9.— Found long ago, yet made to-day,
Employ'd while others sleep,
What few would wish to give away,
And none would wish to keep

10. One-third of the trees in a garden are apple trees, one-fourth pear trees, one-fifth cherry trees, one-sixth peach trees, and six other trees. How many are there in all?

11. Who was the first organist?

12. What king of England conquered Ireland, and when was it fully incorporated with England?

13. Who were the kings of the House of Plantagenet, and why was the line so called?

14 Who was the first of the English earls?

15.— My first is what all ought to be,
My second's in the Arctic sea;
And when united they will show
My whole's what every one should do.
W. H. Eddy, and N. T. Nicholas.

16 What is the length of the side of a cube inscribed in a sphere of 1 inch diameter?

17. Given the radius of a circle which is six. Required the side of its circumscribed rhombus.

18. There is a lamp-post that stands ten feet high. At what distance from it must a man stand who is six feet high so that he may project a shadow of 15 feet.

The answers to questions in No. 44 will appear in the last number of the next month

In answer to the Charade of the late Mr. Praed, the following has been forwarded —

Would I could grasp a *Campbell's* lyric pen!
I then might justice do to "arms and men,"
And sing the well-fought field of Agincourt,
Where, hand to hand, mix'd in the bloody sport,
The hosts of France, vain of superior might,
By English valour were o'erthrown in fight,
And bade wealth and fame a long *Good Night*"

Our kind friend and correspondent, Mr. Middleton, writes us as follows —

"Dear Sir,—In your last 'Solutions to Questions,' On 9, John Mather says, 'crowns were originally wreaths of leaves or flowers' I wish he had given his authority. He also says the first golden crown of which he finds any mention, was that worn by Mordecai But John Mather must surely have begun his search at the wrong end of his bible, for in Lev. viii. 9, it is said that when Moses consecrated Aaron to the office of high-priest, he put on him a golden crown And in Chron. xx. 2, it is recorded that when Joab took Rabbah, the king of that city had a crown which weighed a *talent of gold*, there were also precious stones in it Again, in Esth i. 11, king Ahasuerus ordered queen Vashti to be brought before him with the Crown Royal on her head, which is said to have been also of gold —Yours truly, Robert Middleton"

Our friend Mr Lowe has forwarded an ingenious answer to a question which appeared a couple of months since —"The old custom of decking houses and churches at Christmas with evergreens, is derived from ancient heathen practices Councils of the church forbade Christians to deck their houses with bay-leaves and green boughs, at the same time with the pagans; but this was after the church had permitted such doings, in order to accommodate its ceremonies to those of the old mythology. Where druidism had existed, "the houses were decked with evergreens in December, that the sylvan spirits might repair to them, and remain unnipped with frost and cold winds, until a milder season had renewed the foliage of their darling abodes." Polydore Vergil says that, "Trimmyng of the temples, with hangynges, flowres, boughes, and garlondes, was taken of the heathen people, whiche decked their idols and houses with suche array." In old church-calendars, Christmas-eve is marked "Templa exornantur." (Churches are decked) The holly and the ivy still maintain some mastery at this season At the two universities, the windows of the college chapels are decked with laurel. (Full particulars and information will be obtained by referring to "Hone's Everyday Book" Vol 1.)—Bennie Lowe.

We are gratified extremely to recognise the interest which our readers take in the Exercises for Ingenuity, and from our success in this particular we think we could organise a regular system of intercommunication between our subscribers on subjects of a more general and interesting character. Perhaps a few of them will be kind enough to ask questions, we have no doubt about obtaining answers. In this way a large number of readers might be instructed on a variety of subjects.

LITERARY NOTICE.

The Science of Botany beautifully illustrated by upwards of Three Hundred Engravings from Drawings from Nature.—In The Illustrated Exhibitor and Magazine of Art, for September 4th, will be commenced a series of chapters on the instructive science of botany Each chapter will be profusely illustrated with engravings, carefully executed, These chapters on Botany will not interfere with the general character of the work, which contains first-class engravings, including portraits and specimens of the works of the great masters, in painting, sculpture, and architecture, portraits of eminent characters; views of cities, palaces, and public buildings, natural history, manufacturing processes, machinery and inventions, scientific, including the elements of design, perspective, hydraulics, the stereoscope, &c., ornamental sculpture, needlework, &c., with original literary articles, including biographies, descriptions of works of art, details of manufacturing processes and machinery, papers on natural history and other branches of science, and much interesting fragmentary matter The Illustrated Exhibitor and Magazine of Art is published in weekly Numbers, twopence each, or in monthly Parts, 9d or 11d each, according to the number of weeks in each month.

MISCELLANEA.

If even the *worst* women be, as they are, to men *tolerable* creatures, what must the *best* be?

If you have daughters and anything to leave them, bequeath part at least in the shape of an *annuity for life*; it is an insurance for good usage from their husbands, and the *only* "insurance" I know.

What is Puseyism?—The late facetious Sidney Smith when asked to define Puseyism, remarked that it was a mixture of posture and imposture, flexions and genuflexions, of bowing to the east and courtesying to the west, with an immense amount of man-millinery.

Clever Boy!—"Here you little rascal, walk up and give an account of yourself Where have you been?" "A'ter the gals, father." "Did you ever know me to do so when I was a boy?" "No, sir,—but mother did."

Confidence in Man.—People have generally three epochs in their confidence in man In the first they believe him to be everything that is good, and they are lavish with their friendship and confidence In the next they have had experience, which has smitten down their confidence, and they then have to be careful not to mistrust every one, and to put the worst construction upon everything. Later in life they learn that the greater number of men have much more good in them than bad, and that even where there is cause to blame there is more reason to pity than condemn, and then a spirit of confidence again awakens within them,

Excuses for not attending Public Worship.—Overslept myself—wasn't shaved in time. Too cold—too hot—too windy—too dusty. Too wet—too damp—too sunny—too cloudy Don't feel disposed No other time to myself. Look over my drawers. Put my papers to rights—Letters to write to my friends. Taken a dose of physic. Been bled this morning. Mean to walk to the bridge. Going to take a ride Tired to the shop six days in the week. No fresh air but on Sundays. Can't breathe in church, always so full. Feel a little chilly. Feel a little feverish. Feel very lazy. Expect company to dinner. Hurt my great toe. Got a headache.—Caught cold. Must watch the servants. Can't leave the house for fear of fire. Servants up to all mischief when I go to church. Intend nursing myself to-day. New bonnet not come home. Tore my dress coming down stairs. Got a new novel, must be returned on Monday morning. Wasn't dressed in time Don't like a liturgy—always praying for the same thing. Don't like extempore prayer—don't know what is coming.

Rather Satirical.—"I say, Bill, Jim's caged for stealing a horse." "Sarve him right; why didn't he buy one and not pay for it, like any other gentleman?"

An Actor's Defence.—An itinerant player, possessed of more wit than money, was a few days ago driven by that hard master hunger, to commit the high crime of poaching in the neighbourhood of Birmingham, and was unluckily detected in the act, and carried forthwith before a bench of magistrates, when the offence was fully proved. The knight of the buskin, however, being called upon for his defence, astonished the learned justices, by adapting "Brutus's speech to the Romans on the death of Cæsar," to his case, in the following manner:—"Britons, hungry men, and epicures! hear me for my cause and be silent, that you may hear; believe me for mine honour, that you may believe; censure me in your wisdom, and awake your senses, that you may the better judge. If there be any in this assembly, any dear friend of this hare, to him I say that a player's love for hare is no less than his. If then, that friend demand why a player rose against a hare, this is my answer:—Not that I loved hare less, but that I loved eating more. Had you rather this hare were living, and I had starving died, than that this hare were dead, that I might live a jolly fellow? As this hare was pretty I weep for him; as he was nimble, I rejoice at it; as he was plump, I honour him, but as he was eatable, I slew him." Here the gravity of the court was obliged to give way! prosecutor, spectators, and all burst into laughter at the ready wit displayed by the "poor actor" The information was withdrawn, and the knight of the sock and buskin left the court with pockets much heavier than when he entered it, with the intention of appearing on the stage the same evening in an "entirely new character"

Throw Physic to the Dogs.—"Is there really anything the matter with you?" said a physician to a person who had sent for him. "I don't know how it is," was the reply, "I eat well, sleep well, and have a good appetite."—"Very well," said the doctor, "I'll give you something that will very soon take away all that"

Paper.—In "A Council of Four," paper is described as building-ground for genius, a receiver of stolen goods, the product, the cause, and the preventive of rags, a poor flat much put upon

Lugerdi main.—A noted juggler perceived at the commencement of his performances that he was very narrowly watched by a gentleman whom he knew at once to be a very acute observer. He was embarrassed, and he felt that he could not practise his deceptions with so free and easy a hand as he could if he were not watched by so intelligent an eye. The consciousness of being thus watched distracted his mind, and prevented him from concentrating its energies upon one object The juggler therefore gave this gentleman a piece of money, telling him that he must look out, or he would get it away from him in the course of the evening. At the conclusion of the exhibition, the gentleman said to the juggler, "Well, sir, here is your money, you see that I have kept it safely." "Yes," replied he, "and I meant that you should, for I chose that you should have something else to watch besides me."

Exact Definition.—"Ma'am," said a quack to a nervous old lady, "yours is a scrutinary complaint." "What is that?" "It is the dropping of the nerves The nerves having fallen into the pizarintum, the chest becomes torberous, the head goes tizarizzen, tizarizzen" "Oh, doctor, you have exactly described my feelings!"

The Value of a Good Voice.—Bastardini, when engaged at the Pantheon in London (one of the then rival opera-houses), used to receive for each night of her performance of two songs one hundred guineas—an enormous sum at that time. Storace, who was then a boy, studying music under his father, who gave him a bravura song of Bastardini's to copy, was so astonished that fifty guineas should be paid for singing a song, that he counted the notes in it, and calculated the amount of each note at 4s. 10d. He valued one of the divisions running up and down at £18 11s. Jenny Lind is said to have made while singing upwards of £2 10s. a minute.

NOTICES TO CORRESPONDENTS

Artisan.—*Lac* is a species of resin which flows from a tree growing in the East Indies. *Stick-lac* is the substance in the natural state, *seed-lac*, when boiled in water; and *shell-lac* when it has been melted. It is the principal ingredient in sealing-wax.

Juvenis.—The *Parthenon*, the temple of Minerva, is seated on the Acropolis of Athens. It was erected about B. C. 448. What is now, as may be supposed, in a shattered and mangled state, but it is still the admiration of the travellers and artists who have seen it The chief portion of the sculptures of the edifice were removed by Lord Elgin, and are now to be seen in the British Museum.

Noncon.—The *Pilgrim Fathers* sailed from Plymouth in the *Mayflower*, September 6, 1620. After encountering fearful storms and other perils, they landed at a place in New England (to which they afterwards gave the name of Plymouth) on the 8th of December following.

J. L. (Newport).—The best composition for preserving the coverings of carriages, &c., is Indian-rubber dissolved in caoutchoucine, and then coloured as required. But the process of making it is rather difficult and expensive. Mr. Barnard has a patent for it.—The celebrated patent mackintosh garments are made by dissolving Indian-rubber in hot naphtha. Indian-rubber may be dissolved in oil of turpentine, but it dries with difficulty, the solution made with the fixed oils always remain glutinous.

An Encouragor.—The comparative weight of hydrogen and common air is most correctly stated in the second article to which you refer, namely, vol. ii. p 281. Dr. Stöckhardt says, "Hydrogen is the lightest of all gases; 11½ measures of it only weigh as much as one measure of atmospheric air."

W. A (*Fir-Tree*).—You should get a good dictionary. We will, however, give you the meaning of the three words about which you inquire.—1 *Picnic* This originally meant an assembly where each person contributed something to the common entertainment. It is now used chiefly in reference to parties traveling, or "gipsying," where each person brings something towards making up a comfortable meal. 2 *Philharmonic* The prefix *phil* means a lover, and a Phil-harmonic Society is a society of persons loving harmony. 3. *Synchronous*, or *Synchronal*, means happening at, or belonging to, the same time.—Your other question is handed to the editor of the "Popular Educator."

J. A. Amateur.—The best *Lavender Water*, "Eau de Lavande," is thus prepared.—Take three pounds and a half of fresh flowers, picked; put them in one gallon of rectified spirits for a week, then distil the whole. Another very fine form, Eau de Lavande, prepared according to which is said to be used by her Majesty and many of the nobility, is as follows:—Mitcham oil-of-lavender, 4 ounces; essence of bergamot, ½ ounce, essence of musk, two ounces; rectified spirit, one gallon; mix well. The *Hungary Water* may be made thus:—Rosemary tops in bloom, two pounds, fresh sage, ½ pound, bruised ginger, one ounce, rectified spirit, three quarts; water, one quart Macerate for ten days, then distil eleven pints, or thus French rosemary flowers, one pound; ditto lavender flowers, one ounce; rectified spirit, one pint and a half. Distil three pounds.

An "Ex-Painter's Devil."—The Supplementary Numbers of the "Working Man's Friend" have long since been discontinued. The whole of the Numbers are published in two uniform volumes, under the title of "The Literature of Working Men."

T. Roberts.—We thought everybody knew the meaning of the French motto, *Honi soit qui mal y pense*, "Evil be to him that evil thinks." It is the motto of a military order, called the Order of the Garter, which was instituted by Edward III. in 1350. The motto is inscribed on a garter which is worn on the left knee of the knights of the order. The sovereign is the chief of the order, and the badge is the highest mark of esteem which the sovereign can bestow on the highest subject of the realm. The story about Edward's mistress dropping her garter, as the origin of the order, is said to be without foundation.

RUSSIA AND THE RUSSIANS.—IV.

MOSCOW AND THE KREMLIN.

IN continuing this series of sketches, we must beg our readers to understand, once for all, that we have no personal knowledge of the empire of the Tzar, and that what we tell them, we gather from books. In this, however, we believe we are doing them good service; for it is not to be expected that they can have access to the best authorities, or even leisure to examine them if they had. The history of Russia, which in the last Number we brought down to the time of the present emperor, will, we trust, give them such an insight into the constitution and manners of the people of this great empire, as will, with the general view with which we set out, familiarise their minds, somewhat, with a new subject, and prepare them for a further acquaintance with Russia and the Russians.

Without further preface, we proceed to give the reader an insight of Moscow, the capital of European Russia.

In our last some account was given of the conflagration of Moscow on the occasion of the Napoleonic invasion; we may now, however, give a slight *résumé* of the history of the city itself. The history of the Russian provinces through which the traveller has passed on his way to Moscow has reference to that of this ancient capital; for, though the government of Novgorod and Tver were at one period independent, each in its turn, whether republic or principality, was subjugated by this their more powerful neighbour, and in the fourteenth century Moscow became the capital of Muscovy; Kief, and afterwards Vladimir, having till then enjoyed that distinction. The fearful calamities with which Moscow was visited in the early part of its history were of the same character as those which have befallen almost any other capital, though far more intense. In the early part of the reign of Basil II., it was taken and ravished by the Eastern destroyer, Tamerlane; and, on a subsequent occasion, it fell into the hands of the Tartars, who sacked it, and put many of the inhabitants to the sword. In 1536 the town was nearly consumed by fire, and 2,000 of the inhabitants perished in the flames; and in 1571 the Tartars fired the suburbs, and, a furious wind driving the flames into the city, a considerable portion of it was reduced to ashes, and not less than 100,000 persons perished in the flames or by the

FROZEN MEAT MARKET IN MOSCOW.

less lingering death of the sword. In 1611 a great portion of the city was again destroyed by fire, when the Poles had taken possession of it under the pretence of defending the inhabitants from the adherents of Andrew Nagui, a pretender to the crown. And lastly, in 1812, the indomitable population of Moscow, seeing that they were for the moment unable to withstand the invading hordes of the Emperor of the modern Huns, gave up their ancient and beautiful city to this devouring element—the grandest sacrifice ever made to national feeling. The city was the idol of every Russian's heart, her shrines were to him the holiest in the empire—hallowed by seven centuries of historical associations, it was for Russia's safety given up to destruction with ready and cheerful submission, and this sacrifice was the means of enabling her to take that deep and just revenge on the banks of the Beresina which led to the annihilation of her foe, and allowed the rest of Europe to rise, and, with her, pursue him to his utter discomfiture and ruin.

But we have to describe the city as it is, the hospitals, churches, and gostinnoi dvors, rather than revert to Russian history. The assertion sometimes made, that no city is so irregularly built as Moscow, is in some respects true, none of the streets are straight; houses large and small, public buildings, churches, and other edifices are mingled confusedly together, but it gains by this the advantage of being more picturesque. The streets undulate continually, and thus offer from time to time points of view whence the eye is able to range over the vast ocean of housetops, trees, and gilded and coloured domes. But the architecture of Moscow, since the conflagration of 1812, is not quite so bizarre as, according to the accounts of travellers, it was before that event; nevertheless it is still singular enough. In 1813 the point chiefly in view was to build, and build quickly, rather than to carry any certain plan into execution; the houses were replaced with nearly the same irregularity with respect to each other, and the streets became as crooked and tortuous as before. The whole gained, therefore, little in regularity from the fire, but each individual house was built in much better taste, gardens became more frequent, the majority of roofs were made of iron, painted green, a lavish use was made of pillars, and even those who could not be profuse erected more elegant cottages. Hence Moscow has all the charms of a new city, with the pleasing negligence and picturesque irregularity of an old one. In the streets we come now to a large magnificent palace, with all the pomp of Corinthian pillars, wrought-iron trellis-work, and magnificent approaches and gateways; and now to a simple whitewashed house, the abode of a modest citizen's family. Near them stands a small church, with green cupolas and golden stars. Then comes a row of little yellow wooden houses, that remind one of old Moscow; and these are succeeded by one of the new colossal erections for some public institution. Sometimes the road winds through a number of little streets, and the traveller might fancy himself in a country town; suddenly it rises, and he is in a wide "place," from which streets branch off to all quarters of the world, while the eye wanders over the forest of houses of the great capital; descending again, he comes in the middle of the town to the banks of a river planted thickly with gardens and woods. The exterior wall of the city is upwards of twenty English miles in extent, of a most irregular form, more resembling a trapezium than any other figure; within this are two nearly concentric circular lines of boulevard, the one at a distance of about a mile and a half from the Kremlin, completed on both sides of the Moskva; the internal one with a radius of about a mile, spreading only on the north of the river, and terminating near the stone bridge on the one side, and the foundling hospital on the other. The river enters the barrier of the vast city to which it has given a name about the central point of the western side, and after winding round the Devitchei convent like a huge serpent, and from thence flowing beneath the Tartar battlements of the Kremlin, and receiving the scanty stream of the Jaousa, issues again into the vast plain, till it meets the Oka, a tributary of the mighty Volga, which joins the king of the northern rivers at Nijni Novgorod.

On the north of the Moskva, streets and houses, in regular succession, reach to the very barrier; and though a vast proportion of ground is left unoccupied, owing to the enormous width of the streets and boulevards, the earthen rampart may truly be said to gird in the city. But in the other quarters, and particularly to the south, the city can hardly be said to extend farther than the outward boulevard. Beyond this there are vast convents, the Devitchei, Donskoi, and the Seminofskoi; large hospitals, the Galitzin, the St. Paul, and the Cheremeticff, the largest of all; the race-course, and the beautiful gardens of the Princess Galitzin along the banks of the Moskva; fields, and lakes, and marshes; but all these are within the outer enclosure of the outer wall. This will account for its seemingly scanty population of 330,000 souls.

The centre of this vast collection of buildings is the Kremlin, which, with its beautiful gardens, forms nearly a triangle of somewhat more than an English mile in circumference. The original founder of the city settled, without doubt, on the Kremlin hill, which naturally remained the nucleus of the city at a later period. Adjoining this to the east comes the Kitai Gorod (Chinese city), which still preserves its ancient fence of towers and buttresses. Encircling these two divisions, and itself bounded by the river and inner boulevard, lies the Belo Gorod (white city). The space enclosed between the two circles to the north of the Moskva, and between the river and the outward bouleward on the south, is called the Zmelnoi Gorod. Beyond the boulevards are the suburbs.

Previous to the conflagration of 1812, each of the four quarters was surrounded by a wall and bastions; but all perished in that mighty blaze except the embattled enclosure of the Kitai Gorod, which escaped almost unscathed and the pious veneration of the worshippers of St. Nicholas soon restored the broken walls and crumbling turrets of the Kremlin, "black with the miner's blast," to their present perfect state. The defences of the remaining districts have wisely been dispensed with, and a style somewhat resembling that of its previous architecture was observed in repairing the destruction caused by the fire. But this remark does not apply to the interior of the Kremlin, where the arsenal and the new imperial palace are in modern taste, and quite out of character with the ancient buildings within the walls. Before entering the Kremlin, it will be well to view it from one or two points on the outside, and the most favourable spot for this purpose, on the south side, is the bridge of Moskva Rekoi; from the river that bathes its base the hill of the Kremlin rises, picturesquely adorned with turf and shrubs. The buildings appear set in a rich frame of water, verdant foliage and snowy wall, the majestic column of Ivan Veliki rearing itself high above all, like the axis round which the whole moves. The colours are everywhere most lively—red, white, green, gold, and silver. Amidst the confusion of the numerous small antique edifices, the Bolshoi Dvoretz (the large palace built by Alexander) has an imposing aspect. The churches and palaces stand on the plateau of the Kremlin as on a mighty salver; the little red and gold church of the Tzars, coquetting near the border like some pretty little maiden, and the paler coloured cupolas of the Michaelis and Uspenski churches representing the broad corpulence of a merchant's wife. The Maloi Dvoretz (little palace), and the convent of the Miracle draw modestly back, as beseems hermits and little people. All these buildings stand on the summit of the Kremlin, like a crown, themselves again crowned with a multitude of cupolas of which every church has at least five, and one has sixteen glittering in gold and silver. The appearance of the whole is most picturesque and interesting, and it is certainly one of the most striking city views in Europe.

The northern side of the Kremlin is the least attractive; a plain high wall with two gates separates it from the Krasnoi Ploschad (the red place). The most adorned is the north-west side. Here, in former times, was the Swan Lake. It is now drained, and its bed forms the site of the Alexander Garden, which stretches from the Moskva to the giant wall of the Kremlin.

Though assisted in his wanderings by a good lacquey-de-place, the traveller will not be able to see the sights of Moscow in less than a week, indeed a fortnight may be passed very pleasantly here. Judging from our own experience, the period is not too long to see in comfort everything there is to be seen; for though furnished with tickets and orders from the governor, Prince Galitzin, which acted on all occasions like the *sesame* of Ali Baba, and taken at a capital pace by a good pair of horses, we were a week seeing the sights with

the walls. After a general survey of the city, in a droshky or caléche, the traveller's first object will naturally be the Kremlin, and traversing the wide square in front of the theatre, the white walls of the Kitai Gorod, with their massive buttresses and odd-shaped battlements, will give the stranger the first indication that he is in front of the ancient Tartar city.

What the Acropolis was to Athens and the Capitol to Rome, the Kremlin is to Moscow. It is surrounded by a strong and lofty wall, embattled with many towers and turrets, and several gates. The most important of these is beyond doubt, the "Spass Vorota" (the gate of the Redeemer). It is the *porta sacra* and *porta triumphalis* of Moscow. Through it entered the triumphant warriors of Ivan Vassilievitch, after the conquest of Kazan and Astrakhan, and those of Michaëls and Alexis, after the victories obtained in the Ukraine. Over this gate is a picture of the Saviour, under a glass, and before it hangs a large ill-formed lamp, in a massive metal frame; this is suspended by a heavy chain, and under it, to wind it up, stands a complicated old machine, that jarred and rattled here in the time of the Tzar Michæl. A man, whose sole business it is to wind it up, has a table beside him with wax tapers, which he sells to be lighted before the picture. This shrine is an object of the greatest reverence with the Russians, although few know what it represents, it hangs so high and the colours are so faded.

This gate forms a passage through the tower, of about twenty paces long, and every one, be he what he may, Mohammedan, Heathen, or Christian, must take off his hat, and keep it off till he has passed through to the other side. It is a singular sight, to watch the carriages-and-four, coming along at full speed, and slackening their pace as they approach the sacred gate, while lord and lacquey cross themselves reverently, and drive through hat in hand. Any one passing through, and forgetting to uncover, is immediately reminded of the fact, nor would it be safe to neglect the hint, we once forgot the salute, and were reminded of it merely by a gently murmured warning, "Shlapa, shlapa, batiushka" (The hat, the hat, father).

This gate obtained its sacred reputation in the course of centuries, through many miracles wrought by its means Often, as the people relate, the Tartars have been driven back from it; miraculous clouds have veiled the defenders of the Kremlin, who sought its shelter, while the pursuing Tartars were unable to find the entrance. Even the presence of the temple-plundering Gauls, according to the Russians, only served to increase the renown of this gate. They thought the frame of the picture was of gold, and endeavoured to remove it. But every ladder they planted broke in the middle. Thus enraged the French, who then brought a cannon to batter down door and picture together; but, do what they would, the dry powder was possessed by the devil of water, who was too much for the devil of fire, and would not explode. At last they made a great fire with coals over the touch-hole. The powder was now subdued, but it exploded the wrong way, blowing the cannon into a thousand pieces, and some of the French artillerymen into the bargain, while gate and picture remained unharmed. The spoilers, now over-mastered by dread, withdrew, acknowledging the miraculous power. Such was the story we heard from the taper-seller at the gate. The origin of the custom of uncapping at the Holy Gate is unknown; and, though several traditions are extant, the authenticity of any fact is lost in the darkness of ages; but the feelings of devotion are still fresh and powerful, and it is to be doubted whether any bribe would be sufficient to induce a Russian to pass this archway either by day or night without uncovering his head. The Emperor himself bares his imperial brow as he approaches the Spaskoi; the officer and soldier in all the pomp and circumstance of war do the same, and thus tradition says it has been since the wooden walls of the first Kremlin were raised. And we would strongly recommend the traveller to do at Moscow as they at Moscow do, or he will either be bonnoted by the sentry or some passing mujik, and thus sacrifice his best *André* where it cannot be replaced, or perhaps have the pleasure of being shown the interior of a Russian guard-house instead of the Kremlin.

The greatest care is taken not to allow dogs to enter by the Saviour's Gate, a proof that in a religious point of view the Russians look upon this animal as unclean.

The Nicholas Gate, although not so privileged as the Spass Vorota, has also a wonder-working picture, that of St. Nicholas over it. It was near the entrance of this gate that Napoleon's powder-waggons exploded and destroyed a large part of the arsenal and other buildings. The gate escaped with a rent, which split the tower in the middle as far as the frame of the picture, which stopped its further progress. Not even the glass of the picture, or that of the lamp suspended before it, was injured. So says the inscription on the gate, and the remarkable rent is eternalised by a stone differing from the rest in colour.

All the gates of the Kremlin are connected by a strong and lofty wall, which encloses it in the form of a vast triangle with many towers. Within this wall are contained all the most interesting and historically important buildings of Moscow; the holiest churches with the tombs of the ancient Tzars, patriarchs, and metropolitans; the remains of the ancient palace of the Tzars, the new one of the present Emperor, the arsenal, senate house, &c., and architectural memorials of every period of Russian history—for every Russian monarch has held it his duty to adorn the Kremlin with some monument.

The two most important remains of the old palace of the Tzars are the Terema and the Granovitaya Palata, the former containing the Gymnaceum, the latter the coronation hall of the Tzars; the main body of the palace was so much injured by the French, that no restoration was possible. In its place a new palace was erected, called the Bolshoi Dvoretz (great palace), or, from its builder, the Alexanderski Dvoretz. The ruins of both the others are by the side of it, and connected with it by stairs and galleries. They were, as our guide told us, "so desolated by the French, that door and window stood open to wind and tempest," the coronation hall was restored long ago, and the Emperor Nicholas has repaired the Terema, or houses of the peasants.

In Moscow there are markets in every part of the city, but its chief commerce is centred in the Kitai Gorod, where is the *Gostinnoi Dvor* and the *Riadi* (rows of shops). The former, after that of Nijni, is the largest in Russia. It is a colossal building of three stories, and three rows of pillars and shops stand one above another, connected by countless passages and steps In these courts and galleries there is, during the whole year, a continual fair, and hither the tide of commerce flows from the Baltic, the Black Sea, the Levant, Western Europe, Siberia, China, and Tartary. The mass of the promenaders and purchasers are Russian, and bearded; but the black-robed Persian, with his pointed lambskin cap, and the silken-clad Bokharian may be distinguished in the crowd; the most considerable merchants, who trade here by wholesale, are upwards of 1,000 in number.

Of the various public promenades in Moscow it may be said that the gardens of the Kremlin are to Moscow what those of the Tuileries are to Paris; and in these gardens the *beau-monde* of Moscow promenade in the fine spring evenings. At the foot of the wall a number of artificial hills have been raised, where, on holidays, musicians are placed. These hills are hollowed out beneath, and supported by pillars, and the benches with which they are provided afford cool resting-places for the weary.

The Tver Boulevards, surrounding the Beloi Gorod, are not unpleasing, though less agreeable than the Alexander Garden. They are broad walks laid out with trees, shrubs, and parterres, far more rural and pleasing than the formal lime avenues of Berlin, and they will be much handsomer some time hence, for at present the plantations are very young. The different boulevards round Beloi Gorod have an extent of seven versts, or about a mile. During the Easter week these boulevards are greatly frequented by parties in their sledges, and the numerous booths give them all the appearance of a fair. In addition to these may be mentioned the Peterskoi Gardens, already described, and the Summer Gardens of the Empress Elizabeth in the eastern suburb. These are very extensive, but their beauties are in the sere and yellow leaf. The traveller should on no account leave Moscow without having seen the Kremlin by moonlight. There are three clubs at

Moscow, to which foreigners can obtain admission through a member. That called the English, originally established by the merchants of our nation, is a splendid establishment, well planned and skilfully directed in fact, like the clubs of other countries. Twice a week there is a *table-d'hôte*, at three rubles *par tête*, which is well attended. The club of the nobility is also a very handsome structure, particularly the principal saloon, ornamented with pillars and a statue of Catherine II.: in the winter, magnificent balls are given in it; and, during the carnival, morning masquerades with dancing; these assemblies are attended by as many as 2,000 persons, and the room is calculated to hold 3,000.

Should the traveller desire to know what a Russian *château* is like, he may drive to that of *Astrakina*, three miles from Moscow, a seat of the Cheremetieff family, one of the wealthiest in Russia. The dining-hall is furnished in the Louis Quatorze style; and in the drawing-rooms are some good pictures, a Claude and a Rembrandt being the best. There are also some antiques; a Vulcan lays claim to some merit. These country seats bear the singular name of Moscow *appurtenances*, because the habitations twenty-five miles round are considered as belonging to it. The great number of horses kept by the rich, at a small cost, abridges the distance; and many persons who spend the day at a distant country-seat, enjoy at night the pleasures of the city. The "*Allee des Peuples*," outside the barrier, on the Cheremetieff estate, is a great rendezvous for the shopkeepers and merchants of Moscow. One of the prettiest and most picturesque places in the environs is Koonsova; a drive to it, in the summer, will repay the traveller for his trouble. Moscow prides herself on her manufactures, and her intention never to take foreign manufactured goods, that

PEASANTRY OF RUSSIA.

is to say, never to adopt the principles of free trade, nor have, we believe, the Russian manufacturers altered their opinion since the itinerant apostle of that system visited them. The traveller will readily obtain access to the silk and cotton mills; the machinery is frequently under the care of Englishmen.

In our next we shall have more to say of the city of Moscow, and some of its peculiar institutions. The engraving of the Frozen Meat Market, &c., will convey a good pictorial idea of the appearance and costume of the people during the Russian winter.

RUSSIAN TRAVELLING SERVANTS.

A TRUE BROTHER.

BY CHARLES MACKAY.

You're rich, and yet you are not proud;
You are not selfish, hard, or vain;
You look upon the common crowd
With sympathy, and not disdain;
You'd travel far to share your gold
With humble sorrow unconsoled;
You'd raise the orphan from the dust,
And help the sad and widow'd mother
Give me your hand—you shall—you must—
I love you as a brother.

You're poor, and yet you do not scorn
Or hate the wealthy for their wealth,
You toil contented night and morn,
And prize the gifts of strength and health;
You'd share your little with a friend,
And what you cannot give you'd lend;
You take humanity on trust,
And see some merit in another;
Give me your hand—you shall—you must—
I love you as a brother.

And what care I how rich you be?
I love you if your thoughts are pure;
What signifies your poverty,
If you can struggle and endure?
'Tis not the birds that make the spring,
'Tis not the crown that makes the king—
If you are wise, and good, and just,
You've riches better than all other.
Give me your hand—you shall—you must—
I love you as a brother.

GEORGE CRUIKSHANK AND THE BETTING NUISANCE.

We were the first to draw public attention to the abominable nuisance of the betting shops,* and it is with pleasure we perceive that our example has been extensively followed by editors of newspapers and influential periodicals. It is true that the newspaper reports had previously teemed with *exposés* of the betting system; true that the streets, courts, and alleys of the metropolis abounded in "offices," where the spirit of vice was fostered in the breasts of the young and inexperienced; true that police magistrates and legislators had lamented their inability to check the alarming increase of the gambling spirit in our youthful population,—but police reports and magisterial frowns had no influence in "putting down" the crying evil which was fast filling our prisons and demoralising our people; and no remedy was found in the law for a state of things becoming day after day more unbearable. What was to be done? To tear down the "lists" was an easy thing enough when they were exposed in the front of the licensed victuallers' bars,—for the magistrates had direct control over that class of tradesmen,—but when houses were taken and shewy shops fitted up for the direct and avowed purpose of gambling, and when the conductors of these establishments openly stated, by means of placards in their windows and advertisements in the sporting newspapers, that they were prepared to "give the odds on all the races, and to receive deposits from one shilling upwards," the licensing magistrates were powerless, and no course remained for the well-wishers of morality but direct and immediate exposure of the effects and consequences of a system alike alarming to parents and legislators. That the public did not long remain in ignorance of the abominable doings of the betting-shop gamblers seems natural enough, when we find such men as Charles Dickens and George Cruikshank giving their aid, by pen and pencil, in exposing them in their true colours to the world. Our old friend *Punch* has not, of course, been behindhand in drawing a moral from the betting shops which will long be remembered; but perhaps the most direct hit of all is that last of George Cruikshank's productions—The Betting Book,†—in which he has brought together such a mass of evidence, both literary and pictorial, against the system, as must, we feel assured, do good service in the cause of public morality. If young men would only consider how much they risk, besides their money, when they "back a horse" at the counters of these blacklegs,—character, reputation, virtue, honour, self-esteem,—they would pause ere they crossed the threshold, and if they really do *not* know the extent of the mischief they are assisting in, if they are really *not* aware of the precipice on which they stand when they pause on the betting-shop door-step, we would advise them to purchase and peruse George Cruikshank's little volume,—the drollery of the thing will amuse them, — and, if we mistake not, the moral drawn from the exposure will improve them too. It is a fact that upwards of three hundred "offices" are open in the metropolis and suburbs, where large numbers of persons, chiefly young, including clerks, shopmen, mechanics, errand-boys, and many having the decided marks of "black legs," are continually crowding to examine race lists, and to deposit sums of various extent from one shilling to five pounds, in the hope of gaining twenty, fifty, or a hundred fold, and as every day's Police Court or Old Bailey report furnishes instances of the demoralising and ruinous tendency of the "betting system," we rejoice to find that it has engaged the attention of the moralist, the magistrate, and the satirist. Only a week or two since, a clerk in the banking-house of Messrs. Robarts, Curtis, and Co., was, after ten years' service, convicted of defrauding the firm at various times of one thousand pounds, for the purpose of "making up his betting-book." He pleaded guilty, and is doomed to transportation. The magistrates of the city of London are prepared to address the legislature on the subject early in the ensuing session of parliament; and we trust that ere long we shall be enabled to announce to our readers that the "betting shops" of the metropolis are closed altogether. Our friend George Cruikshank, has, in his little book, brought together a great number of facts, and has founded upon them exhortations and advices which do honour to his understanding and his feelings. He has, of course, illustrated his exposure with "cuts," which are highly characteristic of the eminent caricaturist. If any one can read this pamphlet, and then enter his name in a betting-book, he will sin against faithful warnings, and his sin will be upon his own head!

* See Article entitled "Mr. Alfred Verdant's Gambling Experiences," in No. 27 of *The Working Man's Friend*, New Series."

SIR WALTER SCOTT.

Whether novelists do, or do not, occupy a high standing in the republic of letters, candour must at least allow, that not only do they furnish abundance of amusement, but also that their works are not always deficient in instruction; among them have appeared some of very superior genius. Provided these mental painters, in sketching character, keep nature closely in view, their entertaining themes will prove very far from an indifferent school for ethics; because it has not unfrequently happened that minds which could not otherwise be operated upon, have been attuned to the beauty of moral rectitude by the perusal of a well-told tale of fiction; and be it remembered, that this was the mode in which the ancient philosophers taught morality. Be this as it may, Sancho Panza has immortalised the witty Cervantes, and Don Quixote will continue to be read and to grace the shelves in the libraries of all lovers of literature. The immitable Adams, as depicted by the masterly pen of our own laughter-stirring Fielding, of facetious memory, must always remain the juxta-companion to the Knight of the Woful Countenance. The depth displayed by the humorist in his introductory chapters, the truth and richness of his colouring, will render his fame not less enduring than that of the satiric Spaniard; while Black George bears ample testimony to the raciness of his imagination, as also to his intimate acquaintance with the workings of the human heart, and will carry down Tom Jones, as a first-rate production, to the remotest ages. Don Raphael and Ambrose Lamela have encircled the brows of Le Sage with never-fading laurels, and wrested Gil Blas from the withering hand of time. The author of the Waverley Novels, whose memoir we are about to detail, has added another link to that chain of excellence which has so long delighted the reading world.

More than eighty years have spun their course since the illustrious author of Waverley first became a breathing citizen of the world, and about twenty years have elapsed since the remains of this highly-gifted son of Invention were consigned to their kindred clay. He was the eldest son of a writer to the signet at Edinburgh, where he was born on the 15th of August, 1771. His mother was of a literary turn, wrote several poems, and died in the year of the commencement of the ever memorable French Revolution, 1789, which forms an epoch in the annals of the world of the very first magnitude as to its importance in the future destiny of nations. When a boy, he gave but slender promise of his adult fame. Dr. Blair, when he visited the school at Musselburgh, where our novelist received the rudiments of his education, was observed to take particular notice of young Scott, upon which Dr. Paterson, who had then lately succeeded the former pedagogue, said, speaking of the youthful poet, "My predecessor tells me that boy has the thickest skull in the school." "May be so," replied Blair, "but through that thick skull I can discern many bright rays of genius" He was subsequently placed at the High School in the Scottish metropolis, conducted by Dr. Adam, the same fountain at which that luminary Brougham some years after also began to slake his thirst after knowledge; from thence he was removed to the University, where he finished his education under the celebrated professor Stewart. Having completed his clerkship, he was called to the bar, July 11, 1792. By the influence of the Buccleugh family, to which he was allied, he was appointed deputy-sheriff of Selkirkshire. In 1798 he married Miss Carpenter, by whom he had four children.

His politics were in accordance with Pitt, who proposed to invest him with the valuable appointment of clerk of the sessions, but this was frustrated by the death of the premier, which dissolved the then administration before the warrant had passed the seals. Fortunately the new ministry consisted of such men as Fox, Sheridan, Lord Erskine, the present Mar-

is of Lansdowne, Earl Grey, and many others attached to erature and philosophy, who, to their infinite honour, volunrily presented their political opponent with the post their edecessors intended for him. His first productions were The Chase" and "William and Mary," ballads translated from ie German, but published anonymously; the next, and to hich he prefixed his name, was a tragedy translated from the erman of Goethe, entitled "Goetz of Berlenchingen." At early the same period he contributed those two romantic and teresting ballads, "The Eve of St. John" and "Glenfinlass," Lewis's Tales of Wonder. "The Minstrelsy of the Scottish order" appeared in 1802. His studies then became entirely ntiquarian. His deep interest in the history of his country arried him where, perhaps, none had visited before for cenuries, at least with the same penetrating eye. This enabled im to treat this subject with so masterly a hand in his historial novels. The first result of this application appeared in 804, in a metrical romance of the thirteenth century, called 'Sir Tristram," by Thomas of Ercildoune. The following ear ushered in "The Lay of the Last Minstrel," one of his ost beautiful, original, and highly-conceived poems, the anners, the pursuits, the vices, the virtues of the ancient hivalry of Scotland are admirably delineated; the introducon of the author's ancestry into the poem giving it a portion lmost of his identity, and chaining all the powerful enthusiasm f his gloomy imagination, swell the picture into reality, and e feel ourselves in a world where romance, religion, individual alour, priestly lore, and ladye love by turns enchant, delight, nd exalt the mind. In the same year he published six ballads nd lyrical pieces.

His next great production was "Marmion, a Tale of Flodden ield," a work of deep interest. In 1810 appeared "The Lady f the Lake," which is undoubtedly the best, and will ever be he most popular, of his poetical productions. Its scenery is ascinating. This poem alone would have procured our author verlasting fame. "The Vision of Don Roderick" in 1811, 'Rokeby" in 1812, and "The Lord of the Isles" in 1814, are ll inferior to his former productions Shortly after, he pubished a smaller poem, "The Battle of Waterloo," and, nonymously, the "Bridal of Triermain" and "Harold the Dauntless," two minor poems of great merit.

In addition to the works above enumerated, he produced 'Paul's Letters to his Kinsfolk," "The Border Antiquities of Scotland," "The Life of Napoleon Bonaparte," and edited the vorks of John Dryden, Lord Somers's Collection of Tracts, Sir Ralph Sadler's State Papers, Poetical Works of Anne Seward, he Works of Jonathan Swift, &c.

The year 1811 may be fairly said to have closed his poetical areer. His fame as a poet had now spread over the world, nd while he suffered his poetical genius to rest within him, e was preparing to effect a new era in our English literature.

"Waverley" at this time appeared without any author's ame, and never did a work of fiction create such a sensation n the minds of the literati and all lovers of this species of composition. In the following year was produced "Guy Mannering," by the "Author of Waverley," and in this inimitable manner all these ever-celebrated historical novels appeared. Though he was universally believed to be the author of these novels, yet the same was not proved until the unfortunate failure of Messrs. Constable and Co. of Edinburgh, in which he was involved; and the assignees claimed the original manuscripts, *in the handwriting* of Sir Walter. The trustees of the Advocates' Library, anxious to enrich their valuable collection of manuscripts, offered £1,000 for the whole collection. This offer was rejected. They were afterwards offered to the British Museum, the trustees of which would not purchase them. They were subsequently brought forward, for *public competition*, at the sale-room of Mr. Evans, in Pall Mall. The following is the list, with the prices they produced :—

1	The Monastery, perfect	£.8	18 0
2.	Guy Mannering, wanting a leaf at the end of Vol II.	27	10 0
3	Old Mortality, perfect	33	0 0
4	The Antiquary, perfect	42	0 0
5.	Rob Roy, perfect	50	0 0
6	Peveril of the Peak, perfect	42	0 0
7.	Waverley, imperfect	18	0 0
8	The Abbot, imperfect	14	0 0
9.	Ivanhoe, imperfect	12	6 6
10	The Pirate, imperfect	12	0 0
11.	The Fortunes of Nigel, imperfect	16	16 0
12.	Kenilworth, imperfect	17	0 0
13.	Bride of Lammermoor, only 61 pages.	14	14 0

Sir Walter meeting Captain Basil Hall, the fortunate purchaser of "The Antiquary," accidentally at Southampton, told him that it was his most favourite novel, and kindly offered, that if he had the manuscript with him he would write a few lines to that effect at the end of it.

As an author he had the happy talent of uniting the old English ballad style with the refined beauties of our language and the graces of modern poetry, and he blended with a tact peculiar to himself subjects the most incongruous in their nature. His fancy was luxuriant and excursive, corrected by a judgment that could not be called in question. Upon the accession of George IV., he was the first person upon whom that monarch conferred the honour of a baronetcy, in 1820. His private life was a tissue of those virtues and amiabilities the exercise of which so endear men to their fellows, that when his name swelled the obituary it was followed by universal regret.

Early in 1831 symptoms of paralysis appeared, a disease hereditary in his family. His physicians having recommended the air of Italy, the government gave him a passage to Malta in the Barham ship of war; from thence he went to Naples at Christmas; in April he removed to Rome; there all hopes of his recovery were at an end, and at his own desire he returned to his own house, Abbotsford, within the walls of which he expired, September 21, 1832.

The farewell address of this child of fancy will speak for itself, and may be found at the conclusion of the Fourth Series of the "Tales of my Landlord."

"The gentle reader is acquainted that these are, in all probability, the last tales which it will be the lot of the author to submit to the public. He is now on the eve of visiting foreign parts; a ship of war is commissioned by its Royal master to carry the Author of Waverley to climates in which he may possibly obtain such a restoration of health as may serve to spin his thread to an end in his own country. Had he continued to prosecute his usual literary labours, it seems indeed probable, that at the term of years he has already attained, the bowl, to use the pathetic language of Scripture, would have been broken at the fountain; and little can one who has enjoyed, on the whole, an uncommon share of the most inestimable of worldly blessings, be entitled to complain, that life, advancing to its period, should be attended with its usual proportion of shadows and storms. They have affected him at least in no more painful manner than is inseparable from the discharge of this part of the debt of humanity. Of those whose relation to him in the ranks of life might have ensured him their sympathy under indisposition, many are now no more; and those who may yet follow in his wake are entitled to expect, in bearing inevitable evils, an example of firmness and patience more especially on the part of one who has enjoyed no small good fortune during the course of his pilgrimage.

"He public have claims on his gratitude, for which the Author of Waverley has no adequate means of expression; but he may be permitted to hope, that the powers of his mind, such as they are, may not have a different date from those of his body; and that he may again meet his patronising friends, if not exactly in his old fashion of literature, at least in some branch, which may not call for the remark, that—

'Superfluous lags the veteran on the stage.'"

"Perhaps no writer," says a reviewer in the *Edinburgh*, "has ever enjoyed in his lifetime so extensive a popularity. His reputation may be truly said to be not only British, but European—and even this is too limited a term. He has had the advantage of writing in a language used in different hemispheres by highly civilised communities, and widely diffused over the surface of the globe; and he has written at a period when communication was facilitated by peace. While the wonder of his own countrymen, he has, to an unexampled degree, established an ascendancy over the tastes of foreign nations. His works have been sought by foreigners with an avidity equalling, nay, almost exceeding, that with which they have been received among us. The conflicting literary tastes of France and Germany, which, twenty years ago,

seemed diametrically opposed, and hopelessly irreconcilable, have at length united in admiration of him. In France he has effected a revolution in taste, and given victory to the 'Romantic School.' He has had not only readers but imitators. Among Frenchmen, the author of 'Cinq Mars' may be cited as a tolerably successful one. Italy, in which what we call 'Novels' were previously unknown, has been roused from its torpor, and has found a worthy imitator of British talent in the author of the 'Promessi Sposi.' Many of them have been translated into French, German, Italian, and other languages.

"In 1813, before the appearance of Waverley, if any one should have ventured to predict that a writer would arise, who, when every conceivable form of composition seemed not only to have been tried, but exhausted, should be the creator of one hitherto unknown, and which, in its immediate popularity, should exceed all others,—who, when we fancied we had drained to its last drop the cup of intellectual excitement, should open a spring, not only new and untasted, but apparently deep and inexhaustible—that he should exhibit his marvels in a form of composition the least respected in the whole circle of literature, and raise the Novel to a place among the highest productions of human intellect,—his prediction would have been received, not only with incredulity, but with ridicule; and the improbability would have been heightened, had it been added, that all this would be effected with no aid from the influence of established reputation, but by a writer who concealed his name. His productions are virtually novelties in our literature. They form a new species. They were, it is true, called Historical Novels; and works bearing that appellation had existed before. But these were essentially different: they were not historical in the same sense; and were as little to be classed with the Waverley Novels, as are a chronological index or a book of memoirs, because the same names and circumstances may be alluded to in each. The misnamed historical novels which we possessed before Waverley, merely availed themselves of historical names and incidents, and gave to the agents of their story the manners and sentiments either of the present period, or, much more commonly, of none.

"One of the points of view in which he is first presented to us is, as a delineator of human character. When we regard him in this light, we are struck at once by the fertility of his invention, and the force, novelty, and fidelity of his pictures. He brings to our mind, not abstract beings, but breathing, acting, speaking individuals. Then what variety! What originality! What numbers! What a gallery has he set before us! No writer but Shakspeare ever equalled him in this respect. Others may have equalled, perhaps surpassed him, in the elaborate finishing of some single portrait, or, may have displayed, with greater skill, the morbid anatomy of human feeling—and our slighter foibles and finer sensibilities have been more exquisitely touched by female hands—but none, save Shakspeare, has ever contributed so largely, so valuably, to our collection of characters;—of pictures so surprisingly original, yet, once seen, admitted immediately to be conformable to nature. Nay, even his anomalous beings are felt to be generally reconcilable with our code of probabilities; and, as has been said of the supernatural creations of Shakspeare, we are impressed with the belief, that if such beings did exist, they would be as he has represented them.

"His descriptions of persons are distinguished chiefly by their picturesqueness. We always seem to behold the individual described. Dress, manner, features, and bearing are so vividly set before us, that the mental illusion is rendered as complete as words can make it. But if we feel thus familiar with the personage introduced, it is rather because the mind's eye has received his image, than because we are endowed with a knowledge of his character. It is the outward, not the inward man, that engages our attention. We comprehend Iago perfectly, without knowing what manner of man he was to look upon. But Varney, Rashleigh, or Christian, must be presented mentally to the eye, as well as to the understanding, before we can feel an equal intimacy. His method has the merit of individualising an imaginary person in a remarkable degree, and is well suited to the nature of the Novel. It effects much of what, in the drama, is supplied by the actor who represents a character on the stage. But it is an inferior art to that of unveiling the recesses of the mind, and presenting to us thoughts, passions, tastes, and springs of action—causing us, in fact, to perceive and know the person not merely as if he stood before us, but as if he had long been our intimate acquaintance. His best-drawn characters make us feel as if we saw and heard them; those of Shakspeare as if we had lived with them, and they had opened their hearts to us in confidence.

"That he was a master of the pathetic, is evinced by several well-known passages. Such are the funeral of the fisherman's son in the 'Antiquary,'—the imprisonment and trial of Effie Deans, and the demeanour of the sister and the broken-hearted father,—the short narrative of the smuggler in 'Redgauntlet,'—many parts of 'Kenilworth,'—and of that finest of tragic tales, the 'Bride of Lammermoor.' We must pause to notice the last. In this, above other modern productions, we see imbodied the dark spirit of fatalism,—that spirit which breathed in the writings of the Greek tragedians, when they traced the persecuting vengeance of Destiny against the houses of Laius and of Atreus. Their mantle was, for a while, worn unconsciously by him who showed to us Macbeth: and here again, in the deepening gloom of this tragic tale, we feel the oppressive influence of this invisible power. From the time we hear the prophetic rhymes, the spell has begun its work, and the clouds of misfortune blacken around us; and the fated course of events moves solemnly onward, irresistible and unerring as the progress of the sun, and soon to end in a night of horror. We remember no other tale in which not doubt, but certainty, forms the groundwork of our interest.

"The plots in the Waverley Novels generally display much ingenuity, and are interestingly involved, but there is not one in the conduct of which it would not be easy to point out a blemish. None have that completeness which constitutes one of the chief merits of Fielding's 'Tom Jones.' There is always either an improbability, or a forced expedient, or an incongruous incident, or an unpleasant break, or too much intricacy, or a hurried conclusion. They are usually languid in the commencement, and abrupt in the close: too slowly opened, and too hastily summed up. 'Guy Mannering' is one of those in which these two faults are least apparent. The plot of 'Peveril of the Peak' might, perhaps, on the whole, have been considered the best, if it had not been spoiled by the finale.

"It may be said of his novels, as of the plays of Shakspeare, that though they never exhibit an attempt to enforce any distinct moral, they are, on the whole, favourable to morality. They tend to keep the heart in its right place. They inspire generous emotions, and a warm-hearted and benevolent feeling towards our fellow-creatures; and, for the most part, afford a just and unperverted view of human character and conduct.

"He has been the master of his imagination, rather than the slave. He has controlled it as with the rod of an enchanter, and compelled it to do his bidding, instead of becoming, like the frantic Pythoness, the utterer of the eloquent ravings which were prompted by the demon that possessed her. His writings display a calm consciousness of power. There is in them nothing of the feverishness of distemper; and they are not sullied and corroded by the operation of human passions. He seems to have looked forth upon nature, serene and unruffled, from the watch tower of a commanding intellect.

"Time may raise up other writers, whose comparative greatness may deprive him of his present eminence; but it cannot deprive him of the merit of originality, and of having first opened a new and delightful path in literature. Not in a presumptuous spirit of prophecy, but as a token of our present admiration, we will say, that we think his Novels likely to endure as long as the language in which they are written."

PROVERBIAL PICKINGS FOR ANGRY PEOPLE.

"*Wrath is cruel, and anger is outrageous*"

RAGE or anger, if it be but a small time detained, the force thereof will be greatly assuaged; but if it be suffered to continue, it multiplieth more and more in mischief, until by revenge it be fully satisfied.

Anger is the first entrance to unseemly wrath. Wrath proceedeth from the feebleness of courage, and the lack of discretion.

Anger is soon buried in a wise man's breast.

A CHAPTER ON DOGS, WITH PORTRAITS OF A FEW OF THEM.

Down, Rover, down!"

And as my little boy—a fairhaired, chubby fellow of three ears—says this, the Newfoundland crouches at his feet; and sitting in my easy chair, admire the pair, and fall to thinkg about dogs. rom thinking to riting is a natural ansition with the elders of the gray ose quill; and so, od reader, you ve here the result my cogitations. In nearly all civied countries the g and the horse e the friends and rvants of manand; and if men ize themselves, in general way, on eir knowledge of ıy kind of anals, these are the o species they rticularly favour. is not my intenon to enter into a ry minute deription of the geıs *Canis*, or to deribe their anatoical conformation d geographical stribution, or even to speak of the general characteristics

THE STAG-HOUND.

the dog kind,—from which class I altogether ignore the olf,—much less to give a detailed account of the almost dless varieties of animals said to have sprung from one original stock, of which the shepherd's dog is the well-known type. On the contrary, I mean merely to indulge in an anecdotical gossip about some half-dozen well-known kinds of dogs. My predilections are in favour of the larger and nobler descriptions of animals; and, as a consequence, we will start off at once with the HOUNDS.

A distinct group of dogs is that which contains the hounds. In former times two noble varieties of this animal were common in England: the Talbot, or old English hound, and the blood-hound; but they are now seldom seen.

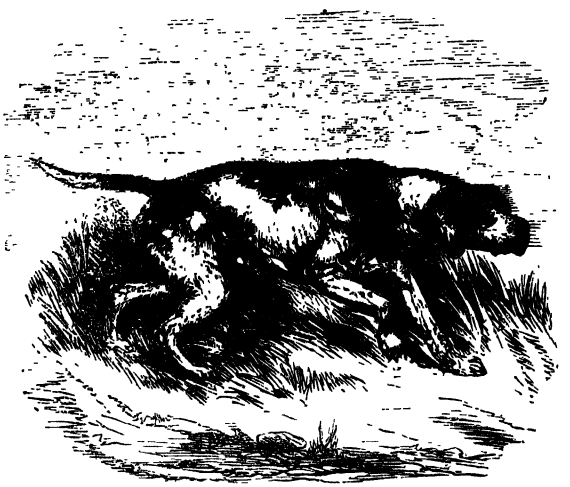
The old English hound has been described as the original breed of our island. It was tall and robust, with a chest of great breadth and depth, ears large and long, and eyes deeply set; a broad nose, and nostrils large and moist, pendulous lips, and a deep, full, and sonorous voice. All who know this fine animal will recognise him by his portrait, if not by our rather wordy description. The general colour of the animal was black, passing into tan or sandy-red about the muzzle and along the inside of the limbs. Shakspeare, when describing the hounds of Theseus, in his "Midsummer Night's Dream," has painted the Talbot to the very life:—

"My hounds are bred out of the Spartan kind,
So flew'd,* so sanded, and their heads are hung

THE TALBOT, OR OLD ENGLISH HOUND.

THE FOX-HOUND.

With ears that sweep away the morning dew;
Crook-kneed and dewlapp'd like Thessalian bulls;



* The flews are the large chaps of a hound.

> Slow in pursuit, but match'd in mouth like bells
> Each under-each. A cry more tunable
> Was never holla'd to, nor cheer'd with horn."

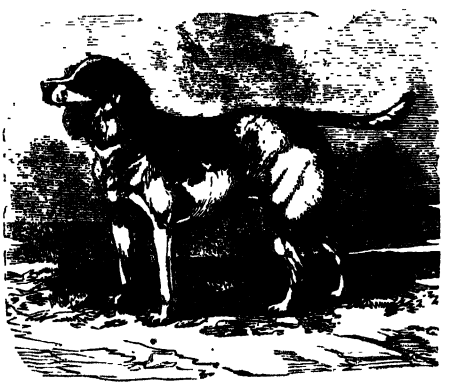
The great poet was no doubt familiar with dogs of the hound kind. He alludes to them, also, in his "Tempest," and his "Comedy of Errors;" in his "Taming of the Shrew," the lordly attendant to Christopher Sly, says,—

> "Dost thou love hawking? thou hast hawks will soar
> Above the morning lark or wilt thou hunt?
> Thy hounds shall make the welkin answer them,
> And fetch shrill echoes from the hollow earth."

It was with such hounds that our ancestors chased the wild deer and other game, when there was so much of forest and waste on our island. It was, most probably, two dogs of this breed which, on one occasion, we are told, continued the chase of a very large stag in the county of Westmoreland, when, either by fatigue or accident, the whole pack was thrown out. The stag returned to Wingfield-park, from whence he started, and, as his last effort, leaped the wall, and immediately expired. One of the hounds pursued him to the wall; but being unable to get over, laid down, and almost immediately expired: the other was found dead at a little distance. The length of the chase is uncertain but, as they were

THE POINTER.

jectured that the circuitous route they might be supposed to take, would not be less than one hundred and twenty miles! Another calculation makes it about half that distance. The horns of the stag, however (the largest ever seen in that part of the country), were long placed in the park on a tree of enormous size; and hence called Hart-horn-tree.



The STAG-HOUND is the nearest representative of the Talbot. In the time of James I. stag-hounds were hunted in close packs. The more general culture of the country, and the confinement of the stag to close parks, led subsequently to the decline of the chase. It was then confined to the neighbourhood of the scattered forests that remained, and was continued only by the sovereign and a few nobles, of whose establishment, from time immemorial, a kennel of deer-hounds had formed a part. Since the death of George III., who was much attached to the chase, stag-hunting has rapidly declined. The modern hound is handsomer, though somewhat smaller than those of former times, and the breed, having been crossed with the fox-hound, became much faster. They have a large, rather stout head, with a wide nose, loose, hanging, broad, and long ears, muscular hams, round, small feet, and a rush tail, carried high. They are invariably white, with some black and tawny marks about the ears, and on the sides or back, distributed in two or three large spots.

The stag-hound, it is needless to say, retains its shape and colour only by the most careful breeding.

"When the stag first hears the cry of the hounds," says Mr. Youatt, "he runs with the swiftness of the wind, and continues to run as long as any sound of the pursuers can be distinguished

THE HARRIER.

THE BEAGLE.

seen at Red-Kirks, near Annan in Scotland, distant, by the post-road of the time, about forty-six miles, it has been con-

That having ceased, he pauses, and looks carefully around him; but before he can determine what course to pursue, the cry of the pack again forces itself upon his attention. Once more he darts away, and after a while, again pauses. His strength, perhaps, begins to fail, and he has recourse to stratagem in order to escape. He practises the doubling and the crossing of the fox or the hare. This being useless, he attempts to escape by plunging into some lake or river that happens to lie in his way, and when at last every attempt to escape proves abortive, he boldly faces his pursuers, and attacks the first dog or man that approaches him." Formidable, indeed, is the antagonist with which he has to contend. In 1822 a deer was turned out before the Earl of Derby's hounds, at Hayes Common. The chase was continued for nearly four hours without a check, when, being almost run down, the animal took refuge in some outhouses near Speldhurst, in Kent, more than forty miles across the country, and having actually run more than fifty miles. What endurance these hounds possess is further obvious from the fact, that in consequence of the severity of the chase nearly twenty horses died in the field.

The FOX-HOUND is the old English hound sufficiently crossed with the greyhound to give him lightness and speed, without impairing his scent. He derives from the greyhound a head somewhat smaller and longer, in proportion to his size, than either the stag-hound or the harrier. "The ears should not," says Mr. Youatt, "comparatively speaking, be so large as those of the stag-hound or the harrier, but the neck should be longer and lighter, the chest deep and capacious, the fore-legs straight as arrows, and the hind ones well bent at the hock."

The BLOOD-HOUND is now considered a rather rare animal. It has equal delicacy of scent with the talbot, but its ears are shorter, and its figure is taller, and, perhaps, lighter. Mr. Bell, in his interesting account of British quadrupeds, describes the breed in the possession of Mr. J. Bell, of Oxford-street, as standing twenty-eight inches high at the shoulder, the muzzle broad and full, the upper lip large and pendulous, the vertex of the head protuberant, the expression stern, thoughtful, and noble, the breast broad, the limbs strong and muscular, and the original colour a deep tan with large black clouds. The blood-hound is graphically pourtrayed by Somerville, in his poem called "The Chase, so popular in a former and different age —

> "Soon the sagacious brute his curling tail
> Flourish'd in air, low bending, plies around
> His busy nose, the steaming vapour snuffs
> Inquisitive, not leaves one turf untried,
> Till, conscious of the recent stains, his heart
> Beats quick, his snuffling nose, his active tail,
> Attest his joy, then, with deep-opening mouth,
> That makes the well-inn tremble, he proclaims
> Th' audacious felon: foot by foot he marks
> His winding way, while all the hissing crowd
> Applaud his reasonings, o'er the watry ford,
> Dry sandy heaths, and stony barren hills,
> O'er beaten paths, with men and beast distain'd,
> Unerring he pursues, till at the cot
> Arrived, and seizing by his guilty throat
> The caitiff vile, redeems the captive prey.
> So exquisitely delicate his sense."

Even now the blood-hound is employed on the continent to follow the scent or the track of a wounded beast of the chase, or to lead the huntsman to the lair before the toils are set, and sometimes even to track out the footsteps of the criminal.

Many anecdotes of the remarkable sagacity of these animals might be given, one will suffice. Aubri de Mondidier, a man of fortune, while travelling alone through the forest of Bondi, was murdered, and buried under a tree. His dog, an English blood-hound, continued for several days at his master's grave; but at length, compelled by hunger, he went to the house of an intimate friend of his master's, at Paris. Here he attracted the attention of that gentleman by his melancholy howlings, then repeated his cries, ran to the door, and looked back to see if any one followed him, and by his being alone and his extraordinary movements, induced his master's friend, accompanied by some other persons, to follow him. Conducting them to a tree, scratching the earth with his feet, and violently howling, he induced them to dig on that particular spot, and there they discovered the corpse of the murdered Aubri de Mondidier.

But this was not all. Some time after, the dog seized a man whom he met, by the throat, and was with great difficulty compelled to quit his hold; and whenever he saw that person—the Chevalier Macaire—he attacked him with equal fury. These circumstances awakened suspicion, which was increased by others, and at length the king, Louis VIII., heard of them, and sent for the dog, who was perfectly gentle till he perceived Macaire, in the midst of some nobles of the country, when he rushed upon him with all the violence he had previously displayed. It was now resolved to submit the decision of the question of Macaire's innocence or guilt, according to the practice of the time, to the issue of a conflict between the chevalier and the dog. It was appointed to take place in the Isle of Notre Dame, then unenclosed and uninhabited: Macaire was provided with a great cudgel; and an empty cask was placed as a retreat for the dog. The crisis came: the instant the dog was at liberty, he ran round his antagonist, avoiding his blows, and menacing him on every side till his strength was exhausted; when, with one bound, he seized Macaire by the throat and threw him on the ground; when in the presence of the king and his court, the murderer confessed his guilt; and a few days afterwards he was beheaded for his crime!

This extraordinary story is related by many writers who are entirely free from all charge of substituting fictions for facts; and of it there is a monument in bas-relief, on the chimney-piece of the grand hall, at the castle of Montargis, a well-known town in France, at the confluence of the canals of Orleans, Briare, and Loing.

Among the varieties of hounds which now exist, there are two requiring a few remarks; the beagle and the harrier. No country equals England in the swiftness, spirit, and endurance of its hounds, and nowhere is so much attention paid to the various breeds.

The BEAGLE was formerly a great favourite with country gentlemen, but is now little used. It is of small stature, but stout and compact in make, with long ears, its scent is exquisite, and when heard at full cry, its tones are said to be musical. It has not, however, the strength or fleetness of the harrier, and still less so of the fox-hound, which was recently described. The beagle is regarded by some as the brachet of the middle ages, and we think it the only species of the long-eared dogs known in the west during the Roman empire. On the continent there is a coarse haired buff-coloured hound of a mixed breed, figured by Buffon, the naturalist, apparently formed from the French braque and the crisp wire-haired dog. It is now uncommon, probably neglected, because of its want of beauty, though formerly much esteemed in otter-hunting, and in the chase when the country was swampy and intersected by rivers. In Queen Elizabeth's reign, the fancy is said a race so small that a complete cry of them could be carried out to the field in a pair of panniers. That princess had little *singing* beagles, which could be placed in a man's glove.

The HARRIER is well known from its being so commonly connected with the chase of the hare, from which, indeed, it derives its name. Truly has one of our poets said,—

> "Poor is the triumph o'er the timid hare,
> Yet vain her best precaution, though she sits
> Conceal'd, with folded ears, unsleeping eyes,
> By nature raised to take th' horizon in,
> And head conceal'd betwixt her hairy feet,
> In act to spring away. The scented dew
> Betrays her early labyrinth; and deep
> In settled sullen sings, far behind,
> With every breeze, she hears the coming storm,
> But nearer, and more frequent, as it heeds
> The sighing gale, she springs amazed, and all
> The savage soul of game is up at once."

The harrier is smaller than the fox-hound. It is of more recent and artificial breed, probably between the hound and the beagle, and is marked in a manner something like that of the fox-hound, but often the dark colours occupy still more surface.

The POINTER, with its stout limbs, blunted muzzle, stunted tail, and smooth hair, is taught to discover game, and it practises what it has learned with great attention and steadiness. Its scent being very acute, it gently approaches the spot where the game lies; at length it stops, and fixes its eyes steadily upon it, with one foot commonly raised a little from the ground,

and the tail extended in a straight line. So firm is this habit of pointing in some, that the late Mr. Gilpin is said to have painted a brace of pointers while in the act, and that they stood for an hour and a quarter without moving! These were Pluto and Juno, the property of Colonel Thornton. Dash, another pointer, the property of the same sportsman, was sold for £160 worth of burgundy and champagne, one hogshead of claret, an elegant gun, and a pointer, with the proviso, that if an accident should disable the dog, he was to be returned to the colonel at the price of £50! When a bird runs, the dog observes its motions, steals cautiously after it, preserving the same attitude, and when it stops the pointer is again steady.

Many stories are told of this animal's sagacity: the following are accredited by Mr. Jesse.—"An old friend of mine had a very sagacious pointer, which was kept in a kennel with several other dogs. His gamekeeper having gone one day into the kennel, dropped his watch by some accident. On leaving the place, he fastened the gate as usual, but had not gone far from it when he heard it rattled very much; and on looking round he saw his favourite pointer standing with her forepaws against it and shaking it, evidently for the purpose of attracting his attention. On going up to her, he found her with his watch in her mouth, which she restored to him with much seeming delight."

"A gentleman in Nottinghamshire has a pointer dog very eager at all times to go out shooting with his master. His master is a bad shot, and when he has missed his game several times together, and which the dog has had the trouble of finding for him, the animal gets provoked, and has several times attacked his master in a manner not to be mistaken. This," adds Mr. Jesse, "is very much the case with my old terrier, Peter. He accompanies me when I am trolling, watches every throw with much anxiety, and shows great impatience, and some degree of anger, if I am a long time without taking a fish; when I do, he appears delighted."

The SETTER is supposed to have originated in, or been brought from, the peninsula of Spain. The head of this race shows a remarkable development of the brain, and in character we find a corresponding intelligence, affection, and docility, and though somewhat timid, they bear fatigue better than the pointer. Their more ancient colours were dark-chestnut and white, or quite red; in England they are white, or white with black or brown marks; but the least adulterated breeds are still found in Ireland, where high prices are paid for the best dogs of this kind.

To Mr. Bell, we are indebted for the following fact:—"By far the most interesting, and, if I may so employ the term, amiable animal I have ever known, was a bitch of this kind, formerly belonging to my father, which he had from a puppy, and which, although never regularly broke, was the best dog in the field that he ever perceived. The very expression of poor Juno's countenance was full of sensibility and affection. She appeared always on the watch to evince her love and gratitude to those who were kind to her; and the instinct of attachment was in her so powerful, that it showed itself in her conduct to other animals, as well as to her human friends.

"A kitten which had lately been taken from its mother, was sent to us, and on Juno's approach showed the usual horror of the cat towards dogs. But Juno seemed determined to conquer the antipathy, and by the most winning and perseverng kindness and forbearance,—advancing or receding as she found the waywardness of her new friend's temper required,—she completely attached the kitten to her; and as she had lately lost her puppies, and still had some milk left, I have often seen them lying before the fire, the kitten sucking her kind foster-mother, who was licking and caressing her as her own offspring. She would also play with great gentleness with some tame rabbits of mine, and would entice them to familiarity by the kindness of her manner; and so fond was she of caressing the young of her own species, that when a spaniel bitch of my father's had puppies, of which all excepting one were destroyed, Juno would take every opportunity to steal the remaining one from its mother's nest, and carry it to her own, where she would lick and fondle it with the greatest tenderness. Poor Bessy, the mother, also a good-tempered creature, as soon as she discovered the theft, hastened, of course, to bring back her little one, which was again to be stolen on the first opportunity; until at length the two bitches killed the poor puppy between them, as they were endeavouring each to pull it from the other; and all this with the most perfect mutual good understanding. Juno lived to a good old age, an unspoiled pet, after her master had shot to her for fourteen seasons."

On the subject of the general faithfulness, courage, and temper of the dog, much might be said. Neither Rover nor Fanny have any predilections in favour of fine clothes or fine houses, and both love their masters equally well whether they be princes or beggars. The cat is attached to the house, the dog to its owner; but having, by aid of book and memory, almost exhausted the patience of the reader, but not the interest of the subject, we refrain. The little boy has been long in bed and the lamp wants trimming.

SONGS FOR THE PEOPLE.

No. IV.

"SEND THE LETTERS, UNCLE JOHN"

A Plea for a Penny Ocean Postage

BY H. G. ADAMS.

UNCLE John is stout and sturdy,
Uncle John has gold in store;
Mighty fleets upon the ocean,
Merchand se upon the shore;
Lands and houses, sheep and oxen,
Corn in granaries and fields—
All that giveth ease or pleasure,
Or to men subsistence yields.

Uncle John has many children,
Scatter'd widely here and there,
And the language that he speaketh,
It is spoken everywhere.
Wheresoever foot hath trodden,
There the sons of Uncle John
Travel, trade, and preach the Gospel,
Earnest workers, every one.

Uncle's ships are ever passing
And repassing o'er the wave,
And our yearning hearts do ever
Tidings of the absent crave,
News of relatives who travel,
Or the friends afar who dwell,
We would know how feel, how fare they,
How they prosper, ill or well.

Greetings o'er should pass between us,
And the heart's fond interchange,
But alas! we're poor, and, therefore,
Distance must our hearts estrange,
And the white-winged herald, as they
O'er the Atlantic go and come,
To the watching waiting many,
Upon either shore are dumb

Uncle John! do send the letters
By your ships that go and come,
Friends abroad would fain be writing
Unto anxious friends at home,
We would wish the absent loved one
In our joys and woes to share,
Send them *for a penny*, Uncle,
It is all we have to spare.

"WILL IT PAY?" Why Uncle! Uncle!
Can you doubt it? look at home,
See how, from all parts, your mail bags
Daily weightier become,
Hear how all your children bless you
For the boon they here enjoy,
Oh, extend it o'er the waters,
And our eager pens employ.

WILL IT PAY? Why fifty letters
Will be sent in place of one,
Fifty pence for *one* poor shilling,
Think of that, good Uncle John!
Think, too, how 'twill foster commerce,
And all friendly ties increase,
Binding nation unto nation
In the bonds of LOVE and PEACE.

HYDE-PARK, PAST AND PRESENT.

BY GEORGE F. PARDON.

Hyde-park now consists of about four hundred acres, bounded on the east by Park-lane, which joins Piccadilly and Oxford-street; on the west, by the village and gardens of Kensington; on the north, by Bayswater; and on the south, by the Green-park and Constitution-hill; from which latter it is separated only by the width of Piccadilly; so that, from the Horse Guards at Whitehall to the hamlet of Kensington, there is one continuous open space or park. A glance at the map of London will make this apparent in a minute.

Such other characteristics of the present appearance of Hyde-park, as may be necessary to be noticed, we shall jot down as we go on—plunging at once, and without further preface, into the past.

The earliest authentic mention of Hyde-park is made by Lysons, who tells us that there were "two ancient manors belonging to the church of Westminster, which were called Neyte and Hyde." At the suppression of the monasteries by Henry the Eighth, they became the property of the crown, having been given, together with the advowson of Chelsea, in exchange for the priory of Hurley, in Berkshire. The site of the manor of Hyde, then, is occupied by what we now know as Hyde-park and Kensington-gardens, which latter consisted originally of only twenty-six acres; they were enlarged by Queen Anne by an addition of thirty acres, and by Caroline, Queen to George II., by a further grant of three hundred acres. There was a royal palace at Kensington-gardens as early as 1686. It was originally built by, and constituted the seat of, Heneage Finch, Earl of Nottingham, and Lord Chancellor of England, whose son, the second earl, sold the house and grounds to William of Orange, soon after his accession, since which period they have remained in possession of the crown. William made several alterations in his new house, the most important of which was the entire re-erection of the upper story, under the superintendence of Sir Christopher Wren. A melancholy interest hangs around the irregular pile, for within its walls died William III., Mary his queen, Anne, Queen of England, and her husband George of Denmark, as well as the second George. It was the town residence of the Duke and Duchess of Kent, and has the honour of being the birthplace of her present majesty. Kensington-palace is a spacious, rambling, red brick building, and more like what it was intended for, a private gentleman's dwelling, than a royal palace; and if, as Sir John Soane says, monarchs can best appreciate the utility and importance of the noble art of architecture, we should imagine the Hanoverian kings had but small liking to their lodging.

Crabbe, in his journal, says that Kensington-gardens have a very peculiar effect: not exhilirating, but lively and pleasant. This is just the impression that most strangers receive of its somewhat formal walks and flower beds, insterspersed here and there with bits of wild nature and luxuriant meadow; but its great charm consists in its pleasing variety of perspectives, and its glimpses of bright water; and on summer afternoons when the band is playing, and the green sward is crowded with elegantly-dressed men and women—the gardens were formerly confined to pedestrians, but a ride was opened last year during the Exhibition—the scene is well worth looking at, especially if the gazer prefer, as we do, the rustle of silk and satin, and the merry sound of young voices, to the dust and turbulence of the hot highway on July evenings.

It seems, however, that the public had not always access to this pleasant place, for in the "Historical Recollections of Hyde-park," by Thomas Smith, we find a notice of one Sarah Gray having had a pension granted to her of £18 a year, as a sort of compensation for the loss of her husband, who was accidentally shot by one of the keepers, while fox-hunting in Kensington-gardens.

Return we to Hyde-park proper, leaving the crowd in the gardens—

> Where rich brocades and glossy damasks glow,
> And chintz, the rival of the flowery bow—

to amuse themselves as they may; merely premising that the Serpentine, of which we shall speak again, was formed in the reign of George II. (1730—1733) by the union of several shallow swampy ponds, and that the bridge over it was erected in 1826, and completes the separation between the park and the gardens.

The two principal entrances to Hyde-park, as most of our readers know, are the triple archway on the top of Constitution-hill, Hyde-park Corner, as it is called—,and Cumberland-gate, or, as it is more frequently designated, Tyburn-gate, at the junction of Oxford-street and the Uxbridge-road.

It may happen, say, it is almost certain, that we may be talking to some who have never been in London, much less in Hyde-park; so, like a guest before a strange house, we will linger for a few minutes about these entrances. Merely glancing up at Wyatt's statue of the Iron Duke, on the Triumphal Arch,—about which there was so much controversy, and about which there is still so much diversity of opinion, and which cost, we believe, no less than thirty thousand pounds,—we will pause before the palatial residence of the Iron Duke himself. This has been the London residence of the hero of a hundred fights for above thirty years, and is so called from a house which stood on the same site, built by Henry Bathurst, Baron Apsley, Earl Bathurst, and Lord High Chancellor of Great Britain (Pope's Lord Bathurst), who died in 1794; in 1665, there were cottages on this spot, and the legend goes—though whether it is true or not we have not been able to ascertain—that where the principal doorway in Piccadilly stands, an old woman once kept an apple-stall, and that, when the first house was built, she disputed with the founder his right to the site, and so far succeeded as to procure an annuity by way of purchase-money for the spot of earth on which she was wont to vend her fruit, however that may be, the mansion was erected; and here, with the doorway and knocker still intact, stand the walls of Apsley-house the new, covering and protecting those of Apsley-house the old. On part of the site too, demolished to make room for the present building, stood the Hercules' Pillars, the noted inn where Squire Western, in "Tom Jones," put up when in pursuit of that scapegrace hero —"While Sophia was left with no other company than what attend the closest state prisoner, fire and candle, the Squire sat down to regale himself over a bottle of wine with the parson and landlord of the Hercules' Pillars, who, as the Squire said, would make an excellent third man, and could inform them of all the news of the town." And here, too, "that bluff, brave soldier," the Marquis of Granby, who died in 1770, is said to have spent many a merry and convivial hour in the midst of his boon companions. The western front of Apsley-house is ninety feet long, and was built by the nation for the Duke of Wellington, after the designs of the Brothers Wyatt, and is principally remarkable for a certain air of massive grandeur, as if in accordance with the character of its owner. During the reform riots, the duke was unpopular, and his windows were destroyed by the crowd. The bullet-proof iron shutters were put up about that time—in anticipation of another ebullition of popular feeling, probably—and have never since been taken down, the precaution having, as it is often the case, outlived the danger. Within that long dark chamber, however, rest some of the finest pictures in the world, among the most prominent of which is a portrait of Napoleon by the celebrated David, and the battle of Waterloo by Sir David Allan, in which Bonaparte is the foremost figure. The duke bought the last at the Royal Academy Exhibition, and his terse criticism—"Good, very good, not too much smoke," has stamped it as the *chef-d'œuvre* of battle-pieces. There are also several specimens by the old masters; and one, the portrait of the first Lady Lyndhurst, by Wilkie, has become historical from the fact of having been so much injured by a stone during the above mentioned riots as almost to defy repair.

According to Spence, Alexander Pope was a little while at Mr. Dean's academy, at or near Hyde-park Corner, where he signalised himself by a satire on his schoolmaster. It appears that, as now in that part of the New-road near Regent's-park, Piccadilly was once famous for statuaries, for in the "New Guide to London," published 1726, we are told that the statues at Hyde-park Corner is a sight worth seeing. There is an interest of another kind, however, attaching to this spot, for near here, though within the brick wall of the park, a fatal duel took place between Lord Mohun and the Duke of Hamilton, on the 15th of November, 1712, in which both combatants fell. There has always been somewhat of mystery attached to the cause of this quarrel, though politics were no doubt at the bottom of it: men killed each other for opinion's sake in those days.

But the other principal entrance possesses by far the greatest amount of interest, for here stood, near the spot now decorated by the marble arch from Buckingham Palace, the most conspicuous monuments of the extravagances of George IV., "the greatest gentleman in England"—the Tyburn gallows, the "deadly never-green" tree. The gallows took its name from a brook that

rose near Hampstead, and emptied itself into the Thames near Chelsea (now probably King's Scholars sewer), and the street through which the criminals passed to execution took its name from the gallows, for all Oxford-street was formerly known as Tyburn-road, and was so called by our grandfathers. What is now called Park-lane, was originally Tyburn-lane; and many a blood-stained criminal on his way to death has passed the portals of Holdernesse-house.

About Tyburn gallows a volume might be written; indeed, a vast deal has been written on its history, and the novels and poems of the last two centuries are full of allusions to its fame. It existed as a place of execution as early as the reign of Henry IV.; it was a wooden triangular erection, with a stage for the hangman, and the precise spot where it stood is now occupied by a handsome row of houses called Connaught-place. In Minsheu's Dictionary, published 1617, its derivation is given as having been so called of bornes and springs, and tying up men there; and in "Love's Labour Lost," Shakspeare makes Biron say—

> "Thou mak'st the triumviry, the corner cap of society,
> The shape of Love's Tyburn, that hangs up simplicity,"

and Taylor, the water poet, says of it, in his "Praise and Virtue of a Jayle and Jaylers," 4to, 1623,—

> "I have heard sundry men oft'times dispute,
> Of trees that in one year will twice bear fruit;
> But if a man note Tyburne, it will appeare
> That that's a tree which bears twelve times a yeare."

To give merely a list of the celebrated criminals who have suffered here would fill a column.

On Tyburn tree were hung the bodies of Cromwell, Ireton, and Bradshaw, at the Restoration. Their dead bodies were dragged from their graves in Henry VIII.'s chapel, in Westminster Abbey, whence they were taken by night to the Red Lion Inn, Holborn, carried on sledges the next morning to Tyburn, and suspended at the three angles of the gallows till sunset, to be afterwards beheaded, their bodies buried beneath the gallows, and their skulls exposed on the top of Westminster Hall!

In the last picture of Hogarth's Idle and Industrious Apprentices, we have a view of the triple tree, and its usual accompaniments.

To Tyburn, Henrietta Maria, the Queen of Charles I, made penance, walking bare-footed through the park; though the fact has been denied by the Marshal de Basompierre, the French ambassador. Poor queen, she might well be glad to escape to France during the stormy period that followed her husband's death, whether this story of the penance be true or not.

The daring of the highwaymen of the last century was the frequent subject of conversation in all circles. We have a vivid picture in Boswell's "Life of Johnson," of the impression made in even literary circles. Boswell asks his patron if he does not think Gray's poetry towers above the common mark! "Yes, sir," replied the great chain in his own peculiar way; "but we must attend to the difference between what man in general cannot do if he would, and what every man may do if he would. Sixteen-stringed Jack towered above the common mark." After this long palaver at the gates, methinks we can safely enter the park.

Turning round, naturally enough, to see the effect of the marble arch from the inside, we catch a glimpse through the opening of the churchyard belonging to the parish of St George's, Hanover-square; in the centre of which, Laurence Sterne, the author of the "Sentimental Journey," lies buried. There is an ordinary-looking head-stone erected to his memory. He died at the "silk-bag shop" mentioned by him in "Tristram Shandy," 41, Old Bond-street, on the 18th of March, 1768. The shop is now kept by a cheesemonger: alas, poor Yorick! In the same street, 146, with Sterne, lived the brave Sir Thomas Picton, who fell at Waterloo; and in the same churchyard with Sterne he was buried—though fifty years divided the tenancy of each, of both home and tomb.

But we are now fairly in the park, and luxuriating in the sunshine. Well, it is a noble place, and worthy the World's Fair. Rather different in appearance now to what it was three hundred years ago, when the French ambassador hunted with King Edward VI., and the Duke Casimir "killed a barren doe with his piece in Hyde-park, from amongst three hundred other deer!" And what a contrast it presents in our day to what it did in that of Charles I., when horse and foot-races round the Ring were the principal source of amusement to the frequenters. The second Charles, however, introduced a better style of pleasure in Hyde-park; and it was during his reign that it was first regularly laid out in walks and drives, and became celebrated as a place of fashionable promenade—a reputation it has ever since retained. And we need only cast our eyes around on the gay equipages in the Ring, the spirited horsemen and horsewomen in Rotten-row, and the delighted pedestrians everywhere, to justify our previous good opinion of the taste which chose this most noble of parks as the temporary home of the Crystal Palace.

Hyde-park was first enclosed in a brick wall during the reign of the second Charles, having been previously only fenced in with what are called indifferently "park palings" and "deer fences." The present open iron railings were erected by desire of George IV.; in whose reign also the so called statue of Achilles, "inscribed by the women of England to Arthur Duke of Wellington, and his brave companions in arms," was erected. The statue was cast by Sir R. Westmacott, R.A., from cannon taken from the enemy during the Peninsular war, and the cost of erection was entirely defrayed by a subscription raised among the fair sex, which is said to have amounted to upwards of £50,000. It is a fine figure, though there is little of originality of conception in it, it being a good copy merely of one of the fine antiques on the Monte Cavallo at Rome. When reviews are held in Hyde-park, they usually take place in the open space behind and to the left of the Achilles statue.

Making our way towards the Ring, which was planned in the time of Charles I.,—and somewhat defaced in order to get room to complete the Serpentine, though several of the original trees are still standing,—we come in full view of what constitutes the great charm of an English park;—not trees and water alone, nor gravelled paths and well-kept rides, but the green luxury of beautiful meadow free to all, from prince to peasant. If in days past Oliver Cromwell, "accompanied by his secretary, Thurloe, and some few gentlemen," was wont to "take the air" and show off his skill in coachmanship, even to the detriment of his own limbs and the spraining of his secretary's ankle (for which fact search in Thurloe's State Papers, vol. ii. p. 552, "and when found, make a note of it"); in our day, Thomas Smith, or Robert Jones, or John Robinson, citizens and householders, can drive their dear partners, or sweethearts, or children, in the "chay" on Sundays, without let or hindrance, and with probably much less chance of a tumble than the parliamentary soldier had.

Better than any regular history of the Park are the snatches of gossip we find in the works of the poets and playwriters of the last two centuries. Glorious old Pepys and famous John Evelyn make frequent mention of the sports common to the spot in their day, but, though they were contemporaries, we much prefer the authority of Pepys, because he kept his diary day by day, while there is internal evidence to prove that Evelyn sometimes neglected to insert anything in his note-book for weeks together. Now, although the fact is nowhere positively stated, it is certain that at one time, the privilege of riding in the Park was a purchaseable one; for under date April 11, 1653, Evelyn says he "went to take the aire in Hyde-park, where every coach was made to pay a shilling, and horse sixpence, by the sordid fellow who had purchased it of the State as they were call'd." And five years after (May 20th, 1658), he tells us that he "went to see a coach-race in Hyde-park, and collationed in Spring-garden." Shortly afterwards it appears that the shilling tax was taken off, and the coach-races discontinued; for two years later (August 10th, 1660), we learn from the diary of the immortal Pepys that running matches were common in the park—"With Mr. Moore and Creed to Hyde-park by coach, and saw a fine foot-race three times round the park, between an Irishman and Crow, that was once my lord Claypoole's footman." Three times round the park probably meant three times round the Ring. It was the custom in Hyde-park in that day, it appears, to sell milk and so on at the lodges, as it has been of late years in various parts of St. James's-park: for Pepys tells us that on the 25th of April, 1699, he took his wife to Hyde-park, and "there in our coach (he set up a coach of his own in this year), eat a cheesecake and drank a tankard of milk." It must not be supposed, however, that the good old chronicler always confined himself to such simple beverages; by no means—for the master of the Clothworkers must needs have been a "jovial soul," else he would not have presented his company with the silver "loving cup" out of which they still quaff their sherbet on state occasions.

That Hyde-park was a fashionable place of meeting in Charles II.'s reign there are heaps of satisfactory evidences. De Gram-

mont tells us that all who had sparkling eyes and splendid equipages constantly repaired thither, while young Bellair, in Etherege's "Man of Mode," says, the most people preferred Hyde-park to the Mall (in St. James's). Many curious customs of our ancestors are incidentally mentioned in these notices;—for instance, we are told by Colley Cibber, that the ladies were in the habit of taking Kynaston, the actor who played the female parts in Shakespeare's plays, with them in their carriages in the Park after the play, and that on such occasions the actor wore his theatrical habit. Lest people should doubt as to ladies riding in the park *after* the play, Cibber goes on to tell us that they could do so easily, "because plays were then used to begin at four o'clock: the hour that people of the same rank are now going to dinner. Of this truth I had the curiosity to inquire, and had it confirmed from his (Kynaston's) own mouth in his advanced age." It does not say much for the delicacy of the language used at the theatres in Charles's age, when the fact of the ladies going thither in masks is mentioned; nor does the publication of the following advertisement, which appeared in the *Post Boy*, June 8th, 1695, say much for public morality:—"Some days since, several persons of quality having been affronted at the Ring in Hyde-park, by some persons that rode in hackney-coaches in masks, and complaint thereof being made to the Lord Justice, an order was made that no hackney-coaches be permitted to go into the said park, and that none presume to appear there in masks," an order which has never since been rescinded.

The Ring in Hyde-park is memorable as having been the place of meeting between Wycherley and the Duchess of Cleveland. Pope tells the anecdote in a piquant way. "Wycherley's acquaintance with the famous Duchess of Cleveland commenced oddly enough: one day as he passed the duchess's coach in the Ring she leaned out of the window, and cried out loud enough to be distinctly heard by him, 'Sir, you're a rascal!' 'you're a villain!' Wycherley from that moment entertained hopes." It must be explained, here, that when the duchess called the poet a villain and a rascal she was quoting a line from one of his own songs, and, for that reason, possibly, he had ground for hope, at any rate, events proved that his hopes were well founded. In the Ring, too, was fought the celebrated duel between Samuel Martin, M.P., and John Wilkes, in which the latter was wounded in the stomach. The cause of dispute was a passage in Wilkes's paper, the *North Briton*; and the event made a great noise at the time (November, 1763). With one other remark we will quit the Ring and make our way to the Serpentine, in which, before eight a.m., we have often plunged. The water is too dirty now. In Pope's "Rape of the Lock" he says—

> "Sooner shall grass in Hyde-park Circus grow,
> Than wits take lodgings in the sound of Bow;"

which distich clearly indicates the tendency of mankind to *go west*.

> "The river, the river that ceaselessly flows,
> Where the nightingale warbles, the violet blows,"

is far from an applicable rhyme for the Serpentine river; for a more unfit stream for all the purposes of health, recreation, or utility, it would be difficult to find near London. It is a wonder how the foreign-looking ducks and wild fowl contrive to live on its bosom—but perhaps dirty water suits their constitution. At any rate it has been proved over and over again, that the fifty acres of water here collected is in a high degree dangerous to the sanitary condition of the surrounding neighbourhood. In the summer of 1848, a commission was appointed to consider the propriety of cleansing the Serpentine, and Sir John Rennie estimated the cost of removing the mud deposit from the bottom of the stream, reducing it throughout to one uniform depth, and insuring a constant stream of pure water, at not less than £30,000. And when we consider how many thousands bathe in these waters, and how many more thousands inhale the insensible miasma while walking beside what appears to be a clean running-stream, but which is in reality a partially stagnant pool, we cannot but regret that considerations of expense should weigh with the government, nor forbear the expression of our hope that this memorable summer will not pass over without something being done to alleviate this crying evil.

We have already said that the Serpentine river was formed by order of Caroline, Queen of George II, but we forgot to add that when the supply from the Bayswater sewer was cut off, in 1834, the less of water was so great that the river was fed by pipes from the Chelsea water-works, and that to this partial and insufficient supply are to be traced nearly all the evils attendant on the present state of this artificial collection of water. In 1820 the waterfall at the east end was erected, though it is often dry and dumb for weeks together. The neat classical edifice erected by Decimus Burton for the Royal Humane Society, and the boat-house, where boats are let for hire, are on the north side; while the Palace of Glass, now in course of removal, was built on the slip of ground between Knightsbridge and Rotten-row, having a small grove of trees between it and the high road. What is called the ornamental water in St. James's-park, as well as that in the private gardens of Buckingham Palace, is supplied from the Serpentine, the depth of which varies from one to forty feet; a fact which renders a bath rather a perilous undertaking, if the bather does not happen to swim. In 1783, Price's Lodge (interesting only in connexion with the deaths of Lord Mohun and the Duke of Hamilton) was taken down, "together with part of the grove, in order to complete the Serpentine river." The last words are quoted from the *Daily Post*, April 20th, 1733.

We are not acquainted with any other historical fact connected with Hyde-park of sufficient importance to warrant our lengthening this already-too-long paper, and it is foreign to our purpose to speak of the sad uses to which weary humanity has too often put the Serpentine river, but we must not conclude without expressing a hope that our gossip will be acceptable to those who are acquainted with Hyde-park; with those who are *not* we are quite sure to find a welcome.

Here's a quotation from Byron quite *apropos* as a finish.—

> "When its quicksilver's down at zero—lo!
> Coach, chariot, luggage, baggage, equipage!
> Wheels whirl from Grafton palace to Soho,
> And loppers they who horses can engage;
> The turnpikes glow with dust, and Rotten-row
> [illegible]
> [illegible]"

MISSISSIPPI STEAM-PACKETS.

In our last week's Number we gave some few particulars of steam navigation, with an engraving of an American iron steamboat. In that article we refrained from making many remarks on the peculiar vessel on which our cousins of the west so pride themselves,—simply for the reason that we could say nothing on the subject from our knowledge; the publication, however, of a new volume,* and the arrival of a file of American papers, enables us to add a few particulars, which may be considered authentic. In the following extract we have an interesting description of the incidents of Mississippi steamboat journeying.

"A rainy and unpleasant day; I went down to the Levee (*i.e.* quay), and inquired on board one of the Orleans packet the 'William Noble,' when she would start, as the printed board intimating in eight-inch letters that 'the William Noble for New Orleans this day,' had been, or may have been statin the same thing for any indefinite number of days previous. The nearest approach to certainty is to be had only by examining the quantity of freight on board, and on the levee for shipment, and conclude accordingly. If she lies high, and there is a good deal of freight to go aboard, with only a few passengers entered, you may read this day, as in five days and so on, according to circumstances; it graduates down until, eventually, it may be held to signify, to-morrow. Sometimes you will perceive the dense smoke, and hear the bustle of preparation to be off, you conclude she is going now, sure but no—you need not hurry, it is only a pleasant fiction of the captain's. they are merely firing up, as the finale of advertising stratagems; it is merely a puff, and coming evening ends in smoke. With all this experience in view, I did, neverthless, ask the clerk when she would start. 'This evening, sir, at five o'clock precisely, sir,' said he, with the emphatic precision of a man that considered five minutes after five as a perfect impossibility: perhaps I asked deprecatingly, 'Six o'clock will be time enough to come down?' 'We start at five, sir,' was the oracular response, with the addenda, 'if you wish to go with us, sir, you had better be on board at a quarter to five o'clock.'—Having paid our fare, with an inherent longi

* Two Years on the Farm of Uncle Sam; with Sketches of his Location, Neighbours, and Prospects. By Charles Casey. London: Richard Bentley.

after the wonderful, we were on board at fifteen to five, but there she lay, smokeless and steamless; her gangway filled with a stream of strong men, rolling in heavy barrels, boxes, &c. We went up to the saloon, sat down at the stove, and counted the minutes (not that we had the most remote idea of departure), but to demonstrate to our own satifaction, that we had once and again hoped against fate, by relying on the clerk's promise. 'How soon will you get out, sir?' said a new comer to my precise friend.—'After dark, I expect, sir!' replied the infallible official. Whereupon we mentally hugged ourselves, from a knowledge of the superior experience which we had bought and *paid for*. At nine o'clock we were to start in the morning, and in the morning we were to be off at ten o'clock, which said ten o'clock eventually came in the familiar shape of four o'clock in the afternoon, when we at length slipped off down the Ohio; and as we watched the receding town, and the beautiful banks, we could not help philosophising a little on the uncertainty of terrestrial things in general, and the emphatic uncertainty of the starting time of Orleans boats, in particular; and as the shades of evening rendered the outlines of our course dim and shadowy, and we watched the two volumes of brilliant sparks, that showered in a cascade of fire, from the tall chimneys, shooting hither and thither in mazy, serpent-like masses, we found we had arrived at a settled conviction, which we hold to this day, that, with the captains' clerks and other officials of steamboats, hyperbole is a natural form especially on subjects appertaining to the capacity, safety, speed, and staring fame, of the particular boat with which they are connected. But to every question there are two sides, nor do we think there is unmixed evil in the world. The saloon of the western steamboat runs clear fore and aft the length of the boat; it is elegantly fitted up, and has a succession of two berthed state-rooms at either side for the whole length. The table is good, and the general comfort provided for The charges are particularly moderate, being from 10 to 15 dollars for an Orleans passage (1,500 miles), including board, attendance, &c"

On the subject of the actual danger encountered by the voyagers in these light and elegant vessels we present our readers with an extract from the *New York Herald* of August 7th. In the following table is given a list of steamboat accidents in America within the present year,—a period of little more than six months:—

STEAMBOAT ACCIDENTS IN THE UNITED STATES IN 1852

Jan. 9.—Boiler of steamer Magnolia exploded at St Simon's Island, Georgia 13 persons killed, 11 injured
14.—Boiler of steamer George Washington exploded near Grand Gulf, Miss. 16 lives lost, ten persons injured
14.—Steamer Martha Washington burnt near Memphis, Tenn 5 lives lost.
23.—Steamer Pitzer Miller's boiler exploded at the mouth of the White river. Several persons killed
25.—Steamer De Witt Clinton struck a snag near Memphis, Tenn. 40 lives lost
31.—Steamer General Warren wrecked at Astoria, Oregon 42 lives lost
Feb. 14.—Steamer Caddo sunk near New Orleans 5 lives lost.
29.—Steam towboat Mary Kingsland's boiler burst below New Orleans. 5 lives lost, 3 persons injured
Mar. 26.—Steamer Pocahontas collapsed her flues near Memphis, Tenn 8 lives lost, 18 persons severely scalded
26.—Steamer Independence wrecked in Matagorda Bay, Texas. 7 lives lost.
April 3.—Steamer Redstone's boilers exploded near Carrollton, Ia 21 lives lost, 25 persons injured
3.—Steamer Glencoe blew up at St. Louis Number of lives lost unknown.
9.—Steamer Saluda's boiler exploded at Lexington, Mo 100 lives lost.
11.—Steamer Pocahontas burnt near Choctaw Bend. 12 lives lost.
25.—Steamer Prairie State collapsed her flues on the Illinois, killing and wounding 20 persons.
May 19.—Steamer Pittsburg's cylinder heads broken, killing 1 and injuring 3 persons.
June 14.—Steamer Forest City collapsed a flue at Cleveland. 3 lives lost.
July 5.—Steamer St. James's boiler exploded near New Orleans. About 40 lives lost.
July 12.—Propeller City of Oswego run into by another steamer, near Cleveland, and sunk. 20 lives lost.
28.—Steamer Henry Clay burnt near Yonkers, on the Hudson. About 80 lives lost, and about 20 more or less injured

THE MELANCHOLY RESULT IN FIGURES.

	Number of Steamers.	Lives Lost.	Persons Injured.
January	6	116	21
February	9	10	3
March	2	15	18
April	5	113	35
May	1	1	3
June	1	3	.
July	3	140	20
Total	20	428 (!)	100 (!)

"The numbers lost by the disaster to the Pitzer Miller and Glencoe, not being known, are not included in the foregoing list; but there can be little doubt, that if added to the other cases which have been ascertained, the aggregate would amount to at least five hundred human beings sent prematurely to their account, with all their imperfections on their heads. We give this frightful table in order to draw the attention of members of Congress to the subject, in connexion with the bill now before them. We learn that this bill, though very valuable, is found to be deficient in some points, and that the attention of Congress will be directed to the subject, in order to cover those points, and to render the bill as perfect as possible. Now is the time for action on the part of Congress: and the country looks to their wisdom and humanity for a measure that will give ample protection to the whole travelling community of the United States."

We are unwilling to add a word on this subject. The facts, as stated, speak for themselves.

LITERARY NOTICE.

THE SCIENCE OF BOTANY Illustrated by upwards of Three Hundred Engravings from Drawings from Nature.—In THE ILLUSTRATED EXHIBITOR AND MAGAZINE OF ART, Number 36, is commenced a series of chapters on the instructive science of Botany Each chapter will be profusely illustrated with engravings, carefully executed These chapters on Botany will not interfere with the general character of the work, which contains first-class engravings, including portraits and specimens of the works of the great masters, in painting, sculpture, and architecture, portraits of eminent characters, views of cities, palaces, and public buildings; natural history, manufacturing processes, machinery and inventions, scientific, including the elements of design, perspective, hydraulics, the stereoscope, &c.; ornamental sculpture, needlework, &c, with original literary articles, including biographies, descriptions of works of art, details of manufacturing processes and machinery, papers on natural history and other branches of science, and much interesting fragmentary matter The ILLUSTRATED EXHIBITOR AND MAGAZINE OF ART is published in weekly Numbers, twopence each, or in monthly Parts, 9d. or 11d each, according to the number of weeks in each month.

CASSELL'S SHILLING EDITION OF EUCLID — THE ELEMENTS OF GEOMETRY, containing the First Six, and the Eleventh and Twelfth Books of Euclid, from the text of Robert Simson, M D, Emeritus Professor of Mathematics in the University of Glasgow; with Corrections, Annotations, and Exercises, by Robert Wallace, A M., of the same university, and Collegiate Tutor of the University of London, is now ready, price 1s, in stiff covers, or 1s 6d neat cloth.

THE POPULAR EDUCATOR —AN EXTRA EDITION of this extraordinary work, on fine paper, at 1½d per Number, or in Monthly Parts, in a neat wrapper, at 7d., or when Five Numbers 8½d., is now published, and is issued without the weekly headings. Persons wishing for this edition must be careful to order the "*Extra* Edition" The whole of the Numbers may now be obtained, or the first Three Parts—Part I., 7d, Part II, 8½d, Part III., 7d. The Common Edition, at One Penny per Number, Monthly Parts, 5d., or 6d., is regularly issued. The First Volume of THE POPULAR EDUCATOR will be ready Oct 1st Common Edition, with Weekly Headings, 3s. 6d; Extra Edition, without the Weekly Headings, 4s. 6d, or strongly bound, 5s.

THE PATHWAY, a Monthly Religious Magazine, is published on the 1st of every month, price twopence—32 pages enclosed in a neat wrapper. Vols I and II, neatly bound in cloth and lettered, price 2s. 3d each, are now ready.

BITS OF MY MIND.

I HAVE sometimes wondered whether *Methuselah* went on through *his* life, thinking worse and worse of human nature, all the time?

MEN believe any religion, rather than none, however absurd, for the same reason that if compelled to set out on a voyage of which they absolutely know *nothing*, they would take the directions of *any old woman* who professed to know *something*, rather than none.

THERE is a certain class of men whose great apparent *serenity* is nothing more than an habitually repressed *irritability*

"A STATE" is only the aggregate of the virtue and intelligence of its citizens. If they cease to be "citizens" and become "self-seekers" merely, there must soon cease to be a state.

To teach young women to prattle learnedly, about science or any other recondite topic always seems to me to be like teaching *canary birds* to go through the military exercise, fire cannons, &c. One wonders to see it done at all; but still more at the misplaced pains that produced it

UNDER the head of "feeling" there are three classes of persons. *First*, persons who can feel for others, as well as what immediately pertains to themselves. *Second*, persons who can feel for themselves and those depending immediately upon them. *Third*, people who can neither feel for themselves nor anybody else.

I NEVER could understand the notion of generals holding "councils of war," as they are called In my mind the general's or admiral's office is *sole* and cannot be communicated to others without certain and probably immediate mischief Thus all great generals have viewed it. Napoleon, Wellington, and Nelson, in modern times, and Hannibal, Scipio, Marius, and Cæsar, in ancient ones, never listened to "councils of war."

NEVER be "talked into" doing anything that is irrevocable, for this plain reason,—because if it do not answer the representation you cannot be *talked out of it again*.

I WOULD rather associate with *good-hearted* people, however moderate in talent or deficient in shining qualities, than with the most accomplished *heartless* coterie in the universe

THERE is one marked and remarkable feature of Astronomy, and that is, that multitudinous as seem to be the stars (suns or worlds be they) planted over the vast visible universe, various as must be their attributes, products, natures, and bases, yet in one or two grand points they all agree and are one and the same—*They are all spheres! They all give out or reflect light.*

I FANCY it will hardly be denied that *authors*, even upon the most ordinary estimate of the utility of their labours, have been the *worst paid* of all labourers of whom we know anything Now what does this prove? That, after all, appearances deceive and that a *plough* is a far preferable thing to a pen, or that *money payment* is not applicable to labourers so transcendental as those of mind? If it proves neither of these alternatives, I wish somebody would tell me what it *does* prove for, from so astounding a fact, we ought, if we are able, to deduce *something*.

"SLANG" sticks to coarse and vulgar minds just as "burs" stick to duffle coats

To treat prosaical things in a poetical way is often called "eloquence;" I am by no means sure it is not ill-taste.

I WOULD no more advise any man to show that he is in advance of his neighbours, either in point of knowledge or virtue, than I would advise a soldier to stand in advance of his regiment, when they were about to fire a platoon of ball cartridge.

THE horse outstrips the man the first day, but in a journey of fifty days, the man out-walks the horse So noise and bombast tell on the crowd at first, but in the end, common sense prevails and leaves mere rhetoric behind

THERE is an old saw, that "he who goes a borrowing goes a sorrowing." That is to say, he who goes on "tick," finds it in the end to be "tic dolloureux!"

BEWARE of those (man or woman be they) who think their home a prison. The odds are that they, and all connected with them, nearly, will, in the end, get a prison for their home.

PERHAPS the most valuable part of the true English mind is its *clearness* France, Italy and Germany, have produced mighty minds, but are they not inferior in this respect to our English reasoners? To our Lockes, our Humes, our Newtons, our Edwardses, our Cobbetts, and our Paines?

IT is strange but there are some men, nay many—ay, and clever men too, who either give the world credit for so much understanding, or so mistake their own, that they will render obscure that which they ought to make clear, and be ashamed to utter truth save in dark oracles and adumbrated sayings

I HAVE heard it maintained that no man, nor woman either, could attain a fine English style, unless he (or she) knew a good deal of Latin and Greek This is sad pedantry! Shakspeare, the greatest master of the English poetry, knew little or no Latin and Cobbett, one of our very best prose-writers, none at all

LET political economists turn, twist, subdivide and perplex the matter as they will, it is clear enough to me that a nation can only be enriched by its own direct industry and toil,—that chicane has nothing to do with it, but in appearance, and that foreign trade is only a roundabout road to the same end.

IT is one of the wonderful privileges of men of genius to make friends *at a distance* amongst kindred minds, without even seeing or being seen by the owners of these sympathetic minds. This is *to compensate* for the paucity of the persons capable of sympathising with them, with whom they come into frequent, actual contact How mysteriously is this world governed! How wonderfully managed!

A SAILOR in a surtout and a fish out of water are synonymous terms

THE world is undoubtedly "a jostle" but a good government makes it a friendly and pleasant jostle, like the crush for the supper-room at a ball, where though *some* get *best* in, and first served, *all* get in and are comfortable at last

WHEN a man says "he believes he may say a thing with certainty," he means he is somewhat *uncertain* of it

ONE of the worst of mistakes is the notion that people may go on living in the constant practice of *absurdity* without accompanying *mischief*

IT is a very common observation that poets, indeed men of genius in general, are "not fit for the world" Be it so. But, let it also be granted that the converse proposition holds good, and the world is "not fit for them."

IT always appeared to me that La Fayette was the "Sir Charles Grandison," of the French Revolution.

NOTICES TO CORRESPONDENTS.

MACEDONIA.—The immediate successor Washington as President of the United States America was John Adams. He was elected March, 1797, and remained in office till March 1801. There are 32 states in the union. Th Congress consists of a Senate, composed of tw members from each state, and a House of Repr sentatives, composed of one representative f every 70,680 persons in each state, and one addi tional representative for each state having a frac tion greater than one moiety of the said ratio Members of the Senate are chosen for six years one-third of them being elected biennially. Th representatives are elected for the term of tw years The number of vessels of war of the Unite States navy is thus given an an American navy list now before us —Ships of the line, 11, frigates first class, 12, frigates, second class, 2, sloops o war, 22, brigs, 5, schooners, 8; bomb-vessels, 5 steamers, 13; storeships and brigs, 6 You other questions we must answer in our nex number

A LABOURER.—The lowest scale of outfit re quired by the government commissioners fron free passengers (males), is 6 shirts, 6 pairs o stockings, two pairs of shoes, two complete suit of exterior clothing, towels and soap And in re turn for the deposit of one or two pounds, the supply each emigrant with a mattress, bolster blankets, counterpane, canvass bag, knife, fork and drinking-mug.

A CONVALESCENT —Without doubt the "bitte ales" contain a portion of alcohol, quite enough to intoxicate if taken in sufficient quantities, and quite enough to injure and to excite a desire fo stronger liquors, if taken in any quantity "Pale' and "bitter ales" may be free from strychnine and yet possess other injurious properties.

C TURNER (Mile-end).—If the nuisance o which you complain existed before you took the house, we fear you have no remedy It is not case in which the Commissioners of Sewers would interfere

A YOUNG MECHANIC —If, as you say, you ca get constant employ at 24s a week, pray keep to your work, and abandon the idea of seeking em ployment 3,000 miles off

AN APPRENTICE —If your master is dead, and your mistress does not see that you are properly instructed in your business, you had better appl to a magistrate and get your indentures cancelled

S R W —Hobbs's patent locks may be obtained at his office, recently opened in Cheapside

W T A.—As you have been refused your certificate as a bankrupt, without protection, you certainly are at the mercy of any creditor You should endeavour to make arrangements with them, giving them reason to believe that you intend henceforth to act honestly and honourably

A SINGLE MAN.—We have no influence with the authorities at the Inland Revenue Office It is not easy to obtain a situation there.

A YOUTH (Hackney-road).—The Spitalfields Government School of Design is just the institution you require. Show your sketches to the secretary You will have more than an hour's instruction three days in the week, at the small charge of 6d. per week for the morning lessons, o 3d per week for those in the evenings.

W. KINGSTON.—The portraits you want are scarce Inquire for them at Evans's, corner o Great and Little Queen Streets, Lincoln's-inn fields

A WHEELWRIGHT.—You may safely reckon upon constant employment in Australia The sum you say you have saved will take you there in comfort, and enable you to take with you some axles, tires, springs, and other articles ready made, the possession of which will render you services most desirable immediately on your arrival

A REFORMER (Chelsea).—"The Standard o Freedom" is discontinued, but you are welcome to search our file, if you can call at our office.

A TEETOTALER.—Yes A subscription of 5s a year entitles you to membership in the London Temperance League, and to the use of the library &c., at the reading-room, 337, Strand The Rev Albert Barnes declines attending any public meetings during his stay in this county, on account of the delicate state of his health.

All Communications to be addressed to the Editor at the Office, 335, Strand, London.

Printed and published by JOHN CASSELL, Belle Sauvage Yard, London.—September 4, 1852.

RUSSIA AND THE RUSSIANS.—V.

MOSCOW.

As an intimate acquaintance with a great city cannot be made in a single visit, so neither can we hope to exhaust the interest of a subject, so large and various as the description of Moscow, in a single article. Without attempting, however, anything like a description of the numerous attractions of this city, we may follow the footsteps of the intelligent traveller, and jot down our conclusions by the way.

The palaces of Moscow of course claim precedence over all other kinds of buildings. Next to the Kremlin, the Terema, is that part of the old palace of the Tzars is called, demands attention. The word Terema, or Terem, is applied, in every peasant's dwelling, to that part of the building round which runs a covered balcony; but the word is, *par excellence*, applied to the palace of that name in Moscow. It consists of four stories, of which the lowest is the largest; the upper ones diminish, pyramidally, till the uppermost contains but a single apartment. On the space thus left by the retreat of the upper story from the ceiling of the lower, is formed a kind of balcony both within and without the building, the steps of which proceed from the ground to the roof of the building. The lowermost rooms consist of the throne and audience chambers of the old Tzars, the next floor contains the rooms devoted to the education of the Tzarovans or princesses, while those above consist of the apartments of domestics and officers of state. The Terema is now used only as a kind of show palace, just as the greater part of our Windsor Castle is, and it is therefore decorated in a most gorgeous

PUNISHMENT OF DRUNKARDS IN MOSCOW.

style—arabesque ornamentation in the manner of the Alhambra, gold, silver, flower, scroll, and figure work mingling together in a kind of semi-barbarous splendour. In the Terema are preserved the portraits, armorial bearings, and other trophies of the ancient Tzars: besides heaps of knick-knackeries of a kind and variety which would have delighted the heart of Horace Walpole, being crowded into every imaginable corner, and stowed away in every conceivable space. From the roof of this building a fine view of the city

may be obtained; and it was from its topmost terrace that Napoleon looked down upon its crowded streets and houses on his arrival in Moscow, and contemplated the splendour and beauty of his unholy conquest. A little time elapsed, and he stood at one of the windows of the Kremlin and watched the burning of the devoted city, and, as the flames mounted higher and higher, and twined their snake like tongues about the fair outlines of many a beautiful dwelling, it may be that he felt a pang of remorse for the result of his own towering ambition, mingled with an involuntary feeling of respect and admiration for a people who were patriotic enough to sacrifice their houses and wealth, rather than acknowledge allegiance to the Corsican.

We mentioned the Granovitaya Palata (see p. 355); this is a singular building of a quadrangular or cubical form, which was formerly attached to the great palace. It contains the coronation-hall of the Tzars, and in it the present emperor was crowned The crimson velvet hanging used on that important occasion still decorate its principal apartment, and the throne of the emperor, under a velvet canopy, is shown to the visitor After the ceremony, the kings of Russia were wont to sit in this apartment in their imperial robes, and entertain the principal personages of the realm. After the royal banquet the room is unused and untrodden, except by the foot of the curious stranger, and no kind of ceremonial takes place within it, till death calls the monarch away, and the luxurious table is spread anew for his successor.

The palace erected by the emperor Alexander is situated on he spot where the old Tartar palace once stood. It is called he Bolshoi Dvoretz, or greater palace, and is distinguishable imply by its lofty façade, and its rather ambitious style of ornamentation The interior, however, is comparatively mean nd insignificant, and it is principally used as a sort of lesser oyal palace. Of course, the visitor to Moscow wishes to see ll that is worthy of observation, and for that reason he eldom misses a sight of the private apartments of the various crowned heads who have from time to time made the palace their home. Here may be seen the throne-room and the bath of the empress Marin, and in almost every apartment are preserved memorials of various great personages—here a scent box of a queen, there a handkerchief which once belonged to an emperor; everywhere some personal memorial, more or less affecting according to the renown of the original owner, or the knowledge and taste of the visitor. In this palace is shown the apartment, from the windows of which Alexander addressed the assembled multitude on his return from Paris in 1814, with the news of the complete overthrow and banishment of the emperor Napoleon.

There is attached to the Granovitaya another palace called the Maloi Dvoretz or little palace. It was built by the emperor Nicholas, and is considered a kind of private residence for the monarch. The principal things in this palace which will attract the attention of the visitor, are the pictures, and, as in the larger building, the personal properties left by its various occupants, all of which are shown to the stranger without fee or reward. The bed on which the present emperor lies when he visits this palace is quite a curiosity in its way, if only for the extreme plainness of its style, and the tremendous hardness of its mattrass. The gilded couches in which kings are said to take gentle slumbers to the sound of delicious music are evidently quite unknown in Moscow. The library of the emperor is small but valuable, as it contains a copy of every principal work which has been written on the subject of the Russian empire.

In Number 47 we gave an engraving of the Church of the Assumption – the Aspenai Sabor, as it is called, in the Russian language. It is difficult to say how many churches and chapels are to be found in Moscow. Many of them are extremely beautiful, especially the Angel Roi Sabor—the church of the Archangel Michael—on the height of the Kremlin. Next in beauty and importance is the Church of the Assumption. It was founded in 1325, and rebuilt in 1472. In it are the tombs of the patriarchs of the Greek church, one of whom, St. Philip, is said to have bearded Ivan the Terrible in his palace with these remarkable words—"We respect you as an image of the Divinity, but as a man you partake of the dust of the earth." The church, like most large Russian buildings, is full of gold and silver ornaments, statues, and relics. "The cathedrals and churches of Russia," says the Marquis of Londonderry,* "are decidedly amongst the objects well worthy of examination. The Church of Vassehi Blagoden is of all other the most singular and remarkable. I should not forget to allude to the enormous bell which is close to the Kremlin Cathedral, in commemoration of a horrible famine in Russia in 1600 This bell was destroyed by the French in 1812, but was afterwards repaired and put into its tower again, from which place you can see thirty-two large cathedral or church spires.

"The institutions are composed of three classes: those established by the government for public instruction; those that are formed by general and individual philanthropy; and those that are purely military, and for branches of the public service Those which I inspected are the following —

"1st. The Foundling Hospital, which is on a much greater scale than anything I ever could have imagined; it is in perfect order and under the most judicious management.

"2nd. The Establishment des Demoiselles Nobles.

"3rd. The Military Hospitals.

"4th. The Cholera Hospital.

"5th. The Lunatic Hospital.

"6th. The Corps des Cadets.

"At Moscow, as elsewhere in Russia, the most talented persons from other countries have been engaged to be placed at the head of the institutions. Russia shows sense and dexterity in availing herself of all the advantage which can be derived from the information, superior knowledge, and acquirements of other countries. Moscow is governed by a senate and a synod and a College des Affaires Etrangères (all under the civil and military governor), who correspond with and receive their orders direct from the departments of Petersburg.

"The number of public institutions is beyond belief. I was informed there were upwards of 1,000 professors, and 16,000 clerks in the different seminaries. There are 7 cathedrals, 300 churches, and 700 chapels, and the population is about 280,000. The convents are 21, 14 of which are for monks, and 7 for nuns There are 168 large streets, 651 small, and 54 squares, 9,000 shops, 500 hotels or inns, and 300 restaurateurs also 33 public and 600 private baths. This may give some idea of the magnitude of the place. Many beautiful châteaus and palaces are in the neighbourhood, which I was unable to visit. The Château Petrokshi, built by Catherine II, the Château Isantique, erected entirely by Potemkin for the empress, the Chateau Kolomenskir Celo, the Château Askhangkelsk, and various others, are very worthy (as I was informed) of examination, possessing great riches in pictures and other valuables.

The St. Sauveur Bridge and another form the communication between the Kremlin and the citadel; the latter, called La Belle Place, has in itself formidable works. The garden of Alexander, and the boulevards which surround the town afford beautiful drives and walks. The magnificent Bazaar of Moscow (which resembles the Gastinodivor of St. Petersburg) is situated in the Place Rouge or La Belle Place. It contains all the depôts of merchandise, persons of all nations, denominations, and tribes. The Exchange is conspicuous, and connected with the *Raidhi*, the name of the bazaar. The next two important streets are St. Basbe and St. Else; and not far from these the Grand Place of the Theatre, called Petrosskaia The representations here are often equal to those of St. Petersburg, especially in national pieces; and the building is of the largest description. Not far off the theatre is the most extensive riding school perhaps in the world, in which a large body of cavalry may be exercised. There is, besides, an extraordinary large ball-room, called L'Assemblée de la Noblesse. The city is divided into twenty sections. The houses in the suburbs are of wood, but the fine palaces and buildings in the city of stone. The pavement is bad, and the lighting indifferent; but twilight in this northern clime is so long, that this inconvenience is not much felt.

"In the two Russian capitals,† Moscow the ancient and Petersburg the modern, there is a freshness of colouring," says Captain Frankland, "which does not exist elsewhere; the façades of all the houses, and the towers of the churches, are either white, yellow, stone-colour, pink, or French gray

* Recollections of a Tour in the North of Europe in 1836-1837; by the Marquis of Londonderry. London: Bentley.

† Narrative of a Visit to the Courts of Russia and Sweden in the years 1830-31. By Captain C. Colville Frankland. London Colburn.

the roofs are light green or deep red. The effect of this elegant colouring is amazingly heightened in Moscow by the bulbous, swelling, inverted-balloon-looking domes of the churches and monasteries, covered, as most of them are, with glittering gold; many of them, for the sake of contrast, are painted blue, and spangled with golden stars; others are green or red, and surmounted by filagree crosses standing upon a crescent. The beauty of their graceful groupings is hardly to be conceived. Surely the Russo-Greco architects must be born with an intuitive conception of the beautiful. I take it that these inverted-balloon-looking domes are of Indian or Tartar origin; for such are those of the great temples of Agra and Delhi, of which I have seen drawings. There are, however, many Italian, and some few Byzantine cupolas, mixed up in the panorama.

"Nature has done a great deal for Moscow, as its site and environs are very diversified and undulating. However, there are no streets here to compare with the *Prospekts* of Petersburg, neither can the quays and rivers of the Moskwa and the Yausa compare with those of the lovely and limpid Neva. As a painter I should say that Moscow bears away the palm of beauty from her sister of the Baltic; but as a mere lounger, that Petersburg is far superior to Moscow.

"I wandered about until dark, exploring various streets, and strolling along another public promenade which intersects the Tverskoia at no great distance from my hotel. I was almost the only lounger. I observed, however, in the course of my day's ramble, that the *beau sexe* here is not so *ugly* as in Petersburg. The troops are few and shabby; they look like provincial militia, as compared with the soldiers of the guard in the capital. Most of them seem to be veterans, and are badly clothed and equipped enough.

"In short, one must go into the interior, if he wishes to know anything of Russia. In that splendid city all is for effect, all is delusion; and although the system of *decoration* is carried to a great extent even along the vast line of road between the two capitals, yet it so forcibly contrasts with the real wretchedness and poverty of all around, as to make its very beauties appear absurd by the comparison too forcibly obtruded upon the eye of the traveller. And so it is, I fear, in beautiful Moscow; its general effect is superb, splendid, unrivalled, but its details are poor and mean."

In Moscow the vice of drunkenness exists to an extent unknown in any other part of Russia. All classes drink to excess in spite of legal enactments and degrading punishments. It is not an uncommon thing to observe well-dressed people sweeping the crossways of the streets, under the strict surveillance of police officers. This kind of punishment is awarded to the drunkards of the better class; the peasants and mechanics undergo the torture of the knout, if they are brought frequently before the authorities charged with drunkenness and disorderly conduct in the public streets.

The Russians are in general tall and robust, the men of course much more so than the women. "It is rare," we are told by the Marquis, "to see a thin person, and you hardly meet with deformity. The Russian countenances are not handsome, but they have a steady, quiet, enduring look and manner. Generally they have small eyes and short noses, and the greater part light hair. The rigour of the climate lessens their perception of taste and smell, and the great plains of snow evidently affect their sight. Their hearing, on the other hand, is remarkably quick, and they have great strength of limb, with hardy constitutions, capable of enduring great privations. Their diet is simple, and their general beverage *krass*, but their passion is *eau-de-vie*; the consequence is general inebriety, when they are not at work or on duty. The dress of the men is of sheep-skins, inside and out, made loose, and tied round the middle by a long sash. They universally wear boots, or shoes covered with fur-skins. When their spirits are excited, they are excessively jovial, remarkably intelligent, deeply alive to their own interest, scrupulously religious and attentive to the smallest ceremony of their church, although I did not perceive they had any great respect for their clergy. They unquestionably possess the art of imitation, and improving on any given ideas or plans more than any other people; but their manufacture does not appear to be as solid and as good as that of other countries, especially England. Their efforts are concentrated in making the articles for sale look elegant and pleasing; but in solidity, use, or durability they are sadly deficient. I should say that this observation applies nearly to all articles of luxury made in Russia.

"The natural and innate capacity of the people is very great. As a specimen of this daring activity, you may see artificers and common workmen stuccoing or whitening their houses in buckets from the roofs, and some sit across a plank suspended by ropes, changing their position on it with wonderful agility, their axes and tools in their girdles, nor do they ever seem at a loss for any dexterous effort.

"Extraordinary superstition seems to reign amongst them, and I think this pervades the higher classes as well as the lower. They are fond of gipsies, and of having their fortunes told, and have great faith in omens. A salt-cellar overturned, or thirteen at table, create an inconceivable sensation in the high classes; and every sort of delusion of necromancy is produced amongst the lower orders. The hospitality of the country is remarkable, as also the universal charity and readiness to relieve the poor which prevails. This is a singular contrast to their seeming cupidity; but it is not more remarkable than the violence of their temperament, when contrasted with the great charm and politeness of their manners."

"Pouschkin (the Russian Byron)," says Captain Frankland, "seems to be throughly versed in the political, civil, and literary history of his country, and is also fully aware of the faults and vices of Russian administration. He is of opinion, however (as are all wise and good men), that no great and vital change can take place in the political and social state of this vast and disjointed empire, but by gradual and cautious steps, each one of which must be placed upon the firm basis of increased civilisation; or in other words, upon the enlightening of men's eyes, and the extension of their understandings. Much yet remains to be done among the higher classes, when they shall be taught their true interests, and those of their poor serfs, then something may be done to ameliorate the condition of these latter,—all this requires time. No change can be lasting which is not based upon a good and solid foundation. The Russian serf is not yet in a condition either to desire or to deserve emancipation from bondage; the greater part would either willingly or necessarily return to the yoke, were they even once freed from it. The protection of the seigneur is like the wing of the mother extended over her helpless offspring; often, very often, do they from their private stores bear the expense of maintaining whole villages, whose harvests may have failed, or which may have suffered from sickness or other calamities. Liberty, it is true, is an inestimable blessing to the civilised man; but is the barbarian in a state to appreciate it, to profit by it, or to maintain it? The fact is, that Russia is still governed *socially* by the feudal system under which the west of Europe so long groaned. Europe threw off the feuds by slow degrees, and at last only by the influence of the wealth, the intelligence, and civilisation of the burgher classes of free towns (societies which had never been subject to the barons), aided by the sovereign, who was always happy to assist in the humbling of the said turbulent and powerful nobility. Such classes are appearing gradually in Russia, and in all probability will, some day, with the help of the crown, work out the emancipation of their fellow-countrymen. Commerce and manufactures are rapidly finding their way into the heart of this empire, and these great means of civilisation must sooner or later produce their effect. Unfortunately, the perpetual wars of Russia retard the nation in its march towards prosperity; they are a terrible drain upon the agricultural and manufacturing classes. They decrease very sensibly the means of population, which is still so lamentably deficient. When they shall cease, the sovereign may have time to turn his undivided attention to the interior and vital interests of his country, but not till then.

"Upon those estates, belonging to rich non-resident proprietors, the serfs are completely governed by the patriarchal system. They have a council of elders, and a sort of local chief, called starost. The starost and the elders collect the obrok, or annual sum due from the serf to the seigneur, and when this is paid, the residue produced by the farm of the serf (for each agricultural serf has a certain quantity of ground allotted for him to till), belongs not to the seigneur, but to himself.

"Many serfs are known to be extremely rich; nay, some of

them are *des millionaires*, but these are generally engaged in commerce, and are domiciliated in the great towns.

NAPOLEON AT THE KREMLIN.

"Each serf who may wish to absent himself from his village to drive his trade of yamshick (carrier), or ishvochick (proprietor of carriages), or merchant, or any other profession, in the towns or on the coast, must be provided with a passport from his seigneur, and as long as he pays his obrok to his lor he is as free as the air he breathes; so that the idea of slaver

RUSSIAN MECHANICS.

is purely a bugbear; the evil lies in the word, not in the reality. The Russ serf is migratory by nature, seeing the immense distances he has to carry his goods to market.

ALEXANDER AT THE BOLSHOI DVORTZ.

RUSSIAN PEASANTRY.

"The obrok in no case exceeds twenty-five roubles a year, and in most cases is infinitely below that sum. The agricul-

tural peasant may be said to be a copyholder, who, as long as he can pay his annual fine, retains possession of his farm. When the Russ serf cries for emancipation, he means that he is to become possessed of a freehold, that is, he is to pay no more obrok to his seigneur. The seigneur is responsible to the crown for all government taxes; and very often, as in cases of bad harvests, or visitations of Providence, all the weight falls upon him, and not upon the serfs.

"The seigneur is entitled to three days' labour from his agricultural serfs out of the week, the other three days belong to himself, and more particularly the Sunday, which he is sure to turn to account; the numerous festivals of the Russo-Greco church ensure plenty of idleness to the peasant, who in no case can be overworked."

JOHN MILTON.

We fear there are but few of our readers who will not, at first sight, deem us guilty of something very like paradox in stating it as our opinion, that not one of the great lights of our literature has received such scant measure of justice as the illustrious John Milton. Such is, nevertheless, our firm and well-considered opinion.

We are well aware that "Paradise Lost" is widely known and fully appreciated; and we would fain believe that the glorious "Sonnets" are scarcely less so—though of that we are by no means so certain. But, to the majority of readers, the giant power of Milton, his mighty prose, that

"Pure well of English undefiled,"

is as though it had no existence save in name. And yet, if we had to chose between the loss of Milton's poesy—even including his exquisitely-beautiful "Comus"—and that of his prose, we much doubt if we should not be more easily reconciled to the former loss—vast as it would unquestionably be—than to the latter. For, though we are far from being lovers overmuch of the ultra-utilitarian spirit which, of late, has manifested itself as strongly in our literature even as it has in our politics, we should not easily find in *any* poesy, however sublime or beautiful, a sufficing substitute for the stern vigour and masculine eloquence of Milton's prose. Differing from that mighty master, in not a few of his opinions on matters of both Church and State, we are not the less sensible of the value of his general zeal for the true, the lofty, and the free, and never, in our bard's history, was there a time when such a spirit as breathes and burns through his his splendid and nervous argumentation was more requisite to the healthfulness of the public taste than it is at the present It is requisite to preserve our literature from becoming effeminated and trivial; the very abundance of our literature—and especially of our periodical works, devoted principally or chiefly to the merely amusing—rendering us less fitted than we ought to be for painful and sustained research; and, at the same time, in appealing with undue frequency to our imagination, making truth less prominently and especially the object of our search and of our worship.

The stern severity of Milton's mind would do not a little to ridding us of the fatal habit of reading for the present pleasure rather than for the future profit; and when we consider what treasures of eloquent truth are contained in his prose works, we cannot but deem that the comparative neglect into which they are fallen is unjust to their illustrious author, and a misfortune, as well as a discredit to an age in which books are multiplied to an extent without previous parallel, and in which the veriest namby-pamby of rhymed twaddle, and prose fiction no less twaddling, finds type and paper for a second and third edition. No! Milton has *not* yet received due honour at the hands of the English people; nor will he have done so, until the beauties, at least, of his prose works shall be published at such a price, and in such a form as to be accessible to every English reader who is really deserving of that name.

If ever man was perfectly well qualified to write the Life of Milton, Dr. Johnson was that man, could he but have divested himself for the time from his fierce, though honest, and, in fact, unconscious prejudice. He had the vigorous and acute judgment, the fervent detestation of cant and hypocrisy, the undying and indomitable love of truth and of learning which should have made him the most fervent of Milton's admirers and he had the comprehensive mind and the perfected taste which should have rendered him the ablest of all Milton's numerous expounders But his prejudice prevented this; and, notwithstanding its frequent felicity of criticism, and its invariable beauty of style, we are compelled to consider his Life of Milton not only inferior to most, if not all of his other "Lives of the Poets," but a decided failure, even when viewed as a single biographical essay.

It is not possible for us, even were we otherwise fully qualified for so important a task, to give, within our extremely narrow limits, anything like a detailed and critical biography of such a man as Milton; a man whose literary genius, vast as that was, can scarcely be considered so extraordinary as the stern high courage with which, in most troublous and perplexed times he did all, dared all, and bore all that seemed to him to be due to that cause which he—however mistakenly and however unfortunately for his country, and the cause of monarchy and real liberty—deemed to be the just and the righteous cause. But, though we cannot aim at supplying this important and discreditable want in our literature, we deem it not the less our duty emphatically to point it out to those who have it in their power to remove this reproach from our nation, and to put an end to the injustice, of so long-standing, done to one, of whom, proud as our nation justly are of other great men, they have as yet neglected to show themselves fully worthy. Praise, it is true, and monuments, whether of the sculptor's or the rhetorician's reading, are inevitably powerless to

"—— soothe the cold, dull ear of death,"

but the debt of gratitude is due to the memory of the mighty dead notwithstanding, and in paying that debt we not only do justice to our own higher and better feelings, but, at the same time, best consult our own interests, by showing to the living and the struggling, that whatever may be the immediate effect of their exertions upon their worldly circumstances, and whatever may be their lot as to achieving present reputation, he who benefits and honours his nation will, sooner or later, do honour to him, and, in so doing, do justice to its own character.

We are the more inclined to insist upon the necessity for our reading population, and more especially the rising generation, being made intimately acquainted with something more of the character and views of Milton than can be gleaned from his poetical works and a dry and meagre sketch of his life, because, in his own time, he was known far less as a poet, than as a ripe and real scholar, armed at all points for controversial warfare; and a high authority among the learned of all Europe, whether upon a question of the scholastic training of little children, or of the civil and ecclesiastical institutions of great nations.

The father of our illustrious subject was a scrivener in highly respectable practice, in Bread-street, Cheapside, where the future poet was born, on the 9th of December, 1608.

At an early age he was sent to St. Paul's School, where he made a progress equally creditable to himself, and to the foundation upon which so many eminent men have been reared. Though so attentive to his classical studies, as, at a very early age, to give promise of that scholarship for which he subsequently became so famous, he at the same time manifested his taste for poetry. Fortunately for all who love his poesy, or, in other words, for all who have taste, judgment, or feeling, his devotion to polite literature was not repressed by his father, but nurtured and encouraged.

At the age of seventeen, in 1625, he was considered sufficiently proficient in scholastic studies, to go to the university, and he was duly entered of Christ's College, Cambridge. To his college he seems, by no means, to have borne, in after-life, the affectionate feelings which many other great men have cherished and expressed. Even at this early period of life he seems, in fact, to have been of a stern and self-relying turn of mind, examining, with a spirit of perfect independence, where he was expected implicitly to assent; and putting himself in the position of an equal disputant, where he was expected to obey with the promptitude of a dependent, and with the humility of a child.

However disinclined to submission to the strict and unquestioned discipline which is so indispensable in scholastic establishments, Milton gave his college no reason to blush for him

as a scholar; and his bent was so obvious to his father, that that sensible and indulgent parent, who retired from his professional avocations with a sufficient—though not very large—fortune, easily consented to forego the desire he had expressed to see his son a minister of the church. In truth, all mere taste being left wholly out of view, the opinions of Milton were so determinedly hostile to episcopacy, that he could not, without being guilty of the most flagrant and disgraceful hypocrisy, have enrolled himself among the supporters of the church, or availed himself of any chance he might have had of obtaining church preferment.

Milton's father, on retiring from professional business, settled at Horton, in Buckinghamshire, and here the young and ardent votary of learning resided for several years—the happiest probably of his life—studying again and again the chiefest of the Greek and Latin classics, and, at the same time, making an intimate acquaintance with the most important of the arts and sciences. It was while he was thus peacefully and profitably employed that he composed the exquisite Masque of "Comus," "Lycidas," perhaps the most perfect monody in our language; "Il Penseroso," and "L'Allegro."

It seems most likely that, so far as Milton's own happiness was concerned, it would have been well for him if his splendid talents and vast scholastic acquirements had never attracted the notice of persons sufficiently powerful and influential to withdraw him from his studious and delightful obscurity But a genius such as his could not long escape the notice of the great, and, in 1638, ere he had attained his thirtieth year, some powerful friends of his father, including Sir Harry Wotton, Provost of Eton, advised that the young poet should travel in Italy To that poetic and famous land he accordingly proceeded, and the letters of recommendation with which he was furnished, procured him, immediately on his arrival, the attention and the interest of the learned and eminent; an attention and interest which his great talents and winning manners soon warmed into a zealous and sincere friendship. From his earliest youth, Milton had been singularly addicted to the study of languages, and was fully as successful as he was zealous in that particular kind of study So qualified, it is not to be wondered at that he studied the mellifluous language of Italy; and he did so with a success which won him the admiration of his contemporaries. How well warranted that admiration was, is abundantly proven by his beautiful Italian sonnets, of which it is by no means speaking too highly to affirm, that they would do no discredit to the very greatest poet of the especial land of poesy

His residence in Italy by no means tended to abate his dislike to episcopacy: indeed, it is one of the few, but serious, errors which are fairly chargeable upon Milton's intellectual character, that he was not a little given to confounding together the just and scriptural authority of a tolerant and enlightened religion, and the usurped power and unholy arts of a gross superstition.

On his return to England in August, 1639, he took a "garden house" in Aldersgate-street, where he educated a few youths, sons of some of his most influential friends. This circumstance was subsequently laid hold of with a most virulent and discreditable eagerness by certain of his opponents, who took the occasion to stigmatise him as a mere "schoolmaster" Upon this point it is only requisite to remark that there is no surer proof of the general goodness of a man's morals, than is afforded by the circumstance of his enemies seizing upon some petty conventional sophism as their weapon against him. To have tamed down his mighty and glowing intellect to the irksome, though important, task of communicating knowledge to children, is surely not the least creditable of the doings of the Bard of Paradise; and they who used the term "schoolmaster," as one of reproach to him, only showed that they little deserved such schoolmaster skill as *had* been bestowed upon their juvenility, and that they would have been all the better for a very much longer subjection to the pedagogue and the ferula.

Alienated from the church at a very early period, Milton, most unfortunately, was environed by circumstances but too well calculated to increase his puritanical tendencies. The fierce contests between Charles I. and his equally deluded and unjust people having terminated in the ruin of both the monarchy and the church, not a few of the most violent opponents of episcopacy were for erecting a spiritual despotism of the own peculiar fashion; and, had not their virulence been ke within bounds by the stern, strong hand of the most accon plished and resolute impostor of either ancient or modern time it is pretty evident, from what *did* take place, that after havin persecuted to the death all who preferred religion to cant, an social order to anarchy, they would have fallen upon eac other, sect upon sect, and impostor upon impostor, until ou raged humanity could no longer endure the sights and woun of horror, or until the disgraced and depopulated land ha fallen an easy prey to Holland, or to whatsoever other foreig nation should have deemed fit to profit by English folly, an to trample upon English weakness. But Cromwell was n the man to allow cant and violence to go one step farther tha suited his own purposes, and the most attentive considerati induces us to believe, not only that Milton was perfectl sincere in the detestation he professed of the attempts c certain of the ultra-puritanical to set up a spiritual despotism but, also, that in giving his adhesion and his aid to Cromwel he really acted worthily and wisely—*circumstanced as the natio then was.*

Being appointed Latin secretary to Cromwell, Milton becam a personage of first-rate importance in the political and diplo matic world, and when the celebrated Salmasius published bitter—because just—invective against the people of Englan for the shameful murder of their sovereign, Milton replied t it, with the utmost ability as a writer, but with scant measur of justice, indeed, whether as a jurist or as a moralist. Th controversy between our poet and Salmasius was so keen an so eagerly kept up, that Milton, who, from his boyhood, ha injured his sight by night-study, aggravated his complaint c the eyes until it terminated in a hopeless case of *gutta serenc* Blessed with daughters with minds scarcely inferior to h own, as far as the love of study was concerned, even blindnes did not interrupt his studies. He was read to, and his dicta tion was written from, but, though he bore his calamity wit a firmness worthy of a Christian and a philosopher, we ma easily see in his pathetic bursts, both in "Paradise Lost" an in "Samson Agonistes," that, however well he *bore* th stroke, he *felt* it in all the fulness of its terrible severity,

Either wearied with the mere ephemeral labours of th controversialist and the politician, or haunted by the conscious ness of a fitness for higher achievement, he pondered for som time on the fittest subject for an English epic poem Nobl he chose his theme, thrice nobly did he treat it. For this—*the* English epic—he received in the first instance only £ and all that he or his received for it from first to last was onl £15!

After he had published "Paradise Lost," his friend Elwoo suggested to him the subject of "Paradise Regained." Suc a subject, treated by a Milton, could not be treated otherwis than well, but, we fancy there are few readers who will agre with the great poet in preferring his "Paradise Regained" t his immortal "Paradise Lost."

The Restoration of Charles II. reduced Milton to muc distress, and, for a time, put him in some peril; but on th passing of the Act of Indemnity, he appeared once more i public. From this time his life was passed in constant eas and study. His diet was simple, his beverage chiefly water and he lived to the age of sixty-six, nearly free from disease His conscientious life—however erroneous some of his judg ments must be deemed—secured him calm in his old age, anc at his death, which took place on the 10th of November, 1674

Of the prose works of this truly sublime writer, we hope t take an early opportunity to speak. Of his great poem, n higher character can be given than is contained in the words of his anything but favourable critic, Dr. Johnson, who says "His great works were performed under discountenance anc in blindness; but difficulties vanish at his touch. He wa born for whatever is arduous; and this work is not the great est of heroic poems, only because it is not the earliest."

A *curious discovery* was made last year at the fine old Roman station of "Risingham" (Habitancum), on the banks of the Reed near Horsley. In a bath, a large mass of *coal* was found, evi dently placed there for the purpose of fuel. All the hydrogen was gone, but it was very *bituminous*. From this it would seem that the Romans really worked coal.

THE BEAUTY OF SELFISHNESS.

" How little and how lightly we care for another!
How seldom and how slightly, consider each a brother!
For all the world is every man to his own self alone
And all besides no better than a thing he does n't own "
MARTIN F TUPPER.

He must be a bold man indeed who could glory in his selfishness, or make it his boast that he considered his own peculiar interest before and beyond that of all else beside—who could calmly stand upon the principle of his own self-love being an estimable quality, and the egotisms of all other men mere amiable weaknesses. Such an avowal in a man would be as rare and unlooked for as the confession of a lady's age after twenty, or the admission of a leaning towards the world in the Rev. Mr. Cushionthumper. But even were he bold enough to tell the naked truth about the matter—and we have grown so refined now-a-days that boldness in matters of opinion is considered rather heretical—he would scarcely be believed in polite society, in fact, while all deplore the existence of selfishness in the mass, we deny it *in toto* when we come to consider it as an individual failing. So that, while we are eating and drinking, and buying and selling, and marrying and dying, and destroying and setting-up, and peddling and carping, and doing all manner of meannesses for the sake of pelf and self—getting rich as fast as we can, and scraping together dirt, as some call gold, with fingers and toes -lying prone upon our bellies before the god of wealth, and despising all besides, there is no such thing as individual selfishness in all the wide and beautiful world —at least, if we may believe the evidence of our ears!

But why is this? why should we wilfully shut our eyes to the beauty of selfishness? Is not the world sufficiently inured to new doctrines in physics—electricity, and galvanism, and steam, and photography,—to bear the shock of a new truth, or must it, like a little child, be kept from a knowledge of forbidden things till it grows a year or two older? No, sooner or later it must come out —at some time or other, now or at some other while, as the case may be, the doctrine must be taught—and here, then, we avow, shading our face a little from *very* straight-laced moralists, that selfishness, properly considered, is one of the cardinal virtues!

But the proof, the proof,—ay, there's the rub Well, let us consider Very deep metaphysicians with all their senses perfect,—acute philosophers looking through wise spectacles at themselves,—have found it difficult to prove that they themselves existed and were not mere animated plants, carrying their earth-boxes about them, a sort of peripatetic botanical curiosities, how, then, shall we make it evident that selfishness is not a giant vice, as has been taught, but a great good, if properly examined?

Why, thus-wise —it's a dangerous doctrine, and we wouldn't sign our name to it for the world, we should expect to suffer moral martyrdom, at the very least, if we did,—but then, are not all new views dangerous? Was it not dangerous for Harvey to say that the blood flowed in the veins? was it not dangerous for Lady Mary Wortley Montague to preach inoculation? was it not dangerous to say that steam-carriages could travel twenty miles an hour? was it not dangerous to talk of getting gas from coal and sugar from potatoes? In truth, it is dangerous to do or say anything that is opposed to old-fashioned prejudices—dangerous to think for one's self—and much more dangerous to print one's own impressions free speaking is dangerous; a talent for observation is dangerous, love and religion are dangerous, if they be pursued in an original manner, and the only safety is in a gentle mediocrity

But, coming to the point without further beating round the bush, let us see whether, as we said, we cannot *prove* our position Selfishness, *per se*, is a virtue. A man loves a woman, why shouldn't he?—though, by the way, what a pity it is that the passion should not be brought under proper control, and not be put aside as something to be ashamed of? why should it not be made a part of education, like dancing or the rule of three? why should the world go on as if it didn't exist, and wasn't the main-spring of all our best desires? Why should the fact be burked by the pulpit, the bar, the school-room and the state, and forced to take refuge in stage-plays and fashionable novels?—Well then, he would be a clever fellow who could bestow his heart's affections on a woman entirely for *her own* sake —bow down to a shrine for the sake of the beautiful idol on the top; the thing is impossible, sheer moonshine and improbable nonsense. Of course, love is pure selfishness; we love a woman for our *own* sake and no other, and selfishness is a great virtue. We love her and desire to possess her: she loves us and has a similar feeling, only a little more etherealised—both affections are eminently selfish, yet who shall say the passion is a vice?

Learning is a fine thing, a most desirable possession; a key to open otherwise locked and close shut-up doors; a pickaxe and mattock to work with in the mine of truth; a light to lighten the darkness of the people, a resting-place in a weary land of sorrow and covetousness, a possession which pays no taxes—though the paper-duty rather cramps its circulation,—a purse of riches which requires no strong box or patent Bramah lock to keep it safe; a joy over which acts of parliament have no control, a pleasure in which there is no alloy, a friend who never reproaches us, and a mistress who can feel no jealousy, - and yet learning is pure selfishness, after all, for no man ever learned a science, or a language, or an art, or a mystery, for the sake of others *only* Therefore, learning is self-interest entirely, and selfishness is a virtue

Of faith, hope, and charity,—those most amiable and never-to-be-too-much-cultivated selfishnesses,—we need only say, that their indulgence goes further, and their prevalence does more, to support and elucidate our theory than anything hitherto advanced. How could faith be properly exerted, or hope beneficially exercised, or charity healthfully bestowed, if self had no part in their manifestations? as far as *they* are concerned, therefore, the argument requires no further illustration.

Trade and commerce are the wheels and cranks of the social machine, but selfishness is the motive power—the fire and water that keep it moving But who shall say that trade and commerce are anything but good and estimable? Who shall accuse the merchant princes of Mark-Lane and Liverpool of unworthy motives, or breathe a syllable against the character of a Baring or a Rothschild, and has not Mr Loyd been made a peer? None dare avow that the Lombards and Venetians, the pioneers of commerce and refinement in Europe, were actuated by vicious motives when they traded in silk and lent money at fifty per cent., and yet it was pure selfishness that prompted all their actions

And so through all grades and classes of men the father loves his child, but he is selfish in wishing her well married, the mother loves her son, but it is selfishness that makes her dream of his one day growing to be a great man, the brother loves his sister, but it is selfishness in his knowing that she is his sister and no one else's. And, taking a wider scope, the virtue of selfishness is seen pervading all society The politician mixes up a little (often a great deal of) selfishness in his patriotism, the lawyer does not study *only* for his client—nor the physician waste his health and shorten his life *only* for his patients, the preacher does not think *only* of the souls of his followers, and forget altogether the loaves and fishes of material life, the master has other thoughts than of his servant's welfare, and the servant has an eye to one day setting up as master for himself But instead of all this being vile and scandalous, it is really good and proper, and provides just the sort of stimulus which prevents men from becoming mere machines, vapid do-nothings, dumb-dogs, and idle time killers

Imagine a state of society in which the virtue of selfishness had no place Fancy it is too stupendous, really The London markets would be unsupplied, for no market-gardeners, or butchers, or clothiers, or artisans, or agriculturists, or manufacturers, or tinkers or tailors, or soldiers or sailors, would feel self interest enough to trouble themselves about the keeping up the balance of trade—and commerce and kindly feeling would soon be insolvent and go through "the court." Reforming your tailor's bills would be a farce, and the linendrapers would feel no further wish to "shave the ladies," love, patriotism, public spirit, energy, perseverance, education, cleanliness, morality, religion, and loyalty, would go by the board, as the sailors say, and we should sink into mere do-littles and ridiculous nonentities Ships would rot in the harbours, and we should not trouble ourselves to build more, houses would go to ruin and fall to pieces, banks would fail, shopkeepers would smoke pipes at noonday, fashion would go out of fashion, opinion would sink into lethargy, toryism would die away, chartism would become extinct, land would lie uncultivated, churches would be empty, theatres shut up, prisons useless, law forgotten, and equity obsolete; we should be too idle even to look after our health; too much eaten up with *ennui* to abuse the rich or foster the poor; too foolish to acquire wisdom and too conceited to discover our own ignorance; all virtue and nobleness would decay, and sporting men would be too lazy to take the "odds about the Derby" In a word, the world would resolve itself into its origi-

nal chaos, and we should go unwashed and unshorn to our unwept graves!

In fact, the principle of selfishness enters so largely into all our transactions with the world—and not with the world merely, but with our hopes of heaven; for we are taught to expect crowns and thrones and sceptres, even there, though in a metaphorical sense, of course—that we should do well in future to look upon it in the light here faintly shadowed forth. And that we should commence the study in a straightforward and proper way, we would counsel the teaching the virtue of selfishness in all our schools, and immediately erect professorships of selfishness at our colleges, so that our youth might matriculate without delay. It would be a great triumph for the writer, if some far-sighted teacher, after perusing these brief hints, should add to his circular of terms a line addressed especially to parents—SELFISHNESS TAUGHT ON THE MOST APPROVED PRINCIPLES.

To put an end to this,—for even the best of things must have an end at some time or other,—once let selfishness be admitted among the virtues, once let it be brought under proper control, once let it be put in training like other good things,—for even good things become vicious when in excess,—once let it be made part of our regular education, and the prejudice against it will vanish away like a fog before a noonday sun. For the want of a systematic classification and control, this virtue has degenerated and come to be considered a vice—just as a good man falling into bad society comes at last to be reckoned up with the vile crew of sinners with whom it is his misfortune to come into contact. Selfishness, properly governed, is a real blessing to the world, but in the present state of society, and without careful looking after, it produces thefts, murders, lies, profamities, and other disagreeables not to be mentioned to ears polite. In its highest manifestation, selfishness is a splendid virtue, in its lowest, it is a filthy vice.

G. P.

AN IMAGINARY EXTRACT

From the next Number of MR DICKENS'S *"Bleak House"*

"PODGERS had been upon the Atlantic before. 'He knew the sea,' as he said himself, 'intimately.' That was enough. No person could speak of any ocean that he, JOHN PODGERS, had crossed, except in a respectful manner. It was a peculiarity in his temperament, that when an idea got rooted in him it was apt to run all over his mind, like a bean. It grew, in fact, to be a part of himself, and he claimed for it a corresponding degree of respect. Consequently, he would take an ocean or a continent which interested him under his protection with as much care as he would take a lady under his umbrella. There was one thing for which he had the highest regard. It was a pronoun, first person, singular number. When he said '*my* baker' or '*my* tailor,' you somehow got an idea of a baker or tailor as much the exclusive property of JOHN PODGERS as his own pocket-book. As for his father—senior partner of PODGERS AND SON, drysalters, No. 3, Fetterlock-lane—he looked upon him as a sort of heirloom, and in regard to his mother, I believe he would have given a chattel-mortgage upon her without the slightest compunction. 'Mrs. JELLYBY,' said he, 'when I was acquainted with Niagara, there was a feeling between me and that cataract that would have surprised any one unacquainted with the parties.' Viewing everything as he did upon extensive principles—that is, upon a scale commensurate with himself—it is no wonder that he took TUNKLES to task when that individual ventured to remark, 'he considered a passage across the channel as being, he should say, rather unpleasant.' 'TUNKLES,' said he, untying his choker and re-tying it into a double bow-knot of offended dignity. '*TUNKLES*, a man does not know what it is to feel unpleasant until he *gets* upon the ocean. When I stepped on board of my packet, sir, and saw my native land fading from my sight, and the waves rolling under my feet, I felt a sensation, sir, which it is impossible to describe. Retiring to my berth, sir, to avoid any unfavourable impressions of an element I had been taught to respect from my infancy, I endeavoured to keep down my feelings, but I found I could not contain myself. There was a smell of fresh paint, sir, in my state-room, mingled with an odour which I should call decidedly fishy, and I was assailed in this manner, sir, for fourteen days, until I almost imagined I was on a sea of turpentine, full of salt mackerel. Then I had a storm, sir, a storm that lasted fourteen days more. My wind, sir, should come from the north-east, but this wind came from the north-west, sir. Consequently, I could make no head-way, sir, my canvass was torn from my bolt-ropes, my topmasts went by the board; and although my helm was lashed down, I expected to be on my beam-ends every moment. Fortunately the wind abated just as it was discovered I had sprung a leak, sir. Fortunately also, it was in my side, and soon stopped. When I got an observation, sir, I was off the coast of Africa. I had been praying for a calm, and there's where I got it. Off the coast of Africa, sir, with an African sky over my head, an African ocean under my feet, and my sun, sir, was such a sun as a man knows nothing about who has never been in the tropics. Think of that, sir; think of a calm that lasted fourteen days,' continued Mr. PODGERS, thrusting his wrinkled neck out of his white choker, and suddenly drawing it back like a terrapin; 'think of that, sir! Becalmed fourteen days off the coast of Africa!' Mr PODGERS came down upon the coast of Africa with such astonishing emphasis that it aroused Mrs JELLYBY.

"'In the vicinity of Borioboola Gha?' said that lady, with her fine eyes on the tin candle sticks.

"'Latitude 186, longitude 35.59,' said Mr. PODGERS sententiously.

"'Ah!' replied Mrs JELLYBY.

'Mr PODGERS resumed. 'When I left my native land, I was a stout man, sir, when I left my African climate, I could have crept through the armhole of my own waistcoat. I had rain, sir, from the time I left Africa until I arrived off Fire-Island light, and then I had snow. I made Sandy-Hook, sir, and then I had a wind that blew me three hundred miles out to sea again. When I did get ashore, it was in a life-boat, at a place called Barnegat. A man dressed in my clothes, sir, with my watch in his pocket, very kindly gave me a light half-guinea out of my own purse, sir, to keep me from starving on my way to New York. Mr TUNKLES, continued Mr. PODGERS, insinuating his right fore-finger into the fifth left-hand buttonhole of that person's coat, 'don't do that again!' Don't speak of the channel as being, certainly by any sane person, considered as—unpleasant. The ocean, sir, which I have crossed, is the only institution that merits that distinctive epithet. And if I ever cross it again'—here Mr PODGERS buttoned his lower lip over his upper, took a long breath, looked at Mrs JELLYBY out of the corner of his left eye, and then said very softly but emphatically—'——!'"

SONGS FOR THE PEOPLE.

ORIGINAL AND SELECTED.

No. V.—BUILD NOT ON THE SAND.

BY ELIZA COOK.

'Tis well to woo, 'tis good to wed,
For so the world has done
Since myrtles grew, and roses blew,
And morning brought the sun.

But have a care, ye young and fair,—
Be sure you pledge with truth,
Be certain that your love will wear
Beyond the days of youth.

For if we give not heart for heart,
As well as hand for hand,
You'll find you've play'd the "unwise" part,
And "built upon the sand."

'Tis well to save, 'tis well to have
A goodly store of gold,
And hold enough of shining stuff,
For charity is cold.

But place not all your hope and trust
In what the deep mine brings,
We cannot live on yellow dust
Unmix'd with purer things.

And he who piles up wealth alone,
Will often have to stand
Beside his coffer chest, and own
'Tis "built upon the sand."

'Tis good to speak in kindly guise,
And soothe where'er we can;
Fair speech should bind the human mind,
And love link man to man.

But stay not at the gentle words,
Let deeds with language dwell,
The one who pities starving birds,
Should scatter crumbs as well.

The mercy that is warm and true
Must lend a helping hand,
For those who talk, yet fail to do,
But "build upon the sand."

MY FIRST SUNDAY IN MEXICO.

FROM THE JOURNAL OF A VOLUNTEER OFFICER.

I HAD reached the goal of my hopes and my ambition, and was comfortably quartered in the city of the Montezumas. There, in that proud and ancient capital, and surrounded with so many of the comforts and luxuries of life, I almost forgot the toils and sufferings of the march and the bivouac, and here, for a while, in comparative ease, "the pomp, pride, and circumstance, of glorious war," which is so fascinating to the untried soldier, seemed almost realised. The American army had occupied the city long enough to establish order, by a well-regulated and efficient military police, and the enemy having retired some distance, the officers and men began to extend their sphere of observation beyond the limits of the capital, when off duty, to the beautiful suburban towns and villages near by.

I spent my first Sunday in sight-seeing, in a visit to the somewhat celebrated city of Guadalupé de Hidalgo, about four miles to the north of Mexico. It is situated at the foot of a rocky mount, called Tapeyac, in the midst of a romantic but not very fertile country, and is approached by one of the six causeways which lead out from the city. They are broad, straight, finely macadamised, and planted on each side with shade-trees, and have been constructed through the waters of the lake at great expense. In point of size this place is not of much importance, and does not contain more than a thousand inhabitants all told. Besides the church erected there, dedicated to the patron saint of the country, and a few religious establishments, the buildings are of mud and reeds, inhabited by a miserable and filthy population. Here it was the "Virgin of Guadalupé" is said to have made her miraculous appearance, and here, once every year, a great festival and celebration is held in honour of her, which is looked upon as one of the most important days in the church. The manner in which the "Virgin" made her first appearance is very remarkable, and the story, as related by one of the early bishops, seems quite as incomprehensible to us, who are without the pale of the church, as the myths which come down to us from pagan antiquity. But since the priesthood appear to put full faith in the *modus operandi* of her advent, the people of the country, as a matter of course, believe it.

The legend runs as follows:—"In the year 1531, an Indian, named Juan Diego, was passing by this mountain of Tapeyac, on his return home from the city, when the Most Holy Virgin appeared to him, and directed him to go back to the city and tell the bishop to come out there and worship her. The bishop refused to admit him into his presence, having no faith in the miracle. In passing by the same spot a few days afterward she appeared to him a second time, and told him to return to the bishop and say that, 'I, Mary, the Mother of God, have sent you.' Again the bishop refused to admit the Indian to his presence, being still incredulous, but required some token of the annunciation. The Virgin appeared to the Indian the third and last time, two days afterward, and ordered him to ascend the mountain and pluck roses therefrom and present them to the bishop as his credentials. Now, this mountain is a barren rock, without a particle of vegetation upon it. The Indian, however, went as he was directed, and there found flowers, which he threw into his *tilma*, a sort of apron worn by the inhabitants of the country. He returned to the city and was admitted into the presence of the bishop, but when he opened his *tilma*, instead of the roses which he had gathered and put into it, there appeared an image of the Holy Virgin, which is said to be preserved to this day in the church which bears her name. From the name of the town she was called the Virgin of Guadalupé, and has been made the patron saint of the country. This is the history they give of her appearance, and it is as bad as rank heresy for Catholics to disbelieve it. With them she is all-important, and appears to have a powerful influence over all the affairs of life. With the great mass of the population she is the only identity in religious reverence, the alpha and omega, the beginning and the end of all their faith and worship. She is appealed to on every occasion, and her name is given to nearly half the females in the country; her image is hung up in every house, and even in the butcher-stalls and drinking-shops she occupies a conspicuous place, where her presence is supposed to preserve the meat sweet in the one, and to bring customers to the other."

COSTUMES OF THE MEXICANS.

On Sunday, the 12th of December, 1847, I rode out to Guadalupe, to witness the ceremonies in honour of this saint. I mounted my horse at an early hour, and set out alone, but by the time I had reached the Garita and turned upon the causeway, I found myself in the midst of a crowd tending the same way. It was as pleasant and beautiful a morning as ever broke over that lovely valley, and everything reminded me of spring-time or early summer. The air had that balmy softness peculiar to the season of opening flowers, and the gentle zephyrs which came from the shining bosom of lake Tescoco, were loaded with a delightful odour. The trees and bushes and grass were dressed in their garb of living green, and the merry-hearted songsters were singing their sweetest melodies in honour of the opening day. Such a delightful season in winter seemed like reversing the order of nature. The crowd which came pouring out of the city was immense, and as checkered in appearance as ever made pilgrimage to the shrine of a saint. From their appearance there were all sorts and conditions of persons, and every class of the proud capital was fully represented, ranging from the caballero to the lepero. Here might be seen an elegant

carriage, drawn by sleek-looking mules, the smiling inmates looking the very personification of luxury and ease—there came a rude, country cart, lined with raw hide and filled with the family of some poor ranchero, drawn by a rawboned ox made fast by thongs around his horns—here ambled by a crowd of donkey cavalry, whose riders, with feet trailing on the ground, urged the animals forward in hot haste towards the scene of festivities—then thousands came on foot, some bearing children strapped to their backs, some bending under loads of nick-knacks for sale Men, women and children, mules, donkeys and dogs, were all mingled together in one throng, and the noise of confused sounds reminded me somewhat of a modern Babel on a small scale Among this mottled group were many American officers, in their neat uniforms, and mounted on prancing steeds On each side of the road, up to the very gates of Guadalupé, booths were erected for the sale of cakes, drinks and sweetmeats, and where all kinds of buffoonery were being performed, gambling-tables were numerous, loaded with shining coin, and here and there I noticed pits for cock-fighting, with anxious crowds assembled round to witness the cruel sport, and bets seemed running high on the favourite chickens The whole assemblage seemed enjoying and amusing themselves to the utmost of their capacity in eating and drinking, gambling and dancing The dancers were assembled under the shade of the wide-spreading trees, where, to the music of the harp and guitar, they performed their national dances with much spirit, dressed in the romantic costume of the country Inside the enclosure, where the sacred edifice stands, was a perfect jam of men, women, and children, old and young, white, yellow, and black, greasy and well-clad, who had come up here to do honour to the saint who rules over their destinies.

When I arrived at the gate leading into the enclosure where the performance was to take place, the procession of the Host was passing, and if it had not been a religious ceremony, I could not have prevented myself from laughing loud, the scene was so ludicrous and ridiculous. The image of the Virgin was borne aloft on a pole, followed by a number of priests in their stove-pipe hats and sacred vestments—then came a platoon of filthy-looking soldiers, with a band of music playing some national air, the whole brought up in the rear by a crowd of "red spirits and white, blue spirits and gray," shooting squibs and hallooing at the top of their voices. It reminded me much more of a Fourth of July celebration, or a militia training in a frontier settlement of the United States, than a religious festival Dismounting I gave my bridle to a soldier standing near, to hold, while I went in and witnessed the performance. On entering, I found much difficulty in getting through the crowd, but by dint of a good deal of pushing and elbowing, and also rapping a few stubborn, greasy-looking fellows over the shins with my sabre, who were slow to make room, I at last reached the door of the sacred edifice The crowd was as dense within as without, and it seemed wholly impossible to be able to enter, besides, an odour, not as pleasant as the ottar of roses, arose from the assemblage. These considerations were sufficient to induce me to turn back and retrace my steps This was no easy matter, as the crowd had closed up again immediately, and I found myself in as dense a throng as ever However, return I must, and putting full faith in the old adage, that "where there is a will there is a way," I set about the matter in good earnest, and in a short time I found myself at the point from which I had started I again mounted my horse, but was uncertain which way to turn. Just then, I was joined by two officers of my regiment, who proposed to ride round the base of the hill towards the left, and, if possible, ascend it on horseback We spurred our horses through the crowd, which opened to let us pass, and turning to the right, rode along the base until we had reached a point nearly opposite to the place from which we started The hill of Tapeyac is some six or eight hundred feet in height, and is a mass of rocks of igneous origin, the surface being quite smooth and bare of vegetation It rises up from the plain abruptly, and is steep in its most sloping part We found the ascent much more difficult than we had anticipated, and it required a great deal of hard labour to get up it. We kept in the saddle for some distance, but at last were obliged to dismount and lead our horses up the steep slope. It was really painful to see the poor animals struggle up the smooth surface of the rock, and now and then it seemed almost impossible for them to keep their footing Thus we laboured upward, and at last stood upon the summit, when man and beast rested from their toil. And while we sat down, holding in our hands the reins of the faithful animals, we looked abroad upon the varied scene below us and enjoyed the beautiful prospect. It was really magnificent, and fully repaid us for the toil we had in ascending The elevation of our position brought under our view the famous valley of Mexico for many miles in every direction To the south lay the city, with the bright sun shining in gilded rays upon the steeples and cupolas of the cathedral and churches, giving them almost the appearance of burnished gold and silver. More distant, in the same direction, the two snow-capped mountains of Popocatepetl and Ixtaccihuatl loomed up in stern grandeur into the clear, blue sky, and stood out from all their fellows in beautiful relief To the left, the eye swept over the sparkling surface of lake Pezcoco, which washes the eastern barrier that shuts in this fair Eden of the New World. Nearer, to the front and to the right, the eye rests upon a wide expanse of plain, variegated with cultivated fields, with their irrigating ditches, like threads of silver, meandering through them. Here and there flocks and herds were grazing on the verdant pasture, or seeking the shade of the trees to shield them from the sun. Such, in a few words, is the nature of the beautiful landscape which opened to our view from the rocky summit where we were seated, and for the reader fully to appreciate it, he must be aware of the freshness and enchantment the balmy air and crystal skies of that clime lend to every scene. We enjoyed it to the utmost stretch of human capacity to enjoy the beauties of nature, and as we descended the rocky mount, so loth were we to have it shut from our sight, that we cast "many a longing, lingering look behind," ere we reached the level of the plain

On nearly the highest point, on the spot where the Indian is said to have plucked the roses, a small church has been erected, which tradition says, sprung up out of the rock in a single night. It is a dark-looking stone building, built in the heavy Spanish style of two centuries ago It is reached from below by a winding stairway, cut in the solid rock, considerably crumbled by time, and worn by the footsteps of the thousands who pass up to worship at the shrine of their favourite saint We entered the sacred edifice, and found it thronged with devotees, mostly half-naked Indians, who had come from the mountains and valleys beyond, on this their annual pilgrimage to the Mecca of their spiritual hopes, and who, like the devout Moslem who yearly kneels at the tomb of his Prophet, having finished his mission, is ready to lie down and die They jostled and pushed each other in their anxiety to approach the altar and touch the garments of the image of the Virgin, and deposit their offering of money in the dish ready to receive it Parents, anxious that their little ones should behold the great saint, lifted them up over the head of the multitude, and at a given signal the whole assemblage prostrated themselves on the hard paved floor to receive the blessing of the good father who ministered there The poor Indians gazed in mute astonishment at all they saw, but to them the riddle was not to be solved, they were taught to believe, not to inquire When they had deposited their offerings, and received a blessing they turned away to make room for others who were continually pressing on.

Turning away from this scene, we led our horses down the stone stairway into the enclosure below The crowd was not so dense as before, and we now found no difficulty in making our way through Giving our horses to a Mexican to hold, we entered the sacred edifice dedicated to the Virgin of Guadalupé The building was yet crowded with people, and the high dignitaries of the church were performing some solemn ceremony, commemorative of the occasion In appearance this church is by far the most magnificent one I was in, in Mexico It seemed almost one blaze of gold and silver in the bright sunlight which streamed through the windows and played upon the rich decorations The whole ceiling, and especially the dome, is painted in the most beautiful fresco, and so life-like are the images, that they appear almost to speak from the panels Above the altar, at the east end of the church, in a frame work of solid gold, is an image of the Virgin as large as life Her dress [illegible] whole length, thickly studded with diamonds, pearls, and emeralds—golden rays issue from each side and suspended above it is a silver dove as large as an eagle. The altar is of finely polished marble, and highly ornamented, and in front runs a railing of silver On both sides of the middle aisle extending from the altar to the choir, some sixty feet, is a railing covered with pure silver half an inch in thickness. In addition to these, there are many silver lamps suspended from the ceilings silver candlesticks before and around the altar, and some of the sacred desks are beautifully wrought in the precious metals. The choir is made of a beautiful dark wood, richly carved and ornamented, and the ceiling is supported by several marble pillars highly polished, and of great beauty As we crossed the threshold the rich deep tone of the organ, accompanied by the sound of many voices chanting a song of praise, swelled beneath the lofty dome and impressed the listeners with feelings of reverence and thanks giving The building was odorous with the perfume of the scattered incense which had a few minutes before been cast abroad over the worshippers, and numerous priests, in their rich robes, were ministering around the altar. The anxious gazing multitude, with in the temple, seemed fully impressed with the solemnity of the occasion, and conducted themselves with much propriety We remained there a short time, and then returned to the yard to look at one or two objects of interest before we rode back to the city Not far from the church is a "holy well," over which a small chapel

nas been erected. The water is supposed to be sacred, and to have the power of healing wounds and preserving all who are touched by it Crowds were gathered there, some dipping the tips of their fingers in, and crossing themselves, others applying a handful to the face, while some of the anxious mothers plunged their dirty children in, in order that the influence of the holy water might be sure to spread throughout the whole system, that is, if the dirt of the little urchins did not prevent it from penetrating Being now tired of Guadalupé, and the dirty crowd we met there, we rode out of the enclosure, and galloped down the causeway toward Mexico, where we arrived in time to dine.

Having indulged in a short siesta, I again mounted my horse toward evening, and in company with General C , rode to the Alemeda and Passeo Nuevo. The Alemeda is a public square, in the western part of the city, planted with trees and shrubbery, adorned with shady avenues, fountains and statuary, and beautifully laid out in walks and drives. It contains about ten acres, and is the most pleasant place of resort in or near the city The shrubbery is kept neatly trimmed and attended with great care, and is odorous the live-long year with the perfume of opening flowers. The trees clothed in their perpetual green foliage are fairly alive with birds of bright plumage and sweet song, which carol their morning and evening hymns free from harm In the centre of the square is a large fountain, surmounted by the Goddess of Liberty, which spouts pure water high up in the air, and at its base crouch four lions, from whose mouths spout up smaller jets; a semicircular row of seats surrounds the fountain, and the surface of the space within is paved with large flat stones, laid in tasteful figures From this point the paths and gravel-walks radiate in every direction, which are again met by others running from other centres, the point where they cross being adorned by smaller fountains In pleasant weather hundreds of children assemble in this charming place in the afternoon, and amuse themselves with their innocent gambols in the shade of the wide-spreading trees Hither the beauty and fashion of the capital, who seek pleasure on foot, resort toward evening, to promenade through the shady avenues There the student carries his book, and, in some quiet secluded corner, apart from the fashionable world which rejoices around him, he sits alone and pursues his favourite study, and there also the lovers repair at the enchanting hour of eventide, and whisper anew their vows of faith and constancy A numerous throng were gathered there, enjoying themselves in many ways apparently unmindful that "grim-visaged war" had erected his shrine in their beautiful city, and that foreign soldiery were overlooking them on the corner of every street We rode through these shady avenues, and then passed out at the south-west angle into Passeo Nuevo, with the crowd which moved that way This is one of the fashionable and most frequented public drives of the city, it is a beautifully macadamised road, half a mile in length, planted on each side with fine shade-trees, and adorned in the centre by a fountain, which spouts four jets of water Seats are placed at intervals along each side of the drive, and opposite to the fountain, for the accommodation of foot people Here all the world of Mexico may be seen toward evening, on a bright afternoon, in carriages and on horseback, and a lively, animated scene it presents. Rich equipages glitter in the declining sun, noble steeds, superbly caparisoned, and ridden by gay cavaliers, prance along, and beauty smiles upon every beholder Everybody who can command any kind of a vehicle drives to the Passeo, and sometimes it is so much crowded, as to be quite difficult to drive or ride along it The equipages which throng this path of fashion are various, and some of them are quite unique, and it is not uncommon to see the elegant turn-out of the English minister, side by side with a common country cart, lined with ox-hide, and drawn by a poor old apology for a horse that would hardly dare to look a vulture in the face. Yet both parties are enjoying themselves in the fashionable world. The custom of this drive is somewhat peculiar, which all follow to the very letter of the law, it is to drive the full length twice, stop in the centre opposite the fountain to salute your friends, as they pass by, and then return home To show our knowledge of the fashionable world, we conformed as nearly as possible to the ways of those who were initiated into the mysteries of the Passeo, and thereby, no doubt, passed for current coin. We spent one hour thus, in seeing and being seen, pleased with the animated scene we had witnessed, and then returned to our quarters. Thus I passed my first Sunday in the city of the Montezumas, and although not as religiously kept as would have been done at home, it had no evil effect upon the spiritual or moral man.

As the greatest tyrannies that ever were perpetrated have been committed under the forms and name of "freedom," so some of the greatest nonsense that ever was uttered has been talked under the garb and form of "science"

VISIT TO THE VALLEY OF CONSTANZA,

In the Cibao Mountains of the Island of St. Domingo, and to an Indian Burial-ground in its Vicinity.

BY SIR ROBERT H. SCHOMBURGK.

We left the small hamlet Pedro Ricart, at the foot of the mountain Barrero, on the 20th of July, at noon. The breeze wafted occasionally to us the report of guns and the sound of bells from the adjacent village Jarabacoa. There the multitude were feasting in honour of Nuestra Senora del Carmen, to whom this hermitage is dedicated.

The ascent of the Barrero commences almost immediately behind the hamlet. I saw on the wayside some large granitic boulders —perhaps a shock of an earthquake—to which the country is subject—had hurled them from the mountain-top to a situation so low. The narrow path up the mountain is a continuous zigzag. Ramon, our guide, led the way on his sturdy pony, decked in a dress befitting the occasion, and very different from the finery in which he was attired the previous day at the fête of Nuestra Senora del Carmen. I followed with my companion, -and then came the servants, and the peons or attendants to the cargo-horses, with their beasts of burden in the rear.

The leaves (or needles, as they are called in the German language, in consequence of their linear structure) of the pine-trees which covered the path rendered it very slippery, and as the ascent made, in spite of the zigzag, often an angle exceeding 30°,* the greatest caution was necessary.

The pine-trees of the tropics, like their congeners of a more northern clime, allow but few plants to grow beneath the shade of their branches I observed principally a few grasses and sedges, and here and there a scarlet *Salvia* A kind of gully was overgrown with bushes; and between them I observed tufts of an *Alpinia*, with rose-coloured flowers and deep-black berries. A few arborescent ferns were noted between the Alpiniæ

We had continued the ascent for an hour, but the prospect was by no means extensive. Through the column-like trunks of the pines the vista presented occasionally the hamlet, with its surrounding plantain and banana cultivations, but apparently so close in a line below our feet that we really were disposed to wonder how we got up there.

The narrow path wound now round a gorge, when a mass of bright scarlet flowers attracted my attention and raised my curiosity to such a degree, that I passed honest Ramon on his slow steed, though an unpleasant tumble into the gorge below was very imminent to both of us, as a consequence of my movement The flowers were those of a splendid fuchsia (perhaps *F. racemosa*), their drooping elegant blossoms nearly two inches long, and, to enhance the beauty, there were sometimes a dozen of these splendid flowers on each branchlet. The fuchsia is one of our favourite flowers in Europe. As a stranger, it is there carefully raised in the conservatory of the rich, and cherished in the enclosure in front of the poor cottage The bride twines it in her hair with the orange-flower and the blossoms of the rose. Yet here in its native soil I met with this plant for the first time to-day I had wandered over mountain and dale under the tropics—the former much higher in elevation, the latter much richer in vegetation—yet no scene had hitherto presented me with a fuchsia

The red soil bespeaks the ochreous nature of the Barrero, and it seemed to me as if Flora herself had adopted this hue as her favourite colour. Higher up, where a deep and narrow cutting exposed the formation of the mountain, I found slaty clay tinged with iron. Soon after we reached the highest pass where we halted. The cargo-horses arrived half an hour later. It was then half-past two o'clock in the afternoon, and the thermometer stood at 69° Fah.†

Here we allowed our panting horses a short rest, and a fine carpet, formed of the favourite grass of the equine race (*Elcusine indica*), was eagerly resorted to by them. In a little recess of the mountain—perhaps hollowed out by former tor

---

* I measured in one instance 35° by the clinometer

† I had an aneroid barometer with me, but, as I have not yet calculated the elements, I do not venture to state the height.

rents of rain—were assembled a variety of interesting plants. The splendid fuchsia neighboured the psychotria, with its large lovely panicles of flowers of the finest azure blue—that colour so scarce in Flora's empire—its footstalks of bright crimson, its leaves large, and of a dark, shining green. How beautiful was this when combined with the scarlet fuchsia! From the midst of this bouquet, planted by the hand of Nature, rose the symmetrical form of the royal palm (*Palma real* or *Orrodoxa oleracea*). The alpinia clustered at its foot, and the pliant branches of a tropical grape-vine hung from shrub to shrub in natural festoons. A few fern-trees completed one of the finest pictures of vegetation that I had beheld under the tropics.

It is strange to a European to see himself surrounded at once with the products of the two extreme zones—the pine and the palm-tree. Yet, may not this picture have presented itself in former geological eras in the north of Europe; and to that may we not ascribe the occurrence of trunks of palms in its coal measures?

We mounted our horses, and followed the narrow path that led along the side of the hill. The strong wind blew the rain, that now descended in torrents, into our faces. The thermometer had sunk to 55°. The storm could not have overtaken us in a more exposed situation; and we found some difficulty in maintaining ourselves on our horses, for the large trees bent around us like reeds. So we halted, and placed ourselves to the lee of the horses, until the storm should have ceased.

The rapid atmospherical changes so common on high mountains presented, shortly after, a splendid view through the opening between the Barrero and the Jagua mountains. The summits of the high elevations that formed the back-ground of the picture in the west were encircled with white fleecy clouds; the sky in that direction was of a dark blue, which gave to the scenery a similar tint, and showed the outlines of the mountain-chain with greater sharpness, streams of light, similar to the fitful bands of the auroral phenomena, played over the sky to the north-west, and at our feet the little village of Jarabacoa was lying in full sunshine. The course of the river Jimenoa showed like a broad silvery thread, fringed with dark-coloured pine-forests.

These mountains are peculiarly formed. The main direction of the chain is east and west, but there are so many interlacings, by sharp-ridged offsets, that one who had not seen the chain from the distance, so as to form an idea of its longitudinal direction, would find himself bewildered in seeking the points of the compass to which this backbone of the island of Santo Domingo really stretches. I feel inclined to describe it as a net of mountains—the extreme northern and southern sides forming the frame, and the connecting-links the meshes. Narrow deep valleys on each side of the interlacing ridges force the traveller to continue on their summits, although he is, in consequence, obliged to make long detours; and instead of advancing steadily towards the south-south-west—which is his true course to Constanza—he is often obliged to follow the ridge to the north and eastward before he is able again to continue to the south-south-west. Our guide had already told us, that so eccentric are the ways of these mountains, that two friends meeting in the morning, the one coming from Constanza, the other from Jarabacoa, in opposite directions, and having each parted on his several way, might at noon have another opportunity of saying, "How d'ye do?" across some chasm, in consequence of the twistings and turnings which both had to take. We did not understand what he meant at the time, but it became clear to us now.

We arrived after four o'clock at a spot called Cristobal. Here stood formerly huts to receive and shelter the way-worn traveller; but some guerilla troops, who were to guide these mountain fastnesses during the late invasion of the Haytians, had wantonly set fire to them. It was very chilly, the thermometer at 69° F. We found, luckily, that some of the posts were only half burnt; and there being a large number of palm-trees in the neighbourhood, a hut or rancho was ready before nightfall. The pine forest gave plenty of materials for maintaining a bright fire: the more requisite as it rained until after midnight, and we found soon that our roof was not waterproof.

The morning was bright. The rain-drops on the scarlet bells of the fuchsia glistened in the rays of the sun, and the delicious morning song of the silguero (*Cyphorinus cantans*, Cab.) resounded through the forest. Our road was of a description similar to that of the previous day, the vegetation, however, more varied. Near to our camp I observed the guava (*Psidium pomiferum*)—a very pretty clitoria, the numerous blue pea-shaped blossoms of which formed garlands for the trunks of trees and underbushes,—the white-blossomed bastard ipecacuanha (*Asclepias curassavica*), an orange-coloured lantana, and several other plants from the valley below. The psychotria, with its azure-blue flowers, was most luxuriant, presenting a mass of flowers which, seen through the dark-green foliage, seemed to be surrounded with a brighter light than we observable around other plants. This optical illusion is, no doubt, ascribable to the strong contrast between the colour of the leaves and the lively blue of the flowers. It is not possible to convey an idea of the gorgeous appearance of this shrub, which, in all my wanderings in South America and the West Indies, I had never met with before. There were two other species of the same genus, one with yellow flowers, the other pale rose-coloured. Among the trees I noticed a species of sumach (*Rhus arborea*), fern-trees—those true children of a moist tropical clime, alpinias, begonias. The trunks of the pine-trees were covered with purple-leaved Tillandsias, and the gigantic Dyckia, which just put forth its flower-stem, resembling in appearance an agava in miniature. A pretty orchidea grew in groups among the long grass, the flower-stem richly set with pink-coloured blossoms.

During my previous excursions I had frequently observed in the beds of the rivers which descended from the Cibao range, masses of granite of larger or smaller size, but I had never met it *in situ*. I saw it here for the first time, indeed the sharp ridges of the mountains were all granitic. One of the projecting points of the mountain was composed of calcareous sandstone. Soon after, large boulders of a close-grained blue sandstone crossed our path. The direction was east and west. It was in masses and denuded, and seemed almost as if it had been ejected from between the granite.

A conical hill was pointed out to me as Redondo, or "el Castillo Rances," the French Castle. Here, tradition says, the French had a fortification, but at what period I have not been able to learn. It was certainly not during the middle of the last century, as of that period there are still eye-witnesses living. I consulted a person now ninety-eight years of age, who had frequently passed the road when young. Even then, he said, no vestiges of the walls were to be seen, and the place was overgrown with pine-trees.

A better situation for hindering an enemy from availing himself of the mountain-pass, to penetrate from the western parts of the island to the eastern, or *vice versâ*, could not have been selected. The conical hill is connected by a ridge scarcely a foot wide with the other mountains, and rises considerably above those in the neighbourhood. The hill consists of decomposing granite, and its summit affords a splendid mountain view. The trench, or fosse, is still visible, but nothing can be discovered of mason-work. The fortifications must have been very circumscribed, as the summit does not afford much room. It is now overgrown with centenarian pine-trees, from the branches of which "old man's beards" (*Tillandsia usneoides*) hang down to a most respectable length.

We traversed the Jimenoa, here much reduced in size from what we had seen this river near Jarabacoa. The banks of these mountain-streams are generally thickly lined with palm-trees; and as the sun's rays cannot penetrate to the soil below their feathery branches, we find usually a deep morass in such situations. The right bank of the Jimenoa seemed so inviting, and presented such a fine tuft of grass to our horses, that we resolved to breakfast here. It swarmed, however, with musquitoes and sandflies, which rendered our halt irksome, and we hastened to ascend the hills before us. I observed here a pommerose tree (*Jambosa vulgaris*), and further on some coffee-plants. If I was rightly informed by General Reyes, the pommerose-tree was introduced from Jamaica only in 1751. It has now so spread over the island, that it might be considered indigenous by one not acquainted with its eastern origin. I have found in some parts whole acres covered with this tree.

The chain which we had traversed separates the tributaries of the river Yacki from those of the Yuna. We now descended to the Tireo, which flows into the Yuna, unquestionably the

largest river in the Dominican Republic. It disembogues into the great bay of Samana. Shortly after three o'clock in the afternoon we halted at Pontezuela, and enjoyed the first view of the Valle de Constanza. The pass of Pontezuela (or little bridge) is the connecting-link between the two mountain-chains that encompass the valley. We had now entered the system of rivers which empty themselves into the Atlantic on the south side of the island. The little rivulet that flowed sparkling valley-ward to the W.S.W. entered the river Limon, a tributary of the little Yacki, which flows into the Bay of Neyber, while its larger namesake passes the city of Santiago, from whence it takes a west course, and flows into the Bay of Manzanillo. At the time of Columbus—indeed, until 1804—it disembogued into the Bay of Montechristo, and the great discoverer called it the Golden River.

The view from Pontezuela over the valley is lovely. The bright yellowish-green of the savannahs produces an admirable effect among the sombre pine-trees which encompass them. Mountains of a dark blue, whose summits tower into the sky, form the background of the picture.

We descended, and passed for some distance through forests. The ground was now quite level. After half an hour's ride, we issued from the forest and entered on the savannah. The contrast is great. The view, previously bounded by high trees, is now free, and the eye glances with some astonishment to the summits of the mountains, which, in grotesque forms, encircle the valley in the figure of an elongated ellipsis.

The savannah was alive with grazing cattle; and a number of young horses, under the guidance of their dams, approached to reconnoitre our cavalcade. On the attack of our dogs, they threw out their hind legs most lustily, and scampered back into the forest. The grass on the savannah is short, but much coveted by animals. It seemed to consist principally of *Panicum horizontale*, *Leptochloa*, and *Eleusina indica*. These grazing-grounds, as I learned afterwards, are surpassed by none. The cattle thrive, and the meat is described as possessing a superior flavour. For this reason the secluded valley to which access was so difficult was selected as a pasture as long ago as 1750, and has continued such to this day.

Our path led once more through pine-woods, and we reached, soon after, the western mountain that sets a boundary to the valley. At its foot flows the rivulet Pantufo, on the banks of which we discovered a wretched-looking "buhio," or hut, covered with palm-leaves, which, nevertheless, I was told, is the best of the six that are to be found in the valley. A single family has resided permanently for the last two years at Constanza; the others come hither only occasionally, to look after the cattle, to brand the young ones, and to carry such as are fit for the market to the plains. The proprietors of the cattle and horses reside mostly in Jarabacoa and Pedro Ricart. With the exception, then, of the family mentioned, there are periods when the valley is without inhabitants. I had no choice but to put up at the "buhio." The brother of the proprietor, with the mayoral and six herdsmen, were there, all of whom, with ourselves, servants, and peons, had to find room in a hut not thirty-five feet square, and open to the winds. It swarmed, moreover, with fleas, from the large number of dogs that belonged to the farm. However, Senor Juanico was obliging, and willing to afford us all the accommodation which his mountain-hut possessed. Night approached, and our cargo-horses had not arrived. Except our slight breakfast on the banks of the Jumenos, we had not tasted food, and all our stock was with the beasts of burden. We addressed ourselves, therefore, to our obliging host, to know if he could furnish something to satisfy the cravings of our stomachs. But he informed us, with wo-begone face, that there was "un poco menos que nada" (a little less than nothing) in the hut. He had neither fowls, nor plantains, nor batatas.—"For heaven's sake," said I, "then, on what do you live here, for none of you seem to be in a starving condition?"—On milk and cheese principally. We receive occasionally cassavi bread and plantains from Jarabacoa, the arrival of which constitutes a feast."—"Have I been deceived in my supposition that the soil is fertile?"—"No, it is extremely fertile."—"Why, then, do you not cultivate it?"—"El Volcan!"—It then occurred to me that I had heard in La Vega of a remarkable blast which occasionally sets in, and by its icy current destroys the leaves of the trees and kills every plant of tender growth. The destroyer appears during the night, without previous warning, when the sky is clear and the air calm. The course of its path can be distinctly traced, though it is variable in its direction. It comes, however, generally, in December and January, from the eastern high mountains, and sweeps over the valley, seemingly exhausting itself on the opposite hills. In the morning, the leaves of all trees, with the exception of the pine, are yellow, and drop; and in a day or two, the naked branches present the picture of our northern winter. The noble stems of the banana and plantain first droop, and afterwards fall,—their vessels over-filled with watery juice. A similar fate meets the other culinary plants. This blast has received the name of Volcano, from the circumstance that the vegetation assumes a yellow hue as if fire had passed over it:—at least so Senor Juanico told me. This phenomenon struck me as very remarkable, as the absolute height does not warrant frost. It can be ascribed only to local causes, to investigate which would require more time than I can give to it. On making further inquiries, on my return to Jarabacoa and La Vega, I was told by well-informed people that it is always known, from the chilly dry air that prevails, even at the foot of the mountains, that "el Volcan" has passed the Valle de Constanza. Sometimes a couple of years pass without the occurrence of this phenomenon, at other periods, it takes place several times in the course of a year.

Under these circumstances, I was not a little astonished when the permanent resident of El Valle de Constanza, a mulatto of much intelligence, brought me next day a dray of fine cabbages which would have done honour to Covent Garden market, thyme, onions, shalots, celery, with batatas, and other tropical productions,—accompanied by a nosegay of some centifolia roses, pinks, and tuberoses. I began to doubt the effects of "el volcan."—but Senor Antonio explained to me his success in the following manner.—"I am," he said, "a native of San Juan, close to the Haytian frontier. The late wars between the Haytians and Dominicans deprived me of all I possessed; and when Soulouque approached the frontier anew, I resolved to fly to the mountain recesses of Constanza. On my arrival with my family at this spot about two years ago, one of the blasts of which you speak had just swept over the valley,—and all vegetation was destroyed. It was a gloomy sight for a man who intended to settle here and cultivate the ground for the maintenance of his family. Nevertheless, I took good heart. Better, thought I, to contend against nature than against savages like the Haytians,—who, in the dark of the night, fell upon my farm, stole away my son, drove off my cattle, and set fire to my buhios. So I fell on my knees, and made a vow to Nuestra Senora de la Merced,—which she has heard—for since I came here the destroyer has not once swept over the valley. Nevertheless, I must leave it,—for since I am the only one who works, all the rest wish to live on me,—and my provision-grounds are constantly robbed."—I have a good opinion of Antonio, and leave unquestioned his faith in Nuestra Senora de la Merced, I believe his tale to be true.

The remains of bygone tribes that once peopled the countries from which Europeans, under the plea of introducing the Christian religion and charity, have extirpated the indigenous inhabitants, have always been of the highest interest to me. On approaching the hut of Juanico, I observed some earth-works on my right. On inquiry, I learned that these were the remains of the palace of the Indian queen Constanza:—so, at least, it had been reported from father to son. Constanza took now additional interest in my eyes.—a female chieftain of that name lent it new lustre. I had considered the name of the valley accidental, but it seemed now to possess historical interest. My inquiries, however, to find out who Queen Constanza was proved fruitless. She seems to have been converted to the Christian religion:—at least so the name would indicate.

"Oh," said Juanico, "there is likewise an Indian sepulchre, or burial-ground, in the neighbourhood." This I was very anxious to see; but there seemed to be a great unwillingness to visit it, and I had to insist on guides being given to me. Antonio and a boy at length showed themselves ready to serve as guides, and we turned towards the foot of the southern mountains of the valley. An hour's good walking through the pine-forest brought us to a rivulet:—here I observed earth-walls of a semicircular form. Crossing the brook, I saw on a

hill-side traces as if a broad path in zigzag form had led to a mount, from the foot of which the burial-place of a thousand or more of the aborigines spread in a circular form, bounded by the mount, the rivulet, and the pine-forest.

The tumuli are of a rounded shape, or rather oblong; covered invariably with fragments of rocks, among which I particularly observed greenstone. This I think has been brought from a distance, as I did not discover any of it *in situ*. The graves have an east and west direction. The greater number are of dimensions calculated for only a single individual; but there are others which, judging from their appearance, may cover several persons. What shall we say to this discovery.—had the aborigines an idea of family sepulchres?

I have said that I stood on the burial-place of a thousand or more. The number of graves in the more open place, where only here and there a pine-tree sprouts, from spots containing

Saat, von Gott gesat, dem Tage der Garben zu reifen,

are underrated if assumed only at a thousand. They extend in the adjacent forest to the rivulet's banks, and there may be probably double the number altogether. I did not disturb the ashes: this I must leave to others. Time was sparingly measured to me; and the absence of proper instruments for digging, as well as the unwillingness of my guides, prevented.

I left the burial-place with strange feelings. Perhaps I was the first European that had ever approached and wandered amongst the resting-places of proud warriors who ruled over these regions. Save these grave that speak of their extinction, not a trace is left of their existence.

My guides spoke of an old sweet orange tree planted by the Indians. The forest was full of sour orange, but this they said was of excellent taste, and had a trunk larger than a man's body. After much search it was found, the guides had not been there for some years. The mother plant had fallen to the ground from old age, and was lying withered on the earth, but a shoot about thirty feet high, and of quite healthy appearance, bore a few fruits. They were of excellent taste, and the greater number had no seeds. This is sometimes the case with old trees. The mother trunk must have been of very large size: the heart of the wood, which had withstood decay, measured nearly three feet in circumference. This was no doubt the first sweet orange tree ever cultivated in this part of the island. Few trees are longer lived; and it is well known that the orange-groves of Spain contain trees 600 years of age.

On my return to the "bohio" I measured the earth-walls of "La Casa de la Reyna Constanza." The longitudinal direction of the two walls is W.N.W., the sides, which are open, N.N.E. The walls are about 6 feet high, 286 feet long, and stand 165 feet apart. About 158 feet from the northern end, there seems to have been an entrance, and a corresponding one opposite. Several old pine-trees grow now from the top of the walls, attesting the antiquity of the structure. It stands close to a hill, the side of which bears traces of a broad path having led up to its first platform-like elevation.

[The above excellent article is extracted from the *Athenæum*.]

THE INFIRMITIES AND DEFECTS OF MEN OF GENIUS.

The modes of life of a man of genius, says the elder Disraeli, are often tinctured with eccentricity and enthusiasm.* These are in an eternal conflict with the usages of common life. His occupations, his amusement, and his ardour, are discordant to daily pursuits and prudential habits. It is the characteristic of genius to display no talent to ordinary men; and it is unjust to censure the latter when they consider him as born for no human purpose. Their pleasures and their sorrows are not his pleasures and his sorrows. He often appears to slumber in dishonourable ease, while his days are passed in labours more constant and more painful than those of the manufacturer. The world is not always aware that to meditate, to compose, and even to converse with some, are great labours; and, as Hawkensworth observes, "that weariness may be contracted in an arm-chair." Such men are also censured for an irritability of disposition. Many reasons might apologise for these unhappy variations of humour. The occupation of making a great name is perhaps, more anxious and precarious than that of making a great fortune. We sympathise with the merchant when he communicates melancholy to the social circle in consequence of a bankruptcy, or when he feels the elation of prosperity at the success of a vast speculation. The author is not less immersed in cares, or agitated by success, for literature has its bankruptcies and its speculations. The anxieties and disappointments of an author—even of the most successful—are incalculable. If he is learned, learning is the torment of an unquenchable thirst, and his elaborate work is exposed to the accidental recollection of an inferior mind, as well as the fatal omissions of wearied vigilance. If he excels in the magic of diction and the graces of fancy, his path is strewed with roses, but his feet bleed on invisible yet piercing thorns.

Rousseau has given a glowing description of the ceaseless inquietudes by which he acquired skill in the arts of composition, and has said, that with whatever talent a man may be born, the art of writing is not easily obtained.

It is observed by M. La Harpe (an author by profession) that, as it has been proved there are some maladies peculiar to artists, there are also sorrows which are peculiar to them; and which the world can neither pity nor soften, because it cannot have their conceptions. We read, not without a melancholy emotion, the querulous expressions of men of genius. We have a little catalogue *de calamitate literatorum*, we might add a volume by the addition of most of our own authors.

The votaries of the arts and sciences are called, by Cicero, heroes of peace, their labours, their dangers, and their infirmities, make them heroes, but peace is rarely the ornament of their feverish existence. Some are now only agreeable, who might have been great writers, had their application to study and the modes of their life been different. In Mr. Greaves's lively recollections of his friend Shenstone are some judicious observations on this subject. He has drawn a comparison between the elevated abilities of Gray, and the humble talents of Shenstone, and he has essayed to show, that it was the accidental circumstances of Gray's place of birth, education, his admittance into some of the best circles, and his assiduous application to science, which gave him that superiority over the indolence, the retirement, and the inertion of a want of patronage, which made Shenstone, as Gray familiarly said, "hop round his walks like a bird in a string."

Men of genius are often reverenced only where they are known by their writings. In the romance of life they are degraded, in its history, they are men. From errors of the mind and derelictions of the heart, they may not be exempt, but are perceived by their acquaintance, who can often discern on these qualities. The defects of great men are the consolation of the dunces. For their foibles it appears more difficult to account than for their vices, for a violent passion depends on its direction to become either excellence or depravity; but why their exalted mind should not preserve them from the imbecilities of fools, appears a mere caprice of nature. A curious list may be formed of

"Fears of the brave, and follies of the wise."—*Johnson.*

In the note underneath, I have thrown together a few facts which may be passed over by those who have no taste for literary anecdotes.*

But it is also necessary to acknowledge, that men of genius

---

* Essay on the Literary Character, by Isaac Disraeli.

* Voltaire was the son of a vintner, and, like our Prior, was so mortified whenever reminded of his original occupation, that it was said of him, that wine, which cheered the hearts of all men, sickened that of Voltaire. Racine, the poet, was the son of a cobbler, and, when his honest parent waited at the door of the theatre, to embrace his son on the success of his first piece, the inhuman poet repulsed the venerable father with insult and contempt. Akenside ever considered his lameness as an insupportable misfortune, since it continually reminded him of his origin, being occasioned by the fall of a cleaver from one of his father's (a respectable butcher) blocks. Milton delighted in contemplating his own person, and the engraver, having reached our sublime bard's "ideal grace," he has pointed his indignation in four iambics. Among the complaints of Pope, is that of "the unpictured shape." Even the strong-minded Johnson would not be painted "blinking Sam." Mr. Boswell tells us, that Goldsmith attempted to show his agility to be superior to the dancing of an ape, whose praise had occasioned him a fit of jealousy, but he failed in imitating his rival. The insertion under Boileau's portrait, describing his character with lavish panegyric, and a preference to Juvenal and Horace, is unfortunately known to have been written by himself.

are often unjustly reproached with foibles. The sports of a vacant mind are misunderstood as follies. The simplicity of truth may appear vanity; and the consciousness of superiority, envy. Nothing is more usual than our surprise at some great writer or artist contemning the labours of another, whom the public cherish with equal approbation. We place it to the account of his envy; but perhaps this opinion is erroneous, and claims a concise investigation. Every superior writer has a manner of his own, with which he has been long conversant, and too often inclines to judge of the merit of a performance by the degree it attains of his favourite manner. He errs, because impartial men of taste are addicted to no manner, but love whatever is exquisite. We often see readers draw their degree of comparative merit from the manner their favourite author does the same; that is, he draws it from himself. Such a partial standard of taste is erroneous; but it is more excusable in the author than in the reader.

This observation will serve to explain several curious phenomena in literature. The witty Cowley despised the natural Chaucer, the classical Boileau, the rough sublimity of Crebillon, the forcible Corneille, the tender Racine, the affected Marivaux, the familiar Moliere, the artificial Gray, the simple Shenstone. Each alike judged by that peculiar manner he had long formed. In a free conversation they might have contemned each other, and a dunce, who had listened without taste or understanding, if he had been a haberdasher in anecdotes, would have hastened to deposit in his warehouse of literary falsities, a long declamation on the vanity and envy of these great men.

It has long been acknowledged that every work of merit, the more it is examined, the greater the merit will appear.

The most masterly touches, and the reserved graces which form the pride of the artist, are not observable, till after a familiar and constant meditation. What is most refined, is least obvious, and, to some, must remain unperceived for ever. But, ascending from these elaborate strokes in composition, to the views and designs of an author, the more profound and extensive these are, the more they elude the reader's apprehension. I refine not too much when I say, that the author is conscious of beauties that are not in his composition. The happiest writers are compelled to see some of their most magnificent ideas float along the immensity of mind, beyond the feeble grasp of expression. Compare the state of the author with that of the reader; how copious and overflowing is the mind of the one, to that of the other; how much more sensibly alive to a variety of exquisite strokes, which the other has not yet perceived; the author is familiar with every part, and the reader has but a vague notion of the whole. How many noble conceptions of Rousseau are not yet mastered! How many profound reflections of Montesquieu are not yet understood! How many subtle lessons are yet in Locke, which no preceptor can teach!

Such, among others, are the reasons which may induce an author to express himself in language which may sound like vanity. To be admired, is the noble simplicity of the ancients (imitated by a few elevated minds among the moderns) in expressing with candour the consciousness of genius. We are not more displeased with Dryden than with Cicero, when he acquaints us of the great things he has done, and those he purposes to do. Modern modesty might, perhaps, to some be more agreeable, if it were modesty; but our artificial blushes are like the ladies' temporary rouge, ever ready to colour the face on any occasion. Some will not place their names to their books, yet prefix it to their advertisements; others pretend to be the editors of their own works, some compliment themselves in the third person; and many, concealed under the shade of anonymous criticism, form panegyrics as elaborate and long as Pliny's on Trajan, of their works and themselves, yet, in conversation, start at a compliment, and quarrel at a quotation. Such modest authors resemble certain ladies, who, in public, are equally celebrated for the coldest chastity.

Consciousness of merit characterises men of genius; but is it to be lamented that the illusions of self-love are not distinguishable from the reality of consciousness? Yet, if we were to take from some their pride of exultation, we annihilate the germ of their excellence. The persuasion of a just posterity smoothed the sleepless pillow, and spread a sunshine in the solitude of Bacon, Montesquieu, and Newton; of Cervantes, Gray, and Milton. Men of genius anticipate their contemporaries, and know they are such, long before the tardy consent of the public. They have also been accused of the meanest adulations; it is certain that many have had the weakness to praise unworthy men, and some the courage to erase what they have written. A young writer, unknown, yet languishing for encouragement, when he first finds the notice of a person of some eminence, has expressed himself in language which gratitude—a finer reason than reason itself—inspired. Strongly has Milton expressed the sensations of this passion—"gratitude." Who ever pays an "immense debt" in small sums?

A SUNDAY EVENING'S MUSINGS.

BY JAMES MORGAN, BOOKBINDER.

How richly braut ful, how calm the scene,
To climb the woodland heights at close of day,
When ev'ry zephyr whispers peace serene,
And all around God's goodness doth portray!

The vale beneath in verdure gaily dress'd
Echoes the ev'ning hymns of thankful birds,
And roving bees return with sweets compress'd,
While 'neath the cliffs repose the friendly herds

Oh, holy scene! a placid calm like this
Absorbs my soul, and bids life's cares retreat,
This hour I'll consecrate, so full of bliss,
To God who swells my soul with joys complete

To heaven I'll raise my thoughts where cherubs sing
Of love and truth in symphonies divine,
There shall I soar on contemplation's wing,
And catch their spirit as they flying shine

Oh! may life's ev'ning hours unruffled roll
Lit by heaven's ceaseless unexhausted ray,
Which penetrates with light and hope the soul,
Illumes the grave, and points to endless day!

LITERARY NOTICES.

THE Second Volume of the WORKING MAN'S FRIEND, containing upwards of 100 pages, richly illustrated, will be ready October 1st, price 1s 6d, neatly bound in cloth.

THE SCIENCE OF BOTANY beautifully Illustrated by upwards of Three Hundred Engravings from Drawings from Nature.—In THE ILLUSTRATED EXHIBITOR AND MAGAZINE OF ART, for September 4th, a series of chapters was commenced on the instructive science of Botany. Each chapter will be profusely illustrated with engravings, carefully executed. The ILLUSTRATED EXHIBITOR AND MAGAZINE OF ART is published in weekly Numbers, twopence each, or in monthly Parts, 9d or 11d. each, according to the number of weeks in each month.

CASSELL'S SHILLING EDITION OF EUCLID.—THE ELEMENTS OF GEOMETRY, containing the First Six, and the Eleventh and Twelfth Books of Euclid, from the text of Robert Simson, M.D., Emeritus Professor of Mathematics in the University of Glasgow, with Corrections, Annotations, and Exercises, by Robert Wallace, A.M., of the same university, and Collegiate Tutor of the University of London, is now ready, price 1s in stiff covers, or 1s 6d neat cloth.

CASSELL'S EMIGRANT'S HANDBOOK, a Guide to the Various Fields of Emigration in all Parts of the Globe, Second Edition, with considerable Additions, and a Map of Australia with the Gold Regions clearly marked, is now ready, price 9d.

THE PATHWAY, a Monthly Religious Magazine, is published on the 1st of every month, price twopence—32 pages enclosed in a neat wrapper. No 33, for September, is now ready, and Vols. I and II., neatly bound in cloth and lettered, price 2s 3d each, may be obtained by order of any Bookseller.

Handsome Presentation Volume, in various styles of binding.—The 1st Volume of the ILLUSTRATED EXHIBITOR AND MAGAZINE OF ART forms one of the choicest instructive volumes that can possibly be presented to a friend. It is published in stiff paper covers at 4s 8d., or in elegant blue cloth binding at 5s. 6d., richly gilt edges, side, and back, 7s 6d. Nearly 400 choice engravings are given in this remarkable Volume.

CASSELL'S ELEMENTS OF ARITHMETIC, will be issued early in October, price 1s in stiff covers, or 1s. 6d cloth, uniform with Cassell's Edition of Euclid, edited by Professor Wallace, A.M., of the University of Glasgow, Editor of Cassell's "Euclid," the POPULAR EDUCATOR, &c.

SWEEPINGS OF MY STUDY.

It is a pity, on many accounts, that the ancient Cornish tongue has been suffered to be lost. The Phœnicians are believed to have worked the Cornish tin-mines; and, if so, this ancient dialect may have been partly Phœnician. Now, it is pretty clear, that the Carthaginians possessed that district called by the Greeks *Phoinike*, and spoke a dialect of Phœnician. That this bore a close affinity to Hebrew is the opinion of Sir William Drummond, who says of St. Augustine that, "had he understood the Punic tongue, he could never have been puzzled, as he confesses he was, with the Hebrew." This opinion is common to many other scholars. The curious thing would have been to have *compared* the *Cornish vocabulary* with the *Hebrew*, a comparison which might have given some singular results. All that is now known of this Cornish language is, that it was *very different* from either Welsh, Gaelic, or Erse, and yet it was a living language in Cornwall up to the eighteenth century. Nay, later than that.

THERE is no truth more important to writers and public men of all descriptions than this—you cannot take the prejudices of mankind "*by storm*." "Sap and mine" are *here* the *only* strategy.

OF all pedantic words, "ancillary" is one of the vilest. "Ancilla" is the Latin for a servant-maid Therefore, to say a thing is "ancillary" to some other thing, is equivalent to saying, that it is "servant girlary" to some other thing. "Ots splut," as Sir Hugh Evans says, "what phrases this?"

BE he who he may — or of what consequence soever—who quarrels with the world, let him be sure he will come off *second best*, and find, in the end, that the world is of more consequence to him than he to it. "Secessions," unless they be like that of the Roman "Populi" to Mount Aventine, seldom or never succeed That of Sir William Wyndham and others from the House of Commons, in Sir Robert Walpole's time, advised as it was by Lord Bolingbroke, failed indecorously That of Fox and others, during Pitt's ministry, was just as unfortunate The secession just now (1843) from the Scotch church will probably share much the same fate, but it is not like a "parliamentary secession." The men are *not silenced* That is in its favour, doubtless.

THE greatest tempest that ever raged in England, seems to have been that which blew in the reign of Queen Anne, in 1703. It blew down whole streets in the Metropolis, so that hundreds, nay, thousands, were perishing amidst the ruins. The loss at sea was enormous, some hundreds of merchantmen were wrecked or foundered, and no less than fifteen sail of the line suffered; amongst which was Admiral Bowater's flag-ship, in which he perished with all his crew. So awful was the tornado, that two persons committed suicide in sheer madness of terror. All this is commemorated in an annual sermon preached in London. It is called "The Storm-Sermon"

IT is a disagreeable thought—but, I fear me, too often a true one,—that literature and corruption frequently reach their height together in a nation, and that a splendid literary era is oftentimes the epoch, also, of the commencement of national decline With *Rome* it was thus, literature broke out just as the two Cæsars subverted the vestiges of the republic. At *Athens* it was much the same, though less marked. *French literature* blazed out under the gaudy tyrant, Louis the Fourteenth. In *England*, literature first made great head after the despotic Tudors had subverted what remained of Anglo-Saxon freedom.

I HAVE often seen persons who had fallen from wealth into poverty, exceedingly grieved, because many persons who formerly paid them attentions, ceased, after that, to do so. This seems very absurd All that the cessation proves is, that the former attentions were *not* paid to the *man himself*, but to his *wealth*. Why, therefore, should he grieve, because he apparently loses that which he *really never had*.

THE cormorant is still tamed in China for the purpose of fishing It was anciently used in England for the same purpose Charles the First had a "Master of Cormorants," as well as a Head-Falconer. Our modern cormorants are of a different species, and trained under different officers. They hunt *loaves* as well as *fishes*.

I HAVE never found it possible in composition to refrain from the use of that inexplicable looking thing—"the dash"—in writing, though I have often tried to tie myself down to the legitimate price of comma, semicolon, colon, and period I fancy that, after all, "the dash" is a necessary part of what is called punctuation The ordinary stops are enough, no doubt, to fix the sense, but this is not all. To give a sentence its *full* effect, a pause, not requisite for fixing the more abstract *sense*, is often absolutely required. This pause the dash denotes, and therefore, I am, after the best review I can give to this matter—*for* "the dash."

IF you get any thing of cloth or silk daubed with mud, do not attempt to clean it hastily, but hang it up in a warm place for several days until the dirt be thoroughly dry, when you will find it brush easily off, without damage to the cloth or stuff, whatever it may be. Even thus, *injuries* not hastily resented, but patiently borne, will *cease to be injuries at all*

NOTHING shows so strongly the great opinion which was entertained of the medical skill of the famous Dr. Radcliffe, as the treatment he met when Queen Anne died Radcliffe was a violent Whig, and in the queen's last illness, when the case grew desperate, was summoned to the royal chamber, but, being himself very ill, refused to go The queen died, and the most violent threats were uttered against the doctor, who, it was alleged, could have *saved* the queen, *but did not choose*, because her death was also that of the Tory administration of Harley and Bolingbroke This prejudice was so strong that it is believed the vexation of it hastened Radcliffe's end It was the highest compliment to his skill, but at the expense of his character

TIME—the soberer of all that is extravagant—has much the same effect upon a finely-constituted mind, that it has upon a finely-painted picture It does not obliterate a tint in the one, but it mellows, refines, and blends them. In the other, it does not blot out a hope, an aspiration, or a feeling, but it sobers down their extravagances. Experience, the fruit of time, acts, in short, like a "gloze," or "medium-tint," upon the hues, which youth has spread with too much brilliance, or passion has touched with too vivid a light.

DEAN SWIFT was one of the few men, Tacitus was another, who have been *far too good for their age and period*. Swift as an honest and wise man was leagues beyond Pope, Harley, Arbuthnot, St. John, and the rest of them. He evidently *felt* the heartless corruption of courts.

NOTICES TO CORRESPONDENTS.

SUSSEX.—We decline furnishing you with directions for "making all sending up fire balloons." The practice is dangerous, and is a misdemeanour punishable by law.

R. L. (Berwick).—The sentences you have sent are Latin; the first, "*Misereis succurere disco*," means, "I learn to succour the unfortunate;" the second, "*Nisi dominus*," is only a portion of a sentence, the first two words of the 127th Psalm, —"Unless the Lord," &c.

JAMES SMITH.—We believe the trade you mention is as good as many others; but it is quite impossible for us to say whether, if you were apprenticed to it, you would be sure to get a situation when out of your time There is good room for improvement in your *writing* (not "*written*"), and also in your spelling.

MACEDONIA.—The "salic law" was a law made by king Pharamond of France, or, as some say, by Philip the Long, by which females were excluded from sitting on the throne. As the character of the people of that age and country was peculiarly martial, it was probably thought inconsistent to have a female ruler. The law is still in force in France, in Germany, Hanover, &c.

G WEBB.—You had better put you inquiries as to the prices of certain books to a bookseller; our answering them would subject us to the advertisement duty

J JAMES (Halsted).—We fear that there are too many shops in the "general line" in the vicinity of London to make it worth your while to leave your present business for the purpose of trying the experiment We are not aware of the existence of any society "to assist tradesmen whose capital is limited," most of the "loan societies" are conducted by rapacious adventurers

JOURNEYMAN.—A warehouseman is readily likely to find employment either in America or Australia. For particulars as to rates of passage &c., you should get the last edition of the "Emigrants' Handbook," published at our office.

J. RATHBONE.—We have no society in London of the description you name. As to rules, &c., you had better apply to *Judd Pratt*, Esq., Temple, London, who is appointed by the government to attend to such matters.

A MINER.—Your young friend the chemist,—begging his pardon,—is a fool, and is trying to make a fool of you. Bring common sense to your aid.

A CONSTANT BATHER.—We think your practice of "bathing in a tepid bath four times a week, staying in the water half an hour each time," is calculated to injure your constitution very seriously *Cold bathing*, for a few minutes at a time, is much more likely to benefit you

A VOYAGER.—The most effectual preventive for sea-sickness is *not to go to sea*. You may, however, greatly stay the disagreeable sensation by remaining in the horizontal position, Excess in eating and drinking should be avoided.

G PASS (Burslem).—You will find a good receipt for *varnishing* water-colour drawings in No. 40 of the "Working Man's Friend," p. 231 If you wish to *polish* them in addition, you must lay on two or three coats of the varnish. Your work may then be polished with the *soft* pulpy part of your hand, previously rubbed with a very small portion of fresh butter.

T J D.—*Liquid glue* is made thus.—Dissolve a quarter of a pound of shell-lac in three ounces of naphtha; put the lac into a wide-mouthed bottle, and pour the naphtha upon it, cork it up; stir it with a piece of wire two or three times during the first thirty-six hours. When thoroughly dissolved it will be about the thickness of cream, and forms a liquid glue always ready for use, and peculiarly applicable to pattern-makers, joiners, or carpenters, and perfectly waterproof.

A YOUNG PAINTER.—*Caoutchoucine* is an inflammable liquor procured from caoutchouc (Indian-rubber) by distillation. When mixed with highly-rectified spirits of wine, it is a ready solvent for all the resins, even copal, and that without heat. As it mixes readily with oils, and dries quickly without injury to the colours, it will, no doubt, answer your purpose well

G PASS.—Sir John Franklin left England on his last expedition, about the middle of May, 1845, in the *Erebus*.

RUSSIA AND THE RUSSIANS.—VI.

PETERSBURG.

PETERSBURG is situated on the Neva, at its outlet into the gulf of Finland, and has a strongly fortified island a few miles westward called Cronstadt, which is the chief naval station of the Russian Empire, and commands the whole entrance outwards into the Baltic. Petersburg is the seat of the imperial government and was intended by its founder, Peter the Great, to form the capital of the empire. It is situated about 500 miles north-west of Moscow, and contains according to the legal authorities, about half a million inhabitants. Although irregularly built, it is considered one of the most splendid cities in the world. The beauty of the entrance into St. Petersburg, we are told by Mr. Jerrmann—the most entertaining and recent of northern visitors—cannot easily be paralleled.*

First, magnificent Cronstadt, with its harbour full of countless ships, its docks without end, its remarkable towers and works, rising in wonderful strength and beauty out of the depths of the open sea, strikes us with admiration. A little farther we pass the beautiful palace of Peterhof, with its delightful gardens, its pleasant park, its fairy-like buildings. After several hours' sail up stream, and after passing the splendid building appropriated to the mining school, we reach the majestic English quay, where the steamer stops, just opposite to the Exchange.

RUSSIAN COURIERS.

The delay occasioned by the revision of passports, before which no one is allowed to quit the vessel, and by the subsequent inspection of baggage at the custom-house, is disagreeable, especially as the glimpse one gets of the city excites the strongest desire and most impatient curiosity to examine it more closely. The annoyance of the detention is lessened, however, by the obliging courtesy with which the officials per-

* Pictures from St. Petersburg, by Edward Jerrmann. Translated from the original German, by Frederick Hardman. London. Longman and Co., 1852

form their duty, assisting the travellers, after its completion, to repack and arrange their property. If there be any truth in the oft-repeated tales of the horrors of the Russian custom-house, they at least can apply but to the inland frontiers, where, perhaps, Cossack usages still prevail. When entering St. Petersburg by water it is only in cases where information of fraud has been received, that harshness and severity are displayed; otherwise, and as a general rule, the treatment is considerate and humane, and might be substituted with great advantage for the petty annoyance inflicted by the Austrian customs' officers. The customary formalities at an end, it is usually still broad daylight when you reach the interior of the city. Most strangers proceed thither along the quay, across the Isaac Square, by the fine statue of Peter the Great, the imposing building of the Admiralty, and the wonderful Isaac Church, to the Newsky Perspective. However much accustomed to Paris and London, the stranger cannot but be struck, impressed and delighted by the spectacle that here presents itself to him; by the remarkable beauty of this street, its immense width, including a double line of carriage ways floored with wood, and footpaths ten or twelve feet broad—by the magnificent palaces and palatial houses bordering it on either side by the elegance of the rows of shops, each vying with the other in luxury and richness, fronted with the clearest glass, illumined at nigh with floods of gaslight, and filled with the most costly objects that luxury and refinement can devise. Still more is he astonished at the constant stream of life which flows along this great artery of the city; at the throng of passengers on foot and on horseback, in carriages drawn by six and by four horses, in smaller vehicles of every kind, in *droschkis* and *istuorstschiks* If the stranger, extricating himself from this noisy bustling scene, succeeds in finding accommodation at the Hotel Coulon or the Hotel Demuth, the only foreign hotels in St. Petersburg, he may live there comfortably enough until he can settle himself in more permanent quarters. But if, through want of room at those houses, or ignorance of the locality, he betakes himself to a Russian hotel, he has speedy opportunity of studying one of the most disgraceful sides of life in St. Petersburg. Short of a forest cavern, a foreigner could hardly meet with anything more uninviting and unpleasant than the aspect of one of the caravanserais, or with anything more dismal than its arrangement and distribution. He is ushered into ill-lighted rooms, betraying a sad want of the careful and cleansing hand of a tidy hostess; and where the elegance of the furniture is by no means so great as to make amends for its extreme scantiness. The absence of anything like a bed particularly strikes him. Russian travellers do not miss this, for they invariably carry their own beds about with them, as Maximilian the First carried his coffin, and thus accustom hotel-keepers to dispense with beds in their apartments. At last, after many delays, and at the urgent and agonised entreaty of the weary foreigner, such a bed is provided as the German, accustomed to the snug eiderdown of his fartherland, shudders to contemplate The painful impression of this first reception is but very partially surmounted, when he becomes aware of another cause of discomfort and annoyance. The attendance is execrable. In these Russian hotels there is seldom a living creature who can speak anything but Russian; and foreigners are at their wit's end to make themselves understood. There is little hope for English, French, and Italians. Only the German, if his good genius suggests to him to visit the kitchen, may chance to discover there a Finland woman. These are skilful cooks, and most of them speak German. He will hardly get a better supper for this, however; and ultimately will be fain to have recourse to the hospitality of his countrymen resident in St. Petersburg, and which assuredly will never fail him If the stranger has letters, or even only a single letter, of introduction, which it is natural to suppose will in most instances be the case, he is rescued, immediately on presenting them, from the purgatory of his inn, either by the offer of a room in the friend's house to whom he is recommended or by being provided with a furnished apartment, of which there are plenty to let in St. Petersburg, chiefly in German houses, and where he will usually find himself very comfortable.

Should any one who reads these lines ever visit St Petersburg without introduction or acquaintance, let him go to the first wire-house or *restaurateur* he meets with (there is no lack of them), and inspect the bill of fare, upon which the names of eatables and drinkables are inscribed in German as well as in Russian. In such places, too, there is generally an attendant who can speak German. Let the stranger walk in, seat himself at the first unoccupied table he comes to, and order his breakfast in German, and in rather a loud voice. He may be pretty certain that, before he has half finished his repast,—and provided he be not too entirely engrossed in its discussion—he will observe some one of the persons present call the waiter, and whisper a few words in his ear. The waiter replies by the same sort of pantomime usually performed by a German court-chamberlain when his royal master asks him why the people do not cheer as he goes by. The *habitué*, having received this shoulder-shrugging answer to his inquiry, seems to consult a moment with his companions, then empties his glass, fills it again, rises from table, approaches the stranger, and greets him as a countryman. Some conversation ensues, and if there be anything in the new comer's mode of speaking, occupation, country, journey, or manner, to inspire the slightest interest, it may safely be wagered that before his interlocutor has emptied his glass, he has invited him to join his party. If, in the intercourse which then follows, he justifies, ever so little, the good opinion which his new acquaintance are well-disposed to entertain of him, he is asked to call upon them, and thenceforward it only depends upon him to consider their houses, if he so pleases, as his own. There is little ceremony used with anybody. A stranger is invited only once to dinner. If he does not please his entertainers, they nevertheless, for that once, endure him with a good and hospitable grace. If, upon the other hand, he makes a favourable impression, on leaving table his host says to him, with a cordial shake of the hand, "Do not wait for another invitation; your knife and fork will be laid here daily, and the oftener you come and use them, the greater the pleasure you will do us." And when this is said, the guest may feel assured that it is meant literally as spoken. Nor need he ever fear to inconvenience his hospitable entertainers; go when he will, he will be welcome. His place is ready for him: if oysters and champagne are upon table, his host smiles, well-pleased that he has come on a day of good cheer. But though beef and potatoes alone be on the board, the lady of the house betrays not a sign of vexation or embarrassment. *Enough* there always is; how it is managed I know not; but the entrance of half a dozen unforeseen guests neither excites surprise nor occasions inconvenience. On the other hand, however homely the repast, the hostess never deems an apology requisite. What she gives is freely given, and she therefore makes sure that it will be contentedly received. How she would laugh, could she witness, in some German household in Dresden or Berlin, the housewife's deadly agony when her husband unexpectedly brings home from 'Change a friend or two to dinner! Such agony, for such a motive, is unknown in St. Petersburg; unknown, too, there, is the German custom of making trifling presents to servants as often as you take a meal in a friend's house. At Christmas and Easter it is customary to make calls at the houses of your friends, and then money is given to servants, and in handsome amounts; ten or twenty rubles to each, or even more, according to the means and inclination of the donor. If the two customs come much to the same in the end, at any rate that of the Russians is more seemly and convenient.

Conversation at Russian dinner-tables is not very striking or diversified. This may be partially accounted for by the separation of the sexes. Be it observed that I here depict the manners of the middle classes. He who desires to learn those of the nobility—not only of Russia, but of the rest of Europe—has only to study the usages of Parisian society, and he then knows those of all other aristocratic societies. In the burgher circles at St. Petersburg, the two sexes usually group themselves very much apart from each other. Even at meals the gentlemen take one half of the table, and the ladies the other. I will not venture exactly to praise such an arrangement, but certainly it spares many an old graybeard, or busy merchant, engrossed with agios and percentages, the trouble of having to entertain a simpering sixteen-year-old neighbour.

The chief subjects of conversation with the ladies of St. Petersburg, at the dinner-table, and in the circle they subsequently form round their coffee-cups, are music, theatricals, the gossip of the town, a very little literature, and, above all,

the fashions. On this last subject they are inexhaustible, and truth demands the confession that they do not cultivate a barren soil. They do not, as many a distinguished national assembly has done, waste their time in fruitless theories. Every project devised speedily becomes an accomplished fact; plans are no sooner sketched than carried out; theory quickly blossoms into practice; no undertaking is too difficult, no obstacle insurmountable, no sacrifice too great for these devoted priestesses of the Graces.

In St. Petersburg people do not live abroad. Public gardens, boulevards, bazaars, and so forth, are there unknown. There everybody minds his business, and stops in his house; and when the cares and toils of the former are at an end, he does his utmost to transform the latter into a paradise. Freedom is an indispensable condition of such transformation, and of freedom the Petersburger enjoys, in his own house, an ample measure; not only in the complete liberty of his social life, not only in his complete abandonment to his individual inclinations, but also in respect of political controversies, which in his domestic circle are often carried on with such keenness and unreserve, that the hearer fancies himself transported into some German republican club. Freedom is far greater in St. Petersburg, in this respect, than is generally supposed. Considering the licence of expression indulged in when conversing on political subjects before strangers and servants, it is quite inconceivable that the vigilant police should never have become aware of, or taken umbrage at it; and that there should be no instance on record of a domiciliary visit in the house of a German resident in St. Petersburg. It is probable enough, however, that the authorities are aware of those conversations, but intentionally take no notice of them, knowing the character of Germans, and that, with them,—words do not lead to deeds.

When politics, into which conversation at St. Petersburg usually ends by gliding, have been fairly exhausted, play is resorted to as a pastime. In this the women are in no way behindhand with the men; but on the contrary, have usually organised their tables of whist, boston, ombre, or *préférence*, long before the politicians have finished their discussions. *Préférence*, especially, is a favourite game with the St. Petersburg fair ones. With unremitting assiduity they play on from seven or eight in the evening till two in the morning, then sup, and separate at four to get up again at daybreak,—that is to say, according to German time, at nine in the morning, for I here speak of winter parties only, seeing that in summer, at St. Petersburg, there are neither parties nor inhabitants.

When the St. Petersburger has thus introduced a stranger into his house and shown him his domestic interior, the chief subject of his pride, he proceeds to display to him the second thing in which he glories, namely, the beauties of the capital. A day is fixed, the droschki is brought to the door,—few Petersburgers in comfortable circumstances are without an equipage,—and the foreigner is driven all about the town. First, through the Newsky Perspective, already referred to, to the majestic Newsky Convent, where repose the bones of St. Alexander Newsky, which were miraculously cast ashore, so runs the tradition, on the Neva's bank, by the Baltic's tempestuous billows. In costly silver relievos, the hero's exploits are perpetuated upon his coffin. Returning hence, the stranger's guide points out to him, on the left of the Perspective, the Kasan church, one of the most beautiful ornaments of the city. In its front stand four colossal stone statues of apostles, models for four statues of the like gigantic size, which are to be cast in silver. The metal for this purpose is already stored up in the vaults of the Church, and is a pious present from the Cossacks of the Don. On entering the sacred edifice, the eye is at once fettered and dazzled by the magnificence it meets. Pillars, walls, floor, and ceiling, all of the costliest marble: a great barrier, three feet high, and of wrought silver, in front of the sanctuary, and behind it pictures of saints, partly cut out according to the Russian fashion, and having head, neck, and breast, as well as the frames, studded with precious stones of great price. Various trophies, conquered in the wars with Turks and French, decorate the Church; amongst others, the marshal's baton of Davoust, the sight of which once incited a Frenchman, fanaticised by false patriotism, to commit a church robbery. He was detected, and [illegible] the offence is one of those most severely punished in Russia, the authorities contented themselves, in consideration of the extenuating motive, with sending him out of the country.

From the Kasansky you drive through the Morskoy, paved, like the Newsky, with wood, to the *Edit Moyi*,* one of the handsomest buildings in St. Petersburg, opposite to which, on an immense open square, stands the enormous Alexander's Pillar. Thence you proceed to the sumptuous Winter Palace, whence the view over the Neva, Wasili Ostrow, and the Petersburg bank, is exceedingly fine. Going down the quay, you reach the Champ de Mars, of such vast extent that I once saw the Emperor pass in review there a body of 80,000 men of all arms. Whoever has had the opportunity of seeing the Russian guards manœuvre, will assuredly hesitate before expressing German contempt of those "barbarous hordes." Several days are requisite for even a superficial examination of the principal sculptural and architectural monuments of the city. Then it is the turn of St. Petersburg's charming environs;—Sarskoje-Sélo, Jelagyn, and Peterhof, the summer residence of the Court, whose beauty borders on the fabulous. Thence comes a visit to Apothecary's Island, with its wonderful botanical garden, in whose immense conservatories one fancies oneself transported to the tropics. To the intelligent zeal of the court-gardener, Mr. Tellman, a German, these hot-houses are indebted for a care and development which render them probably unsurpassed by similar establishments in any country of the world. At any rate, nothing of the kind that I have seen in Potsdam, Vienna, and Paris, can bear comparison with them. From Apothecary's Island you reach Kamini-Ostrow, thence proceed to Petrowsky, and so from one island to another, each surpassing its neighbour in the beauty of its plantations and elegance of its summer villas. Certainly art alone is to be thanked for all this beauty and bloom in the far north of Europe, where nature does nothing; equally certain is it that the glory of these lovely gardens last at most but ten or twelve weeks. Not on that account, however, are we to withhold our recognition of the Beautiful, wheresoever we find it; but rather prize and appreciate it the more, because our enjoyment of it is to be so brief. And assuredly the stranger, crossing for the first time the bridge of Kamini-Ostrow, pausing in its centre, and looking right and left at the lovely villas, built in the most graceful Italian style, and embedded in luxuriant vegetation and beauteous flowers, may well imagine, as his astonished gaze wanders over the shores of the arm of the Neva, that he has been suddenly transported to the seductive banks of Arno or of Brenta. These islands are the summer abode of the inhabitants of the capital; where no one, whose business will possibly admit his absence, ever remains between the beginning of June and the end of August. The oppressive heat, combined with the intolerable dust, and, above all, the pestiferous exhalations of the canals, drive every one forth. These canals, of great width, and encased in handsome granite quays, are very ornamental to the city, but they render residence there during the hot season perfect torture. Accordingly, towards the end of May, all make their escape; and if I have already had occasion to praise the hospitality of the town, I must now admit it to be surpassed by that exercised in the country. There it is a common practice for whole families to quarter themselves, unexpected and uninvited, upon their friends and acquaintances, bringing with them their servants, horses, and dogs. They are always heartily welcomed, kindly received, and hospitably entertained; and their departure is sincerely deplored, though it occur only after many weeks' stay. The rural amusements are walks and rides, bathing, bals champêtre, fire-works—which are let off almost every evening, especially towards the beginning of autumn—music, singing, somewhat more conversation than in town, because less time is passed at cards, somewhat less reading, because one is almost constantly out of doors. Gambling, however, is not entirely given up, and moreover the abstinence in summer is amply compensated by the winter's excess. With the exception of Mexico, there is assuredly in no place in the world more gambling than here. True, that games of chance are strictly prohibited, and are played neither in public places nor at private clubs; but games of skill, especially *préférence*, are played so abominably high that scarcely an evening passes, in

* *Generalstab*, military head-quarters, officers of the staff: in England, the Horse-Guards is the only analogous establishment.

IMPERIAL PALACE OF GATCHINA.

BLESSING THE NEVA.

the winter-time, without a few hundred thousand rubles* banco exchanging hands at the card-tables of the English club and other establishments of the kind. These profuse and habitual gamblers play—especially the Russians—with wonderful coolness, and with the utmost apparent indifference as to the result.

* A Russian ruble is equal to 10d English, nearly.

A circumstance that comes greatly in aid to the hospitality of the Petersburgers, is the abundance of provisions and their consequent cheapness. One can hardly form an idea of the plenty that prevails. On Twelfth Day, when midnight chimes, the peasants of the whole empire set out upon their sledges, well packed with fish, flesh, and game, and preserved fruits, which latter are no where so well prepared and of such good flavour as in Russia, and repair to the towns, especially to St. Petersburg, often performing journeys of 2000 or 3000 versts. There they usually sell their goods at very advantageous prices, and then, in large caravans, in high spirits, and somewhat elevated by drink, retrace their steps homewards. These journeys, however, take place only in what are called fine winters, by which the Russians understand a steady cold of 20 deg. to 24 deg. Reaumur. Then the sledging paths are firm and smooth; the peasants' little horses, not bigger than a bull of a year and a half old, drag them briskly and without fatigue to the capital, where their eatables arrive fresh and in good order. If, upon the other hand, a thaw sets in, these poor people are greatly to be pitied. The results of the year's toil are inevitably lost to them. And even when it freezes again directly, so that the provisions reach their journey's end seemingly well preserved, the thaw has nevertheless caused distrust as to the state of the meat, and sale and price are alike diminished. With respect to fish, not the slightest deception can take place, for the Russian knows by the very first look at the fish's eye, and by pressing it gently with his finger, whether the fish has been thawed, and if it has he will not purchase it at any price. In remarkably mild winters, when there are frequent intermissions of thaw and frost—as happened, for instance, in the winter of 1841-2—the police institute a rigid examination of the provisions before they are allowed to enter the city. And so it came to pass that in that unfortunate winter many hundreds of sledges were excluded from St. Petersburg, then contents were thrown into the water or buried in the earth, and their unhappy owners had no choice but to sell horse, sledge, and harness, and to retrace on foot, sorrowful and a-hungered, the weary journey to their distant homes. Happily such *had* (mild) winters are of very rare occurrence. The one I have just referred to, during which the Neva twice thawed and twice again was frozen, was unparalleled in the memory of the oldest man in St, Petersburg.

The cheapness of the principal necessaries of life, such as bread, potatoes, meat and fish, extends also to the more delicate vegetables, to fruit, and to poultry, and the smaller sorts of game, (especially a species of partridge, heathcocks, &c.), particularly if one does not run after things which have only just come into season. This explains the abundance observable on the tables of St. Petersburg, even upon those of the middle classes. Fuel is also very cheap, and rents, compared with those demanded in Vienna and other capitals, are by no means high.

The ordinary necessaries of life are decidedly cheap. But very costly, upon the other hand, are all objects of luxury, particularly those manufactured in foreign countries. Men's clothes, and more particularly women's clothes, are made in St. Petersburg even better than in London and Paris; the fashions of course coming from the latter places, and being most conscientiously imitated by the Russian artists. But they are enormously dear, as are all kinds of dress, millinery, and ornaments and as are also French wines and books. The dealers in these last, for instance, reckon the Prussian dollar as equivalent to the silver ruble, which is at once an addition of six or seven per cent to the price, and moreover, lay on a profit of twenty-five and often thirty-three per cent. By these exorbitant charges the sale of books is much injured. Foreign wines in general are anything but cheap, especially champagne, the regular price of which is three silver rubles a bottle, or more than half as dear again as in Germany; and what makes this expense still more felt, is the extravagant use of that wine. The first thing that a Russian places before a stranger is champagne, and as the German is of an imitative nature, and this custom flatters alike his palate and his vanity, the use of the luxury is carried to profusion. An effort has been made to substitute a Russian product for this expensive drink; and a wine is fabricated out of the excellent grapes of the Crimea which is called Russian champagne and which exactly resembles the original so far as colour and effervescence go. But there the likeness ends. In flavour the difference is so notable that the Russian sets the Crimean wine only before those guests whom he does not desire again to receive, but the repetition of whose visits the sacred laws of hospitality forbid him to decline.

"The arsenal and docks of Cronstadt," says our entertaining informant, "must be included amongst the finest public works of St. Petersburg; and after them the attention of the stranger is forcibly arrested by the multitude of splendid churches and public buildings of all kinds, the Winter Palace being prominent amongst the latter. I shall not weary my readers by a dry and detailed account of things which they may find better described in any guide-book. I will but pause a moment at the public hospitals, selecting especially that of Abuchow, which I had special opportunities of inspecting through the kindness of one of its directors, Counsellor Gotte, who was distinguished alike as physician, administrator and man; but who now, unhappily, is no more. These St Petersburg hospitals strike the visitor so forcibly at a first glance, by their extreme cleanliness and convenience, that he is unavoidably prepossessed with a most favourable idea of the treatment experienced there by the sick. This treatment is indeed, so excellent, the care and attendance so first-rate, that I do not hesitate earnestly to advise such strangers as may be thrown upon their own resources in St. Petersburg—living at hotels or in furnished apartments—to take refuge, in case of illness, in one of the public hospitals. There, at a very reasonable rate, they may obtain a room and attendance for themselves, such as they assuredly could not obtain—especially the attendance—in any other way.

"The style of building of the St. Petersburg houses is peculiar, very suitable, but expensive. Although building materials—stone, wood, iron—are there infinitely cheaper than in Germany, houses yet cost much more. In St. Petersburg the owner of a stone house is looked upon as a man well off in the world. The term 'stone,' used as a distinction from 'wooden,' will soon fall into disuse, for in the heart of the city there are scarcely any wooden houses remaining, and in streets more distant from the centre they will gradually quite disappear, substantial and extensive repairs of such houses being no longer permitted. When these become necessary the owners are bound to take down the houses and rebuild them of stone. The expensiveness of building arises from high wages, and from the great solidity of the buildings. St. Petersburg is built partly on swampy and partly on sandy ground houses of any size require, therefore, enormous foundations. When one reflects that, a century ago, a bottomless morass existed where now stands the mighty Kasansky Cathedral, a morass which swallowed whole forests of trees before the erection of so colossal a monument could be ventured upon one marvels at the boldness of the mind which could plan and carry out the erection of such a city on such a spot. Even as the idea of its foundation originated with Peter the Great, so was he also the animated spirit at the carrying out of the plan. He resolved to found an immense commercial city, a second Amsterdam; he would have his merchantmen, freighted in India, discharge their cargoes in the heart of his capital at the door of his merchants' warehouses. Direct from the vessel's hold should the bales of rich eastern produce be carried into the store. With this view did he plan the three broad and proportionably deep canals which intersect St. Petersburg in every direction."

Amongst the best and richest shops in St. Petersburg are provision shops—somewhat resembling our Italian warehouses—where an immense variety of edibles and potables, the choicest spices and most expensive wines, delicacies of every kind, as well as butter, cheese, and other common articles of consumption, are exposed for sale. Goods, to the amount of many millions of rubles, are heaped up in these shops, most of whose keepers, themselves *millionnaires*, are serfs of Count Scheremetiew, in whose name the business is carried on, since by Russian law no serf can trade. When they began business, they were aided by the count's money and credit, and in return they pay an annual poll-tax, in like manner with the serfs who till the ground, and with those who, by their owner's permission, take service or employment in the towns. Five rubles (four or five shillings), was the yearly sum they paid,

when they first set up their shops, for each male—women being exempt from the impost. They pay the same and no more now that they roll in wealth, inhabit sumptuous mansions, and drive in elegant carriages.

"Besides the imperial palaces," says Mr. Jermann, "the churches, the buildings appropriated to the use of the admiralty, the military staff, and the senates; besides the theatres, barracks, and so forth, the educational establishments deserve especial mention. Their annual cost to the State amounts to a sum such as Russia only could afford for such a purpose. The immense expense can be understood only by calling to mind that Louis XIV.'s saying, '*L'Etat c'est moi!*' is also that of the emperor, who takes as much care of the State as he could do of his own person. Besides the various civil and military schools, those of the Mining and Forest Corps are excellent educational institutions for youth. These two remarkable and palace-like buildings are provided with everything that can contribute to the health and comfort of their inmates; and the treatment of the scholars completely fulfills the high expectations which the imposing exterior of the edifices is calculated to awaken. There is no great difficulty in obtaining the admission of lads. The interest of the State is the main object kept in view; and the State, it is considered, cannot have too many able servants. From the day of his entrance into these corps, every material and moral want of the pupil is fully supplied, not only until his education is completed, but in some sort for his whole life. By the fact of his entrance into one of these schools, he becomes bound to serve the State a certain number of years. This includes a reciprocal obligation on the part of government to provide the young man, when his term of service is expired, with a suitable position. The system of education in these corps is, as in the Polytechnic School at Paris, entirely military. It is usual in Russia for every government servant to hold military rank. From this arrangement springs an official aristocracy, which, in social estimation and value, is far superior to the aristocracy of birth. The official aristocracy occupy an important middle station between the nobles by birth and the burgher classes. In addition to the imperial educational establishments already existing, the duke of Oldenburg founded, some twelve or fourteen years ago,* a school of law, which, under his auspices, has had the happiest results. It has sent forth a large number of legal officials, who enjoy, especially by reason of their incorruptibility, the high respect of the nation. There can be no higher recommendation of such an official, nor one tending to inspire greater confidence in him, than to have been educated at the Oldenburg legal school. Stimulated by the success of this undertaking, in the year 1840 the noble duke founded, at Kalomeja, nine versts from St. Petersburg, a school of agriculture, which has also been signally successful. The young men who there receive theoretical and practical instruction in the various branches of farming are sent, after completing the course, to distant provinces of the empire. There, installed as teachers or government officers, they exercise an advantageous influence on the progress of agriculture. Of such institutions there are several in the country, but that which advantageously distinguishes those of the duke of Oldenburg above them, is their superior moral standing, and the circumstance that they annually send forth a number of young officials whose incorruptibility has become proverbial; assuredly a great benefit for a country where there is by no means a superfluity of that virtue.

"The public schools—called corps in Russia—are under the special protection, and indeed, it may be said, under the personal superintendence of the emperor. By day and by night, they are never safe from his domiciliary visits. Often does Nicholas rise in the middle of the night from the iron camp bed upon which he invariably reposes, get into his one-horse droschki, and make a solitary tour of inspection of the various public schools. Not unfrequently he goes forth on foot, and takes the first vehicle he finds plying for hire in the street. Thus it was, that upon a certain snowy night an Istworstschik, drove him in his sledge to a remote quarter of the city. The sledge had long to wait for him, and when the emperor returned, and, before getting in, would have paid the driver, he found that he had no money about him. The grinning Istworstschik declared that was not of the least consequence, and when the czar, throwing himself into the sledge, absently called out, 'Na domo!' (*Home!*), the man drove his little Finland horse full trot to the Winter Palace, in whose immediate neighbourhood he suddenly stopped, and looked inquiringly round at his fare. The emperor got out, rather surprised, ordered him to come to the same place on the following evening, and asked him, as he walked away, 'Do you know me?' A sly 'No' was the reply, and the next evening the sledge-driver received princely payment—less, assuredly, for his readiness to give credit than for his cunning discretion.

"At these nocturnal visits to the schools, rigid investigations take place. The emperor's first glance on entering the corridor is at the thermometer; and woe betide those who are responsible, if it does not stand at the prescribed fourteen degrees. Then he visits all the rooms, to see if there be everywhere light, and if the officers on duty be vigilant. The beds of the scholars are next examined; the emperor pulls off the bed-clothes, and, holding a light in one hand, with the other he turns the children from side to side, strictly investigating the cleanliness of the linen, and of their persons. Often, in order to try their bodily strength, he challenges them to wrestle with him, and, for a stranger who should suddenly enter, it would certainly be no uninteresting sight to behold the despot of all the Russias, with five or six lads clinging to his gigantic form, and exerting their utmost strength to throw the ruler of forty millions of men upon the floor. Henry IV.'s reply to the Spanish ambassador 'You are a father? Then I can continue my game!' has helped to fill all sorts of grammars and vademecums down to the present day, of the paternal sports of the mightiest of European potentates with lads who are total strangers to him, nothing is known but the wildest and most ridiculous tales that idleness and a rage for gossip ever engendered.

"Startling contrasts abound in St Petersburg. One morning, before four o'clock, I was driving to the Neva baths, when, on the Camino-Most, the stone bridge, my progress was impeded by a long procession of temporary emigrants, proceeding into the country in their carriages. Still under the influence of the impression this scene had made upon me, and meditating on the temptations and perils to which the children, and especially the daughters, of the poor are exposed in this age of luxury and corruption, I drove past the magnificent Kasansky, and reached the Newsky Prospect, stretching away, in its vast length, beyond my range of vision, and, at that hour of the morning, hushed in a stillness which was not without a certain solemnity. Suddenly, to my astonished eyes, the strangest scene presented itself. I beheld before me an *al-fresco* ball. A number of elegantly attired ladies, some in handsome shawls, and with feathers in their hats, were performing the strangest sort of dance, which they accompanied with a sort of bowing motion, incessantly repeated. I could recognise no French or German dance in their singular evolutions. Could it be some Russian national dance? I thought. What kind of dance could it be that was thus danced in broad daylight on the public highway, and without male dancers? A few men were certainly there, but merely as lookers-on. I touched the arm of my Istworstschik, called his attention to the group, and made an interrogative gesture. The explanation he gave me was doubtless very lucid and circumstantial, and would have been highly satisfactory, had it only been intelligible to me. Unable to understand a word he said, I ordered him, by the vigorous articulation of 'Pachol,' to drive up to the strange ball before the weary dancers should seek repose upon the stones at the street corners. Drawing nearer and nearer, I yet heard no sound of music; at last we reached the Anitschkow Palace, and found ourselves close to the scene of this untimely activity. A repulsive and horrible sight met my eyes. A number of young women, apparently still fresh and blooming, with ruddy cheeks—but whether of artificial or natural colours their incessant monotonous bowing movement prevented my distinguishing—elegantly dressed in silks, jewels, and feathers, were sweeping the Newsky-street under the superintendence of policemen. Some of them appeared overwhelmed with shame, others stared at me, at the Istworst-

* It may here be proper to remind the reader that, although Mr. Jermann's book was first published in the year 1851, some of its chapters had been written several years earlier.

schik and horse, with perfect indifference, and seemed rejoiced at our passage, which suspended for a moment their painful and disgraceful occupation. They were a detachment of nocturnal wanderers, who, when returning too tardily to their homes from pursuing their wretched calling, had fallen into the hands of the patrol, had passed the remainder of the night in the watchhouse, and were now atoning, broom in hand, their untimely rambles. I hurried off to the bath, glad to escape from this degrading and deplorable spectacle."

The winter palace at St. Petersburg is, as the name imports, the winter residence of royalty. It is a splendid massive pile, and may be considered as, *par excellence, the palace* in a city of palaces. In 1837 it was destroyed by fire; but such is the power of wealth in Russia, that it was rebuilt in a year! Previous to its destruction, it is described by Kohl as being so complete a labyrinth of apartments, that even the chief of the household, who had been in his post for more than twelve years, was unacquainted with all the nooks and corners of it. As in the forest of the great landholders, many colonies are settled of which the owner takes no notice, so there nestled

When Paul ascended the throne, he erected the château Galchina into an imperial palace; and around it there speedi arose a town; with churches, and hospitals, and villas, ar Russian luxuries innumerable. Gatchina has been for mar years the favourite summer retreat of the royal family.

Having already outrun our space, we will conclude th paper with a notice of the curious religious ceremony of bles ing the waters. We take the description of the Marquis Londonderry, who was an eye-witness of this extraordinar rite:—

"The 6th of January, old style, is the day set apart throughout the empire for blessing the waters. In every city and plac in Russia, this solemn religious ceremony takes place on th day. I repaired by invitation to the palace at eleven, and wa placed, as before, among the aides-de-camp généraux of th emperor. Lady Londonderry had received a special letter c request from Prince Volkonski to attend at the empress' apartments to see the procession, and afterwards to inspec her Imperial Majesty's jewels. The troops of the regiment of the guards in garrison at St. Petersburgh were formed prett

RUSSIAN BOATMAN.

many a one in this palace not included among the regular inhabitants. For instance, the watchmen who had charge of the roof built themselves huts between the chimneys, took their wives and families there, and even kept poultry and goats, who fed on the grass which grew in the interstices of the masonry. It is said, that at last cows were introduced! but all these anomalies have been swept away since the palace has been rebuilt.

The cause of the fire is said to have been the destructive construction of some of the flues; but under the hand of the architect, Kleinmichael, and the industry of several thousand workmen, the winter palace soon assumed its former commanding elevation and imperial grandeur.

The Imperial Palace of Gatchina was the summer residence of the Tzar Nicholas, is situated about twenty-eight miles from St. Petersburg, in the suburbs of a town of the same name, containing about 4,000 inhabitants. This magnificent château was built by Prince Gregory Orloff, and at his death came into the possession of the Empress Catherine, by whom it was presented to the son, the Grand Duke Paul, in 1784.

much in the same manner as they were on New Year's day. They lined the saloons of the Palais d'Hiver, and the officers assembled, as before, in *la salle blanche*. At eleven the emperor, accompanied by Prince Charles of Prussia and the Héritier, arrived, and the column of procession was formed to the palace chapel, where high mass was performed. On this occasion (the only one in the year) the archbishop or metropolitan performs the service himself, and it is done with all due pomp and solemnity. The high priests and clergy assisting were clothed in more costly robes than on any former occasion. The metropolitan, who is a man of small stature, seemed buried under the weight of his garments of gold, and of his cap, in which every jewel of the East seemed to be concentred. The emperor and Prince Charles stood together near the altar, the Grand Duke behind them; and all others present formed a circle around them. No ladies were present. The mass being ended, and the *Te Deum* chanted, the great banners of the chapel were taken up by the attending clergy, to be borne out upon the waters, together with the sacred cups, books, and the symbol of the host, which were lifted up and carried

by the priests. The young boys of the corps of choristers next struck up a hymn of praise, and formed three abreast, followed by the gentlemen singers in like order. They marched through the whole of the rooms of the palace to the great staircase leading to the Neva. After the above, appeared all the sacred emblems borne by the priests, two and two, of whom more than 300 filed off, carrying these offerings and rich religious relics. Their rear was closed by the metropolitan himself, with train-bearers, &c. After the head dignitary of the church, the emperor came in Cossack dress, with his head bare; behind him followed his aides-de-camp généraux, and all the civil and military officers of the empire in the capital. On coming to the grand door of the palace, the cold was near twenty-eight degrees, and the snow was falling in thick masses; the atmosphere was dense and foggy, and yet, notwithstanding all this inclemency of weather, countless multitudes appeared on the quay, on the banks, and on the waters of the Neva. The emperor stopped on the staircase, and ordered Prince Charles of Prussia and the Grand Duke not to go out of doors and expose themselves to the tremendous weather that was raging. They obeyed his imperial majesty's orders. He was kind enough to address me in a similar strain. I replied that his imperial majesty had been so obliging as to place me among his aides-de-camp généraux, and I trusted he would allow me to attend his person as they did.

"We left the palace, and walked in solemn procession amongst the mass of the inhabitants of St. Petersburg, without cloaks, and bareheaded, in splendid uniforms and diamond decorations, in cordons of all colours, and in uniforms of all classes and descriptions, in one of the most pitiless snowstorms that ever descended from the heavens, along the terrace and quays of the Neva, for a considerable distance, until we were opposite the windows of the empress, where her imperial majesty and her ladies were assembled. We then turned to the Neva, and proceeded on the ice to a temple which was erected on the river. The clergy and the head of the *cortège* assembled around and within it. A loud mass was then sung, at its conclusion, the metropolitan, taking off his upper garments and seizing a large basin and tankard, descended a staircase leading from the inside of the temple to the water, a large hole having been made in the ice under the temple. His eminence shortly appeared from below, having blessed the waters; and bearing them in the jug and salver, he proceeded to the emperor, who plunged his face and hands into the vessel, then the grand priest, dipping a brush into the water, sprinkled his imperial majesty all over, invoking at the same time the blessing of heaven on Russia and its monarch. The metropolitan next proceeded to sprinkle and give his benediction to all the standards and colours which had been collected round the temple, and afterwards to the officers, civil and military, who were besprinkled in a similar manner. During this period, salutes of artillery from the fortress continued to be discharged, but the multitude remained in breathless awe and silence. One of the officiating clergy had been despatched, so soon as the metropolitan had blessed the waters of the Neva, to the empress within the palace, bearing vessels and goblets for her imperial majesty and the ladies, filled with the holy water, and when the procession resumed its way back to the palace, the whole populace rushed to the temple to drink or to touch the waters.

"It is difficult to account for the extreme superstition which pervades the lower class of Russians, even to this day, in regard to this ceremony. Children that are born on the night preceding this consecration, are sent with their nurses and plunged into this hole under the ice, and it is believed, if they endure it (which many do not), that they will be free from every danger through life. The little ones occasionally perish from the effects of this experiment, and in some instances the frozen hands of those who plunge them under the waters are not able to hold them, when slipping from their grasp they perish, and are immediately considered as angels on high. How long this will last amongst a people whose nobles and higher classes are every day rejecting the obsolete and barbarous notions of early times, it is impossible to pronounce. Nothing, however, can excite more astonishment and wonder in the mind of a Protestant Christian than the scenes I have described.

"In this ceremony of blessing the waters at the pavilion on the Neva, the children carry thick birch brushes and bundles of clean linen, and the effect of seeing them all flocking and running to the ceremony, urged on by superstition such as this, is very remarkable.

"The emperor, cold and wet to the skin, with all the *cortège* covered with snow, and entirely drenched, in all their splendid ribbons, stars, &c., now returned to the palace, the troops and procession falling in as at first, the standards and colours being carried back to the centre of their corps. After a general salute, the clergy, priests, and choristers disappeared with their symbols and emblems into the sacristy behind the altar; the troops of the guards filed off before the emperor and prince Charles. His imperial majesty next went to the apartments of the empress, where a *déjeûner a la fourchette* was provided; and her imperial majesty and the grand duchesses, with the greatest kindness and amiability, displayed all their jewels, and whatever was costly and precious within their apartments, to their visitors."

ONLY A TRIFLE.

"That's right," said I to my friend Simpkins, the baker, as the sickly-looking widow of Harry Watkins went out of his shop-door with a loaf of bread which he had given her—"that's right, Simpkins, I am glad your are helping the poor creature, for she has had a hard time of it since Harry died, and her own health failed her

"Hard enough, sir, hard enough, and I am glad to help her, though what I give her don't cost much—*only a trifle, sir!*"

"How often does she come?"

"Only three times a week. I told her to come oftener, if she needed to, but she says three loaves are plenty for her and her little one, with what she gets by sewing"

"And have you any more such customers, Simpkins?"

"Only two or three, sir"

"Only two or three, why, it must be quite a tax upon your profits"

"Oh no, not so much as you suppose, altogether it amounts to *only a trifle*"

I could not but smile as my friend repeated these words, but after I left him, I fell to thinking how much good he is doing with "*only a trifle.*" He supplies three or four families with the bread they eat from day to day, and though the actual cost for a year shows but a small sum in dollars and cents, the benefit conferred is by no means a small one. A sixpence, to a man who has plenty to "eat and drink, and wherewithal to be clothed" is nothing, but it is something to one on the verge of starvation And we know not how much good we are doing when we give "*only a trifle*" to a good object

SONGS FOR THE PEOPLE.

ORIGINAL AND SELECTED.

No. VI.—THE PRAYER OF POVERTY.

BY W. H. PATCHING.

O Thou who ever lookest down with equal eye on all,
On coronet, or queenly crown, or cottage-homestead small,
We ask, that in our fatherland thy blessings may endure,
We humbly pray on bended knee,—O God! protect the Poor!

Thou mak'st thy glorious sun to shine upon the vile and just,
The seasons' changes are all thine,—in Thee alone our trust,
Thy providence on every hand, thy mercy ever sure,
Encompasseth abroad the land,—O God! assist the Poor!

We envy not the titled great their acres of our soil,
Nor would we shun our lowly state of hard but honest toil;
We willingly with sweat of brow would sustenance procure,
But even this oft faileth us,—O God! preserve the Poor!

Is our sole heritage of worth the birthright which thou gave?
Our only portion of thy earth, that *one lone spot*—the grave?
Yet such hath been the bitter part, the taunt which we endure.
Oh soften Thou that iron heart,—O God! help Thou the Poor!

But Thou *hast* heard the needy cry, for sorrow, want, or pain,
Hath never uttered prayer or sigh, or sued to Thee in vain
And Thou hast taught to wealth and pride the evils they may cure,
By scattering thy blessings wide,—O God! uphold the Poor!

Light is dawning—praise to Thee! yet more that Thou hast shown
The might, the *right* of Poverty,—not *right* of wealth alone!
It doth not brand with shame our brow, with aspiration pure
To *Thee*, and *Thee* alone, we bow!—Thou *God who lovest the Poor!*

EDWARD JENNER, M.D.

HEALTH is allowed on all hands to be a blessing of inestimable value; consequently, disease must be viewed as a drawback of a most painful description upon happiness. If the one be an enviable good, the other must be a most deplorable evil. Therefore, to preserve the first, and mitigate the latter, are objects of the deepest interest to society, and those individuals who devote their time and talent to the attainment of such desirable ends, are justly entitled, not only to the applause of their own countrymen, but to the lasting acknowledgments of mankind at large.

When we reflect upon the destruction of human life caused by the confluent small-pox, when we call to mind the disfigurement of person occasioned by its virulence, when we take into account its ravages upon the beautiful features of the most lovely portion of our species, we feel we cannot be too grateful to the individual by whose exertions and perseverance so great a scourge was, if not entirely, at least in a great measure disarmed of its malignancy, and its operation on the human form rendered less mischievous, or it may, perhaps, with more accuracy be said, our gratitude is due to the man whose philosophic mind suggested the idea of employing a milder disease as an antidote to one of a severer kind, thus lessening the concomitant ills of life.

The numerous, multiplied, and reiterated attempts made with a view to frustrate the scientific labour of the philanthropist who is the subject of this notice, and to smother his truly valuable discovery in its cradle, have been sufficiently exposed in the controversial publications upon this most important subject. It was, however, most fortunate for the human race, that these attacks, not very creditable to those who conducted them, proved complete failures, especially when it is considered that they had a powerful auxiliary in the untoward circumstance of there being two sorts of vaccine matter, one of which was fit for the designed purpose, therefore called the true kind, the other unfit, designated the false, the use of which latter caused the commission of many errors, the effects of which not only injured the cause, but deceived some of the most eminent physicians in different countries, who were otherwise friendly to the new practice; indeed, the French were ignorant of the veritable cow pock, until the journey to Paris of our own Dr. Woodville, made expressly for the purpose of making them acquainted with the essential difference between the two. It is, moreover, a debt of common justice due to the Spanish government to say, that so heartily did they enter into the immense advantage it would prove to the world generally, that it was owing to their truly generous and disinterested policy, that vaccination obtained currency in Asia, Africa, and America, and that it received countenance even in our own island of St. Helena. Dr. Sacco, a Milanese physician of no common celebrity, was also an able supporter of the new practice, seeing that he was indefatigable in collecting facts and disseminating the result of his experiments, which proved highly favourable to the introduction of vaccine virus.

Edward Jenner, so celebrated for the discovery of vaccination, was born in Gloucestershire, 17th May, 1749, the youngest son of a clergyman; as he was intended for the medical profession, at a proper age he visited the metropolis for the purpose of finishing his studies in the usual manner, by rendering himself familiar with hospital practice, and it was his good fortune to attend the lectures of that almost unequalled anatomist, the immortal John Hunter. It is pleasing to think that the fame of both pupil and professor will descend to the latest posterity with undiminished lustre, and that future ages will do homage to the talent through the exercise of which the human family has been so greatly benefited.

On his return to the provinces he settled at Berkeley, where he obtained a character as an intelligent and ingenious practitioner, and was generally considered a man of talent and sound science. It was in the year 1776, then a young man of twenty-seven, that he made the world acquainted with that important discovery which at once raised him to an enviable situation among the benefactors of the human race, and gave him location in the temple of fame, from which alone he can be removed by the destruction of our globe. Twenty years from the commencement of his investigation into the means to render variolus virus unnecessary, Dr. Cline, the then surgeon to St. Thomas's Hospital, introduced vaccination into the great metropolis of the British empire, where it has ever since maintained its ground with increasing reputation as a mild substitute for an afflicting scourge; and its practice was soon afterwards adopted into the army and navy.

Its author now began to reap the harvest of his indefatigable zeal. To reward his meritorious services, a parliamentary grant was made in his favour of twenty thousand pounds; the university of Oxford, as a tribute to his acknowledged ability, presented him a diploma, constituting him a doctor of medicine. He was chosen a fellow of the Royal Society and of other learned associations in Europe and elsewhere; an institution was also established for the promotion of his scheme, which bears his name, called the Royal Jennerian Society: he thus became the pride of his own country, and the admiration of others, was universally respected, and his opinions had the weight of reason, together with the sanction of the medical talent distributed over the four quarters of the globe.

Society was deprived of this enlightened member and ingenious discoverer on the 26th January, 1823, when he died suddenly of apoplexy, in the seventy-fifth year of his age, to the regret of a numerous and valuable acquaintance, after having lived to see the perfect establishment of his own patriotic and philanthropic system.

Never was any system intended for human benefit more obstinately or more virulently opposed. Books were written, disgusting cases adduced, by influential and professional men, for the purpose of showing that it was inadequate not only to the prevention of variolus eruption, but that it was calculated to entail frightful diseases on those who were submitted to the operation. The adverse feeling was kept so constantly before the public, so unremitting in their exertions were its enemies, that parents became alarmed, dreading lest their children should become monsters of deformity, and be inoculated with a filthy disease that would attach to them through life. The intrinsic merit of the method, however, outrode the storm; reason prevailed, and the practice was generally brought into use.

To account for such dogged pertinacity might be difficult, it would, perhaps, be ungenerous to say it proceeded from envy, that an obscure country practitioner should have made a discovery of such importance to the world, while it had escaped the keen penetration of men who had long been deemed the most skilful of their class.

A DAY'S ESCAPE.

"Let us escape from city ways, and take a little holiday in the country."—
I AMBE.

THE love of country scenes and country pleasures exhibits itself in various phases of our city life; and, whether we gaze upon a picture in a gallery, or, escaping from the bustle and turmoil of the dusky streets, taste the pure air of heaven that's "lying by the violet," the feeling is the same, and this unquenchable, unextinguishable love of nature it is, amid all the foul temptations of the world, that keeps us pure, and teaches us that the glory of God's handiwork is better than the gain of silver and gold. This feeling it is that crowds our parks on summer evenings, and fills the vans to overflowing that wend their dusty way to suburban pleasaunces like Hampton Court and Richmond—and we never gaze upon a picture representing trees and water, hill-side landscape or rustic porch, the deep forest glade or the tiny bit of garden before a labourer's cottage, the breezy downs or even the well-stocked farmyard, without thanking God in our hearts that he has made us so pleasant an abiding place.

It is not that there is a deficiency of rare sights to be seen, or piquant excitements to be experienced, or anxieties to be suffered in the crowded towns, that the escape into the country becomes a pleasant relief, it is that the inaudible and noiseless foot of Time, travels more slowly to our senses amid the woods and green leaves murmuring; it is that the spinners and knitters in the sun—the bee and butterfly and gaudy-coloured moth, and humming insects of a thousand hues—are never seen amid the din and bustle of the crowded highway; it is that the roses of the spring throw out their scent more bountifully when no dull house-wall intervenes between them and the sky; it is that the faint gleaming of the dappled cast

—the mountain's misty top, where wild birds wheel and whoop—the music of the sunny air, that thick around the woodland copse hums gloriously—come welcome to the sad and weary senses of the town-kept wanderer; it is that beside the brink of haunted stream or down among the depths of woodland dells, the voice of nature comes in gentlest whisper and breathes into our heart of hearts, saying to our envyings, and heart-burnings, and ambitions, and hatreds, and littlenesses, and covetousnesses—Peace, be still!

Now, if the contemplation of a picture, or a little trip out of town give rise to good and improving thoughts; if they make a man return to his daily toil with a better resolution and a firmer hope, then are picture-galleries and railroads, steamboats and covered vans, especial messengers of comfort to the world.

And this occasional "escape" has other and more important 'missions" to fulfil; it teaches the world's workman that there are better things to occupy his mind than the sordid cares of life—it gives him hope to bear the brunt of the battle and the heat of the day—it inspires him with manly courage to face the dangers and disagreeblenesses of poverty—it disarms temptation of half its seductive power, and makes him feel himself, as he stands erect in the fields beneath God's sky of blue, that, though a little lower than the angels, he is made in the image of his Maker.

The world has been a long time considering this knotty problem—a long time debating this question of a people's amusement, and there are some -they are of the old fashion, though, and slow to understand that which they were never taught—even now, who doubt the "good" that comes of parks and pleasure-gardens for the poor, some who cannot comprehend what mere workmen want of elegances—who think that the poor have nothing to do but work, and go to church on Sundays in their best They lie under a great mistake—a wilful and most destructive error—which, unless it be corrected speedily, will bear upon its darkened wings the tempest and the cloud of disaffection No, it is a better thing that men should lift their voices up to heaven in fields, and woods, and pleasant places in humble thankfulness and praise, than that they should meet together in the crowded and pestilerous byeways of great cities to curse the rich and grumble at the hard times The rich cannot do *everything* to ameliorate the condition of the poor, but they can do *much*; they can teach men that labour is honourable -that toil is the natural inheritance of the sons of Adam - that they feel and sympathise with honest industry—that they are willing to encourage all who aspire to good—that the barriers of society are not erected in a proud and exclusive spirit, never to be broken down, in a word they can bestow upon their striving fellow-men a noble and enduring gift, a gift beyond all reckoning and estimation, the gift of Education—

"That source of sterling joy,
That poverty itself cannot destroy" G. P. P.

AN ENGLISHMAN ABROAD

THE present prime minister of Parma, in Italy, was once a stable boy; and his elevation to his present rank may be considered not only a singular instance of the mutability of human affairs, but of the tendency of the Anglo-Saxon race, when transplanted to foreign countries, to emerge to eminence, and surpass others by the homely but rare qualities of common sense and unfaltering energy.

Ward, as your readers are perhaps aware,—says the correspondent of a daily newspaper—was a Yorkshire groom The Duke of Lucca, who obtained, by his fall from horseback in Rotten row, the familiar *sobriquet* of "Filthy Lucca," spying the lad's merits, took him into his service, and promoted him through the several degrees of command in his stables to be head groom of the Ducal stud. Upon Ward's arrival in Italy with his master, it was soon found that the intelligence which he displayed in the management of the stables was applicable to a variety of other departments In fact, the Duke had such a high opinion of Ward's wisdom that he very rarely omitted to consult him upon any question that he was perplexed to decide, and the success which never failed to crown Ward's advice gave him, in the eyes of the feeble descendant of the Spanish Bourbons, the prestige of infallibility. As Louis XII. used to answer those who applied to him on any business by referring them to the Cardinal d'Amboise, with the words "Ask George," so Charles of Lucca cut short all applications with "Go to Ward."

The expenses of the stables having been reduced to less than half under the administration, while the Duke's horses were the envy of all Italy, it struck the Prime Minister strongly, that it would be a good thing if the same economy could be introduced into other departments. So Ward tried his hand on one thing and the other, continually enlarging his sphere of influence, until from household matters he passed to those connected with the State—which, indeed, is such a miniature affair, that it does not greatly pass the limits of some private domestic establishments. Ward, now become factotum of the Prince, won, in the disturbances which preceded the revolutionary year 1848, a diplomatic dignity, and was despatched to Florence upon a confidential mission of the highest importance. He was deputed to deliver to the Grand Duke the act of abdication of the Duke of Lucca. At first the Grand Duke was doubtful whether he could receive in a diplomatic capacity a messenger of whom he had only heard in relation to the races of the Cascine, where Ward had been in the habit of riding as a jockey But it soon appeared that the Lucchese Envoy had in his pocket a commission making him the Viceroy of the Duke's States, which was to be acted upon in case the Grand Duke made any difficulty, or even if he refused to receive Ward as the ambassador of the States of Parma at the capital of the Medicis.

Soon after, in 1849, when the Duke of Lucca resigned his other States to his son, Ward became the head counsellor of the hopeful prince, who has thus been able to follow out a sporting bent under the best auspices, while he had a minister whose shrewd sense was more than a match for the first diplomatists in Italy.

Ward was on one occasion despatched to Vienna in a diplomatic capacity Schwarzenberg was astonished at his capacity; in fact, the *ci devant* Yorkshire stable boy was the only one of the diplomatic body that could make head against the impetuous counsels, or rather dictates, of Schwarzenberg, and this was found highly useful by other members of the diplomatic body. Among others, Meyendorff, the Russian ambassador, cultivated him greatly An English gentleman, supping one night at the Russian ambassador's, complimented him upon his excellent ham. 'There's a member of our diplomatic corps here," replied Meyendorff, 'who supplies us all with hams from Yorkshire, of which county he is a native.' Ward visited England. The broad dialect and homely phrase betraying his origin through the profusion of orders of all countries sparkling on his breast, he rarely ventured to appear at evening *soirees* Lord Palmerston declared he was one of the most remarkable men he had ever met with.

Ward, though all his vicissitudes, has preserved an honest pride in his native country. He does not conceal his humble origin The portraits of his parents, in their homespun clothes, appear in the splendid saloon of the Prime Minister of Parma.

DO GOOD.

GOOD men are pillars of the earth,—the valiant and the strong,
Who battle with the deeds of sin, of darkness and of wrong—
Whose helmet is their love of truth—their armour, hate of crime,
Then, brother, make their warfare yours, and untold bliss is thine

Do good The grain of mustard-seed thou scatterest in the earth
Shall to a thousand priceless gem, give unreluctant birth,
Like springs upon a barren land, like sunshine to the cloud,
Thy deeds shall come, and earth shall tune thy praises long and loud

Do good To banish Envy's reign, and Hatred's threefold power,
And foul Corruption's withering blast—the blight of every hour,
Stem grosser thought and wanton pride—outstretch thy willing hand
To plant Religion's purity in this, God's pleasant land.

Do good Grim Malice to subdue, and Lust with bloated eyes,
Though hard the road and sharp the thorns that in thy pathway rise,
Though shadowy glooms come round thy way, let not thy heart despair,
Heaven's light, a lantern to thy feet, shall guide thy footsteps there

Do good To stay the raging sea of Crime, whose stormy wave
Round youth's frail barque tempestuous rolls—stretch out thine arm to save
The weak, the helpless, and forlorn from Sin's ingulfing tide,
And more than conqueror thou shalt be through all the world beside

Do good And let thy kind words lull the weary heart to sleep,
And dry the fountains of those eyes which sorrow maketh weep,
Love's gentle words be thine to turn the hard, rebellious will,
And sceptic hearts shall yield—confess that God is with us still.

Do good A world of human joy shall flood thy spirit o'er,
And those unfeignedly rejoice bow'd down with grief before.
Do good—and airs from Eden land shall their sweet voices bring
I bless thee in thy pilgrimage and guide thy wandering.

RUDOLF OF HABSBURG.

BY PARSON FRANK.

TROUBLOUS times were in store for Germany when Frederick II., that unflinching foe to the over-reaching papacy, was gathered to his fathers. Misfortunes in war during the latter part of his eventful reign, crushed his hitherto indomitable spirit. The crowning blow was dealt when he discovered that his old friend and confidant, Peter de Vincis, designed to poison him, by the agency of a certain physician in the pay of Rome.* His countrymen recur with affectionate respect to the memory of this able prince; and one of the most patriotic amongst them affirms that the lustre of the seven crowns that adorned his brow (viz., the diadems of Rome, Germany, Lombardy,† Burgundy, Sicily, Sardinia, and Jerusalem), was far surpassed by his intellectual gifts and graces.

Frederick died A.D. 1250,—and the glory of the empire perceptibly declined. The Roman see abetted the cause of faction, anarchy prevailed; and in the year 1257, "the imperial dignity was literally sold by the electors to Richard, brother of Henry III. of England."‡ At his decease occurred an *interregnum* characterised by social disorder and lawlessness. The electors were fully aware of the peril involved in a continuance of this state of things, but were unwilling to exchange their individual licence for submission to a new and supreme master. In the year 1273, however, they agreed to elect Rudolf, Count of Habsburg (a castle in Switzerland), the founder of the house of Austria, by whose vigorous policy order was again made a possibility within those realms.

Rudolf was born at a castle on the borders of Alsatia, A.D. 1218. The father of this future emperor was a bold warrior—distinguished in the internecine feuds of the turbulent barons in his vicinity, and by his gallant bearing when following the standard of Frederick, unfurled in defiance of the apostolic see. He repaired to the Holy Land when a new crusade was proclaimed, but fell a victim to the climate of the East. Young Rudolf had been early inured to martial pursuits. It was his appointed business and his cherished pleasure to wrestle with his comrades from day to day—to exercise limbs and lungs in running matches—to try the mettle of every steed he could lay hands on, and indoctrinate it with despotic convictions of the Rights of Man over it and its kind—to dare his fellows to trials of skill in hurling the javelin and like passages of arms—

> "No braver youth
> Descended from Judean heights, to march
> With righteous Joshua, nor appeared in arms
> When grove was felled, and altar was cast down,
> And Gideon blew the trumpet, soul-inflamed,
> And strong in hatred of idolatry."§

He loved to follow, fleetest of the fleet, "the red deer driven along its native heights, with cry of hound and horn" "Such and so glorious did this youth appear"

It was but a petty inheritance that fell to his lot on the demise of his father. The limits of the district called Habsburg are not easily to be defined, they certainly comprised a smaller territory than that to which the same name was given after the aggrandisement of the family. At this period Rudolf does not seem to have been an exception from

> "The good old rule,
> That they should take who have the power,
> And they should keep who can,"

his caste were notorious at that time of day as a set of pillaging lords whose object it was to feather well their "iron nests" on the castle hill, by falcon flights at contiguous prey, which they duly plucked when the descent was successful. "For some time," says Archdeacon Coxe, "Rudolf found no respite from war; he was either engaged in protecting the surrounding states from the incursions of banditti and depredations of the powerful barons, or under various pretences invading the possessions of others, and defending his own property from t encroachments of ambitious neighbours." In 1245 he marri Gertrude, daughter of an Alsatian count; and for several yea seems to have led, as was becoming, a comparatively tranq life. By some historians he is said to have been the master the horse to the king of Bohemia, and to have passed a co siderable time in his court.

In 1259 we find him at his old trade of arms, heading t citizens of Strasburgh against their bishop, and carrying s before him, to the infinite delight of the Strasburghers (wh erected a statue to their champion), and to the overwhelmir chagrin of the prelate, who did not long survive the disaste While identifying Rudolf to some extent with the marauding barons, we must mention an important distinction betwee him and the majority of that grim brotherhood; it is the sam distinction that separates Robin Hood and the Saxon outlaw of Sherwood's forest glades from the vulgar herd of footpad and cut-throats. We are told that Robin was born

> "Amang the leaves sae green."

and in the woods he passed his life, at the head of several hun dred archers, formidable to the earls, viscounts, bishops an rich abbots of England, but beloved by the farmers, labourers, widows, and poor people. He and his "merry men" grante peace and protection to all who were feeble and oppressed; shared with the indigent the spoils of those who fattened o other men's harvests, and, according to the old tradition, di good to the honest and industrious.*

> "From wealthy abbots' chests, and churche's abundant store,
> What oftentimes he took, he shared amongst the poore."
> (Robert Brune's *Chronicle*).

And thus says Robin in the old ballad, when confronted with Richard Cœur-de-Lion (the Locksley and Black Knight o *Ivanhoe*) —

> "For I never yet hurt any man
> That honest is and true;
> But those who give their minds to live
> Upon other men's due
> For I never hurt the husbandmen
> That use to till the ground,
> Nor spill their blood that range the wood
> To follow hawk or hound"†

In like manner, Coxe asserts that Rudolf did not follow the example of the plundering barons who harassed the peasants with incessant pillage, and robbed defenceless travellers, but that, on the contrary, he adopted a system of conduct which distinguished him with honour in those times of misrule and confusion,—delivering the highways from numerous banditti, and protecting the citizens and free men from the tyranny of the nobles, and that he principally levelled his attacks against the turbulent barons or the haughty prelates who concealed their ambitious designs under the sacred name of religion.‡ By this course of action he secured the confidence and attachment of the burghers and hardy mountaineers, who applied to him more than once to mediate in their dissensions, to curb the rapacity of the noblesse, and to check the guerrilla exploits of Italian brigands. With admirable address he carried on a succession of sieges, stratagems, and spoils,—gathering golden opinions from all sorts of men by his demeanour amid moving accidents by flood and field. "The wars which he waged," says Dr. Miller, "were the enterprises of a friend of order, not the ravages of a plundering chieftain. The singularity of this conduct drew upon him a very general attention; the citizens of the neighbouring republics gave him their entire confidence,§ and he began to be considered as the protector of liberty against the violences of the barons."‖ The latter allied together in self-defence against this potent adversary; but, at last, struck with terror, exclaimed, "All opposition is useless; Rudolf is invincible!" It was while engaged in punishing the Bishop of Basle (who had massacred several nobles of Rudolf's family at a recent tournament), that news reached him of his regal destiny, being informed by his nephew, at midnight, that he was unanimously chosen king of the Romans by the electors of Germany. After some deliberation,

---

* "He ordered the medicine prepared for him to be given to a malefactor, who instantly expired. This proof of infidelity extorted a bitter lament from the aged king. 'Alas!' he exclaimed, 'I am abandoned by my most faithful friends. Peter, the friend of my heart, on whom I leaned for support, has deserted me, and sought my destruction. Whom can I now trust? My days are henceforth doomed to pass in sorrow and suspicion.'"—Menzel's *History of Germany*, xi.

‖ *Philosophy of History*, xiii.

he accepted the dignity, amid general acclamations. The bishop, mortified at his enemy's swelling renown and fast-increasing dominion, bitterly and profanely exclaimed, "*Sede fortiter Domine Deus, vel locum Rudolfus occupabit tuum!*" (Sit fast, Lord God, or Rudolf will occupy Thy throne!)

The founder of the Austrian dynasty was now in his fifty-fifth year. He was crowned at Aix-la-Chapelle, A. D. 1273. At the same time were celebrated the nuptials of three of his six daughters; people were eager to form matrimonial alliances with the great man of the day—the observed of all observers. His main design at the outset of his career was to subdue Ottocar, king of Bohemia, whose subjection had been one of the conditions annexed to the grant of the crown.* Ottocar had been Rudolf's rival in this matter, and was formidable from the extent of his domains, reaching as they did from the confines of Bavaria to Raab, in Hungary, and from the Adriatic to the Baltic sea. After prolonged struggles Rudolf gained the day, and compelled Ottocar to submit to humiliating terms of peace. The latter was merely to hold Bohemia and Moravia in fee of the emperor. Menzel, in his *History of Germany*,† repeats as authentic the story of his degradation, in these words:—"In 1276 Ottocar came, attired in the royal robes of Bohemia, to an island on the Danube, where Rudolf, meanly clad as a horse-soldier, received him under a tent, which, whilst the king was kneeling at his feet, and taking the oath of fealty, was raised at a given signal, in order to degrade the monarch in the eyes of the people; a mean and dastardly action; and the reproach of vanity can be cast only on the emperor, the king of Bohemia having merely appeared in a garb suited to his dignity, on an occasion which, far from elevating his pride, deeply wounded it."‡ Ottocar's queen incited him to resent this insult, and the contest was renewed, to the imminent peril of Rudolf, against whom were now arrayed fresh allies to Bohemia. On August 26th, 1278, was fought a bloody conflict, wherein both sovereigns distinguished themselves by signal intrepity In this battle of Marchfield, as it is called, above fourteen thousand lives were lost. Rudolf was hard at death's door, and Ottocar, after a valiant defence, was taken, stripped of his armour, and slain; his body, defaced with wounds, "a piece of bleeding earth," was (with Rudolf's sanction) borne to Vienna, embalmed, and buried with august display at Prague. During the war, the superior skill of the emperor in the art of war is said to have surprised both friends and foes. Gerbert tells that nothing seemed more astonishing than the portable bridge of boats which he had previously used in his wars on the Rhine The reader will remember that a similar feeling was excited on our own shores, four hundred years later, when William of Orange came over to find a throne in Britain §

Rudolph kept his triumph at Vienna, where great excitement prevailed and games were celebrated;

> "Where throngs of knights and barons bold,
> In weeds of peace, high triumphs hold,
> With store of ladies, whose bright eyes
> Rain influence, and judge the prize" ‖

On this festive occasion, a knight who had numbered one hundred summers, Otto von Haslau, tilted with one of his own great grandsons; while

> "In the air
> A thousand streamers floated fair,
> Various in shape, device, and hue,
> Green, sanguine, purple, red, and blue,
> Broad, narrow, swallow-tailed, and square,
> Scroll, pennon, pensil, bandrol, there
> O'er the pavilions flew" ¶

The emperor's next care was to conciliate the pope, who watched with boding apprehension the rapid successes of the once inconsiderable count. Rudolf used to remark that Italy had destroyed many kings of Germany, saying, "Rome is like the lion's den in the fable; I discover the footsteps of those who went toward it, but none of those who return."** The hatred borne by the reigning pontiff (Martin IV.), to the Germans was such, that he openly expressed his wish that Germany were a pond full of fish, and he a pike, that he might swallow them all—a truly decorous aspiration on the part of the father of the faithful! Surely he mistook his lineage when he traced his descent from an apostle, and overlooked his consanguinity to that Nero* whose throne he occupied.

When Rudolf was at last permitted to direct his undivided attention to the restoration of internal tranquillity, he exerted the utmost vigour in prosecuting this important aim † He manifested an activity seemingly incompatible with his advanced age in traversing, with this mission, the length and breadth of the empire. He demolished more than threescore castles of bandit notoriety in Thuringia, and a still larger number in other districts. He inflicted summary punishment on the marauding barons; and when attempts were made to alter his stern decrees, on the plea that the offenders were nobles, Rudolf refused to discriminate between robbers of high and of low degree. "True nobility," he said, "is faithful and just, offends no one, and commits no injury."

Distractions in Bohemia and Hungary troubled his declining days. The refusal of the electors to comply with his wishes as to the disposal of the imperial crown embittered his last moments. He died July 15, 1291, in the 73rd year of his age, after a reign of nineteen years.

Rudolf was a man of striking personal appearance. He was tall and slim, bald-headed, pale, and noted for a conspicuous aquiline nose, which occasioned popular jokes at his expense. The people love to dwell on some physical peculiarity of their rulers—hence the names of William *Rufus*, Edward *Longshanks*, Louis *le Gros* and *le Debonair*, Philip *le Bel*, &c. Like our William III., this emperor was serious and composed in aspect—though, like him, he could become warm and animated. The Austrian greatly surpassed the Dutchman in the art of pleasing: it was the fervent aim of the former to gain the esteem of all with whom he came in contact, while the Prince of Orange was cold and indifferent, not to say forbidding and crabbed. Rudolf was naturally hot and passionate; and, conscious of his weakness in this respect, he, to his credit, took pains in curbing his temper, and succeeded in drawing from his familiars expressions of pleasurable surprise at the command he gained over himself He was twice married His second bride was Agnes of Burgundy, a beautiful girl of fourteen. The Bishop of Spires, by whom the royal damsel was conducted to her carriage after the nuptial ceremony, was so enchanted with her grace that he kissed her cheek—probably with unseemly fervour. The lady was ruffled at this prelatic gallantry, and Rudolf exiled the ecclesiastic from court, saying, "I will provide the bishop an '*Agnus' Dei* to kiss—but desire that he will leave my '*Agnes' unkissed*."

The emperor does not seem to have been a devotee to the *belles lettres*, though he entertained respect for authors, and encouraged learning One of his sayings was—"Would to God I could employ more time in reading, and could expend some of that money on learned men which I must throw away on so many illiterate knights!" His biographers attribute to him a deep sense of religion, and a cherished habit of sincere devotion. It is to *his* honour that he honoured the humble ministers of the church, but chastised the haughty prelates who forgot the meekness of the Gospel in the splendour and exercise of temporal dominion.‡ Pleasing anecdotes are narrated of his piety, his magnanimity, and generosity. With one illustration of his genial disposition, characteristic of the man and of the times, we close this sketch.

One cold morning—some three years before his death—Rudolf was walking into the good town of Mentz, attired in the unpretending garb which was his favourite dress. Attracted by the kindly promise of a fire in a baker's shop, he entered, little expecting the churlish greeting in store for him. "Soldiers ought not to come into poor women's houses," crustily murmured the mistress, profoundly ignorant of the person of the intruder. "Don't be angry, good woman," he replied, soothingly, inwardly amused at the prospect of a *scene*, and unconsciously anticipating the *Goodman of Ballengiech*—"I am an old soldier who have spent all my fortune in the

* This Cæsar's kindred wish is notorious † Miller.

‡ Coxe Chapter iv.

service of that rascal Rudolf, and he suffers me to want, notwithstanding all his fine promises." The woman took the cue, and abused the emperor with unsparing vigour, telling her guest that he deserved his poverty for being ass enough to serve under such a fellow, and bestowing upon master and man a running series of unsavoury epithets, adding that Rudolf had ruined the bakers of Mentz, and ending her "concourse of sweet sounds" with a grand crash *fortissimo* by way of *finale*, throwing a pail of water on the fire, to expedite his departure.

When Rudolf sat down to dinner that day, he related the morning incident to his companions with infinite *gusto*, and ordered a boar's head and a bottle of wine to be despatched to his termagant subject, as a present from the old soldier who had warmed himself by her fire. Ere long she of the unruly tongue appeared at his table in piteous nervous plight—suppliant before the great man who had been playing the old soldier under her roof—and with vehement gestures of passionate contrition she implored his mercy. Rudolf required one condition only—to wit, that she should perform *da capo* her facile discharge of improper names, and faithfully repeat the copious list as she had mouthed it in the forenoon. and, as she managed to comply with tolerable accuracy, the merriment of monarch and guests knew no bounds.

DIVISIBILITY OF MATTER.

Few, if any, of those sublime phenomena which are constantly striking upon our visual faculties, are more calculated to elicit admiration from the reflective and philosophic mind than the extension of matter. It is one of those astounding facts that teach us a great moral lesson, and is at once indicative of the ingenuity of man and the unbounded power of the Creator It furnishes scope for contemplation so vast, that the human mind, stooped in wonder, is lost in the windings of the intricate labyrinth to which it so obviously leads. Who that beholds only a small portion of those immense resources with which nature has been furnished to continue her elaborate work and preserve it from decay, can fail to adore the great Author of all that is, of all that was, or of all that ever shall be?

To suppose, however, that the gratitude of feeble man, even when exerted to its utmost stretch, can ever prove commensurate with innumerable benefits so benignantly and so profusely placed within his reach, would be to suppose it were possible for him to blanch the Ethiop's skin Yet his thanks ought to be unceasingly poured forth to the Fountain of all goodness, and he will best consult his own happiness, his obedience will be best evinced, he will best perform his duty, by living in charity with all men, and by enjoying with prudence and moderation the multitudinous blessings so benevolently showered down upon his favoured head

But let him learn, that whatever change he may perceive to be effected in the numerous forms of matter, however minutely they may be divided, however completely they may be rarefied, the quantum will still remain the same. for truly and eloquently has Lord Bacon said, that "it requireth the same omnipotence to make something nothing, which at first made nothing somewhat."

Gold-beaters, by hammering, can reduce *gold* to leaves so thin that 282,000 must be laid upon each other to produce the thickness of an inch; yet these leaves are perfect, or without holes, so that one of them laid upon any surface, as in gilding, gives the appearance of solid gold. They are so thin, that, if formed into a book, 1500 would only occupy the space of a leaf of common paper, and an octavo volume of an inch thick, would have as many pages as the books of a well-stocked ordinary library of 1500 volumes, with 400 pages in each. Still thinner than this is the coating of gold upon the silver wire of what is called gold lace, and we are not sure that such coating is not of only one atom thick. *Platinum* and *silver* can be drawn into wire much finer than human hair. A gram of *blue vitriol* or *carmine* will tinge a gallon of water, so that in every drop the colour may be perceived. A grain of *musk* will scent a room for twenty years, and will have lost little of its weight The *carrion crow* smells its food many miles off. A *burning taper*, uncovered for a single instant, during which it does not lose one thousandth part of a grain, would fill with light a sphere four miles in diameter, so as to be visible in every part of it. The thread of the *silk-worm* is so small that many of them are twisted together to form our finest sewing silk; but that of the *spider* is finer still, for two drachms of it, by weight, would reach from London to Edinburgh, or nearly four hundred miles. In the milt of a *cod-fish* or in water in which certain vegetables have been infused, the microscope discovers animalcules, of which many thousands together are not equal in bulk to a grain of sand; and yet nature with singular prodigality, has supplied many of them with organs as complete as the whale or the elephant, and their bodies consist of the same substance, or ultimate atoms, as that of man himself In a single pound of such matter, their are more living creatures than of human beings on the face of this globe. What a scene has the microscope opened to the admiration of the philosophic inquirer! *Water*, *mercury*, *sulphur*, or in general any substance when sufficiently heated rises as invisible vapour or gas; that is it is reduced to the aeriform state. Great heat, therefore, would cause the whole of the material universe to disappear, and the most solid bodies to become as invisible and impalpable as the air we breath. Few have contemplated an annihilation of a planet more complete than this.

THE GHOST RAISER.

My uncle Beagley, who commenced his commercial career very early in the present century as a bagman, will tell stories Among them, he tells his single ghost story so often, that I am heartily tired of it. In self-defence, therefore, I publish the tale, in order that when next the good, kind old gentleman offers to bore us with it, every body may say they know it. I remember every word of it.

One fine autumn evening, about forty years ago, I was travelling on horseback from Shrewsbury to Chester I felt tolerably tired, and was beginning to look out for some snug way-side inn, where I might pass the night, when a sudden and violent thunder-storm came on. My horse, terrified by the lightning fairly took the bridle between his teeth, and started off with me at full gallop through lanes and cross roads, until at length I managed to pull him up just near the door of a neat-looking country inn.

"Well," thought I, "there was wit in your madness, old boy, since it brought us to this comfortable refuge" And alighting, I gave him in charge to the stout farmer's boy who acted as ostler. The inn-kitchen, which was also the guest-room, was large, clean, neat, and comfortable, very like the pleasant hostelry described by Izaak Walton There were several travellers already in the room—probably, like myself, driven there for shelter—and they were all warming themselves by the blazing fire while waiting for supper I joined the party. Presently, being summoned by the hostess, we all sat down, twelve in number, to a smoking repast of bacon and eggs, corned beef and carrots, and stewed hare.

The conversation turned naturally on the mishaps occasioned by the storm, of which every one seemed to have had his full share. One had been thrown off his horse; another, driving in a gig, had been upset into a muddy dyke, all had got a thorough wetting, and agreed unanimously that it was dreadful weather—a regular witches' sabbath!

"Witches and ghosts prefer for their sabbath a fine moonlight night to such weather as this!"

These words were uttered in a solemn tone, and with strange emphasis, by one of the company He was a tall, dark-looking man, and I had set him down in my own mind as a travelling merchant or pedler My next neighbour was a gay, well-looking, fashionably-dressed young man, who, bursting into a peal of laughter, said,

"You must know the manners and customs of ghosts very well, to be able to tell that they dislike getting wet or muddy."

The first speaker, giving him a dark, fierce look, said,

"Young man, speak not so lightly of things above your comprehension."

"Do you mean to imply that there are such things as ghosts?"

"Perhaps there are, if you had courage to look at them."

The young man stood up, flushed with anger. But presently resuming his seat, he said calmly,

"That taunt should cost you dearly if it were not such a foolish one."

"A foolish one!" exclaimed the merchant, throwing on the table a heavy leathern purse. "There are fifty guineas. I am content to lose them, if, before the hour is ended, I do not succeed in showing you, who are so obstinately prejudiced, the form of any one of your deceased friends; and if, after you have recognised him, you allow him to kiss your lips."

We all looked at each other, but my young neighbour, still in the same mocking manner, replied,

"You will do that, will you?"

"Yes," said the other—"I will stake these fifty guineas, on condition that you will pay a similar sum if you lose."

After a short silence, the young man said, gaily:

"Fifty guineas, my worthy sorcerer, are more than a poor college lizar ever possessed; but here are five, which, if you are satisfied, I shall be most willing to wager."

The other took up his purse, saying, in a contemptuous tone,

"Young gentleman, you wish to draw back?"

"*I* draw back!" exclaimed the student. "Well, if I had the fifty guineas, you should see whether I wish to draw back!"

"Here," said I, "are four guineas, which I will stake on your wager."

No sooner had I made this proposition than the rest of the company, attracted by the singularity of the affair, came forward to lay down their money; and in a minute or two the fifty guineas were subscribed. The merchant appeared so sure of winning, that he placed all the stakes in the student's hands, and prepared for his experiment. We selected for the purpose a small summer-house in the garden, perfectly isolated, and having no means of exit but a window and a door, which were carefully fastened, after placing the young man within. We put writing materials on a small table in the summer-house, and took away the candles. We remained outside, with the pedler amongst us. In a low, solemn voice, he began to chant the following lines —

"What riseth slow from the ocean caves
And the stormy surf?
The phantom pale sets his blackened foot
On the fresh green turf."

Then raising his voice solemnly, he said,

"You asked to see your friend, Francis Villiers, who was drowned, three years ago, off the coast of South America: what do you see?"

"I see," replied the student, "a white light arising near the window, but it has no form; it is like an uncertain cloud."

We, the spectators, remained profoundly silent.

"Are you afraid?" asked the merchant, in a loud voice.

"I am not," replied the student, firmly.

After a moment's silence, the pedler stamped three times on the ground, and sang —

"And the phantom white, whose clay-cold face
Was once so fair,
Dries with his shroud his clinging vest
And his sea-tossed hair."

Once more the solemn question

"You, who would see revealed the mysteries of the tomb—what do you see now?"

The student answered in a calm voice, but like that of a man describing things as they pass before him.

"I see the cloud taking the form of a phantom; its head is covered with a long veil—it stands still!"

"Are you afraid?"

"I am not!"

We looked at each other in horror-stricken silence, while the merchant, raising his arms above his head, chanted in a sepulchral voice,—

"And the phantom, and a voice from the wave,
He shall know me in sooth!
I will go to my friend, [illegible]
And [illegible]"

"What do you see?" said he.

"I see the phantom advance; he lifts his veil—'tis Francis Villiers! he approaches the table—he writes!—'tis his signature!"

"Are you afraid?"

A fearful moment of silence ensued, then the student replied, but in an altered voice,—

"I am not."

With strange and frantic gestures the merchant then sang,—

"And the phantom said to the mocking seer,
I come from the south;
Put thy hand on my hand—thy heart on my heart—
Thy mouth on my mouth!"

"What do you see?"

"He comes—he approaches—he pursues me—he is stretching out his arms—he will have me! Help! help! Save me!"

"Are you afraid, *now*?" asked the merchant in a mocking voice.

A piercing cry, and then a stifled groan, were the only reply to this terrible question.

"Help that rash youth!" said the merchant, bitterly. "I have, I think, won the wager, but it is sufficient for me to have given him a lesson. Let him keep his money, and be wiser for the future."

He walked rapidly away. We opened the door of the summer-house and found the student in convulsions. A paper, signed with the name "Francis Villiers," was on the table. As soon as the student's senses were restored, he asked vehemently where was the vile sorcerer who had subjected him to such a horrible ordeal—he would kill him! He sought him throughout the inn in vain; then, with the speed of a madman, he dashed off across the fields in pursuit of him—and we never saw either of them again.

That, children, is my ghost story!

"And how is it, good uncle, that after *that*, you don't believe in ghosts?" said I, the first time I heard it.

"Because, my boy," replied my uncle, "neither the student or the merchant ever returned; and the forty-five guineas, belonging to me and the other travellers, continued equally invisible. Those two swindlers carried them off, after having acted a farce, which we, like ninnies, believed to be real."

I BIDE MY TIME

'FRIEND! thy life is a weary state,
Poverty, misery altogether,
Toiling early, and sighing late,—
Nothing but stormy and wintry weather,
What hast thou done to deserve so badly?
Ah! me, I pity thy dreary life—
Thy lips, alas! they smile but sadly—
Thine eyes they tell of a terrible strife.
Thy gentle heart is unknown to fear,
I know thy soul is unstain'd with crime"—
"Hark ye, friend! a word in your ear
Patiently toiling,—I bide my time.

Oh! ever that thought my spirit cheers —
If I toil mid the winter wind and snow,
I'll rejoice when the merry spring appears,
And laugh when the summer roses blow
Weary with toil the evening finds me,
But I feed with content on the coarsest root.
I murmur not at the fate that binds me,—
I'm planting a tree that shall bear me fruit.
'Tis thought—not sorrow—that pales my cheek
There's a voice within that bids me climb,
And my soul is firm, though my limbs are weak,
And, onward looking,—I bide my time" J. K

LITERARY NOTICES.

The Second Volume of the WORKING MAN'S FRIEND, containing upwards of 400 pages, richly illustrated, will be ready October 1st, price 3s 6d, neatly bound in cloth.

THE SCIENCE OF BOTANY beautifully illustrated by upwards of Three Hundred Engravings from Drawings from Nature is in course of publication in the ILLUSTRATED EXHIBITOR AND MAGAZINE OF ART. Each chapter (continued weekly) is profusely illustrated with engravings carefully executed. The ILLUSTRATED EXHIBITOR AND MAGAZINE OF ART is published in weekly Numbers, twopence each, or in monthly Parts, 9d or 11d each, according to the number of weeks in each month.

CASSELL'S SHILLING EDITION OF EUCLID.—THE ELEMENTS OF GEOMETRY, containing the First Six, and the Eleventh and Twelfth Books of Euclid, from the text of Robert Simson, M.D., Emeritus Professor of Mathematics in the University of Glasgow; with Corrections, Annotations, and Exercises, by Robert Wallace, A.M., of the same university, and Collegiate Tutor of the University of London, is now ready, price 1s in stiff covers, or 1s 6d neat cloth.

CASSELL'S ELEMENTS OF ARITHMETIC, will be issued early in October, price 1s in stiff covers, or 1s 6d cloth, uniform with Cassell's Edition of Euclid, edited by Professor Wallace, A.M., of the University of Glasgow, Editor of Cassell's "Euclid," the POPULAR EDUCATOR, &c.

THE POPULAR EDUCATOR ALMANACK, price 2d, containing a large amount of Educational Statistics, compiled from the most authentic sources, with brief notices of the various arts, sciences, languages, &c., will be ready for delivery November 1st.

AN EDUCATIONAL WORK FOR EVERY FAMILY. Now ready, "The First Volume of the Popular Educator." Common Edition, with weekly Headings, 3s 6d, Extra Edition, without the weekly Headings, 4s. 6d, or strongly bound, 5s. This Volume contains Lessons in the French Language, Latin, German, English, Arithmetic, Music, Geometry, Botany, Natural History, Biography, Geography, &c. The "Popular Educator" is published in monthly Parts and weekly Numbers, both Common and Fine Editions.—Common Edition, 1d. per Number; Fine Edition, 1½d.

BITS OF MY MIND.

THE Irish are a quick-witted people, but they most unquestionably make *queer Philosophers*, especially when they are really in earnest, if that ever be the case. I cannot imagine a more impossible sort of a thing than would be an *Irish Utopia*.

I OBSERVE it is now the fashion to blacken the edges of paper for the use of people in mourning on the *outer* half of the sheet only, the *inner* part being left as before. Is this a "tippe," or meant so, of the people, for whose use the paper is intended, whose mourning is generally confined to the outside?

SOME folks say "learning languages is a knack." What that means I do not well know; but it is a *gift peculiar to certain minds*. Is it a desirable one? Of that I have some doubt For who are likely to attend best to words? Those who attend least to *things* This does not follow as a *certain* consequence, but no one can deny *its probability*.

A MAN who for a long time argues seriously with you upon some important and serious subject, but at last, finding himself beaten in the argument, endeavours to escape by turning the whole into some scurvy jest, is nearly as bad as a thief who, being foiled in an endeavour to pick your pocket, attempts to pass the attempt off under the pretence of "a practical joke" In my mind one deserves a kicking or a horsepond nearly as much as the other.

"HIGH SPIRIT" is doubtless a good gift, and when you feel indignant at anything, it is, no doubt, good "prima facie" evidence, that the thing is worthy of indignation and unworthy of you But this rule has many exceptions—very many indeed—and when doubts are expressed, never hesitate to listen to the decision of *calm reason* as to the truth of that particular case

To "elevate the mind" is, in plain terms, *to lift it out of the dirt* —and this ennobling process is the peculiar province of *poetry*, whose gift it is ever to be empowered to elevate morality, which nothing else can do in this world This constitutes the true value of poetry, if I may apply the word "value" to that which is invaluable.

IN all matters of morality set up for yourself *a high standard*, and invariably act upon it; but beware of the amiable mistake of setting up a high standard *for others* at the same time, to do this is to adopt the best possible recipe for being cheated, galled, and bamboozled through life

SET it down not as a certain truth, but as a high probability, that he whom others do not understand, does not understand himself.

MEN should remember and never forget, that besides *proper things*, there are also proper *times* and proper *places*

THE government of God in the *moral world* is to my mind as certain as in the *physical*, but, for obvious reasons, it is mostly hidden and unseen even of those who are influenced by it, and obey it.

SOME men never value anything that they can clearly understand. They must have the "obscurely mysterious" to charm them. They *reverse* Ixion:

> He embraced a cloud, because he thought the cloud *Juno*.
> They would only embrace Juno, because they thought her a *cloud*.

SOME things seem as if they had been absolutely created to serve the most insignificant purposes.—For instance, if we had no *cobs* what the plague should we stop our bottles with?

THOSE who are *fancifully ill* are vexed and hurt if you do not seem to think them *as ill* as they describe themselves to be. Those who are *really ill*, are hurt and vexed if you do not seem to think them *as well as* they describe themselves to be.

I SHOULD fancy that, taking all circumstances together, Edinborough is the most picturesque of cities. Athens was and is very finely situated. So are some of the Spanish towns. But the Castle-Rock, Mountains and Firth of Edina, are, I should guess, equal to any. The city, in truth, is *too* "picturesque" to be *comfortable*, and it looks so

BESIDES a great liking and admiration of flowers, I have for certain sorts a particular affection, as men are said invariably to have for their "first love," though they may afterwards meet with charms confessedly more beautiful or more desirable. This sort of love I have for the commonest flowers—for wall-flowers, and "Sweet William," for instance, for "Nasturtium," for the old large "white rose," and for "stock gillyflower," and "Southern-wood," because on them my young eye first rested, and from them I first sucked a "honey" of poesy, the relish of which after-sweets have never overmatched

WHENEVER it happens that the two differ, believe your *heart* rather than your *head*

IT is an unreasonable thing to expect the same consideration in adversity as in prosperity, and no wise man either expects it or complains of its absence The fact is, men as naturally love sunshine, and as naturally draw to it, as do their fellow-insects *flies*

I HAVE often wondered at the propensity many men have to christen their eldest son after themselves, unless they want indeed a colourable pretext sometimes to break open the youngster's letters

MEN who would be ashamed of setting up *oracles out* of themselves, strange to say, have set them up *in* themselves. Witness Dr. Reid, and the whole tribe of modern Scotch metaphysicians, whose "common sense" is nothing less nor more than this.

I HAVE no doubt there exists a certain species of mind so fond of the "subtle" or "remote," or what it thinks so, that it invariably *despises* what it can really understand Nor are such persons, perhaps, *far wrong* in doing so.

I DO not recollect seeing any explanation of the reason *why* the fire follows when steel is stricken by flint, or from any other violent collision between hard or brittle substances. I take it to be this—that by the collision the attraction of cohesion amongst the atoms, forming a small portion of one of the substances, is destroyed Consequently the latent heat and light belonging to that portion are set at liberty, and go to form the spark or flash of fire that follows

IT is almost incredible to those who have not observed it narrowly what a perpetual conflict we keep up with the elements, and their auxiliaries, insects and vermin This is most palpable in a house shut up Leave it for a few months, and from an elegant dwelling how quickly does it become the emporium of dust, damps, mildews, dry rot, spiders, wood lice, moths, flies, mice, and rats. Nay, even in our proudest palaces is this aggression ever going on Majesty cannot awe it, and one side of a gilded panel may be a queen revelling in all the luxuriance of beauty, and on the other a rat gormandizing in all the luxuriance of garbage.

NOTICES TO CORRESPONDENTS.

W. N (Paddington).—The velocity with which light is propagated is about 200,000 miles in a second, so that it could pass nearly ten times round the earth, or once between the earth and the moon, in one second of time. We could not answer your other question satisfactorily without employing several diagrams; but the whole science of optics will be explained shortly in the "Popular Educator."

K. T—If you are so deeply in debt to your landlord, you are not entitled to the usual legal notice to quit He can at any time put in a distress

SALMASIUS.—The publication about which you inquire has long since been discontinued.

M. WEBSTER.—We know little of the merits of the speculation to which your note refers; but the names appended to the prospectus are those of persons of the highest respectability.

A CONSTANT READER.—You should have directed your inquiries to some skilful medical practitioner. Have nothing to do with persons of the class of which you speak.

I. B (a working man)—The following is strongly recommended as an excellent liquid for waterproofing leather —Indian-rubber, one quarter of an ounce, oil of turpentine, three quarters of a pint, put them in an earthen pot, tie it over with bladder, and set it in hot water, when the Indian-rubber is dissolved, add hot *boiled* oil, one pint. See that the boots, shoes, or other leather articles, be free from dirt; warm them well, and apply the liquid in a warm state. Keep the mixture well corked, and do not pour out more at a time than you are likely to use.

A. D. O.—General Washington died December 14, 1799

R. W. GAYLER (Teignmouth)—Apply to the Secretary of the Peace Society, New Broad-street, Finsbury-circus.

C C. (Preston)—Your inquiry reminds us of a passage in Ben Jonson's play of "Every Man in his Humour" A lackadaisical young spendthrift asks, "Oh, pray, nuncle, have you got a book about hawking and hunting?" The uncle replies, "Hawking and hunting! Learn to be wise, and practise arts to thrive." We profess no skill in "hawking and hunting."

XAVIA.—You will not be likely to obtain any grammar or dictionary of the Russian language in this country.

A. MUIR.—We receive a number of letters from correspondents requesting accurate information as to the whole process of photography, receipts for the various solutions, &c. We decline answering this class of inquiries. The answers we could give would lead our correspondents to try a number of expensive experiments, many of which would be likely to fail, unless they received regular instructions from some experienced practitioner. The "Manuals," &c., that are published do little beyond recommending solutions, &c., prepared for sale by the publishers.

J. T. Y—The *Standard of Freedom* has been discontinued for some months. We do not believe that the letters of "*John Pym*" appear in any other journal.

"A COMMUNICANT."—You certainly are *not* "eligable" for a free passage to Australia," and if you were able to pay for your passage thither, we do not think "pattern drawers and engravers" are likely to obtain a livelihood there.

A READER.—We believe that the clergyman may legally require the baptismal fees to which you refer.

TYRO.—It *is* our intention to publish "*a compendious*," and at the same time *cheap*, Latin Dictionary. Particulars shortly.

TRAGUE; J. D. B; H. BLYTH, and several others We have duly received your verses but being at present overstocked with similar articles, we cannot promise a very early insertion. Some of them will appear in due time, others are rather below our standard.

All Communications to be addressed to the Editor, at the Office, Belle Sauvage Yard, London.

Printed and published by JOHN CASSELL, Belle Sauvage Yard, London.—September 18, 1852.

RUSSIA AND THE RUSSIANS.—VII.

THE RUSSIAN PEOPLE.

RUSSIA,—says our often-quoted and entertaning traveller, Edward Jermann—is a country of contradictions. The proverb that "extremes meet" is nowhere more frequently justified than in the dominion of the Tzar. If we speak of the Russian climate, we immediately begin to shiver; but many a traveller will aver that he has suffered less from heat in Rome, and more from cold in London, than in St. Petersburg.

The contrast consists in the climate; consists in the extremes which meet in Russia, and which meeting is also to be noted in the national character, customs, manners, in the laws and in their execution. If you tell us that the Russian has something of the wild beast in his composition, we shall not say that you are in the wrong; but neither can you accuse us of misstatement when we assert, that in social intercourse he is amiable, gallant, and delicate. We are both in the right; we may agree that he holds out his hand to us with German frankness, presses ours with the courteous cordiality of a Frenchman, and with fingers velvety as a tiger's paw, but from which, as in the case of the tiger, the claws sometimes suddenly protrude. To put the case in two words—the Russian's breeding is in opposition with his original nature, and the struggle between the two engenders perpetual contradictions.

The summer day is of heavenly beauty, its only drawback is that the heat is too oppressive. at six o'clock you are longing for a puff of fresh air, that you may breathe freely—at seven you crouch shivering beside a blazing fire. Was the day, therefore, not beautiful? and are there not many days which are fine for the whole of their four and twenty hours? for in the height of summer there are full six weeks when one does not know at St. Petersburg what night is.

CONVICTS ON THEIR WAY TO SIBERIA.

You have a servant, true as gold, and sober as a dervise. For three months not a fault has been found with him; at the end of that time thirst overtakes him, and he is drunk for eight days—literally for eight whole days. This over, for three or four months nothing will induce him to touch strong drink. Are such contradictions conceivable? And yet they exist

Look at the Russian *muschik*! He disgusts you to behold, and yet he is the cleanest man in the world; he is covered with dirt, and yet the correspondent lies who wrote to the Cologne Gazette that in Russia "the soldiers are driven like cattle to the bath, that being the only means by which their proximity is rendered endurable," and so forth. The correspondent may have seen the Russian soldier dirty, *that* I admit, and certainly it is not everybody's affair to investigate things minutely: the *muschik*, who works for nine months of the year in his sheepskin, and wears the same skin often for ten years or more, exposed in it to all weathers, and leaving upon it the traces of his occupation—he, I say, certainly cannot be as trim and neat as a ballet-dancer; and the same might doubtless be the case with the troops whom the correspondent saw upon their march back from Hungary, who also may possibly, for the sake of order, have been marched by detachments or corps to the bath under the guidance of a non-commissioned officer. All this I grant. But what I affirm and maintain is this: give the Russian soldier no meat for a month, and he will not murmur; put him for three months on half rations, he bears the privation uncomplainingly; but, upon the other hand, only dreprive him for a month of the two baths which he is accustomed to take every week, and he will grow discontented, useless, sick; for nature and habit imperiously demand this cleanliness of his body, however unspeakable may be the dirt of his garments which circumstances entail. There again you have the extremes meeting.

The Russian laws are for the most part wise; many of them are very humane, above all they are very just, and yet in the whole world no such scandalous injustice occurs, no such atrocious abuses of power are witnessed, as in Russia. In no other country is the administration of justice and police worse than there. The fault is not with the laws, but with those who execute them. Whoever has had opportunities of becoming acquainted with Russian justice and police, will assuredly not complain of the abuse of the lash in that country; much more likely will he be to deplore that it is so little laid on, and, especially, that it is so seldom applied in the right place. Russian corruption is unfortunately no fable. The man who has money enough, who knows the paths, and does not shrink from treading them, may there gain all his ends.

If the Russian police are vigilant, the thieves are no less adroit, as the following anecdote, related by Mr Jermann, sufficiently testifies.

Kakuschkin, the chief of police, was not very popular in the Russian capital; but by the thieves he was especially detested, for his severity almost equalled their audacity. So there was a double temptation to despoil him—the gain to the spoilers, and the vexation of the spoiled. He possessed, amongst other things, a magnificent porphyry vase, which stood upon a no less costly pedestal. How the thieves managed to steal the vase is still a riddle, but stolen it was. For six months the police hunted after it; not a trace but was followed up and explored; not a thieves' hiding-place but was examined; but all was in vain! At last hope was abandoned, and the authorities relaxed their vigilance. One day, however, a policeman went to Kakuschkin's wife, and took her the joyful intelligence that the thief was discovered, the vase already at the police office, and that her husband had sent him for the pedestal, in order to identify the stolen object. Madame Kakuschkin was overjoyed: and when her husband came home to dinner she ran to meet him, in high glee.

"Well," she cried, "and the vase?"

"What vase?"

"The stolen vase, which has been found: the vase whose pedestal you sent for?"

"Whose pedestal I sent for! Whom did I send?"

"A policeman."

"Say, rather, a *policeman's uniform*. I sent no policeman, nor have I heard aught of the vase, or of its pedestal."

When the chief of the police is thus made game of, what must be the lot of the poor citizens, to whom thieves and police are alike dangerous?

We have heard much of the punishments of Russia; and it appears by all accounts that they are most severe, beginning with the rod at school, and ending with perpetual banishment to Siberia—in the mines and deserts of which the name, station and actual identity of the offender is lost for ever. Travellers tell us of meeting melancholy *cortèges* in the wilds and steppes of Russia—convicts who, after having suffered the punishment of the knout, are conducted with all the ceremonials of a military procession into the dreary fastnesses of Siberia, far beyond the confines of European civilisation.

The humanity of the Russian laws, which in many respects cannot be too highly praised, has long abolished capital punishment, except in cases of high treason. In its place are the Rod and the Knout. Sentences to punishment by the former often condemn to such a vast number of blows that the hide of an elephant could not withstand them. Human nature must sink and expire under them. In this dilemma, Russian humanity has had recourse to the plan of the tender-hearted boy, who, in order not to hurt his dog too much at one time, cut off a little bit of his ears every day until he was sufficiently cropped. What man can endure 4000 blows of a stick? They would inevitably kill him, which is no part of the condemnation; and, as a proof that this is not desired, the sentence concludes by ordaining that, after he has received his punishment, he shall be sent for life to Siberia.

The officer in command of the troop ordered for the execution of the sentence is responsible for its being literally and completely carried out. This responsibility he lays, in his turn, upon the shoulders of the regimental surgeon. The delinquent—civilian or soldier, it matters not which—marches down the fatal street of men, with a soldier in front and in rear, whose levelled bayonets prevent his hanging back or unduly hurrying on. Upon his left walks the surgeon, holding the unhappy wretch's hand in his, and anxiously watching the state of the pulse. When its diminished beat gives token of danger, the punishment, on a signal from the medical man, is immediately suspended, the exhausted sufferer is placed in a cart and taken to the hospital. The horrible, but yet humaner, practice of the Austrians, to inflict the entire number of blows prescribed by the sentence, even though the latter portion of them fall upon a corpse, is here strictly prohibited. The patient is taken care of in the hospital until recovery, and then—another bit of the ear is cut off. If this process be often repeated, he usually dies in consequence of his wounds; but in that case justice has not actually *killed* him! Should he ultimately recover, he is sent to Siberia. It seems incredible, but is nevertheless true, that many criminals have thus taken, by instalments, 4000 or 5000 blows, and lived to drag out many years of melancholy existence in Siberian deserts.

The second and still severer punishment is that of the knout, with respect to which the most fantastical notions prevail. According to these, a man gets the knout in Russia as he may get a ribbon or an order, without rhyme or reason. That is not exactly the case. Before the punishment of the knout can be inflicted, it must be proved that such a crime has been committed as would entail, in every civilised country, the punishment of death. For the knout is the substitute for capital punishment. It cannot be inflicted without the Emperor's own signature. For the rest, though the sentence proceeds from the judge, its effect depends entirely upon the executioner who wields the knout. Does he mean to be humane to his victim?—he kills him with the first lash; for so great is the instrument's weight that it enables him to break the spine at a single blow. This is not, however, usually done, and the unfortunate culprit receives the whole number prescribed, which rarely exceeds half-a-dozen. Here no surgeon attends, as on occasions of running the gauntlet, to regulate the punishment. If the criminal dies under the knout, no one is answerable—the motive for such exemption from responsibility doubtless being that the very *first* blow may be fatal. If he survives, he is sent, when cured, to Siberia. And instances of persons surviving this frightful punishment have frequently been known to occur.

The relation of the Russian peasant to his master, says our authority, is that of the slave to his owner—the sulky obedience of impotence to power and force. Instinct bids the serf extract as much advantage as he can from the connexion with his lord, and to do as little as he can in return. By *advantage* he understands brandy, for which he will do anything, even work. Upon the other hand, if he can shirk labour, he deems it a sacred duty to himself to do so. The Russian always seems extremely busy, but it is only *seeming*; upon the whole

he gets through about half as much work as a free German day labourer.

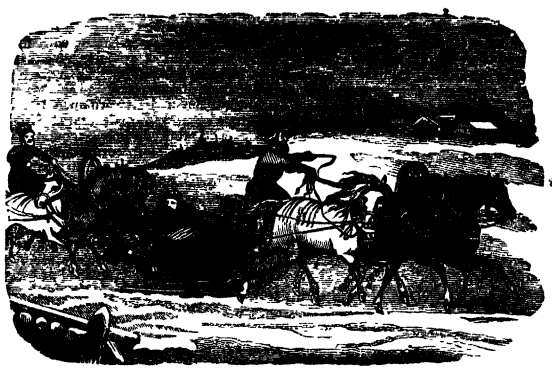
The dress of the Russian peasant is well suited to the climate, convenient and not ugly. He wears a shirt and trousers of blue or red-striped linen, and over them a caftan of blue, grey, or brown cloth, which reaches below the knee, is cut obliquely from the throat to the breast, and studded with cylindrical buttons of brass or white metal. Throat, head, and feet, are bare. His throat is protected by the very strong but not proportionably long beard; his hair is usually cropped round the head, but sometimes is allowed to flow down upon the shoulders. His girdle is a broad linen band, in which he sticks his usual tool, the axe, and in winter time his gloves. In the winter he exchanges his caftan for a sheepskin, covers his head with a round or four-cornered cap, envelops his feet with folds of linen, and draws on strong boots or a sort of shoes which he calls *labkar*, and which are very skilfully made out of the bark of birch or lime trees. Of these shoes he will wear out twenty or thirty pair in the course of the year; they cost only about fifteen kopecks, and most of them are made at Sepuchof, a town to the south of Moscow. Of late years this kind of shoes is not so universally worn as formerly, for such a great quantity of them were made, that the forests near the place of manufacture were seriously injured by the stripping off of the bark from the trees. Those peasants, therefore, who are too poor to buy boots, wrap up their feet in cloth and sacking, which gives them the appearance of elephants' feet. Except in this last respect, the whole costume has a great resemblance to that of the lower classes of English in the time of Richard the Second (fourteenth century).

The Russian peasant women are by no means beautiful. They are short-bodied, squat figures, with round faces, high cheek-bones, coarse features, and pallid complexions. Those amongst them who pretend to good looks and wish to improve their appearance, use paint; but they lay it on so unskilfully, that they cannot be said to mend matters. Their beauty, however, bears due proportion to the idea of beauty entertained by that class of Russians who estimate personal comeliness by bodily circumference. The more corpulent a woman, the more admirers will she have. Such being the beau ideal of the Russian of the lower orders, he finds abundant objects of admiration. When the first bloom of youth has passed away (this occurs at a very early age), all the women get fat, which may arise partly from their lazy habits, partly from their too frequent employment of vapour baths. They are puffed out rather than plump, and are deficient in that firmness and elasticity of form which imparts such attraction to the appearance of other European women, even of an equally low degree. The climate may also have something to do with this; at least, I infer that it may, from the quality of the flesh of domestic animals, which in Russia is much more spongy than in Germany. And this is a theme of eternal complaint with German housewives in Russia, who declare that beef shrinks so much in the cooking, that it comes out of the pot hardly half the size it went in. Be this as it may, corpulence is an important item in a Russian's estimate of beauty; and that is the case not only in the country, but in the higher circles of the capital, where such stateliness of exterior is much prized, at least in servants. Certain it is that a bulky full-bodied coachman may reckon upon a few hundred rubles extra annual wages; and if, to bodily weight, the colossus adds the advantage of a correspondingly bushy and redundant beard, he may consider his fortune made.

The dress of the peasant women, even of the poorest, is not altogether ungraceful. They wear short gowns of blue cloth, braided with all the colours of the rainbow, and having the stomacher fastened by a row of cylindrical buttons. The young girls part their hair smoothly in the Chinese style, and tie it at the extremity with a knot of ribbons; but as soon as they are married they carefully conceal it under a head-dress. This consists of a bright-coloured cloth of gay pattern, fastened tightly under the chin, and which on festival days is further embellished with ornaments of gold or coloured stones. On such occasions also, the throat and head are adorned with strings of beads, and with gold and silver coins, to the utmost of the wearer's means.

In the severest winter the Russian peasant women give no further protection to their heads. Their bodies, on the other hand, are enveloped in thick sheepskins, and their feet carefully protected by very warm stockings and boots. In summer they go always barefoot. When they would make themselves particularly fine, they put on a red *Sarafan*, or long gown, and load their head, neck, and breast with everything they can scrape together in the way of beads, gold, and silver. Even to these poor lingerers upon the lowest step of civilisation's ladder, vanity is by no means unknown.

In the winter time the sledge is the common means of conveyance in Russia. The general form of the sledge is that of a wheelless cradle or chaise, with a pair of shafts attached. The better kinds of vehicles have three horses, the centre one of which is fixed to the shafts, while his two companions gallop on either side. Some sledges have a roof or hood over them, but the majority are open like a chaise or gig. In the country the horses are decorated with bells, but in the towns this is not allowed, in consequence of the intolerable noise the use of such ornaments would occasion. The Russian couriers are perhaps the most enduring and hard working class of men to be found in Europe. Seated on a board covered with a thick leathern cushion, in a wooden vehicle, without springs or back to lean against, and on a level with the traces, the courier travels at full gallop over the most wretched roads, without rest or repose, to Odessa, to China, or even to Port St. Peter and St. Paul, 12,800 versts from St Petersburg. Add to this, that the courier, so long as he is on Russian ground, is forbidden, under pain of dismissal, to close an eye in sleep. On such tremendous journeys as the last referred to, nature becomes at last too powerful for duty to resist her call, and the harassed courier allows himself brief repose. But it has often occurred that when the despatches reached their place of destination, the bearer was unable to deliver them,—he lay a corpse in the carriage.



Less fatiguing than the journeys of these couriers, but still far from agreeable to the foreigner, is the travelling with post-horses, or by diligences. By the first mode he is very much at the mercy of chance. If he quits St. Petersburg provided with a good *padroschnik* (an official document to procure him post-horses), and if he finds no competition at the posting-houses, he gets on pretty well. But if he has not the paper in question, or if there happens to be a demand for, and consequent scarcity of, horses at the relaying places, he may abandon all calculation as to the probable progress of his journey, and resign himself to the will of Providence. Supposing him to have at last got his horses, and to have left the post-house far behind, he yet has no certainty when he may reach the next; for he may chance to fall in with a courier, or with an officer travelling on service, to whose horses some accident has happened, and who forthwith, and without the slightest ceremony, stops the luckless stranger, takes the cattle from his carriage, harnesses them to his own, and gallops off, perperfectly indifferent as to the fate of the man whom he thus leaves horseless and helpless upon the emperor's highway. The traveller by sledge—say even from Riga to St. Petersburg, between which places the road is tolerably good—may deem himself fortunate if he does not get lost in the night; and may thank, for his safety, the quick ears of his postilion, who, hearing his cry of distress, pulls up and waits until he can pick himself up out of the snow, into which (and out of the sledge) a sudden violent jolt has shot him. In our last number we inserted an engraving of the mode in which the couriers of Russia performed their journeys; above will be found a sketch of the sledge-travelling common to the Russian winter.

In no country in the world, perhaps, is the bath more frequently used than in Russia; and yet, strange contradiction, nowhere are the clothes of the people in so filthy a state. The ordinary shampooing, so frequently described by travellers, is in use all over Russia; but the scenes said to be witnessed in the baths exist, we are assured, only in the imagination of the narrator.

The festival to the memory of their dead is a singular observance of the Russian population; this is held the Monday after Easter, thence called "Pominatelnui poniedelnik," or Recollection Monday. Thousands congregate to the churchyards on this day, bringing with them eatables and drinkables of every kind and description, and the funeral picnic, which opens with the mornful recollection that a wife or a friend has

been taken from them, closes amidst the most uproarious scenes of revelling. Cloths are spread over the graves of their deceased relatives, and on these are placed the pirogs, or some other favourite dish, and plenty of quass, punch, and suchlike compounds. "Here's to the memory of Ivan Dimitrivitch," says one, with a glass of brandy in his hand; "Poor Ivan, he cannot drink himself, and therefore we will drink for him;" and thus they drown their sorrow.

Foreigners who are at St. Petersburg during the winter will be highly amused with the exciting and agreeable pastime of the ice hills, which are the great focus of attraction while the frost lasts. These ice hills are made of large blocks of ice, cemented together by water being poured into the interstices, the plane at the foot of the incline, of which the angle is considerable, being similarly constructed On the summit of each hill is a wooden tower, [which is gained by a commodious flight of steps, and from it parties get into their sledges, and are projected down the incline and along the level at the foot, until they arrive at the bottom of the next hill; there they leave their sledges, which are carried, by men employed for the purpose, to the top of the next tower, when they again are launched off. The sledge used in this exercise is a slight framework of steel, about one foot high and three long, having on the top a cushion for a seat. The Russian nobility, the English, the Germans, and French, have each their separate hills, erected by subscription amongst themselves, in some inclosed spots: there are also many public ones, for all classes. A large space on the Neva is carefully levelled and inclosed, for trotting and ambling matches, in harness, — a favourite amusement of the Russian merchants, who take great pride in the speed and action of their horses. The sledges used in this species of sport are of the slightest construction, sometimes not weighing more than fifty pounds. It is entirely a Sunday amusement, as are most others. Skating is not in vogue more than a few weeks; it is tame to a Russian, compared to his ice hill; this and the swing are their two most popular enjoyments. A stroll to the markets of frozen provisions must not be forgotten at this season of the year.

SLEDGE-DRIVING IN RUSSIA

A BEAR CHASE ON THE ICE.

The national sports of our countrymen may, too, be indulged at St. Petersburg; the English merchants have a subscription pack of fox-hounds: their success, however, has been stated as partial, and the only good run on record is one they had with a wolf, which was fairly run into in the open country, after a two hours' burst without a check. It should be remarked, that the marshy nature of the soil is not adapted to this kind of sport. There is bear, elk, and wolf hunting in the neighbourhood of the capital, and some of the British residents there are very keen sportsmen.

From the enjoyment which the Russians of all classes take in every species of scenic diversion, the theatre is particularly a popular amusement. There are, independent of the one near the Hermitage, three large theatres in St. Petersburg; the *Bolshoi*, or Great Theatre, on the square of that name, between the Moika and Catherina canals; the *Alexander* Theatre, in the Nevskoi Prospekt, and the *French* in the square near the palace of the Grand Duke Michael. The performances at the two former are devoted to Russian and German plays and operas, the latter to French and German dramas All theatrical establishments in Russia are under the immediate management of Government, by whom every expense is paid; and, as none is spared, the scenery and dresses are of the very best kind: the sums disbursed must be very considerable —in fact the expenses are so much above the receipts, that it is said to be but an indifferent speculation. The imperial purse, however, is pretty capacious and well lined, and stinginess is certainly not one of the Emperor's infirmities. The houses are spacious, very nearly semicircular in shape, and handsomely decorated; and a magnificent box for the imperial family occupies the centre of the two first tiers. The arrangement for the accommodation of the public is exceedingly good, every seat being numbered in such a manner as entirely to prevent confusion. There are no stalls in any of these theatres, but the back part of the pit is fenced off as a *parquet*, and contains seats at a lower price; about two-thirds of the pit seats are generally occupied by officers wearing uniforms of all fashions and colours, and almost universally muffled up in long gray cloaks, without which no officer thinks he is accoutred.

GENERAL SUMMARY.

Although the characteristics of St. Petersburg and Moscow are those of opulence and splendour, the other principal towns and cities are by no means well built or thickly inhabited. In the following list will be found the names of the chief towns and cities in the various departments of Russia, with the number of their inhabitants, &c., according to the official census of 1835, since which period no reliable data have been published. By the next official accounts these figures will probably be found erroneous, as in the course of nearly twenty years the population will have increased somewhat; but in the absence of later information we must have recourse to these or none:—

Provinces.	Inhabitants.	Sq. Miles.	Inhabitants for each square mile.
1 Archangel	240,896	15,212	15
2 Astrakan	103,280	4,072	25
3 Vilna	1,315,781	1,162	1,132

54 Province of Omsk	72,546	802	90
Total for the Asiatic Provinces	1,827,936	..	..

To the above must be added Georgia, respecting whose population we are yet without authentic information,—and the Grand Duchy of Finland, not included in this census.

CAROLUS VON LINNE.

COMMONLY CALLED BY HIS LATIN NAME "LINNÆUS."

As society increases in means, and nations progress in civilization, mankind become more enlightened. It is then scientific research acquires a value, and obtains a position deeply interesting. As we advance in knowledge, we habitually learn to be inquisitive respecting the origin of those things by which we find ourselves surrounded; we become anxious to dive into the arcana of nature; we grow impatient to ascertain the laws by which her operations are conducted, and our energies are directed to wrest from her bosom, if possible, her secrets. Those individuals, therefore, who strive to aid us in such our endeavours, by the invention of ingenious theories, must always hold a consequential rank among naturalists. We hail as benefactors of no common worth all those who devote their time, employ their talent, and bring their genius to bear upon such desirable purposes. They are indeed, in the truest sense of the word, the friends to their species; we accept their assistance with gratitude, and every occurrence relating to them is considered worthy of our particular notice.

This celebrated naturalist was born 13th May, 1707, old style, at Rœshult, in the province of Smaland, in the kingdom of Sweden, and put apprentice to a shoemaker. Dr. Rothmann, a physician, perceiving the lad to possess considerable talent, interfered with his parents, and prevailed upon them to let him study for the practice of medicine. In consequence of this arrangement, he entered at the University of Lund, in Scania, in 1727, whence he removed the year following to that of Upsal.

It was here he conceived the idea of a new arrangement of plants, now known as the sexual system; to the furtherance of this purpose he wrote a memoir, which was shown to Rudbeck, the botanical professor, who was so struck with its ingenuity that he received the author into his house, as a tutor to his children, and made him his assistant in the delivery of his lectures. His fame now advanced; he was looked up to as a promising genius of some brilliancy; so much so that the Academy of Sciences at Upsal sent him, in 1732, to make a tour of botannical investigation through Lapland. The Swedish people do not appear to be so lavish in their allowances on these occasions as some other, perhaps more wealthy, nations: the whole amount apportioned to Linné for this object not being more than fifty Swedish dollars, which were deemed amply sufficient to defray his expenses; and with this comparatively small sum, unaccompanied by any one, he prosecuted a journey of three thousand five hundred miles, from which he returned at the end of the year. He was next engaged in a scientific tour through Dalecarlia, and went again to Lapland on a mineralogical discovery. In 1735, he published a highly classical work, the complete Flora of Lapland; subsequently, his Rudiments of Botany, in which he laid down the basis of his own system, attracted the notice of Mr. Clifford, a wealthy merchant residing at Amstordam, who made him the superintendent of his garden at Hartecamp, near Haerlem, then famous for its curious and valuable collection of exotics, of which our botanist drew up a systematic catalogue. In 1738, Linné visited England, after which he made an excursion to Paris, and towards the close of the year returned to his native land, where he settled as a physician at Stockholm. About this time the Swedish Government established a Royal Academy in that city, of which Linné was one of the first members, who very materially contributed to its character, and greatly advanced his reputation by the opportunities thus offered to him to display his abilities, now considered among scientific men to be of the very first order. In 1741 he succeeded to the professor's chair for medicine in the University of Upsal, and was also made superintendent of the botanic garden, to the augmentation of which, and to bring it under the new arrangement conformably to his own advanced system, he devoted his most sedulous attention with unremitting industry.

The sphere of his action being thus enlarged, he shone with fresh lustre, seemed impelled by a new impetus, so much so, that some noblemen, justly proud of their countryman, combined to strike an honorary medal of him at their own expense, thus giving a decided distinction to his increasing fame, added

to which, he was, in 1747, nominated royal archiater, that is, chief physician to the king.

The measure of his country's gratitude, however, was not yet full; an honour awaited him which had never before been conferred by any Swedish monarch on a literary man; having acquired a moderate degree of opulence, sufficient to enable him to purchase a territory, with a mansion, at Hammarby near Upsal, he was created a knight of the polar star in 1753, and in 1761 elevated to the rank of nobiity. During the last years of his existence, he chiefly resided upon his own estate, enjoying the fruits of his genius, the confidence of his countrymen, together with the respect of all the learned bodies in Europe. It was in this beautiful and well-earned retreat that he fulfilled the order of nature, by yielding up a life devoted to scientific research, on the 11th of January 1778. So highly were his talents appreciated, and so properly was he looked up to as an ornament to his species and a benefactor to science, that, impressed with a deep sense of the great value of the new system, and actuated by national feeling in favour of so intelligent a native of the country which had adopted him for its sovereign, the king or Sweden, in 1819, ordered a monument to be erected to him at the place of his nativity. Besides his works on natural history, he published a Classical Materia Medica, also a Systematic Treatise on Nosology, entitled "Genera Morborum." Natural science owes him great obligations, since few men have been more assiduous in its service, few have equalled the boldness, the zeal, the activity, and the sagacity he displayed in the pursuit; and although it is possible the arrangement may hereafter give place to one more perfect,—indeed, it has already gone under no less than sixty-three revisions by different botanists, among whom are to be found Thunberg, who was his own pupil, Gmelin, the botanical professor at Gottingen, Withering, Schreiber, and our own Dr. Smith; independent of which, another system, broached by Jussieu, the French naturalist, is making rapid strides;—yet that of the immortal Linné will never fail to be contemplated as a noble effort of the human mind, will always attract the admiration of the sons of science, nor will it ever cease to be eulogized by the world at large, seeing that it will furnish ample reason for congratulation, that instead of being made a shoemaker, he made himself a philosopher.

JOURNAL OF A FASHIONABLE YOUNG LADY IN THE FIFTEENTH CENTURY.

MONDAY MORNING.—Rose at four o'clock, and helped Catherine to milk the cows, Rachel, the other dairy-maid, having scalded her hands in so dreadful a manner the night before: made a poultice for Rachel, and gave Robin a penny to get something from the apothecary.

Six o'clock.—The buttock of beef too much boiled, and beer a little of the stalest.—*Mem* To talk to the cook about the first fault, and to amend the other myself by tapping a fresh barrel directly.

Seven o'clock.—Went to walk with the lady, my mother, in the courtyard; fed twenty-five men and women; chid Roger severely for expressing some ill will at attending us with broken meat.

Eight o'clock.—Went to the paddock behind the house with my maid Dorothy; caught Thump, the little pony, myself, and rode a matter of six miles without saddle or bridle.

Ten o'clock.—Went to dinner John Grey, a most comely youth—but what is that to me? A *virtuous maiden* should be entirely under the direction of her parents—she should harbour no affection unknown to them, if her object be a lasting and happy union. John ate but little, and stole a great many looks at me; said women would never be handsome, in his opinion, who were not good tempered. I hope my temper is not intolerable; nobody finds fault with it except Roger, and he is one of the most disorderly serving-men in the family. John Grey loves white teeth My teeth are of a pretty good colour, I think, and my hair is as black as jet, though I say it, and John's, if I mistake not, is of the same colour.

Eleven o'clock.—Rose from table. the company all desirous of walking in the fields; John Grey would lift me over every stile, and twice he squeezed my hand with vehemence. I cannot say that I should have any objection to John Grey; he plays at prison bars as well as any of the country gentlemen, and he is remarkably dutiful to his parents, my Lord and Lady, and never misses church on Sunday.

Three o'clock.—Poor farmer Robinson's house burnt by accidental fire. John Grey proposed a subscription among the company for the relief of the farmer: gave no less than four pounds with this benevolent intent.—*Mem.* Never saw him look so comely as at this moment.

Four o'clock.—Went to prayers.

Six o'clock.—Fed the hogs and poultry

Seven o'clock.—Supper on the table; delayed till that hour on account of Farmer Robinson's misfortune.—*Mem.* The goose pie too much baked, and the pork roasted to rags.

Nine o'clock.—The company fast asleep; the late hours very disagreeable; said my prayers a second time—John Grey distracted my thoughts too much the first time; fell asleep, and dreamed of John Grey.

[Extracted from an ancient MS preserved in Drummond Castle, and said to be the Journal of Lady Elizabeth Woodville, previous to her marriage with Sir John Grey, who fell in one of the many engagements between the partisans of York and Lancaster.—This lady was afterwards married to Edward IV., and was the mother of Edward V. and the Duke of York—the two young princes said to have been murdered in the Tower by order of their uncle the Duke of Gloucester, afterwards Richard III. This celebrated woman, the wife, mother, and sister of kings, died miserably in prison in the reign of Henry the VII.]

SONGS FOR THE PEOPLE.

ORIGINAL AND SELECTED.

No. VII.—WHAT IS NOBLE?

BY CHARLES SWAIN.

WHAT is noble? To inherit
Wealth, estate, and proud degree?
There must be some other merit,
Higher yet than these for me!
Something greater far must enter
Into life's majestic span,
Fitted to create and centre
True nobility in man!

What is noble? 'Tis the finer
Portion of our mind and heart,
Link'd to something still diviner
Than mere language can impart.
Ever prompting—ever seeing
Some improvement yet to plan;
To uplift our fellow-being,
And, like man, to feel for man!

What is noble? Is the sabre
Nobler than the humble spade?
There is a dignity in labour,
Truer than e'er pomp array'd!
He who seeks the Mind's improvement,
Aids the world, in aiding Mind!
Every great, commanding movement
Serves not one, but all mankind.

O'er the Forge's heat and ashes—
O'er the Engine's iron head—
Where the rapid shuttle flashes,
And the spindle whirls its thread—
There is Labour, lowly tending
Each requirement of the hour;
There is Genius, still extending
Science and its world of power!

'Mid the dust, the speed, and clamour
Of the loom shed and the mill;
Midst the clink of wheel and hammer,
Great results are growing still!
Though too oft, by Fashion's creatures,
Work and workers may be blamed,
Commerce need not hide its features!
Industry is not ashamed!

What is noble? That which places
Truth in its enfranchised will!
Leaving steps, like angel traces,
That mankind may follow still!
E'en though Scorn's malignant glances
Prove him *poorest* of his clan,
He's the *Noble*—who advances
Freedom and the cause of Man.

NEW STYLE.

WHAT is called "New Style" was legally introduced into Great Britain in September, 1752. As just a century has elapsed since then, a few explanatory remarks upon it may be neither inappropriate or uninteresting.

Days, months, and years are the principal, if not the only, natural divisions of time. A day is the time in which the earth completes one revolution round its axis; a month that in which the moon revolves once round the earth; a year that in which the earth revolves round the sun.

The Roman year, as fixed by Romulus, somewhat more than seven hundred years before the Christian era, consisted of only ten months, or three hundred and four days, to which were added about sixty days for the purpose of bringing the beginning of each year near to the same astronomical point. A memento of these ten-month years is preserved in the names by which the last four months of our own calendar are distinguished; September, October, November, and December, literally signifying the seventh, eighth, ninth, and tenth months. Numa Pompilius, the successor of Romulus, perceiving the clumsiness of his predecessor's arrangement, divided the intercalary days into two additional months, to which he gave the names of January and February.

The Jews, at least from the time of Alexander the Great, and indeed almost all other ancient nations except the Romans, reckoned twelve lunations to a year (whence the origin of the English word *twelvemonth*); but as these amounted, on the average, to only three hundred and fifty-four days, eight hours and forty-eight minutes, it is evident that they were nearly eleven days shorter than the solar or real year. To remedy this discrepancy, these eleven days were called "the Epact," and as such accumulated from year to year, an intercalary month being added to the year whenever the epact amounted to thirty or upwards, which of course occurred about thirty-seven times in a century, or rather oftener than once in three years; these intercalated years consisting of *thirteen* lunar months instead of twelve.

This mode of reckoning continued until the time of Julius Cæsar, who ordered these eleven days to be distributed amongst the months, thus raising some of them from twenty-nine to thirty, and others from thirty to thirty-one days each, the entire year containing three hundred and sixty-five days. But even this arrangement was found to be incomplete, inasmuch as it took no account of the hours and minutes which the year contains above three hundred and sixty-five days. To supply this deficiency, it was appointed that the sixth day before the calends of March (that is, the twenty-fourth of February) should in every fourth year be reckoned twice, whence our term "Bissextile" i.e. "twice-sixth." When the Roman calends became less generally known, it was found more convenient to insert the intercalary day at the *end* of February.

A near approach to accuracy was thus attained Nevertheless, as this arrangement reckoned the solar year to be three hundred and sixty-five days and six hours, whereas it is in fact only three hundred and sixty-five days, five hours, and forty-eight minutes, fifty-five seconds, it was in every four years about forty-four minutes wrong. This may seem to be an insignificant trifle; yet, so important do even trivial things become by accumulation, that this comparatively small discrepancy would in less than twenty-four thousand years have caused the 21st of June to be the shortest day throughout the northern hemisphere! When Gregory XIII. rectified this error, it had actually carried the astronomical commencement of the four quarters of the year more than ten days backward, the vernal equinox being on the 11th and sometimes on the 10th of March, instead of the 21st Yet so potent is religious prejudice, that because this correction was made by a Pope, Protestant nations and other opponents of Roman Catholicism refused to adopt it,—a refusal in which Russia has persisted even until now.

In the year 1751, however, an act of parliament was passed, which enacted that from and after the 2nd of September, 1752, the new or corrected style of reckoning should be adopted throughout Great Britain and its dependencies And as the yearly fractions had then accumulated to *eleven* days, it was enacted that the day next following Wednesday, September 2nd should be called and reckoned the 14th.

Persons who were then living have told us, that some ignorant rustics, having heard that there was to be a new style on the above-named day, went to their accustomed footpath in the fields in the expectation of finding a new *stile* there; and returned grumbling and angry at the hoax which they thought had been played upon them! But discontents far more serious and protracted than these resulted from the alteration. Masters refused to liberate and pay their servants on the 29th of September, alleging that it was not twelve months since the preceding Michaelmas. On the same ground tenants of lands and houses refused to quit their holdings, according to the new enactment. This originated the distinction between Old Style and New Style,— a distinction which has been perpetuated to the present day.

In no respect was the adoption of the new style more strenuously contested than in reference to annual fairs, feasts, and wakes. In some instances the bellmen of the neighbouring towns and villages were employed half a dozen times by the belligerent parties; one party ordering them to announce that their village feast would be held according to the *new* style, the other that it would be held according to the *old* style. In one instance when most of the inhabitants of a town had agreed to celebrate their feast according to the new style, an influential fruit-grower is said to have successfully exerted himself to procure a reversal of their decision; alleging as his reason, that his cherries would not be ripe at the feast, unless their decision was reversed.

But although custom and interest have thus perpetuated vestiges of old style amongst us, it should be borne in mind that if Lady-day, Michaelmas, &c., are mentioned in any contract, the law fixes those days to the twenty-fifth of March and the twenty-ninth of September. If the contracting parties intend *old* Lady-day or *old* Michaelmas, they must insert the sixth of April or the eleventh of October, and so of all the rest.

We may add that, to preclude the necessity of any such great change in future, it was also enacted that three out of every four *centenary* years should not be leap-years. Hence the year 1800 was a *common** year; so also will the year 1900 be. But as, if all the centenary years were so, it would produce a slight error in opposition to the former one, it is provided that the years 2000, 2400, 2800, &c., shall be leap-years. This arrangement will keep the statute years within a small fraction of the astronomical ones.

Before dismissing the subject, we may take occasion to remark how frequently objections and cavils are founded in ignorance. Disbelievers in revelation have sometimes exulted in a contradiction or two which they think they have discovered in the Bible; yet assuredly none of these are so evidently so as the following.—

A hundred years ago the seventeenth of September was the first Sunday in the month.

More than five hundred children were born in Great Britain and Ireland on September 1, 1752, most of whom were living on the eighteenth of that month, *yet not one of them was then a week old!*

Yet both these assertions are strictly and literally true. So also as to statements of difficult interpretation, several of which may confessedly be found in Scripture, yet all of them are more than paralleled by the following, which, to any one who did not know the facts we have narrated, would seem utterly incredible.

Nearly all the people in Great Britain went to sleep on the 2nd of September, 1752, and did not awake until the 14th? Neither the king of England nor any of his subjects tasted a morsel of food between the 2nd of September and the 14th!

Hundreds of common rushlights which were lighted on the 2nd of September, kept constantly burning until the 14th!

Many persons retired to rest on the 2nd of September, and did not fall asleep until the 14th!

On the 2nd of September a physician was summoned to a patient who was dangerously ill, yet, though he rode at his

* This increased the difference between old style and new to *twelve* days, a fact which during the first quarter of the current century greatly perplexed many of the patrons of the former. Hence the phrase "new old style," which is sometimes heard. Should our successors persist in retaining these antiquated dates, we suppose that after the year 1900 (which will raise the difference to *thirteen* days), they will have to speak of new style, old style, new old style, and *new* new old style!!!

utmost speed, and the distance was less than a mile, it was the 14th day of the month before he arrived!

The explanatory key to all these enigmas is found in the fact that the day next following September 2, 1752, was the 14th!

Thus let us rest assured that what paradoxes or difficulties soever we may find in either the works or word of God, they would all be clearly and easily explained if we could obtain possession of the fact which would furnish the key of their solution.

Oakham. J. JENKINSON.

CHARLOTTE MAY

"We are such stuff as dreams are made of,
And our little lives are rounded with a sleep"

"Mother," said Lottie May, "my head aches, and feels very, very warm. What can be the matter?"

"You are feverish, love, and require rest"

So Mrs May gave her child some herb-tea, and placed her in her little bed

In the night, the mother was awakened by a little groan, and lay and listened half unconsciously for a few moments, then she heard the groan again

"It's Lottie," she said to herself, and springing softly from her bed, for fear of disturbing the child, she stepped to the side of its bed and whispered

"Lottie!"

"Is that you, mother?"

"What's the matter, Lottie?"

"My head hurts me a little, mother;" and she groaned again as she clasped her hot hands over her soft, brown hair "Will you give me some water, mother?"

Mrs. May's hand trembled so that she could hardly pour out the water, but Lottie could not lift herself up to drink it, and the mother held her; then she held the candle over the bed

"Mercy!" she exclaimed to herself, as she saw the red and purple cheeks, the large dark eyes, now larger than ever, and bloodshot; the vacant, wild look, and the little hands clasped tightly on the top of her head.

"Lottie! Lottie! Charlotte!" said Mrs May, but Lottie did not answer for some moments; then she opened her eyes suddenly, more widely than ever, and said

"Oh, mother, I've seen an angel, and its face was like yours, and there were two great wings, and glory all around it, mother, and it called, Lottie, Lottie, Lottie."

Mrs. May trembled again, but she did not show it, or change her countenance before her child.

Then she rang the bell for her maid, and told her to call John, and send him for Dr. Mason immediately, then she bathed the head of the little sufferer in cold water, and laid her on the bed again until the Doctor came

* * * * * * * * * * *

"When was she taken, Mrs May?" said Dr Mason

"She went to bed feverish, I was awakened an hour ago by the child's groans, and found her so"

"What have you done?"

"Bathed her head in cold water, that's all"

"All wrong," said the Doctor, and he felt her pulse, gave her some calomel, told Mrs. May to keep her very warm, and the windows closed, and went home again, wondering why people would get sick at night, he did so hate night-practice, or if they must be sick, why could they not wait until morning to be treated.

Lottie lay in a unquiet doze, and Mrs. May sat by her side all the long night. Oh, how her heart yearned for her child! and she prayed silently that the flower might not be gathered from her, indeed, she never knew how much she loved her little idol until now, when the shadow of Death loomed up like a black cloud on the horizon of her imagination, at which she looked with sickening anxiety. Would it bring thunder, and lightning, and destruction, or pass on with but a genial shower, leaving fresh greenness and life in its path? Was it the *shadow* of Death, or did the all-devouring tyrant himself hover near? And she grasped the child's hand, as she thought of the angel's calling, "Lottie, Lottie, Lottie," as if she would so keep Heaven from taking away her treasure; and in the long night-watches it recurred again and again, and each time her heart beat more quickly, a feeling of dread and awe overpowered her, and a tremor, passed over her frame like the feeling from sudden fright in the darkness, yet apart from her child there was no fear in that mother's heart she felt that she could part with life itself to save her little one.

At last the long, weary, desolate night had gone, and the sun shone into the room fitfully as the clouds passed over it.

Lottie opened her eyes, and looked up at her mother, and at the sunshine, and put her arms round her mother's neck, and said, in a low, weak, gentle voice.

"What's the matter, mother? You look so sick! I'm not in now mother, my headache's gone." Then she looked up at the sun again, and said: "Mother, I'll get up now." The mother heart beat wildly with hope as she spoke, but the child could not move.

"But, mother, I'm better, a great deal better; I'm only a little sick Kiss me, mother. I saw you by my bed last night, but couldn't speak then."

She breathed harder from the effort she had made, and lay perfectly still, except her large eyes, which followed every movement of her mother about the room.

Then Dr. Jones came, and shrugged his shoulders at what had been done, though he declined interfering, but Mrs May insisted and called in old Dr Armour, the friend of her father's youth, also and the three doctors met and "consulted" about the poor girl.

And Lottie was sometimes worse, and at others better, and sometimes she knew no one, not even her poor mother. It almost broke her heart to see the child stare at her so vacantly, and say such strange things Then her eyes would change, and she would look up in her mother's face and smile, and be again her own dear Lottie

In this manner two solemn, sad, and weary days of hope deferred passed away, and Lottie grew weaker and weaker

Mrs. May sat by the side of her sleeping child hour after hour, and gazed at the shrunken hands, and rough crimson cheeks, and listened to her deep breathing, every breath of which seemed like a groan Oh, how freely would she have given her life to bring back the hue of health to those fevered cheeks! She took up her embroidery, to try and while away an hour of this torturing uncertainty, but the needle trembled in her hand, for the work itself was a seat for Lottie's little chair, she could not make a stitch! Then she took up her favourite author, but the letters seemed blurred, she could not distinguish a word; her pen to write, but the tears fell and mixed with the ink—emblem of her fast-coming black despair. Then she knelt by the couch of her child to pray but she could not, her prayers were the "groanings which cannot be uttered," and she arose and went to the window, and looked up towards the sun, but there were clouds over the sky, it seemed as if there were clouds over the sunshine always now. In the street she saw Dr Jones' and Dr. Mason's gigs approaching, but she left the room, for she began to lose faith in them, and went into the garden, where there was more air to breathe, she some times thought she would choke in the rooms, they seemed so small now

When she came back, Dr Armour was there also

"Dr Armour," said Mrs. May, with an appealing yet firm look "will my child die?"

"Heaven grant she may not!"

"Doctor, I have steeled my heart to bear even her death. *Will my child die?*" And her look became more firm and grave, but she held her hand tightly over her heart

"I am not omniscient, madam, your feelings probably tell you as much as all my science can. *I fear the worst.*"

Mrs May rose to her feet with a fixed and vacant stare, and moved slowly forward through the rooms. She had never yet in her heart thought that her child would die; woman-like, she had hoped against hope. For a moment she looked round vacantly then all the scenes of those three days of torture crowded to her brain, the blood-shot eyes, the red, furred cheeks, the breathing succession of groans, the Doctor's words, his look; and then like a flash of lightning through her brain passed the words, "Lottie must die," and she uttered a piercing scream and fell senseless on the floor.

When she came to herself, she was on her bed, and Dr. Armour standing by her. Recollection returned, and she said, with an unnatural calmness which startled him.

"Doctor, is my child dead?"

"Not yet. But do not rise, madam, you are too weak."

Mrs May looked at him with a surprised look, then rose and went to her child's bedside. Lottie knew her mother, and when Mrs. May took her hand, she felt it pulled slightly, and bent down her head until her lips touched those of her child, and she felt them move a little to kiss her, then she tried to speak, but could not! and the mother stood by the side of the bed with glazed eyes in which were no tears, for she could not weep. Oh, how she wanted to weep, but could not, and her eyes burned her as she gazed at the dying girl.

The doctors stood round in silence, for they knew that she was dying; the mother bent over her in silence, for she, too, felt that she was dying; and the child gasped, and gasped, and a slight gurgle was heard in her throat, and she lifted her head suddenly, and said,

with a faint voice, "Mother!" and fell back on the pillow quite dead.

"God of mercy, help me to bear this!" said Mrs. May. "Almighty Father, help me to bear this!" and she fell on her knees and clasped her hands in agony.

The doctors slowly and silently left the room, and went down stairs, and they stepped into the parlor, and shut the door to have a chat before they separated.

Mrs. May started suddenly from her kneeling position, and looked earnestly at her child, last hope of her heart, last link that bound her to earth; and she hurriedly felt her feet, hands, heart, and put her ear down to the still, silent lips, then glided swiftly and noiselessly down stairs, to the back parlor, where the folding-doors were ajar.

"* * * Lower down, the breathing showed that. I was afraid we were to be kept up all night."

"I think you gave her too much calomel, Mason."

"Not a bit, she should have had more yesterday, instead of your arsenic."

"Well, well. Curious case."

"Very."

"Gentlemen," said the old gray-headed Dr Armour, who had wept at the death-bed, and had not spoken before, "gentlemen, it is unprofessional for me to say so, and late in life to acknowledge it, but this is all wrong somewhere. The child should not have died, and I must * * *"

Mrs May had been checked by the tone of the indifference, almost of levity, of the first speakers, now she threw open the doors, and stood there, drawn to her full height, and with her earnest eyes dilating, with a look that made them shrink as if she had seen a spectre. but she only said

"Heaven help ye, gentlemen, in your extreme need. Dr Armour, for God's sake come back and tell me if the child's dead!"

They returned, but the corpse was growing cold

Mrs. May clasped her hands round its neck, bent her head over its face, tear after tear rolled down her cheeks, and there she sat through the long night, clinging to the garment that had held her Lottie

---

Mrs. May sat by the little coffin that contained her child's form She had grown much older in the two long, weary, solemn days that Lottie had been dead. She could look at the death-sleep, and the little hands crossed on the bosom, and the closed lids over those dark, expressive eyes, and place fresh roses, and geraniums, and heliotrope, about the calm, life-like corpse, without weeping now, but there was a deep, fixed, almost stern expression of grief on her pale, classic face, which seemed to ask no sympathy, and was feeding on the springs of her own life. She could not pray yet Often had she fallen on her knees since the little one's last faint 'Mother!" but no utterance followed, for her heart only asked in agony, "Why, oh, why had He taken away her Lottie?" And thoughts high and deep passed through her mind, of time and space and Heaven and immortality, until imagination had wandered and lost itself in the dim confines which separate thought from the impenetrable mysteries which surround us, until all consciousness of time and space in her present life were lost, and then the question would recur, *did* He take her away, or was she sent uncalled from the earth, by unholy errors, by poisoning drugs, and she shrank from the question shuddering

Carriage after carriage drove up to the door, the rooms were filled with friends and acquaintances of the mourner and the mourned, and a solemn looking man opened the Bible, and read, "Suffer little children to come unto me, and forbid them not, for of such is the kingdom of Heaven!" Then he said many beautiful things about the child, which he had known from its birth, but Mrs May could not listen, and, sobbing out her anguish, left the room for *why* had He taken away her Lottie? After the ceremony was over, she returned, and stood by the coffin, and looked at her child for the last time. She thought of all her grace and repose, even amongst her little play-mates, and all her arch and winning ways, and hot tears fell on the cold form. Then they closed the coffin, and placed it in the carriage with Mrs. May alone, she would have it so. They drove slowly down Broadway, and Mrs. May was startled by the noise of carts and omnibuses. It seemed strange that they drove on so furiously while Lottie was carried by, and crowds of people lined the streets, all gay and unheeding. Mrs. May drew down the curtains, and hid them from her sight. They passed over the South Ferry, and so on to Greenwood; and between the beautiful sculptures and white monuments (standing over buried hopes, like the rainbow over the abyss of the cataract, or the fair face over a crushed heart), until they came to Lottie's grave. It was a sweet spot, on the southern side of a gentle rise that overlooked the Bay and Narrows, and caught the first smile of Day, as he rose from the horizon and bathed himself in light; and the last rays of the sun rested on its bosom, while the twilight lingered there when darkness had hidden all below. Lottie had often played on it, and told her mother which was *her corner*. Poor child! she little thought how soon she would take possession; indeed, she always said it with as happy a smile as if she had been immortal, and would never need an earthly resting-place.

Mrs May remained in the carriage, and when they took the coffin towards the grave, there was again that fixed and glassy look, those tearless eyes. How she longed to keep even the corpse for ever near her!

They lowered the little coffin into the grave, and, as the earth fell on the lid, said, "Dust to dust, ashes to ashes!" and a little mound marked the place where, down, down in the earth, the fair-haired girl awaited the final reckoning.

They came to Mrs May as they passed out, but she waved them away, and one after another left, until she was quite alone Then she descended from the carriage, and went to the grave, and the servant brought a basket of flowers, and wept as he retired, for they all loved Lottie; and Mrs May bent over the grave, and scattered flowers about it, she felt so wholly desolate, now that they had taken away the last link, the body of her poor child. The sun went down, and the night came on, as she knelt there, and tree and leaf and insect, all were hushed as still as the grave beneath her, and she looked up to the heavens, and saw the stars, like tapers on the pall of darkness which shrouded her, and she gazed and gazed, and her heart longed for a revelation of her child's fate and her own in that mysterious sphere, and her heart was softened as she gazed Then she bent over the grave again, and took a little flower and put it in her bosom, and thought of her child and its last faint "Mother!" and the tears came to her eyes, her bursting heart found vent, and she wept, oh, how long and passionately, as if existence itself were welling from her eyelids! Then she looked up again, and the sky seemed to have lost its darkness; and the stars dilated, and seemed to fill the heavens with glory, and her spirit became more rapt and exalted, as if spiritual influences were about her with which she could commune, and her lips were opened at last She prayed long and earnestly to the Father who had taken her idol She felt now too truly that it had been an *idol*, and she blessed His holy name, and knew *why* he had taken her Lottie. Her mind became more exalted, a transcendent exaltation took possession of her soul, and it seemed to expand super-sensually, until it lost sight of earth and its earthly tenement, and rose to the feeling, the *consciousness, of the* INFINITE. She seemed to have a dual existence, a being separate from her being, and looked down on herself, as she knelt at the grave, with an *infinite pity*. (Whether under the direct influence of the "inspiration of heaven," or the native powers of her soul drawn from their slumbers by surrounding circumstances, who shall tell?) And her soul expanded in its exaltation, until she felt herself a link between the Infinite of Holiness and the great Soul of Humanity, and while a feeling of infinite love and pity for mankind took possession of her soul, their errors and weaknesses shrank into the back-ground. even her own sorrows became vague, undefined, distant, almost little

This consciousness, this exaltation, vouchsafed to the best of us so rarely, from the low or grovelling for ever barred, may come sometimes perhaps to mothers at the birth of their first-born, oftener at its death A revelation to great minds at the moment of their best conceptions, to others, at the moment of death, or when death suddenly becomes imminent and near, and fear does not paralyse the soul Sometimes it comes with the fervid devotion of the worshipper, filled with a holy and living faith, seldom, if ever, in mere religious ecstacy, this, the flash of the torch, soon out and lost, that, like the June sunshine, lighting all things, and drawing them from the earth to warmth and life. But it comes to none without leaving him better, wiser, stronger to endure and bear, and with deeper sympathies for the sufferings and errors of his kind

Mrs. May knelt there, wrapped in her new existence, hour after hour, far into the night, until her servants were alarmed, and they came and accosted her, but she answered them calmly, and left the grave with a blessed peace in her heart, and they drove over the lonely road, and through the quiet and deserted streets, towards her desolate home, a sad, but a wiser and better being, for her soul had known the *divine* depth, her heart had become the *sanctuary* of sorrow. God had taken away her loved ones for a time, but he had given his own love in their place, and she wept no more.

PEOPLE think they "get cold" by getting wet, they, on the contrary, get cold by *getting dry*. It is the continued chill of the evaporation of the wet that causes cold.

THE real great "secondary cause" of the success of Christianity was its *purely democratic tendency*. It is in fact a *quiet* "levelling system."

A LITTLE LEARNING.

Is it true that "a little learning is a dangerous thing?" Far be it from us to say so. The late THOMAS CAMPBELL, in his inaugural speech on his election to the lord rectorship of the University of Glasgow, made the following estimable remarks on this subject.—

"In comparing small learned acquisitions with none at all, it appears to me to be equally absurd to consider a little learning valueless, or even dangerous, as some will have it, as to talk of a little virtue, a little wealth, or health, or cheerfulness, or a little of any other blessing under heaven, being worthless or dangerous.

"To abjure any degree of information, because we cannot grasp the whole circle of the sciences, or sound the depths of erudition, appears to be just about as sensible as if we were to shut up our windows, because they are too narrow, or because the glass has not the magnifying power of a telescope.

"For the smallest quantity of knowledge that a man can acquire, he is bound to be contentedly thankful, provided he is shut out from the power of acquiring a larger portion; but whilst the possibility of farther advancement remains, be as proudly discontented as ye will with a little learning. For the value of knowledge is like that of a diamond, it increases according to its magnitude, even in much more than a geometrical ratio. One science and literary pursuit throws light upon another, and there is a connection, as Cicero remarks, among them all,—'Omnes artes, quæ humanitati pertinent, habent quoddam commune vinculum, et quasi cognatione quadam inter se continentur:'—that is, all the arts relating to humanity, have a common bond and relationship which unite them with one another.

"No doubt a man ought to devote himself in the main to one department of knowledge, but still he will be all the better for making himself acquainted with studies which are kindred *to* and *with* that pursuit. The principle of the extreme division of labour, so useful in a pin manufactory, if introduced into learning, may produce, indeed, some minute and particular improvements, but, on the whole, it tends to cramp human intellect.

"That the mind may, and especially in early youth, be easily distracted by too many pursuits, must be readily admitted. But I now beg leave to consider myself addressing those among you who are conscious of great ambition, and of many faculties; and what I say, may regard rather the studies of your future than your present years.

"To embrace different pursuits, diametrically opposite, in the wide circle of human knowledge, must be pronounced to be almost universally impossible for a single mind. But I cannot believe that any strong mind weakens its strength, in any one branch of learning, by diverging into cognate studies, on the contrary, I believe that it will return home to the main object, bringing back illustrative treasures from all its excursions into collateral pursuits."

Thus far THOMAS CAMPBELL. The same question has since been discussed, at far greater length, by DR. WHATELY, Archbishop of Dublin, in his opening lecture in connexion with the Exhibition of the Results of Irish National Industry. Remarking on some of the objections made to the spread of education among the humbler classes, he said, "One objection brought forward is in the well known couplet of the poet,—

'A little learning is a dangerous thing.'

"It was urged that people were likely to be puffed up with vain conceit, and that smatterers would in their folly and presumption think themselves unfitted for mean and laborious work, and that they would be displeased at not being honored as people of the most learning they think themselves ought to be. But let us consider what the remedy is. The poet says—

'Drink deep, or taste not.'

Now, I think you will say on reflection that both of these remedies are impossible. '*Drink deep.*' How deep are we to go? Is not the most learned in any department—is not the most intelligent man, even in that department to which he may have completely devoted himself, extremely ignorant? Is it not very little that he knows in comparison with what he does not know? Five hundred years ago a man was considered to be much more than extremely ignorant if he was able to write his name. But if you look around you, what a scanty knowledge anybody has of any subject, compared with that he is ignorant of! The gigantic telescope, that has been so great an honor to this nation and to this country, has brought to light and has revealed to us things never known before. It has brought to light new truths more unaccountable than anything with which we were previously acquainted. The greatest astronomers a hundred year ago were mere children to those who live now, and these are children in comparison with those who may be in existence two or three centuries hence. It is impossible to 'drink deep,' it is impossible to have more than a very little knowledge of any subject in comparison to what is to be learned. The field of science may be compared to an American forest, in which the more trees a man cuts down the greater is the expanse of wood he sees around him. It is true a man may have a very great degree of knowledge in comparison to one of his neighbours; but is he likely to be proud from the circumstance that he knows more than any one around him? If by drinking deep is meant, 'Go to the bottom of any subject,' I say it is impossible to do anything more than be very superficial. I say, then, the first remedy the poet gives is impracticable.

"The other remedy is '*taste not*,' that is to say, have no learning at all. But that is equally impossible. The most ignorant clown knows something—he has a little learning, and that little learning you will find is exceedingly dangerous. You will hardly find any person so ignorant as not to know what money is. It is very possible he may think that the rich, who possess the money, are the cause of all the sufferings of the poor, and that if the rich were plundered and their property divided, it would be a better thing for the poor. But if he learns more—and I am happy to say he can learn more, from some of the reading books of the national schools—he will learn that if the rich had their property sold and divided among the rest, the latter would not be anything the richer, but poorer. There is no one here present who is not in that perilous situation of having a little learning, and there is no one here who has not that little learning on every subject. I daresay there is no one here profoundly versed in agriculture; yet we all know the difference between oats and turnips. I daresay there are not a dozen chemists here, yet everybody knows the difference between sugar and salt. In fact if you consider that a little learning is a dangerous thing, and that the only remedy is not to taste, you must keep men in a state of downright idotcy. I say, therefore, that both the remedies, 'drink deep' and 'taste not,' are utterly impracticable.

"There is no one here present who is not aware we have rulers. Is it not a good thing that they should understand that government is necessary to preserve property and person? Are they likely to be better or worse subjects for knowing that? It depends much upon what the government is. If you wish to establish an unjust and unequal government, if you wish to establish a false and erroneous religion, then probably it will be advisable to keep the people in ignorance, or at least to avoid the danger of enlightening them. But if the government is a good one, the more they understand of good government the more they will respect it; the more they know of true religion, the more they will value it. Nothing can be more mischievous than the principle of Socialism—that all should get the same wages,—a principle which would at once destroy all emulation, by which persons try to excel in skill and industry. All the manufactures exhibited in this building would be utterly ruined and destroyed by the principle of equalization in wages; it would take away all merit from the skilful and the enterprising, and therefore take away all incentive to exertion. Manufactures would become dearer and inferior—and would at length go away from us to other countries. Every one knows, no matter how ignorant of medicine, that there is such a thing as disease. What was the consequence of keeping to the principle of 'taste not' in medical discoveries. When the cholera raged in Poland, the peasantry took up the notion that the nobles were poisoning them—that the rich were the authors of that terrible decease. They arose in masses in different places, broke into the houses of the nobility, and finding a quantity of chloride of lime there, it being used for disinfecting, they took it for the poison, and murdered all the noblemen and gentry of the neighbourhood. That was the result of a little learning; but we cannot

keep that little learning from them. You can hardly keep men from thinking that there are some superhuman beings who have an interest in human affairs. There are some clowns in a certain part of England, who, owing to having been kept as far as possible—for completely it is impossible—on the principle of 'taste not,' still conceived there were some powers superior to man, and this belief led some poor insane creature to imagine himself a prophet, and who of course in any civilised community would have been put in a madhouse. But this 'little learning' actually caused an insurrection in his favor, and many lives were sacrificed before this most insane insurrection was put down. I say, then, the two remedies laid down are impossible.

"What, then, are we to do? Simply to impress upon all people how little their knowledge is, and how little they know in comparison to what they are ignorant of; and the more they are taught the less likely they are to overrate or mistake the character of their knowledge. I say also that, other things being equal, the more knowledge is diffused among mankind the less danger there is of ill-use being made of it For, what is the most mischievous consequence of knowledge being diffused among mankind? It is that some knowing unprincipled demagogue makes use of a number of very ignorant people as his tools. He gets people to believe in him as a great patriot, as a guide to lead them to succeed, and they will do anything, bear anything, commit any excesses in his cause. But who ever heard of such a thing as a riotous rabble or a riotous mob composed altogether of educated men? They never could be bound together into a mob, because they would each be generals, they would all think themselves fit for command No; the great instrument of the demagogue is a number of very ignorant persons, looking up to him as a person of superior ability A little light is a dangerous thing, but it is dangerous only to those who walk as boldly in the twilight as in the daylight, without looking carefully to avoid the holes and precipices they may fall into. Let them be aware that it is twilight, and let them walk carefully, but do not let them seek to remedy it by blindfolding their eyes. Is it decidedly a useful thing to have a little learning in many instances, even when you cannot have more than a little compared with your neighbours. The most accomplished persons I know are those who may be called 'smatterers;' that is, persons who do not know, or do not pretend to know, much of many departments, but have a slight knowledge of a variety of subjects. But, then, they know the amount of their knowledge, and do not pretend to be profoundly versed in the departments of which they have but a slight acquaintance. Is a man obliged to acknowledge himself an accomplished chemist because he knows oxalic acid from salts?—and yet to know this is very useful.

"But some people are not so much afraid of a little knowledge as they are of people being puffed up with having learned some hard words or scientific names, and having attended lectures in which they have picked up something about 'geology,' 'zoology,' and various other 'ologies,' as people call them, which makes their neighbours think they are profoundly versed in science, while in truth they know very little, except some technical terms. I admit it; it has often been dwelt upon, and deservedly ridiculed; I have warned people against it. But there is another danger on the opposite side, which I have scarcely ever seen mentioned. There is a folly which I think quite as great as that to which I have been alluding, and which is of a yet more unbearable character, and still more hopeless—I mean what may be called 'the pedantry of common sense and experience.' For one person who is overbearing on account of his knowledge of technical terms, you will find five or six still more provokingly impertinent with their common sense and experience. Their common sense will be found nothing more than common prejudice, and their experience will be found to consist in the fact that they have done a thing wrong very often, and fancy they have done it right, and that they have seen many things pass before their eyes many times, without learning how to profit by experience. They are like people who are often poring and looking over books without having learned to read. A person affected with the pedantry of science may read and be corrected; he will either enlarge his knowledge or dispossess himself of his pride; but what is to be done with a man who despises all science? What will you do with a man who says, 'Oh! I don't trouble myself with terms of political economy; but there are some points upon which I have made up my mind. One can judge from common sense what decisions you should give as to Free Trade and Protection, or on the working of the poor law; but as for political economy, I know nothing about it'. This is much the same as to say—'I have never read Euclid, nor don't pretend to know anything about it; but I know by common sense how to square the circle'; or, 'I don't know anything about medicine, but I see a certain sort of physic is good for sick people, and know by experience how to cure them.' I have not the least doubt that popular lectures of this kind diffuse a taste for reading and systematic study. The use then, I conceive, of these lectures, is to set before the people a good deal of knowledge, which, though, a very slight and imperfect part of what may be done even in our present state of knowledge, is yet calculated to be both pleasing and useful; and, amongst other things, to show them how much it is they do not know. I am convinced that a certain amount of knowledge is much more likely to produce a modest, humble, and inquiring state of mind, that any attempt to keep people in ignorance. Those who feel interested in any branch of knowledge of which the lectures treat, may proceed further and pick up much that is useful. Those who do not feel that interest will still learn a little, and that little will prove exceedingly useful."

DEATH OF

THE DUKE OF WELLINGTON.

September 15th, 1852.

At the moment of our going to press, we are startled by the announcement of the decease of Arthur, the great Captain of the age, who expired at a quarter past three in the afternoon of Tuesday, the 14th of September, at Walmer Castle, after a succession of severe fits.

We are preparing a MEMOIR of this remarkable man for our next Number, accompanied by a

PORTRAIT.

The extent of our circulation requires us to go to press at least ten days before the date of our issue. Hence the seeming discrepancy between the date of this notice and that of the present Number.

LITERARY NOTICES.

THE Second Volume of the WORKING MAN'S FRIEND, containing upwards of 400 pages, richly illustrated, is now ready, price 3s. 6d., neatly bound in cloth

CASSELL'S SHILLING EDITION OF EUCLID.—THE ELEMENTS OF GEOMETRY, containing the First Six, and the Eleventh and Twelfth Books of Euclid, from the text of Robert Simson, M D., Emeritus Professor of Mathematics in the University of Glasgow, with Corrections, Annotations, and Exercises, by Robert Wallace, A M., of the same university, and Collegiate Tutor of the University of London, is now ready, price 1s in stiff covers, or 1s. 6d neat cloth

CASSELL'S EMIGRANT'S HANDBOOK, a Guide to the Various Fields of Emigration in all Parts of the Globe, Second Edition, with considerable Additions, and a Map of Australia with the Gold Regions clearly marked, is now ready, price 9d

THE PATHWAY, a Monthly Religious Magazine, is published on the 1st of every month, price twopence—32 pages enclosed in a neat wrapper. No 33, for September, is now ready, and Vols I. and II., neatly bound in cloth and lettered, price 2s 3d each, may be obtained by order of any Bookseller.

CASSELL'S ELEMENTS OF ARITHMETIC, will be issued shortly, price 1s. in stiff covers, or 1s 6d cloth, uniform with Cassell's Edition of Euclid, edited by Professor Wallace, A.M., of the University of Glasgow, Editor of Cassell's "Euclid," the POPULAR EDUCATOR, &c.

EXERCISES FOR INGENUITY.

SOLUTIONS OF QUESTIONS IN NO. 44, JULY 31.

1. M.I.L.L.—mill; several correspondents in prose and poetry.

2. For the chosen candidates, 233 persons voted; and for the defeated candidates 142; majority 91. Answered by thirty-four correspondents.

3. The number sought is 65. Proof: $65-5=60$; $\frac{5}{6}$ of which is 40.

4. The number 36 may be divided into three parts, so that the $\frac{2}{3}$ of the first, the $\frac{3}{4}$ of the second, and the $\frac{4}{5}$ of the third may be equal to each other. Thus 8, 12, 16, are the numbers sought, and 4 is the common number.

J. W. R. BAKER, and several others.

5. It is impossible, practically, to divide 20s among four persons, so as to give to the first $\frac{1}{2}$, to the second $\frac{1}{3}$, to the third $\frac{1}{4}$, and to the fourth $\frac{1}{5}$, and leave no remainder. Fractionally the several parts would be 7s. 0 $\frac{1}{10}$d, 5s. 3d $\frac{1}{10}$d, 4s. 2d. $\frac{1}{10}$d., and 3s. 6d. $\frac{2}{10}$d. W. R.

6. 1,574,897,652 inches nearly —JOHN SEARCH.
1574897651720 inches —JOHN MATHER

7. By the mistake of the printer, the answers are given *with* the first part of this question. To the latter clause, St Helena was so called by the Portuguese in 1502, because it was discovered on St. Helen's Day.

8. Unanswered correctly.

9. Read the first and second lines alternately thus—

Never | all for he who | everything often | more than
tell you may know tells he knows tells he knows

And so on of the rest.

10. A prominent station I hold, it is true,
In modern days, and in everything *new*;
And although from old times I've unjustly been hurl'd,
The learned can prove me as old as the *world*
King William believed me a doctor of skill,
At least in my absence *Will* ever was *ill*
And had Cleopatra my counsel not spurned,
The *asp* to a *wasp* I had instantly turned,
Whose sting—although painful—had done little harm,
Her cold *arm* also I could have made *warm*
To sprightliness friendly, I freely do grant,
I convert *it* to *wit*, but the *ant* into *want*
I often reduce, while the poor jaded *hack*,
I never can meet but I give him a *whack*.
The *whelp* cries for *help* if I ever desert it
While *all* into *wall* I can shortly convert it.
As a proof of my honest benevolent views,
I never meet with *hose* but I always ask *whose*?
My aid it is needful to spread information,
I'm the ruling spirit of interrogation,
Whom, *where*, *whence*, *which*, *whether*, *who* owe their existence
To me as their origin. By my assistance
My clothing and poultry—my *hen* and my *hat*,
The one will say *when*, and the other say *what*
My *ash* I make *wash*, and should there be a *hole*
In any one's garment, I soon make it *whole*
Whate'er be your merits, believe me, 'tis true, sir,
They're but *half* of mine, for I am DOUBLE YOU (W) sir.
ROBERT MIDDLETON, *Aberdeen*

SOLUTIONS TO QUESTIONS IN NO 48, FOR AUGUST 28

1. $39^2=1521$
$15^2=225$
$1296\sqrt{\ }=36$ ft length of left piece;
and $36+39=75$ ft. height of Maypole.
ROBERT MIDDLETON.

2.—222·0833 square yards of paving.
$33\frac{1}{2}+28=612\div 2=30\ 75\times 65=1998{\cdot}75$ square feet.
$1998{\cdot}75\div 9=222{\cdot}0833$ square yards paving.

3.—7500 cubic feet nearly.—30 | 25
30 | 8,333
900 | 900
7499,700 solid.
J. HILL.

Questions 4, 5, and 6 unanswered.

7. Because the pressure of the atmosphere—or rather the attractive power of the earth—is not so great on the top of a mountain, as it is at the level of the sea.—B. HUDSON.

8. The woman had 119 apples.—Worked out by several correspondents.

9. A bed —Several correspondents.

10. 120 trees.

11. Jubal, the second son of Lamech, by Adah his wife, and sixth in descent from Cain, was the first organist—Genesis iv. 19, 20, 21.—W. T. TAUSCOTT, R. M., and many others.

12. Ireland was conquered in the year 1172 by Henry II, and was fully incorporated with England, A.D. 1801, in the reign of George III.

13. The kings of the house of Plantagenet were, Henry II, Richard I., John, Henry III., Edward I., Edward II., Edward III., and Richard II. This line was so called from Henry II, who was the son of Matilda, the second child of Henry I, and Geoffrey Plantagenet, duke of Anjou, in France.
W.T. TAUSCOTT, *Shepton Mallet*.

14. Unanswered.

15. Justice (just ice).

16. Dia. = 1. Rad. = ·5, and $\cdot5^2=\cdot25+\cdot25=\cdot50$
$\cdot50\sqrt{\ }=\cdot70710678$, &c., length of side.
Or,
Dia = 1. Rad. = $\frac{1}{2}$, and $\frac{1}{2}\times\frac{1}{2}=\frac{1}{4}$ $\frac{1}{4}\sqrt{\ }=\frac{\text{square root of 1}}{\text{square root of 4}}=\frac{\text{square root of 1}}{2}=\frac{\text{square root of 100000000}}{\text{square root of 200000000}}=\frac{10000}{14142}=\cdot70710678$, as before.—ROBERT MIDDLETON.

17. As only two of the angles of the triangles can touch the circumference of the circle, the length of side will depend on the measure of the angles at the circumference; as the nearer they approach to a right angle the side will be the longer, and *vice versa*. Therefore, if I understand the propounder's meaning at all, the only answer that can be given to this question is—
Length of side, greater than 6, the rad of circle,
And less than 8·485 side of square, whose diagonal is 12.
ROBERT MIDDLETON.

18 A man will have to stand 10 feet from the lamp-post to project a shadow of 15 feet.—B. HUDSON. As shown by Mr. Robert Middleton, $6.10\ 15\ 25-15=10$ feet; or the man 6 feet high must, to project a shadow of 15 feet, stand at the distance of 10 feet from the lamp-post.

This being the last Number in the Volume, we have contented ourselves with answering the questions proposed in Numbers 44 and 48. In the next week's Number we shall propose several new and interesting questions, to which we invite the attention of our subscribers. In reply to Mr. Middleton, Mr. Mather writes as follows.—

Derby, August 30th, 1852

Sir,—If Mr Middleton will take the trouble to turn again to Luke 8, 9, he will find these words;—"Even upon his fore front did he put the golden plate, the holy crown,"—if in the preceding sentence the word "plate" is equivalent to "crown," I stand corrected. Again, in 1 Chron. xx. 2, it states that the king of Rabbah had a crown which weighed a talent of gold; by consulting the marginal readings, he will find that the crown was not a golden one, but "equal in weight to a talent of gold." And in Esth. i. 11, he only conjectures the "crown royal" to be gold; he does not assert it as a fact. I make these few remarks merely to vindicate myself, and as Mr. Middleton wished me to state my authority, I refer him to "Cruden's Concordance," which appears to coincide with my opinion. Your's truly, JOHN MATHER.

*** In reference to our hint as to the advisability of establishing between our readers a system of intercommunication, by which much valuable information might be mutually afforded, we have received several letters containing hints and questions for insertions. In our third Volume, the first Number of which will appear next week, we intend to introduce several improvements suggested to us by correspondents and our own experience. We have constantly forwarded to us questions which require something more than a mere brief, though correct, reply. With this class of queries—containing, as they often do, important historical, social, and statistical facts,—we have been hitherto, we fear, somewhat too uncommunicative—owing, perhaps, to the fact that the majority of our correspondents neglected the first requisites of letter-writing, clearness of hand, and perspicuity of idea. For the future, then, in order to widen a field already extremely useful, we propose that our EXERCISES FOR INGENUITY shall include not only arithmetical and algebraical questions, but that all such subjects as are treated in the publication called *Notes and Queries* shall find admittance in our pages.

THE

WORKING MAN'S FRIEND,

AND

FAMILY INSTRUCTOR.

VOLUME THE THIRD—NEW SERIES.

LABOUR IS WORTH!—to the human man
How through heaven grows the life-current leaping!
How his strong arm, in its sinewy play sweeping,
Fells the forest, or shears the golden grain!
LABOUR IS WORTH!—in the sea the pearl groweth,
Rich the coral—from the tiny cell blowth,
From the fair cocoa the strong fruit blowth,
Temple and statue the marble block hide.

DROOP NOT, though shame, sin, and pain are round thee,
Bravely fling off the foul chain that hath bound thee,
Look to your pure heaven unfolding beyond thee,
Rest not content in thy darkness—a clod
WORK FOR SOME GOOD, be it ever so slowly,
Cherish some flower, be it ever so lowly,
ABOUT IT! All labour is noble and holy
Let thy great deeds be thy prayer to thy God

FRANCES S. OSGOOD

AND SOLD BY ALL BOOKSELLERS.

1853.

TO OUR READERS.

THE completion of the present Volume is also the completion of the WORKING MAN'S FRIEND AND FAMILY INSTRUCTOR, as a separate publication. It was started as a means of providing for the labouring classes a medium through which their peculiar wants, wishes, ideas, and capabilities might be fully shown. The end its proprietor had in view has been answered to a greater extent than could have been anticipated; and the Ten Volumes of which the work consists remain as a memorial of the great and interesting experiment. About twelve months since, was commenced the publication of the POPULAR EDUCATOR, a work of a more strictly instructive character than any hitherto attempted; and it has been found that the class of readers created—it may be said—by the FRIEND AND INSTRUCTOR have eagerly adopted the EDUCATOR, and have given to it a circulation and influence almost unprecedented. It will be easily understood, however, that two works not altogether dissimilar in character, issued from the same press, were in some danger of injuring each other. To prevent, therefore, any chance of that kind, and, at the same time, to comply with the wishes of numerous readers, the more attractive features of the WORKING MAN'S FRIEND—Biography, Natural History, Social and Practical Economy, Moral Philosophy, and Popular Science—will be henceforth transferred to the pages of the EDUCATOR, in the form of direct lessons, in addition to Lessons on the Languages, Geography, Astronomy, Geology, &c. Thus, while the WORKING MAN'S FRIEND may be placed on the shelves of the working man's library as a complete work, it is to be hoped that its readers will discover in the POPULAR EDUCATOR all those characteristics which rendered The FRIEND so acceptable. Henceforth the two publications will be essentially one.

London, March 21, 1853.

INDEX.

THE WORKING MAN.

LETTERS TO WORKING MEN: No. I. Introductory, 1.
No. II. Life Insurance, 42.
No III. Political Economy, 75.
No. IV. Political Economy, 88.
No. V Some Thoughts about Labour, 105.
No. VI. The Ballot, 215.
No. VII Life Insurance (second article), 209
No. VIII. Savings' Banks, 333
The Importance of the Worker, 113.
Giants—Intellectual Giants, 167.
Sanitary Regulations, 178,
Literature not Inconsistent with Business, 186
THE WORKMEN OF LYONS. No I. Lyons and its Industry, 245.
No. II. Manners and Character of the Workmen, 262.
No III Insurrections and Secret Societies, 277.
No IV Present State of the Manufactures and Institutions of Lyons, 291
No V. Conclusion, 311.
CHARACTERS AND TENDENCIES OF AMERICAN SOCIETY.—No. I. 27.
No. II. Emigration, 40.
No III. Religious Tendencies, 75
No. IV. Manners of the Americans, 92
Evil Speaking, 91.
Delays are Dangerous, 218.
Plea for a National Half-Holiday, 280.
Domestic Æsthetics (with an engraving), 225
Elementary Drawing and National Education, 271.
On an Acquaintance with the Laws of Nature, 274
Ragged Schools, 275.
Royal Letter on Education, 281.
Efficiency of the Teacher Tested by the Success of the Scholar, 285.
A Short Philosophical Inquiry, 326.
What Good can the Working Man do? 346
Competition, 357.
Early Closing Movement, 382.
Is the Pursuit of Knowledge Compatible with a Close Attention to Business? 386.
The Working Man should be Intelligent, 192
Drawbacks on Progress, 411.

BIOGRAPHY.

MEMOIR OF THE DUKE OF WELLINGTON (with portrait and several engravings)
No I. The Birth, Parentage, and Education of the Duke of Wellington, his first Military Experiences; his Indian Achievements; the Conquest of Seringapatam; Invasion of the Mahratta Country; Battle of Assaye; his Marriage, &c, 1 8.
No II. The Peninsular War; the British Army in Portugal; the Passage of the Douro; Battle of Talavera; the French in the Peninsula; Battle of Busaco; Torres Vedras, and Retreat of Marshal Massena; Sieges in the Peninsula, 17-24.
No III. The Duke in France; Waterloo, 35-39.
No. IV. The Night after the Battle; the News received in England; the Duke appointed Ambassador at Paris; Treaty of Aix-la-Chapelle; Duke's Return to England, 60-62.
No. V. The Warrior in the Senate, Civil Administration of the Duke; accep's Office as Prime Minister; Catholic Emancipation; Reform; the French Revolution of 1830, 65-68.
His Death, &c.; Summary, 83.
Professor Cowper, 104.
Charles Kingsley, 109.
Daniel Webster, 117.
James Wolfenden, 148.
Alfred the Great, 166.
Miss Berry, 169.
Vandile, the Miser, 175
Dick Whittington, 188
Lady Lovelace (Ada Byron), 189.
James Logan, of Pennsylvania, 211.
Dr. Mantell, 219.
John Hampden (with engraving), 241.
Benvenuto Cellini, 251.
Biographical Anecdotes, 287.
Sketch of Daniel Webster, 328
Father Gavazzi, 330.
Masaniello, 332
Joseph Hume, 341
Eugenie, Empress of the French (with portrait), 354
Leigh Hunt, 377.
Four Great Men of the Last Century, 389
Habits and Character of Bryant, 404

HISTORICAL AND DESCRIPTIVE ARTICLES.

The Order of the Lone Star, 10
Burial Places in the East (with an engraving), 33,
The Coal Fields of Great Britain, 70.
Gossip about Clocks (with four engravings), 71,
Rouen (with engraving), 81,
Cloisters of Notre Dame, 89.
The Slave Trade in Africa (with engravings), 97.
A Day at the Giant's Causeway (with engraving), 106, 376
Pazzi [illegible] graving), 113
The C[illegible] DE[illegible], 119

ARTHUR DUKE OF WELLINGTON.

THE conqueror of Napoleon is dead. Before this page reaches the hand of the reader, the distressing intelligence will have been carried across the broad Atlantic, and in a little while will have made the circuit of the world—from Ireland, where Wellington first saw the light, to India, the scene of his earliest triumphs. Though long expected, the news comes at last upon us with something like the effect of a sudden death; and the whole nation, consisting as it does of men of all shades of political opinion and people of all creeds, is plunged in grief and consternation for the loss of the greatest of her sons.

Though our own opinions on the abstract idea of war are well enough known, we could not, even were they as extreme

as these of the most enthusiastic member of the Peace Society, withhold for a single instant the expression of our conviction of the great and irretrievable national loss we have sustained, or our sincerest admiration for the noble warrior, joined to our most heartfelt regret at an event which we cannot but regard as the most important which has happened during the present year. It has been well said that Arthur Wellesley Duke of Wellington was the very type and model of an Englishman. To bravery the most unquestionable and military talents second to that of no hero of past or present times, was added a character for exemplary coolness under difficulties, untiring energy in the pursuit of what he conceived to be the right, a clear and educated judgment, a resolute and indomitable will, a finely-balanced mind, and a high sense of honour and propriety. He was, as Talleyrand the French diplomatist observed, the most "capable man" of his time and nation. Words are wanting to express the greatness of England's gain in the possession of such a man, or the immensity of her loss in the melancholy event which has by this time been recorded in every European and American newspaper. Other men are living amongst us who can boast of more striking and brilliant qualities of invention and contrivance, of more extensive knowledge, more vivid foresight and comprehension of the changes of popular feeling,—but in the roll of Britain's senators no name stands higher than that of Wellington for the possession of clear judgment, coolness of determination, and rectitude of action. In the senate, as in the field, the characteristic of this truly great man was, that "he always knew what was best to be done in the actual state of affairs, and had the wisdom and courage to do it."

To a simplicity of life the most remarkable, considered in connexion with his aristocratic predilections and antecedents, the duke added a respect for legal and constituted authority second to none of her Majesty's most loyal and devoted subjects. It has been well observed of him, that he lived, commanded and governed in unconscious indifference and disdainful aversion to those common incentives of human action which are derived from the powers of imagination and sentiment. He held them cheap, both in their weakness and in their strength, and the force and weight of his character stooped to no such adventitious influences. He might have kindled more enthusiasm, especially in the early and doubtful days of his peninsular career; but, in his successful and triumphant pursuit of Glory, her name never passed his lips, even in the most popular and spirit-stirring addresses to his soldiers. He was the embodiment of sound, practical common sense, and possessed just the talent which Englishmen could honour and appreciate. He could not, indeed, like Napoleon, indulge in high-flown tropes and figures, or well-painted pictures of false and meretricious glory, even had it been the genius of Englishmen—which, happily, it never was—to be influenced by such appeals. His entire nature and character were moulded on reality, and he lived to see things exactly as they were, stripped of the false and theatrical halo which circumstances often threw around them. His acute glance and cool judgment pierced at once through the surface which entangles the imagination or kindles the sympathies. Truth, as he loved her, is only to be reached by a rough path and by stern minds. In wars, in politics, and in the ordinary transactions of life, the Duke of Wellington adhered inflexibly to the most precise correctness in word and deed. In fact, his temperament altogether despised and abhorred disguises and exaggerations of all kinds. The fearlessness of his actions was never the result of speculative confidence or presumption, but it consisted, principally, in a just perception of the position in which he stood to his antagonists in the field, or his opponents in the senate. The greatest exploits of his life—the passage of the Douro, the march on Madrid, the victory of Waterloo, and the passing of the Catholic Relief Bill—were performed under no circumstances that could inspire enthusiasm in a mind constituted like his. Nothing but the coolness of the player could have carried him so triumphantly through the scenes in which he was destined to enact so principal and important a character—adverse, as many of them were, to his chances of success, and fraught, as most of them are now known to have been, with consequences no less important than the peace of Europe and the world. He was the foremost man of his age and country; and, as there is always a hero for every great event, we may esteem ourselves fortunate that it pleased the Almighty to spare his life long enough to accomplish the full measure of his great and noble actions. If any reflection could decrease the grief which the nation feels at the loss of her noblest son, it would be that he has not outlived his fame, and that he is gone to the grave with no duty neglected and no honours undeserved.

THE BIRTH, PARENTAGE, AND EDUCATION OF THE DUKE OF WELLINGTON.

The "Great Captain," who has just passed from among us, was born, according to the generally received opinion, at Dangan Castle, in the county of Meath, Ireland, on the first of May, 1769; a year, rendered conspicuous by the birth of his great opponents, Napoleon Bonaparte and Marshal Soult. Other accounts give the 30th of April as the day of his birth, and Mornington House, Merrion-square, Dublin, as the place in which that important event took place. Though born in Ireland, the family of the duke were undoubtedly of English extraction. The Colleys, or Cowleys, the ancestors on the female side, came originally from Rutlandshire, having emigrated to Ireland in the reign of Henry the Eighth; and the Wesleys, the male branch, were of an ancient family in Sussex, who made the sister island their home at a still earlier period. In the middle of the sixteenth century the Cowleys became of considerable importance in the counties of Kildare and Meath, in both of which they acquired, by public grants and otherwise, considerable possessions; and one of them, Sir Henry Cowley, received the honour of knighthood in the reign of Elizabeth. An intermarriage with the daughter of Sir Thomas Cusack, Lord Chancellor of Ireland, still further increased the importance of the family. Upon the Restoration, Henry Dudley Colley—whose name is written indifferently as Colley, Cooley, or Cowley, and who had faithfully adhered to the fortunes of the first Charles—received a substantial recognition of his loyalty, by the grant of various lands. One of the daughters of this gentleman married Garrett Wesley, of Dangan Castle, county Meath, in the year 1728, and thus the families became united. Richard Cowley, in default of a male heir, succeeded to the estate of the Wesleys, and assumed the name. He was sheriff of Meath, served in parliament for the borough of Trim; and in the year 1747 was created Baron of Mornington, in Ireland, by George the Second. His son Garrett became a marquis, and about the year 1797, adopted the name of Wellesley—a name since become famous in the councils of the nation. It was, however, under that of Arthur Wesley, that the future duke was known in his early youth. The name of Wesley suggests other thoughts than those of military fame and glory; and there is a curious story told by Southey in his speculative reflections, which we may here insert. It is said that when Charles, the brother of John Wesley, was at Westminster school, his father received a letter from an Irish gentleman, who proposed to adopt his son and make him his heir; but the offer, unaccountable as it appears, was declined, and the Richard Cowley, mentioned above, was adopted by the eccentric owner of Dangan. Thus, concludes Southey, "had the transfer really been made, we might have had no methodists; the British Empire in India might still have been menaced from Seringapatam, and the undisputed tyrant of Europe might still have insulted and threatened us on our own shores." The son of Richard Wesley, became, as we have mentioned above, the Earl of Mornington and Viscount Wellesley, and married Anne, daughter of Arthur Hill, Viscount Dungannon, by whom he had issue nine children,—four of these have become famous in history,—the Marquis Wellesley, Lord Maryborough, the Duke of Wellington, and Baron Cowley.

By the death of his father, the marquis, in 1781, Arthur Wellesley, who was christened after his maternal grandfather, was left to the entire care and guidance of the Countess. It has been often observed that clever mothers make clever sons; and in this instance there was no departure from the rule. The Countess of Mornington was a woman of considerable talent, piety, and strength of character, and it is to her teaching and example that the world probably owes much of that nobility of mind and singleness of purpose which distinguished the Duke during the whole course of a very long life. He was sent early to Eton, where he made but slow progress in the

various studies suited to his age and station. Indeed, his backwardness in this respect is said to have caused great uneasiness to his parent, and to have had some influence in the selection of his future profession.

From Eton our hero proceeded to a private seminary at Brighton, and from thence to the Military College at Angers in France. Here, though the young student left no signal reputation behind him, it is clear that his time must have been productively employed. The director of the seminary at Angers, the well-known Pignerol, was an engineer of high repute, and the opportunity of acquiring, not only professional knowledge but a mastery over the French tongue,—at that time more rare than it is now,—must have been of signal advantage to Wellington in his eventful future. This education, such as it was,—and there is reason to believe that it was at least in advance of the age,—occupied a period of about six years, and on the 7th of March, 1789, at the age of about eighteen, we find the Hon. Arthur Wellesley gazetted as Ensign in the 73rd—some say the 41st—regiment of foot.

We come now to consider

HIS FIRST MILITARY EXPERIENCES.

The influence of Arthur Wellesley's family connexions and his own military predilections, which even at his early age were conspicuous, made the promotion of the young ensign as rapid as his first achievements were brilliant.—On the 25th of December 1787*—he was promoted to a lieutenancy in the 79th foot. In two years subsequently, he exchanged into the 12th light dragoons; and on the 30th of June, 1788, he was made captain in the 58th regiment of foot. In the succeeding year he returned into the cavalry service, by exchanging into the 18th light dragoons. Rapid as this promotion was, it did not end here, for we find that in 1793, he received his majority in the 33rd foot; and in the same year he was (by purchase) appointed lieutenant-colonel of that regiment. Until this period the youthful soldier (for he was scarcely in his 24th year) had seen nothing of active service; this however, did not last long, for in May, 1794, his regiment was ordered from the Cove of Cork to join the army under the command of the late Duke of York, which needed reinforcements, in consequence of the reverses of the British army and its allies in the Low Countries. His regiment landed at Ostend, and garrisoned that city. The diversion made by Lord Moira, to relieve the army of the Duke of York, necessarily brought the 33rd regiment into the field.

The first military operation performed by the conqueror of Waterloo was the evacuation of a town in the face of the enemy. The 33rd had been landed at Ostend; but when Lord Moira, who had the chief command of the reinforcements sent out, arrived at that port with the main body, he saw reason for promptly withdrawing the garrison and abandoning the place. Orders were issued accordingly, and though the republicans, under Pichegru, were at the gates of the town before the English had quitted it, the 33rd was safely embarked. Lord Moira by a flank march effected a timely junction with the Duke of York at Malines. Colonel Wellesley took his corps round by the Scheldt, and landed at Antwerp, whence he moved without delay to the head quarters of the Duke. This was in July, 1794. The operations which followed, and which terminated in the following spring with the re-embarkation of British troops at Bremerlehe, a town at the mouth of the Weser, constituted Arthur Wellesley's first campaign. They do not, for the purposes of our memoir, require any circumstantial description. The total force of the Allied Powers was strong, but it was extended over a long line of country, composed of heterogeneous troops, and commanded by generals, not only independent, but suspicious of each other's decisions. In the face of an enemy, first animated by desperation and then intoxicated by success, there existed no unity of plan or concert of movements. After the defeat sustained by the Austrians at Fleurus, the campaign was resolved into a retreat on the part of the Allies, and pursuit of fortune on the part of the French. The Austrians were on the middle Rhine, the British on the Meuse. The route taken by the Duke of York in his successive retirements from one position to another lay through Breda, Bois le Duc, and Nimeguen, at which latter place he maintained himself against the enemy with some credit. Early in December, however, he resigned his command to General Walmoden, and returned to England, leaving the unfortunate division to struggle with even greater difficulties than they had yet experienced. Disengaged by repeated triumphs from their Austrian antagonists, the Republican forces closed in tremendous strength round the English and their comrades. The winter set in with such excessive severity that the rivers were passable for the heaviest class of cannon, provisions were scanty, and little aid was forthcoming from the inhabitants against either the inclemency of the season or the casualties of war. It was found necessary to retire into Westphalia, and in this retreat, which was commenced on the 15th of January, 1795, the troops are said to have endured for some days privations and sufferings little short of those encountered by the French in the Moscow campaign. So deep was the snow that all traces of roads were lost, waggons laden with sick and wounded were unavoidably abandoned, and to straggle from the column was to perish. The enemy were in hot pursuit, and the population undisguisedly hostile to their nominal allies. At length the Yssel was crossed, and the troops reposed for a while in cantonments along the Ems; but as the French still prepared to push forward, the allied force continued its retreat, and as they entered Westphalia the tardy appearance of a strong Prussian corps secured them from further molestation till the embarcation took place.

THE DUKE'S INDIAN ACHIEVEMENTS.

On the return of Colonel Wellesley to England, after his first campaign, his regiment was ordered to the West Indies, and in the autumn of the above year, it joined the fleet at Southampton, under the command of Admiral Christian. But a list of accidents, arising from changeable winds and adverse circumstances, obliged the fleet to return to port. The unfavourable weather which prevented Wellington's departure, can be looked on as a kind of Providence, for before the fleet could put to sea again, a change of orders arrived, which obliged him to proceed to India, a far more worthy field for his exertions. In the spring of the next year, the 33rd received directions to embark for Bengal; but the ill-health of its colonel,—which at that time was so frequent as to cause serious alarm to the family—obliged him to remain behind. But a favourable change took place, which enabled him to join the troops at the Cape; and, in the February of 1797, he landed at Calcutta—the principal city of the present Bengal presidency, and the theatre of his renowned military triumphs.

The success which awaited the future hero of Spain was great indeed, contrasted with the unfortunate issue of the contest in the Low Countries; and it may, perhaps, be considered a fortunate circumstance for Colonel Wellesley that, on his arrival in India, he found himself in active co-operation with one who could so well understand his peculiar position and character as his brother, Lord Mornington, the then Governor-General of India.

It may be as well, perhaps, to say here a few words in explanation of the position of Indian affairs, and of the persons with whom our hero was thus brought suddenly into contact.

"In 1797 there still existed, and in something more than name, a Great Mogul, that is to say, a representative of that Mogul or Tartar dynasty which since the commencement of the sixteenth century had established itself in the Imperial sovereignty of India. He was not, however, directly possessed of any substantial power, though there was eager competition for the exercise of his traditional authority. He resided at Delhi, and in histories of this period is often termed 'the king,' a title which, though afterwards conferred by us on the Nabob of Oude, was long considered in India as the exclusive property of the supreme territorial lord. The power lost by this monarch in the decline of his dominion had been seized by two classes of people—his own lieutenants, who had converted their governments into independent heritages; and his Hindoo subjects, who had embraced the opportunity of renouncing an allegiance which they had never willingly or perhaps absolutely acknowledged. Of the former class were the Nabobs of Oude and Bengal in Hindostan, *i.e.*, in that part of India commonly so called, which is north of the Nerbudda river, and the still more powerful lieutenant who administered singly the whole of the 'Deccan' or 'South,' under which designa-

* Life of Wellington. By Col. John Montmorency Tucker. London: Willoughby and Co.

tion was nominally comprised almost all the southern portion of the peninsula exclusive of 'the Carnatic,' a name attached to its south-eastern districts, between the river Kistnah and Cape Comorin. The first of these princes was usually termed 'the Nabob-Vizier,' or 'Vizier,' in consequence of that office having been monopolised by his family during the decline of the Mogul empire. The second, the 'Nabob, or 'Subahdar' of Bengal, had been conquered by us at Plassey, and we had virtually assumed his inheritance ourselves. The third, he of the Deccan, was termed the 'Nizam,' or 'Lieutenant,'—a title which had been given purely for personal distinction to the first Viceroy of this province on his accepting office, but which had been perpetuated in favour of his successors, as we see to this day. The Carnatic was not held immediately of the Mogul sovereign, but of his lieutenant in the Deccan, who thus claimed the allegiance of a feudatory not greatly inferior to himself. The prince in question was called the Nabob of the Carnatic, or, more familiarly, from his place of residence, the Nabob of Arcot. These were the Mahometan powers with which we had then to deal."

The Hindoo pretenders to dominion were represented by the Mahrattas, a powerful and warlike tribe of the Malabar coast, which had successfully resisted the great Aurungzebe, and which had turned to such profit the imbecility of his successors as to have almost revived in their own favour the imperial claims of the Moguls themselves. They had extended their power by despatching their great captains in various directions on the common errand of conquest, such conquests to be retained by the individual victors on condition of allegiance and tribute payable to the supreme family. This family held court originally at Sattara, under a title which has been made familiar to the present generation by the importunities of its *soi-disant* representative; but the Rajahs of Sattara had been superseded in all effective or cognizable authority by the 'Peishwa' or 'chief' of their own privy council—an office which had been made hereditary in a particular family, and to which the princely power had been wholly transferred. The Peishwa resided at Poonah, but his lieutenants had already assumed an independence little less substantial than that of the Mogul viceroys just described. One named Scindiah, then the most formidable of the cousinhood, had established himself in Malwa, and was pretending to extraordinary dominion in western Hindostan; another, named Holkar, had set up his standard a little to the south of Scindiah, in the town of Indore; the Bhonsla family were settled with great possessions at Nagpore, in the north-east of the Deccan; and the 'Guicowar,' or 'herdsman,' was installed in the government of Guzerat, contiguous to the Peishwa's territory. Of this great and formidable Mahratta confederacy only two members now survive as substantive powers of India—the Guicowar, still called by his ancestral appellative, and the Nagpore prince, at present styled the Rajah of Berar; the Peishwa's prerogatives having been extinguished and absorbed by Lord Hastings in 1819, and Scindiah and Holkar having succumbed in the stubborn contests which we shall have presently to recount. It will further be requisite to mention that an inconsiderable Hindoo principality in the south had been usurped by a Mahometan adventurer, who was consolidating an inheritance with true Oriental success, and that the Abdalla empire, founded about forty years previously in Affghanistan, was still vigorously administered by Zemaum Shah, the identical prince visited by our generals but the other day. Our remarks refer to a period of Indian history so comparatively early, that any actor in these half-forgotten scenes appears like a phantom of the past; but it will stimulate our interest in the subject before us, if we endeavour to realize to our own imaginations that the grey-headed old soldier who but yesterday was riding down Whitehall was the identical hero, who fifty years since drove Dowlut Rao to capitulate, and packed off Dhoondiah on the carriage of a galloper gun. It is strange that the commander of an army should be one of its last survivors.

"The position of the Indian Government relatively to the Home Administration was not, when Colonel Wellesley arrived in those parts, materially different from that which exists at present. The great step of identifying those prodigious acquisitions with the dominions of the British Crown had virtually been taken already; and Lord Cornwallis, in the last war, had wielded, to Tippoo's cost, the resources of an empire instead of the arms of a company. A few years earlier Indi had scarcely been reputed among the fields open to th soldiers of the British army, and regiments were reluctantl despatched to quarters not looked upon at first with an favourable eye. But the scene had been changed by lat achievements; and though a command in India was not wha it has since become, it was an object of reasonable ambition Napoleon pretended, even after the victories of Seringapatan and Assaye, to slight the services of a 'sepoy general,' bu Wellesley established for the school, in the eyes of all Europe a reputation which it has never since lost."

No sooner had Colonel Wellesley arrived in India than h found himself engaged in active service. As has been stated the Marquis of Wellesley (then Lord Mornington) was nomi nated Governor-General of India. He went out with th desire and hope of governing in peace and order, and, lik many great men since, found himself immediately involved i war and discord. Tippoo Sultaun, the deadly and treacherou enemy of the English, had at that time concluded a peace with the East India Company. But the treaty was one of word only; and scarcely had Lord Mornington commenced the civi government of the country when he found enemies on all side of him intriguing with the French for the purpose of expellin the English at once and for ever from the peninsula of India While Tippoo was ostensibly at peace with England, he wa covertly carrying on negotiations with Bonaparte at Cairo and it was with pain and reluctance that the new governo found himself compelled, at all hazards, to declare war against his treacherous ally. At that time Englishmen considere Egypt as the high road to India; and the occupation of th latter country by Napoleon was therefore sufficient cause fo alarm and precaution. On the 22nd of February, 1799, there fore, war was formally declared against the Sultaun.

But Tippoo was fully prepared, and made an unexpecte attack on an advanced brigade of English at Sadasee, but wa repulsed with severe loss. Near Mallavilly, on the 27th o March, the Mysore army was discovered in position; an actio ensued, and the Sultaun was again defeated. Frequent an severe skirmishes took place, in all of which the 33rd wer successful. Colonel Wellesley, in addition to the command c the troops, was invested about this time with a sort of semi diplomatic power, he being one of a commission accompanyin the grand army under General Harris.

Of course, as we do not write for military readers, we shal be excused if we do not go into detail with regard to the seve ral engagements in India in which Wellington played an im portant part. The invading forces having penetrated into th dominions of Mysore, were speedily brought into actual coll sion with the enemy; and on the 4th of April the army, und the supreme command of General Harris, ably seconded b Colonel Wellesley and General Baird, arrived in effecti condition before the walls of Seringapatam.

THE CONQUEST OF SERINGAPATAM.

"Who shall take Seringapatam?" was the boasting questic of Tippoo Saib, when, standing on its ramparts, he saw t British encamp before it.

"Between the camp of the besiegers and the walls of th famous fortress stretched a considerable extent of irregular ar broken ground, affording excellent cover to the enemy for a noying the British lines with musketry and rocket practic At one extremity was a "tope" or grove, called the Sultau pettah tope, composed mainly of betel trees and intersected l numerous watercourses for the purposes of irrigation. Th first operations of the besiegers were directed to the occupati of a position so peculiarly serviceable to the party maintainin it. Accordingly, on the night of the 4th, General Baird w ordered to scour this tope—a commission which he discharg without encountering any opposition. Next morning, Tippoo troops were again seen to occupy it in great force, on whi General Harris resolved to repeat the attack on the succee ing night, and to retain the position when carried. The du was intrusted on this occasion to Colonel Wellesley with t 33rd and a native battalion, which was to be supported by a other detachment of similar strength under Colonel Shaw This was the famous affair of which so much has been sa and which, with such various colourings, has been describ as the first service of Arthur, Duke of Wellington.

receiving the order, Colonel Wellesley addressed to his commander the following note, remarkable as being the first of that series of despatches which now constitute so extraordinary a monument of his fame :—

'*To Lieutenant-General Harris, Commander-in-Chief.*

'Camp, 5th April, 1799.

'My dear Sir,—I do not know where you mean the post to be established, and I shall therefore be obliged to you if you will do me the favour to meet me this afternoon in front of the lines and show it to me. In the meantime I will order my battalions to be in readiness.

'Upon looking at the tope as I came in just now, it appeared to me that when you get possession of the bank of the Nullah you have the tope as a matter of course, as the latter is in the rear of the former. However, you are the best judge, and I shall be ready.—I am, my dear Sir, your most faithful servant,

'ARTHUR WELLESLEY.'

This letter has been often appealed to as evidence of that brevity, perspicacity, and decision afterwards recognised as such notable characteristics of the great duke's style. Without stopping to challenge the criticism, we would rather point to it as signally exemplifying the change which had taken place in the young colonel's official position since we last saw him in the Dutch campaign. Instead of simply conducting a regiment, we now find him, though still only a colonel, in command of a powerful division of an army, influencing the character of its operations, corresponding on terms of freedom with the General-in-Chief, and preserving his despatches for the edification of posterity. Reserving, however, any further comment on these circumstances, we must now state that the attack in question was a failure. Bewildered in the darkness of the night, and entangled in the difficulties of the tope, the assaulting parties were thrown into confusion, and, although Shawe was enabled to report himself in possession of the post assigned to him, Colonel Wellesley was compelled, as the general records in his private diary, to come, "in a good deal of agitation, to say he had not carried the tope." When daylight broke, the attack was renewed with instantaneous success, showing at once what had been the nature of the obstacles on the previous night; but the affair has been frequently quoted as Wellington's 'only failure,' and the particulars of the occurrence were turned to some account in the jealousies and scandals from which no camp is wholly free. The reader will at once perceive that the circumstances suggest no discussion whatever. A night attack, by the most natural of results, failed of its object, and was successfully executed the next morning as soon as the troops discovered the nature of their duties.

When these advanced posts had fallen into our hands, the last hour of Tippoo's reign might be thought to have struck, and the final results of the expedition to be beyond peril. But there is an aspect of facility about Indian campaigning which is extremely delusive to those inexperienced in its risks. All goes apparently without a check, and all is thought easy and insignificant; but the truth is, that a single check, however slight, will often turn the whole tide of success. It is the characteristic of this warfare, that reverses which in other countries would be endured without serious damage, are here liable to be fatal. To our check before the little fort of Kalunga, in 1814, we owed probably the duration and losses of the Nepaul war, and it has been credibly averred that if the ingenious operations of our officers had failed before the gates of Ghuznee, the disasters of the Cabul retreat would have been anticipated in that first Affghan expedition, which now reads like a triumphal march. It is true that Tippoo's forces proved unequal to encounter in the field even the weakest of the invading armies, and that our position before Seringapatam had been taken up without any resistance proportioned to the renown or resources of our enemy. But the fort was extremely strong, the place unhealthy to the last degree, and any material protraction of the siege would have exhausted the provisions of the army and given time for the season to do its work. The river Cauvery is periodically swelled during the monsoon, and, had this occurred earlier than usual, the siege must have been raised, and a disastrous retreat—for in India all retreats are disastrous—must have been the inevitable consequence. As it was, the Commander-in-Chief was full of apprehensions, and Sir John Malcolm used in after days to relate an anecdote which shows better than any calculation how many chances still remained in Tippoo's favour. On the day appointed for the storm he entered the general's tent and saluted him by anticipation with the title which proved afterwards the reward of his services. 'Malcolm,' was the serious reply of the old chief, 'this is no time for compliments. We have serious work on hand. Don't you see that the European sentry over my tent is so weak from want of food and exhaustion that a Sepoy could push him down? We must take this fort or perish in the attempt. I have ordered Baird to persevere in his attack to the last extremity; if he is beat off, Wellesley is to proceed with the troops from the trenches; if he also should not succeed, I shall put myself at the head of the remainder of the army, for success is necessary to our existence.'

"In fact, these arrangements had been actually made. Colonel Wellesley, whose unremitting attention to all the duties of the siege is shown in a multiplicity of despatches, and the value of whose suggestions is proved by their effect upon the operations, received orders to head the reserve in the advanced trenches and to await the success of the storm. The fighting in the batteries had already been desperate and the losses heavy, but 2,500 Europeans still survived to lead the assault, and a chosen column of Sepoys followed them. It was midday on the 4th of May. Colonel Wellesley had received reports of the state of the breach, had revised them in terms exactly like those afterwards used at Ciudad Rodrigo and Badajoz, had superintended the final preparations, and was expecting the result from his appointed post. 'It was,' says one near him, 'a moment of agony, and we continued with aching eyes to watch the result, until, after a short and appalling interval, we saw the acclivity of the breach covered with a cloud of crimson.' The assault succeeded, and Colonel Wellesley advanced from his position, not to renew a desperate attempt, but to restore some order in the captured city, and to certify the death of our dreaded enemy by discovering his body yet warm and palpitating under a mountain of slain."

Thus fell one of the most famous of Eastern warriors; and his death may be said to have sealed the future fate of independent India. It is not our purpose in this place to enter into any argument for or against the proceedings of the English government in their acquisition of the vast extent of country known as India, nor even to repeat the often-quoted phrase, "that if we had not conquered and retained the peninsula, the French would!" Our present purpose is rather to trace the personal history of the Duke of Wellington, and if this purpose necessitates the relation of battles, and the exigencies of conquerors, it is a consequence of the peculiar relation which the man bore to the events. The memoirs of the Duke of Wellington are written in those wonderful Despatches, which, though not composed with a view to publication, discover the character, and attributes of their author better than any other existing memorial.

After the capture of Seringapatam, the conquered country was divided among the conquerors, the Company reserving only one-fourth portion of the Sultaun's territory to themselves. This conciliatory measure proved of considerable advantage to the stability of India, and by it and other concessions the Company were enabled to gather together their forces, and recruit the strength of the almost exhausted soldiers. Colonel Wellesley formed one of the commission to conduct the treaty of partition; and by his firmness, moderation, and activity, fully warranted the hopes that were entertained of him both as a warrior and a diplomatist.

But such is the state of Eastern politics, and such the nature of Indian warfare, that the successful leader of a native band may be to-day unknown and unfeared, and to-morrow erected into a man of importance and power, with troops and treasure at his command. Such was the case in the present instance. Among the prisoners liberated by the conquerors of the city from the dungeons of Tippoo Saib, was a Mahratta trooper, called Dhoondiah Waugh, "the King of the two worlds!" as he boastingly styled himself. He was a freebooter soldier, who after committing various depredations in the Mysore, was at length captured and thrown into prison by Tippoo. Being liberated, however, on the death of the latter, he cast about him for wherewith to employ his active mind and person. He did not wait in vain. In a little time he found himself at the head of a large company of native warriors; and his first

xploit was to make an incursion into the Baduna provinces, from which he levied contributions by every species of savage warfare. His audacity at last became so great that it was found necessary to check it; in furtherance of which an expedition, formed of British and native troops, and commanded by Colonel Wellesley, set out against him to act with another corps under Colonel Stevenson. On the 3rd of September, Colonel Wellesley's division, consisting of the 19th and 25th dragoons, 1st and 2nd regiments of native cavalry, entered into the territories of the Nizam. The former, from some unforeseen cause, was not able to make such rapid progress as the latter, who came in sight of Dhoondiah's army, at Conaghull, on the 10th. The enemy consisted of upwards of five thousand cavalry. Without waiting for Col. Stevenson's coming up, Colonel Wellesley instantly attacked the "King of the two worlds" (as the despatches call him) in a very strong position. "His Majesty" stood firm for a moment or two, but the impetuosity of the attack was so great that his troops were quickly thrown into confusion, and he himself bit the dust and was killed.

And to render the destruction of these marauders more complete, Colonel Stevenson's division coming into action, routed the enemy with great slaughter, and captured his two remaining guns, all his baggage, camels, bullocks, &c.

Colonel Wellesley's despatches give a description of this warfare against the bands of the "King of the two worlds," in these words.—

"I moved forwards this morning, and m[illegible] (Dhoondiah's) army at a place called Conaghull, about [illegible] miles from hence. He was on his march, and to the west [illegible] apparently with the design of passing between the Mahratta family. [illegible] cavalry and my detachment, which he supposed [illegible] Shinnoor. He had only a large body of cavalry, apparently five thousand, which I immediately attacked with the 19th and 25th dragoons, and first and second regiment of cavalry. The enemy was strongly posted, with his rear and left flank covered by the village and rock of Conaghull, and stood for some time with apparent firmness; but such was the rapidity and determination of the charge made by those four regiments, which I was obliged to form in one line, in order at all to equalise in length that of the enemy, that the whole gave way, and were pursued by my cavalry for many miles. Many, among others Dhoondiah, were killed, and the whole body dispersed, and were scattered in small parties over the face of the country. Part of the enemy's baggage was still remaining in his camp, about three miles from Conaghull; I returned thither, and got possession of elephants, camels, and every thing he had. The complete defeat and dispersion of the enemy's force, and, above all, the death of Dhoondiah, puts an end to this warfare."

From the manner in which Colonel Wellesley relates his pursuit of the "King of the two worlds," it is evident he did not attach any great importance to the campaign in a military point of view. He says—"After I had crossed the Malpurba, it appeared to me very clear, that if I pressed upon the 'King of the two worlds' with my whole force on the northern side of the Dooab, his majesty could either cross the Toombudra with the aid of the Patan chiefs, and would then enter Mysore; or he could return into Savanore, and play the devil with my peaceful communications."

Had Dhoondiah been taken alive, in all probability he would have been executed. Colonel Wellesley's instructions by letter, from Secretary Webb, dated 24th May, 1800, were—"You are to pursue Dhoondiah Waugh, wherever you may find him, and hang him on the first tree."

The corpse of "his majesty" having been found, was lashed to a galloper gun and carried back to the British camp, where it was buried. But we had almost forgotten to mention one circumstance that certainly merits our especial notice, as highly creditable to the humanity of the victor. When the enemy's baggage was overtaken, a boy, about four years of age, the favourite son of Dhoondiah Waugh, was found, and taken to Colonel Wellesley's tent. The colonel not only afforded protection to the orphan, but, on leaving the East for Europe, he deposited a sum of money in the hands of a friend, to defray the expenses of his future maintenance and education. He grew up an intelligent and active youth, and was placed in the service of the Rajah of Mysore; but, unfortunately, died of cholera in the year 1822.

"Thus has ended this warfare, and I shall commence my march in a day or two towards my own country. An honest Killadar of Chinnoor had written to the 'King of the world' by a regular teppale, established for the purpose of giving his intelligence, that I was to be at Nowly on the 8th, and at Chinnoor on the 9th. His majesty was misled by this information, and was nearer me than he expected. The honest Killadar did all he could to detain me at Chinnoor, but I was not to be prevailed upon to stop; and even went so far as to threaten to hang a great man sent to show me the road, who manifested an inclination to show me a good road to a different place. My own and the Marhatta cavalry afterwards prevented any communication between his majesty and the Killadar."

It is not to be concealed (nor should it be), that although he was successful in this brilliant attack and conquest, over Dhoondiah's army, Colonel Wellesley has been censured by high authorities for risking the safety of his division by engaging an enemy of superior force, before the arrival of Colonel Stevenson. Be this as it may, *success did crown his efforts*, and it is somewhat ungracious to say now that it was *contre les regles.**

The result of the operations against Dhoondiah Waugh prevented all further fear in that quarter, and the expedition which had been suggested against the Dutch settlement at Batavia was abandoned. Colonel Wellesley was appointed to a new command at Trincomalee, from which place, however, he removed the troops to Bombay. The Governor-General wished him to join General Baird, in an expedition across the desert—an expedition as wild and fruitless as anything recorded in history. Severe illness,—fortunately, as it would appear,—prevented this wish being accomplished; for there was work of a more exciting and useful description to be done in the scene of his present triumphs, and British interests in India once more required an appeal to arms. The next important position in which we find our hero, is in the

INVASION OF THE MAHRATTA COUNTRY.

The intrigues of the conquered led to a determination on the part of Lord Mornington to invade the Mahratta country, in order to check the advances of the French; and on the 20th of April, 1802, Arthur Wellesley,—having been raised to the rank of Major-General,—was appointed to a division which was intended to form an advance corps to the army of Madras, then on its march towards the banks of the Toombuddra. "By extraordinary exertions, General Wellesley reached Poonah. On the 13th of May, the Peishwa entered the capital, and it was hoped that Scindiah would return quietly to his own country. This hope was vain. Scindiah and the Rajah of Berar, who were together in the field, made a menacing movement towards the frontier of our ally, the Nizam. Information was also received of a secret and active correspondence between Scindiah and Holkar; and it was privately known that a league, hostile to the British was on the eve of being concluded.

"Scindiah, having been required to retire behind the Nerbuddah, and separate his troops from those of the Rajah of Berar, evaded the demand, under the usual pleas used in Eastern diplomacy. General Wellesley, who only waited the conclusion of the negociation, on learning that the envoy Colonel Collins, had quitted Scindiah's camp, instantly took the offensive, and advanced on Ahmednuggur.

"This fortress is one of the strongest in India, built of solid stone and chunam, surrounded by a deep dry ditch, with large circular bastions at short intervals, and armed with three or four guns in casemated embrasures, with a terrace above and loop-holes for musketry. The bastions are unusually lofty the curtains short and low, with loop-holes in their narrow ramparts for musketry. The guns (some sixty pieces) upon the bastions were numerous, ranging in their calibre from twelves to fifty-twos; but the casemates were too confined to allow their being effectively employed. The glacis was so abrupt as to cover nearly thirty feet of the walls, affording shelter for an enemy, if they could only get close to the place.

"This formidable place of arms was carried by assault in the most gallant style imaginable—and on the 12th, the surrender of the fort followed that of the city. The reduction o

* J. M Tucker's Life of Wellington.

such a place was obviously a most gallant exploit; and 'Gookla, a Mahratta chief, residing in our camp,' says Colonel Nicholls, 'with a body of horse, wrote thus to his friends at Poonah—"These English are a strange people, and their General a wonderful man. They came here in the morning, looked at the Pettah walls, walked over it, killed all the garrison, and returned to breakfast! What can withstand them?"'

"General Wellesley continued his operations. On the 26th he was reinforced by the first battalion of the 10th regiment under Major Dallas, who had escorted safely from Bellary, two thousand bullocks loaded with supplies, with three lacs of pagodas, for the use of the army. The march had been made in nineteen days without a halt; and the opportune arrival of the convoy enabled the English General to continue his advance towards Aurungabad, which place he entered without opposition on the 29th.

"Scindiah, on finding that Aurungabad had fallen, made a movement, as if to threaten Hyderabad; and, for the double purpose of protecting that city and securing large convoys on their route to join his army, General Wellesley, by marching on the eastern bank of the Godavery, effected these important objects. Colonel Stevenson was also actively employed. He carried the fort of Jaulna by assault; and, by a night attack, dispersed a considerable body of the enemy. Hitherto, the confederated chiefs had only hung upon the flanks of the English, with an immense cavalry force, supported by an inconsiderable body of matchlock men: but now they were joined by sixteen battalions of regular infantry, and a train of artillery, amounting to nearly one hundred guns; the whole *corps d' armée*, at a moderate computation, exceeding fifty thousand fighting men.

"The confederates had encamped at Boherdun, and it was determined that the corps under General Wellesley and Colonel Stevenson should make a combined attack upon them without delay. Two routes, running east and west, led through the hill country between Budnapoor and Jaulna; and as the defiles were narrow and difficult, it was arranged that Stevenson should move by the western, and Wellesley by the eastern line, and then, with united forces, fall upon Scindiah and his confederates."

The Mahratta chiefs were not idle meanwhile, however. On the contrary, the main body of Scindiah's troops were ready and waiting for the attack of the allies. By the 26th of June, however, the plans of General Wellesley were so far matured as to enable him—with the coolness and far-seeing courage for which he had become celebrated—to lead his troops into the very heart of the Mahratta country. The result of the various manœuvres was the famous

BATTLE OF ASSAYE,

which was fought on the 24th of September. The enemy were entirely routed.

"Though it was clear, both to British and Mahrattas, that the whole campaign was virtually decided by such a triumph as that of Assaye, yet the native chiefs, who, as Wellesley on this occasion described them, were 'rashness personified,' evinced resolutions of provoking yet another battle. Scindiah, it is true, under the combined teaching of Wellesley and Lake, had received a lesson which, to the latest days of his life, he never forgot; but the Rajah of Berar was still in the field, and as General Wellesley two months afterwards was on the Mahratta track to compel adherence to the covenanted stipulations, and to clear the country of any dangerous gatherings, he came one evening upon the whole remaining force of the enemy, drawn up in battle array before the village of Argaum, to renew again the experiment of September. Considering that since the last battle the British had been strengthened almost as much as they themselves had been weakened, it was a forlorn hazard; yet a body of Persian cavalry in the Berar service made a desperate charge on the European regiments, and Scindiah's horsemen, who, notwithstanding the recent treaty, were found in the ranks of our adversaries, made a show of supporting the attack. The advance of the British line, however, was not waited for by the main body of the Mahrattas, who in the hopeless confusion abandoned their guns and fled, but only to fall, through the long hours of a moonlight night, under the sabres of their pursuers.
